

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

### Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

### About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

## GENERAL WASHINGTON AT TRENTON AND PRINCETON.

DECEMBER AND JANUARY—A HUNDRED YEARS AGO.

BY AMBROSE B. CARLYLE.

PRESIDENT WASHINGTON'S RECEPTION AT TRENTON IN 1789.

"First in War, First in Peace, and First in the Hearts of his Countrymen!" Such is the language we are wont to apply to but one man—our immortal Washington. "First in the Hearts of his Countrymen" he unquestionably and most deservedly was, but who does not love him the more and revere his memory the more sincerely because his greatness, his grand glory, his title to the undying homage of Americans rests not in any considerable degree upon preëminence as a military man. He was neither a Cæsar, nor an Alexander, nor a Charlemagne, nor a Napoleon,

VOL. VIII.—1

nor a *military genius* in any ordinary acceptation of the term. Great he was in war—ininitely greater than any of the renowned warriors history tells of and the world honors simply as great soldiers—his greatness was that of the pure, positively unselfish patriot, not that of the mere soldier. A late writer, in an eloquent paper, not without strength and force in general correctness, alludes to Washington as "the brave, brilliant soldier and astute statesman of the first chapter of the American Nation's history." This sounds well to uncritical American ears, but it fails utterly to

picture justly our noble Washington. "Astute Statesman"—well, let that stand, for he was a *statesman*, so good, so wise, so pure that he won the designation "First in Peace" and none will dispute its fitness; if "astute" be not the best qualifying adjective, it is not altogether the worst. "Brave Soldier"—he was *brave* in the very best sense of the term, possessing the highest type of moral courage; but "brilliant soldier" no right-feeling American can regret that he was not. But the writer cited fails to note the one quality that above all others placed George Washington "First in the Hearts of his Countrymen," and at the same time assigned him a special niche in the gallery of the world's heroes, with no rival to divide his glory—that one quality was the singular patriotism which never thought of self but to offer that noble self a free, unreserved sacrifice on the altar of his country. Some there have been, in our own and in other lands, of equally pure patriotism, but he stands without a peer because there has never been one with equal opportunities, equal inducements for self-assertion, self-aggrandizement, self-advancement, whose every act has been so unquestionably actuated by a patriotism combining nobleness of soul, the loftiest rectitude, and the sublimest purity of purpose!

I have said that our hero was not a "brilliant soldier"—not a "military genius"—and yet the series of military operations which form my present theme, planned and matured and executed by him, would seem to disprove my assertion. But, even if we grant that the movements of December 25th to January 5th were brilliant and worthy of a military genius, their exceptional character would prove my position rather than disprove it. I do not, however, grant that these splendid movements and actions were brilliant in conception; their grand results were rather due to Providential overruling and directing than to the planning of a military genius, excellent as those plans were in the main. I think it will be seen that if those plans had not failed in one point at least, the results would have been far different.

Within the first half-year of its existence the young Republic was called to endure trials and vicissitudes which threatened its very life. Commencing with the defeat of the American army, August 27th, at Long Island, and the fall of Fort Mifflin on the ensuing day, there was a continuous chapter of disasters for four long months,

less three days. The Congress was in sore perplexity over the ever-important question of whence and how to provide money to meet the necessary expenditures for the civil and military service; the army, small in number, miserably equipped, almost naked, quite foot-bare, often hungry, and dispirited by successive reverses, was fleeing across New Jersey before a foe, overwhelming in numbers, splendidly equipped, completely clothed, well fed, and flushed with success after success.

At last, the momentous crisis had come, and so dark was the prospect for America that even the brave Washington became anxious. The handful of patriot soldiers had reached and safely crossed the Delaware; the British had reached the eastern shore, and had there been checked by the foresight of the American chief in removing every possible means of crossing the stream, and they were compelled to await the forming of nature's bridge of ice, ere they could cross and possess the Republic's capital.

The Congress had become alarmed at the proximity of the enemy, and had sought safety in flight. The Tories were jubilant and defiant; the false-hearted were deserting their country's cause and seeking its enemy's amnesty and care; timid patriots were crushed with consternation and alarm; even braver patriots were heartsick with anxious fears for their country and appalled with dire apprehensions for the cause of liberty and independence; but few brave souls were there left whose hearts refused to quail, or their purpose to falter; of this brave few, God be praised, was the noble chief of the army. His courage and steadfastness were the more notable because he, better than any other man, knew the whole sad truth—others could suspect and surmise, while he *knew* the terrible peril of these dark months, weeks and days; yet while many, good and true as he, were affrighted by their suspicions and surmises, he went bravely forward with unblanching cheek and unflinching step to meet and conquer the dread peril. Within a few days his small, weak force would melt away, the men retiring from the service upon the expiration of their terms of enlistment, and whatever was to be done must be done quickly—at once. Fortunately, the apparently hopeless condition of American affairs inspired the British commander-in-chief with over-confident anticipations of an easy and speedy triumph in the coming spring, and he made arrangements for a

quiet inactive winter, disposing his troops accordingly. Anything like an aggressive movement on the part of the Americans seemed so preposterous that Howe did not give a thought to such a possibility. He would remain in New York, eat, drink and be merry, through the winter; he would permit his ablest lieutenant, Cornwallis, to go to England, and would distribute his men with

a view mainly to their comfort, and the greatest ease of feeding and sheltering them.

These arrangements had been put into execution so far that he was safe in New York, where Cornwallis also was on the eve of sailing for home, and the troops were partly in that city, with detachments dispersed through New Jersey, Grant being in command of those in New Jersey in the room of Cornwallis. A considerable force of Hessians was in and about Trenton, which, according to General Washington's letter to the Congress, under date of 27th December, 1776, reporting his success at

Trenton, comprised about 1,500 men in three regiments, those of Anspach, Knyphausen and Rall, with a troop of British light-horse, the last named being the ranking officer and in command. It is, of course, needless for me to give in detail the movements of Washington and his army; as every American reader knows, our chief, well knowing the character of the Hessians, judged wisely that on Christmas night and the early

morning following, the officers and men would be in good condition for an effective surprise, and chose that time for commencing his grand movements. The events sustained his judgment; the Hessians had made "a night of it," and the morning found them just sufficiently under the influence of the night's orgies to become an easy prey to Washington's little band of "wide-awakes." The move-

ments of the Americans were carefully executed, and were fully successful; the Hessians were surprised, their feeble attempts at defence defeated, their commander, Rall, mortally wounded, a small number of their men killed and wounded, and Lieutenant-Colonel Scheffer, with nearly nine hundred men, surrendered to General Lord Stirling. Then, having accomplished his purpose and knowing that the enemy were at Mount Holly, Burlington, Princeton and elsewhere, all around within a radius of a few miles, in sufficient numbers to form an overwhelming

WASHINGTON AT TRENTON, JANUARY, 1777.

force when concentrated, the prudent Washington hastened again to place the Delaware between his little army and the enemy, safely landing his captives and captures on the Pennsylvania shore.

Just here let me note two events which, I believe, contributed materially to the aggregate success—one being a movement independent of Washington's plans and the other the failure of one of the proposed movements. Colonel Rall

had been informed that an aggressive movement was designed by the Americans, and would doubtless have been less off his guard but for a slight diversion in the vicinity of Mount Holly, made by Colonel Griffin, under orders from General Putnam who, after a slight skirmish, had at once withdrawn—this diversion, slight as it was, the Hessian commander doubtless mistook for the proposed movement, and its very insignificance, no doubt, induced the greater inattention to his duty in guarding against American movements. The

escape of some of those who got away by the outlet he was to have guarded. But I cannot conceive how he could have concealed his men until the opportune moment.

The "popular" histories tell us with full details of the wounded Rall's surrender to Washington, and there is a print showing the supposed event. The fact is, upon Rall's fall he was borne to his former headquarters, Lieutenant-Colonel Scheffer succeeding to the command; and upon the utter defeat of his force, the latter surrendered not to Washington, who was engaged in another part of the town, but to General Lord Stirling.

While General Washington was winning the important victory at Trenton, the Congress in session at Baltimore was taking action not less important in its direct bearing upon the future conduct of the war. Hitherto, Washington had been commander-in-chief in name rather than in fact. Not only had his every movement, nay, his every projected movement, been subject to revision and criticism, and even to modification, on the part of the Congress, but his having men to command had been subject to the will or caprice of the several local or State legislatures; while in the highly important matter of selecting officers to lead the men, to execute his plans and fulfil his orders, he had little or no voice. After waiting long and patiently for the Congress to remedy these evils, he had at last suggested to that body the necessity for providing and developing a military system for the Nation—a national system with an actual head having sufficient authority to be justly responsible for successes and failures. But the States were jealous of any apparent concentration of power, while the Congress was timid and fearful of augmenting that jealousy by applying the only possible cure for the evils under which the civil, no less than the military, affairs of the Nation were suffering. At last, the time had come when the military administration at least must be crystallized into national unity or divided counsels, divided authority and divided responsibilities would convert the disasters they had produced into utter ruin. The timid policy was not abandoned for some years in civil affairs, the finances of the Nation were still left at the mercy of the States until the Nation had neither money nor credit, and had to be saved from final and irretrievable death by the credit of one of its citizens. But, while General Washington was

WASHINGTON'S HEADQUARTERS IN TRENTON.

second event I have alluded to was the failure of Colonel Ewing to cross from Morrisville to Trenton, as planned by Washington. Had he crossed, he must have landed at about daydawn at about where the State-house now stands; within shot of his landing place stood the "White House," which was at the time occupied by Knyphausen's regiment; Ewing could not well have concealed his men from this regiment, and their discovery would have endangered, if not insured the defeat of, the entire plan. True, if Ewing could have avoided discovery until the successful advance of the two main divisions of the Americans, his command could have fulfilled the work designed for it, and might have made the success more complete by preventing the

winning the Christmas victory at Trenton, the Congress at last yielded to the dictates of common sense by adopting his repeated counsels in reducing the military affairs of the Nation to a national, as well as a rational, system; it made Washington commander-in-chief in fact, at least in a measure, by giving him some of the authority and power involved in that high position. Some foolish people misunderstood the action of the Congress, and imagined that it was creating a dictator; but the noble Washington did not so misunderstand the scope of the action of the National Legislature, and his lofty patriotism and subtle wisdom and perfect discretion soon allayed the popular anxiety and doubts, and in their stead there was soon evident a new confidence among the patriots throughout the land, a high spirit, too, of resolve, of self-consecration, was everywhere evinced by the patriots of all classes—the timid, doubting, fearful ones became bolder, the brave braver, and the wisdom of the too-long deferred unification of military authority and responsibility was seen and felt at home and abroad. The successes at Trenton and subsequently at Princeton of course had their influence in bringing about the marvelous improvement in temper and spirit among the patriots at home and their friends abroad; but the mighty, potential influence was the vigor Washington imparted to military operations under the national and rational policy which made him truly the head of military affairs. Reverses and sore trials were still experienced by the American Nation, but the people never again fell into the dark, gloomy, despondent mood which prevailed from August 27th to December 25th, 1776.

Under the new authority vested in him, General Washington immediately set in train measures for creating a *national* army, and energetically pushed forward these measures to their fruition. But it was a vast work to create such an army, and meanwhile the little army which had achieved the Trenton glory was melting away; the 31st of the swiftly-passing December would mark the close of the terms of enlistment of a large proportion of the men, and the new year's dawn would find him without a sufficient force to constitute the merest semblance of an army, or to maintain even a shadow of defensive war. Something must be done, at once, to save the country until his new national army could be brought into the field—besides, the Trenton triumph was but the com-

mencement of a grand project he had formed, and farther momentous operations must be effected, victories won, to make what had been done of true, enduring value. The men whose terms of service were expiring must be induced to reenlist or at least to remain for a few weeks—but how? They must be offered a bounty—but where was the means? The Congress had neither money nor credit; it had not fulfilled its promises to the soldiers in the past, and its farther promises would not avail. The men had unlimited confidence in their chief, and his word was sufficient for all he could personally promise, but was not so for what he might promise for the Congress or the Nation. He, nobly seconded by Stark and others of his officers, gave personal pledges freely—but cash must be had and at once; patriotism could not

"DOUGLASS HOUSE," TRENTON, ST. CLAIR'S HEADQUARTERS.

blind the eyes of the brave soldiers to the fact that those dear to them were destitute and suffering from want of necessities of life, and they would not reenlist even for a short term without some cash in hand. In his extremity of need, Washington turned to the only human source from which he could anticipate relief. He appealed to Robert Morris, the cash was at once obtained, the men secured, the victory of Princeton gained, and a happy people raised pæans of grateful praise to the victorious chief and his gallant army.

Having placed his prisoners and the other trophies of his victory in safety, General Washington once more crossed the river, December 30th and 31st, and took up quarters in a house

close to the Assanpink bridge, while General St. Clair's were at the house of Captain Douglass, on Broad street. The former was burned down some years since, and the latter has been removed to a new site, its old site being occupied by a Lutheran Church.<sup>1</sup> The respective headquarters of the other officers do not specially demand notice or illustration. The army was encamped upon the rising ground to the south of the Assanpink. Scarcely was Washington fairly established in Trenton, when the British commenced operations to dislodge him. On the 2d of January, a British force of about 5,000 men marched into Trenton; they approached the Assanpink on its north side, the narrow stream separating them from the Americans, with but one small bridge spanning it—this they made three vigorous attempts to cross, but were at each assault repulsed with heavy loss. Cornwallis had been compelled to relinquish his visit to England, and was now again in command. The three repulses satisfied him for the day, and he determined to defer his expected victory until the next morning. Upon the cessation of fighting Washington convened a council of war at St. Clair's headquarters, the Douglass House, noticed above, his own headquarters being too near the bridge for the purpose. That Cornwallis expected to renew the attack in the morning was certain, and the result could not be doubted; hence the council could but conclude at once

<sup>1</sup> We have made accurate engravings of these two edifices: that of Washington's headquarters is from a helotype kindly loaned us by Robert Coulton Davis, Ph.D., of this city, and that of the Douglass House is from a drawing made by General William S. Stryker, Adjutant-General of the State of New Jersey, and loaned us by him.

that the only wise course was to steal away in the night; it is said that a retreat down the Delaware was proposed and that it was the chief who suggested "the bold and judicious design of abandoning the Delaware and marching silently in the night, by a circuitous route along the left flank of the British army into their rear at Princeton, where he knew they could not be strong. After beating them there, he proposed to make a rapid movement to New Brunswick," where were their baggage and magazines. This plan was promptly adopted by the council, and a little after midnight the Americans left the Assanpink, so silently that their foe, though scarcely a hundred yards away, heard nothing nor thought of the Americans' escape until daybreak exposed the vacant camp; according to Wilkinson, besides the usual *ruse* on such occasions of leaving camp-fires brightly burning, Washington took the additional precautions of doubling the guards and setting a strong fatigue party to work at building

HUGH MERCER.

From a Pencil Drawing by Colonel Trumbull.

entrenchments within hearing of the enemy. At dawn, Cornwallis was no doubt extremely mortified to discover that the bridge could be crossed without a battle, as his foe had fled—but that was not the worst; he could not conceive or ascertain whither the "rebels" had gone, until the sound of distant cannon showed him that, as Sir William Erskine is said to have expressed it, "Washington has *outgeneraled* us," and that "the fox" (as he is said once to have called Washington) was working mischief at Princeton. But greater must have been his chagrin when, after a forced march of unusual speed,<sup>1</sup> he arrived at Princeton to

<sup>1</sup> The speed must have been unusual, if the story be true that, while yet at Trenton, he heard the firing of the cannon

find the mischief done and "the fox" again escaped.

The story of the victory of Princeton has been often told and well told, and I need not here recount it. The battle was not a great one in the numbers engaged or in the time of its continuance; but short as it was, it was most severe—the British losing about one hundred killed, and about three hundred wounded and prisoners, and the Americans losing about one hundred killed and wounded, including several estimable officers. The saddest loss of the patriots at Princeton was the brave Scot, Hugh Mercer. A native of Scotland, Dr. Mercer had served at Culloden as an assistant surgeon; coming to this country in 1747, he settled in Franklin County, Pennsylvania; he served with Washington in the Indian Wars of 1755 and 1756; subsequently removing to Fredericksburg, in Virginia, where he resided at the commencement of the Revolution, when he was among the first and boldest of those who took up arms for his adopted country, which he loved with all the fervor of a native, and which he served faithfully and fearlessly until his death at Princeton. In the *American Historical Record* of November, 1874, Dr. Lossing gives a capital sketch of General Mercer.<sup>1</sup>

As we have seen, part of the plan devised at Trenton was to go to New Brunswick from Prince-

ton; but, with an overwhelming army of foes all around and his own men well-nigh worn out with fatigue, Washington wisely concluded not to hazard the grand advantages he had gained by the successes of Trenton and Princeton, and quietly went into winter-quarters at Morristown, where he arrived on the 5th of January, 1777.

I have already alluded to the wonderful results of this brief campaign of twelve days. The American Republic emerged from the dark clouds of fear, dread, apprehension and despondency, into the bright light of hope, faith and confidence. The British officers in America were baffled, the authorities in England amazed, the friends of America in England and other countries enheartened, the world electrified. During the whole Revolutionary struggle the movements of these twelve days had no parallel, and the good effected was felt through adversity and prosperity throughout the war.

I have also spoken of the wise act of the Congress in making General Washington

actual commander-in-chief, and one of the best consequences of the successes at Trenton and Princeton was that they strengthened the Congress in pursuing this new common-sense policy, revived popular confidence in him, and aided him in recruiting and organizing a national army.

The winter at Morristown was not spent in idleness: recruiting for the new army was prosecuted with zeal, and before the opening of the spring Washington found himself in command of ten thousand men, largely regulars of his national army, officered under his own direct control, and well provided and equipped as compared with former American troops. Meanwhile, constant incursions by scouting and foraging parties had compelled the British to keep within the lines of New Brunswick and Amboy.

GENERAL MERCER.

From a Photograph in possession of Dr. Lossing.

<sup>1</sup> The two portraits of General Mercer are both apparently well authenticated, dissimilar as they are, and we cannot decide as to their respective merits, except that the first appears to show a much younger man than the General was when killed.

## THE MOORISH EMPIRE IN SPAIN.

BY EDWARD THOMPSON.

MOHAMMED lived between 570 and 652. His creed, at first despised and insignificant, gained followers rapidly during the closing years of his life, and still more rapidly after his death, when rival sects, claiming sole orthodoxy, rivaled each other in proselytism east, north, south and west. Like a circle in water, the progress was consistent on every side; and while some planted the green banner in Ispahan and India, and carried it forward so effectually against China that its influence has to be reckoned in all later history of the empires; while growing in Northern Turkey to the grand conquest of Constantinople and the overthrow of the Byzantine Empire in 1300, that we have already sketched, and dispossessing Thoth and Sesostris in Egypt by Amru, lieutenant of Caliph Omar in 640, it flashed across the whole Mediterranean littoral of Africa and penetrated above the Cataracts and beyond the Sahara, and remains in the ascendant there to this day.

The most brilliant chapter of the new creed was written in Spain. There it conquered a sturdier if not a finer civilization than the one it overthrew in Turkey; the Gothic Empire contrasting with the later Greek as unadorned strength with effete beauty and languor. The successive stages

by which the Moslem creed won its way through Tripoli, Tunis, Algiers and Morocco to the Atlantic are hardly worth describing, and indeed present few salient features.

The people had no common creed or political polity; had no culture or zeal or energy. They comprised races that united and dissipated according to caprice; and though fierce and warlike, and as determined to resist invasion as in the times of Scipio and Hannibal, had no bond of union and no great resources. Their hot blood was fired by the sensuous incitements and enthusiasm which overrun Arabia, and Mohammed's creed rather flashed along their way than fought for its victory. The Fatimito Caliphs of Northern

MOORISH GATE AND BUILDING.

Africa were strong enough to vaunt their superiority over the Caliphs of Bagdad, by whom, when the Shiite and Sunnite controversy arose, precedence was claimed over the central authority, recognized by most of the Moslem world, at Damascus. The root of the Fatimito power was purely Saracenic. It included the blood of the best races of Northern Africa—men fiery in love and war, but patient to study and capable of sustained efforts. They were learned beyond the nations of Europe, then plunged in the intellectual night of the Middle Ages, and preserved law,

medicine, and the arts and sciences from grave loss. Having no vital creed, these races accepted that of Islam so soon as they were convinced that it was propagated by strong swords as well as by

by the Count's daughter. The story is apocryphal, perhaps; but there is no doubt that when the Caliph Walid had authorized Muza to agree with the Count in 710, Muza despatched a force across

HALL OF ABENCERRAGES, ALHAMBRA, GREECE.

perceptible allurements, and carried the crusade successfully onward to the Spanish province of Mauritania. Muza, the Arab commander, was then approached by the emissaries of Count Julian with proposals to enter Spain and dethrone Roderic the Goth, on account of indignities suffered

the Strait of Gibraltar under his lieutenant Taric, and began the great epopee that lasted, with continuous and brilliant acts, to the reign of Ferdinand and Isabella.

The government of Spain at that time was Gothic and divided. There was little concentra-

tion of authority, little knowledge of any kind, and little industry or patriotism or faith to atone for general decay from the period of Cæsar's rule. Taric found almost no resistance when he landed and was able to recruit and organize his men unopposed. He won his first great victory after three days of hard fighting, near Cadiz, somewhere between 711 and 714. As soon as a secure lodgement was made, Muza himself arrived with reinforcements, and overran the country with a poor show of resistance. The

Goths had weakened in an alien climate, and the Spaniards were so degenerate or careless that they refused to make the effort necessary; and when Muza's son, Abdelaziz, married Roderic's widow,

GATE OF JUSTICE, ALHAMBRA.

Egilona, he was enabled to draw many of the Goths and Spaniards under his banner. Two of the new rulers, brothers, ruled in Africa when he and Taric were both summoned to Damascus by Caliph Walid. But their removal had no lasting effect on their government. There were dissensions in the Saracenic ranks which helped the Gothic hero, Pelago, to gain renown. These sprang from unwillingness to recognize the authority of Damascus, rather than from intestine controversies or fear; and

the work of subjugation went forward until Abderahman, the eleventh Emir, was defeated by Charles Martel at Tours in 732. Then some successes won by Alphonso, a Spanish ruler, occurring

HALL OF THE FOUNTAIN.

at the instant when Abdul Abbas, the Abasside, overthrew the Ommeyade dynasty at Damascus, and when a rebellion in Barbary threatened Moorish power there, in its immediate fountain, the Cordovan Walids made Abderrahman, son of an Ommeyade caliph, the head of an independent government that grew into the brilliant Moorish dominion in Spain. Abdul rallied an army of twenty thousand men, defeated the Abasside faction, be-

came real Caliph of Cordova, and made the King of Asturias and Galicia tributary to him. Charlemagne interfered to protect Gothic power, and took the territory called the Spanish March in 778, but was signally defeated in the memorable battle of Roncesvalles, and all his conquests were regained. Thereafter Abderrahman conciliated the Christians, built grand mosques, consolidated his power, and began the agricultural, commercial, scientific and literary power afterwards attained.

Following Abderrahman's death, Al-

Hakem put down an insurrection in Fezzan, that wished to be independent of Spanish rule; defeated the Goth Alfonso, and waged war with France along the Marches. The war began with the Christians,

FOUNTAIN OF LIONS.

years. He, however, conquered the independent states of Barcelona, Navarre and Leon, before hostile, and thereby did much for his race. The Ommeyades caliphate closed with the deposition of Hixem in 1031, after two hundred and eighty years of government over most of Spain; and this close left a number of petty kings, wrangling with one another and with Christians: the King of Badajoz, who ruled most of Portugal, being chief in a confederation of Moorish princes. Ferdinand I. of Castile, who had Roderigo the Cid for his

A MOORISH DWELLING.

general, warred thirty years and to his death, in 1072, with all the Moorish power. The kings of Seville, Leon, Cordova and other provinces, however, took courage from Spanish dissensions, and when Al-

that if it had ever paused after Tarric's arrival, was never more to rest; and each side was hampered by intestine wars. The Moors, however, through all this period, encouraged learning, the arts and sciences, and even the ladies of their harems were conspicuous for knowledge. Al-Hakem warred with Cordova and Leon to 976, and Almanzor, having defeated Sancho, would have consolidated power but for rebellion in Africa that was unappeased for

fonso VI. of Leon, consolidated the Spanish power in New Castile, Mohammed summoned the Almo-

to save Cordova and Seville, and they were forced to surrender to the Almoravides in 1094, when

Jusuf became unquestioned Emperor of all Moslem Spain and Portugal. His son, Ali, crushed Alphonso at Ucles in a reign and campaign of fourteen years. But Christian dissensions were healed under these losses, while the hatred of the polished Moors of Spain for their rude African co-religionists increased, and Raymond took Saragossa and conquered at Davoca. Ali himself was called to put down the rebellious Almohades in Africa, in 1133; but his lieutenants withstood Alphonso of Aragon and Navarre successfully until 1139, when they were terribly defeated at Ourique in Portugal, by Alphonso Henriques.

The immediate results of this battle were great. The Spanish Moors at once expelled the Almoravides they had summoned from all Spain, when Ali was suffering defeat in Africa. The African Almohade caliph seized the opportunity, and arrived in person to rule the more tempting land. He conquered the insurgent feudatories in 1157; revived science and letters, and patronized the famous Averrhoes, and enabled his successor, Yusuf, to restore the perfect empire before his death in 1184. Spanish strength was at this period greatly sapped by the enmity of the Jews, who had been and were mercilessly oppressed; and when, at the close of the century, a fresh

MOHAMMEDAN GUEST CHAMBER.

ravive Arabs from Morocco. Jusuf came with an army, and the Moslems won another great victory at Badajoz. No aid could be gained from France

host from Africa threatened Castile, Yacub conquered Alfonso in the great battle of Alarcos and gained all New Castile. Mohammed Abu levied

A STATE DINNER.

a vigorous war and was met by equal, having French aid. The opposing forces met at Tolosa in the summer of 1212, and, if history is true where it presumably lies, one hundred thousand Moors were killed and sixty thousand were captured by Alfonso, and the great Almohade dynasty fell.

While the last of this brilliant and illustrious dynasty were struggling with the kings of Saragossa, Ferdinand III. induced the King of Portugal to aid the kings of Castile, Leon and Aragon, and their combined forces drove all the Moslem power save that of minor and discontented kings of Estremadura, Murcia, Valencia and Algarve, to their last stronghold in Granada. This city fell in 1252; and before 1275 Alfonso the Wise, and Leon, had put down and extinguished the Moslem

power in Granada that had encouraged agriculture, introduced sericulture, founded manufactures and created a great system of irrigation; erected and supported schools and hospitals, patronized letters, and made a very brilliant age in the heat of war and prevalent and continued disorder. The son of Mohammed, the deposed ruler of Granada, brought a scion of the Almohade dynasty from Africa, to war with the common Christian foe, and gained great victories at a heavy price, in Aragon as well as in Granada. At the close of the thirteenth century Granada was overrun by Castile; then torn by Nasar's revolt and by petty dissensions, so

that in 1331 Castile vainly attempted to wrest the great stronghold of Gibraltar from the Moorish government of Granada. The endeavor drew another Moorish army from Africa, and then Portugal united with Castile and Navarre, and won a desperate victory at the battle of Rio Salado and

DEVOTIONAL ATTITUDES.

took Algeciras. Not twenty years later, a conspiracy under Abu Said depleted the weakening power

of Granada. Abu was crowned, killed, and succeeded by Mohammed; he by his son Jusuf, who invaded Murcia, recovered the throne in 1407 and reigned brilliantly to 1430.

Then the savage rule of Mohammed VII. lost power to Castile and made Granada the last foothold of Moorish power tributary to the conqueror. Civil wars helped Ferdinand and Isabella to the victory they achieved

over King Muza, last ruler of his race, in 1491, at the hands of Gonsalvo. The terms made were honorable to Spanish as to Moorish valor. The latter revolted on account of the infraction of some religious stipulations in the treaty and because they were baptized, unwillingly, wholesale; but after subjugation the survivors were allowed to return to Africa. And so after a rule of eight hundred illustrious years—years made great by the greatest attainments and culture and effects that still survive there and over the world—the sons of Tarik and Muza returned, as poor as their fathers left, to the kingdom they always retained and still hold.

Such is the political and military history, briefly outlined, of that brilliant dream of Oriental romance in Southern Europe, that has

created as much esteem since its overthrow as it did alarm during its existence. Seen chiefly through romance, it is softened and mellowed to our observation. In reality it de-

MINARET.

MOHAMMEDAN TOMB.

serves great regard. The administration, though under the code of the Koran, was singularly efficient and pure, and was the immediate cause that popularized the "Thousand and One Nights" tales of Eastern origin. The laws of Bagdad and Damascus were carried with the arms of that authority; but as years elapsed they were accommodated to new conditions and became gracious to Jews and Christians, liberal and kindly. The tenure of property was as safe as in England. Crime was promptly repressed. The mosques were the universal and sufficient asylums for want as well as early seats of those institutions of learning that conserved the unsurpassed medical, architectural, chemical, mineralogical, historical, musical, textual, poetic, and other skill and knowledge of a race whose Alhambra is today unsurpassed by any structure for durability, lightness and grace; whose bridges stand now as they were created; whose irrigation only needs renewal to enrich the land;

MOORISH HALL.

whose majolica-ware founded the most admirable exhibit of its class in our Centennial; whose swords, copying the Damascene and preceding the Tolosan, had a temper our best miss; who made Cordovan leather the unapproached superior of every land; whose glass united the strength of French plate with the limpid excellence of Venetian and Japanese; whose silk and worsted and woolen fabrications might be profitably copied now; whose vineyards were unexcelled—who were as great and efficient contributors to modern culture as any, and carried the mathematics to as high a pitch as song and dance.

The Alhambra of Granada was one of the most famous Moorish structures. It was begun in 1248 and finished in 1314. It is outside of the city, fortified, prepared to accommodate forty thousand men, and contains a palace surrounded by forests and gardens. The Hall of the Abencerrages was laid with marble, stuccoed and ornamented with fine designs in brilliant colors on

the walls, and these designs and colors are as clear and brilliant to-day as they were five centuries since. The ceiling of cedar, inlaid with mother-of-pearls, silver and ivory, has no northern equal. The Hall of Lions is a more grand apartment

plash of waters and motion of leaves are heard everywhere, and no vivid fancy is required to recall the brilliancy of the time when heroes whose scimitars surpassed Spanish swords, listened to the lute in company of ladies versed in all

THE CATHEDRAL OF SEVILLE (ORIGINALLY A MOSQUE).

in the same palace, and receives its name from a marble and alabaster fountain supported by marble lions, that stands in the centre. All portions are carved with infinite detail and rare skill; broad passages border the interior; the

Avicenna's lore, and as beautiful as beauty itself. The entrances to the great buildings combined Norman strength with Saracenic skill, and thousands of Christian slaves taken in war were employed in carving the endless details that half

tailed the strength which was the chief thought. The engraving we furnish of a Moorish Gate will compare favorably in proportions and beauty with the Arc de Triomphe that was Napoleon III.'s great trophy to Paris; and the Moorish Gate was simply an appropriate entrance to greater attractions,

wards occupied by a Mosque. The Giralda, or chief muezzin tower, was erected in 1196, and was carried to the present height of 350 feet in 1568. The Alcuzar of the same city is as old, and is in some particulars comparable with the Granadan Alhambra. The Cathedral of Cordova

CATHEDRAL OF CORDOVA (ORIGINALLY A MOSQUE).

like the French stands solitary. The Tower is in the form of a minaret, and was used for summoning the faithful to arms or to prayer, and as a watch-tower.

The Cathedral of Seville, that forms one of our attractions, stands on the site of an old temple sacred to Asarte, in the days of Phœnician supremacy, and then to Salambo, and that was after-

wards simply the mosque founded by Abderrahman in 786, and enlarged in later years. Originally, the building was supported by twelve hundred pillars, of which a third have been removed. Spanish power in its greatest day has never equalled the architecture, the culture, the music or the freedom of that it suppressed—which the world still recalls and mourns.

## THE LONG WATCH.—A TRUE STORY.

BY SHEELAH.

"MEDICAL students are not the only disturbers of graves," said the old man, in a meditative tone, while his eyes were fixed as though memory had brought up some far-off scene to his mental view. "Hungry wolves will soon scent a dead body," he continued, "no matter where it is buried, and make short work in dissecting it." Then added, after a pause, and speaking slowly, "I remember witnessing a watch once which convinced me that wherever true affection exists the dead receive as much attention as the living."

I expressed my curiosity to hear the case to which he alluded; and the old man related the following tale:

"The early settlers of Minnesota led a wild life. Society was a mixture of all classes and many nations, though the largest proportion was French, Indian and half-breeds. The business chiefly carried on in St. Paul was in lumber and furs, in both of which I was pretty extensively engaged.

In that delightful climate the air is so pure and exhilarating that only to breathe it is a constant joy. It keeps the spirit always buoyant and the heart young, and gives a zest to out-door sports such as none but the experienced can understand. I had joined many a hunting party, and bear, deer and buffalo I had brought down in scores with my own hand. I knew all the pleasures of the sport, from the excitement of the chase to the gay, rollicking supper and song at the camp-fire at close of day. Even when winter came, and the immense logs that blazed in the fireplace were scarcely sufficient to temper the frosty air within doors, I wanted to be out on the free plains, under the clear vault of heaven. So one bright December I joined a party of half-breeds on a trapping expedition.

Our way lay westward, but we crossed the Mississippi in a few minutes on a bridge built by the strong hand of winter. Then, over the firm, crisp snow our sleds shot smoothly; and soon the shingled roofs of St. Paul and the smoke above them were out of sight. How bracing the keen air! How our nostrils expanded to take it in, and our chests heaved with the pleasurable sensation of the elastic element dancing through our

lungs! Nowhere, I believe, can you feel the current of life with such actuating force through every part of your system as when bathing in the full enjoyment of Minnesota's atmosphere!

On we sped, by stream and lake and hill and forest, all sparkling in the sun's rays with the gorgeous adornings bestowed on them by the frost king. I had galloped over the same region on horseback amid summer's bloom, when the trees and soil were clothed with verdure, and flowers perfumed the balmy breeze, and waters gaily danced, and birds and insects filled the air with life and harmony; yet never had my eye feasted on scenes of richer beauty than those which surrounded me now in their glittering winter robes.

But you will think me enthusiastic about the charms of my favorite State; and that was not the subject upon which I started."

Here the old man paused, running his fingers through his thin hair, in search of scattered thoughts.

"O, yes," he said, "I was going out on that trapping party. Well, a few hours brought us to the trapping ground, on the banks of the Minnesota—that beautiful river from which the State received its name, and which means sky-tinted water, in the poetic language of the Dakota. We set our traps and then encamped for the night. The next day we proceeded ten miles farther, and again set our traps. So we went on for five days, and then the weather showed indications of coming snow.

We were now on a beautiful prairie, in the centre of which was a log cabin built especially for the accommodation of hunters. I therefore proposed to remain here and attend to the traps in this vicinity in case of a deep snow, while the trappers should divide into parties, according to the number of the sleds, and hasten to the different trapping grounds, to secure the game already caught, returning for me on the way home.

This plan being approved, I was soon left alone, when I immediately proceeded to the cabin, where I left my gun and package of provisions; and, taking a hatchet, went out to cut as much wood

as I should require to burn through the night. When I had procured a good supply and piled it in the hut the day was quite advanced, and the chilly northeast wind warned me that the snow was not far off. So I hastened around to visit the traps, and was surprised to find how many were already sprung. I returned with a good harvest to the hut, intending to take off the skins and cure them at my leisure. I then made a good fire, prepared a comfortable supper, shook up the long prairie grass that had been piled there in the fall, and spreading my rug and blanket, had a bed fit for a king.

But while I slept the snow fell thick and fast, and when I awoke in the morning I found that my cabin was buried up to the very roof; and only through the chimney could the daylight reach me. My fire had burned low, so I hastened to pile wood upon it until I had plenty of light and warmth. I then prepared a good breakfast, after partaking of which I took my hatchet and began to cut a passage through the snow, from the door. I worked hard for a couple of hours, and by that time reached the surface, through a slanting tunnel just wide enough to admit my body. How beautiful the country appeared, covered with a pure, white soil, in which the trees were sunk to their branches, and these all dressed with feathers of the same glittering purity, while above was a clear, blue sky, and the sun shining with dazzling splendor upon the holy scene!

I returned to my hut and employed the rest of the day in taking off the skins of my game and curing them. The carcasses I took out and buried at some distance in the snow. I then cut some branches for burning, and dragging them to the mouth of the tunnel, I entered the hut and made myself comfortable for the night. The door had been but frail, and the weight of the snow had burst it in; so I now just propped it up to keep the cold air out. I had my supper of deer steak, pemmican, hard bread and coffee, and then having put plenty of wood on the fire, I went to bed.

But I did not drop asleep. I lay looking at the wood blazing merrily on the hearth, and the sparks flying up the chimney until my attention was attracted to the sound of crashing among the branches at the mouth of the tunnel. It is a wolf I said, who scents food, and springing up I seized my gun, and the moment the door was thrown in I fired.

When the noise and smoke from my gun had subsided, I saw that the approach of my dreaded visitor had stopped; and anxious to see if he was killed or only stunned, I snatched a brand from the fire and went to the door, when—Oh, horror! a stream of blood was trickling over the white snow from a man's head in the aperture.

The agony I felt at the thought of having killed a fellow-creature was terrible. A cold sweat broke over me, and my hair stood on end. But a groan from my poor victim showed me he was not dead, and gave me hope that I was not a murderer. And now, with more strength than I had supposed I possessed, I tore away the snow to widen the passage, and taking the wounded man by the shoulders, I drew him forward, resting his head upon my knees until I could get my arms around him, and then I lifted him to my bed and laid him on it. With another burning brand, I now examined him closely and found that the ball had entered his head and lodged there. I also discovered, with a shudder, through a swarthy, weather-stained skin, the features of one of my own race.

But, though life was not extinct, I saw that it was fast ebbing. He was quite insensible, only giving signs of life by his deep breathing and an occasional moan. How I wished that I had some knowledge of surgery, though I felt that it was not in the power of mortal skill to save him. I took my handkerchief and bound it around his head as gently as I could; and, that done, I thought I would get a little snow and moisten his lips and wipe the blood from his face. I turned towards the door with this intent when I started to see a crouched figure at the foot of the bed. I stepped into the shade, to let the fire-light fall upon it; and then I saw the dusky face of a young squaw, on every line of which suppressed anguish was legible, while her large eyes were fixed in intense anxiety on the still form before her.

If I was pained before, at the consequences of my hasty shot, how much more now, when I saw that there was a second sufferer? And my heart was heavier than it had ever felt before, as I scooped out a handful of snow, and, returning to the wounded man, pressed a small crumb between the dry lips, and then sponged clean the quiet face. I could do no more, and overcome by my feelings I sunk on my knees beside the bed and prayed earnestly that I might be spared the lifelong misery of blood guiltiness.

Until now the poor Indian girl had neither spoken nor stirred; but when she saw me in the act of prayer she pressed closer to me, and I heard her whisper softly the name of the Dakota's god—Heyoka. With the sound a fresh pang pierced my heart, for it told me that her friend, or husband, who lay dying by my hand had been a worshipper at no Christian shrine, or she would have learned something of his fate. He was evidently a bushranger; one of those renegades of civilization who cast themselves loose from every tie of home and kindred, and adopt the vagrant life of the wilderness. Having thrown aside the habits and restraints of society, the religion of his fathers was forgotten or despised; and now he lay on the verge of eternity, and the wife of his choice knew no power to invoke in his behalf save Heyoka, the false object of Dakota worship. Poor fellow! Oh, how my heart ached over him! I would willingly have given my rash right hand to have saved him. But he never spoke. The burden of guilt, however, was removed from my spirit; and as I wiped the death damp from his brow I felt the calm assurance that I was not condemned as a murderer.

The poor widow uttered no cry and shed no tears when the eyes of her protector closed in his last sleep; but, gathering herself into a heap at his feet, she lay perfectly still, as though her spirit also had gone to seek the happy hunting-grounds beyond the dark lake of death. A couple of hours passed and I became alarmed. Was she, too, dead? I went to her and raised her head; and, to my relief, found she was breathing. It then occurred to me that perhaps she was stupefied by hunger as well as sorrow. No knowing how many hours she may have wandered through the bleak wind and snow after the footsteps of her lord before they reached the hoped-for shelter of the cabin. With this thought I immediately prepared some coffee and broiled a venison steak. I then roused her, drew her towards the fire, and insisted on her partaking of some. She eagerly swallowed a few mouthfuls, and then crept back to her post at the feet of the dead.

It was the longest night I ever spent; but at last morning appeared, and I arose to make preparation for the disposal of the body, already stiffening. The first thing I saw as I turned to the door was the heap of blood-stained snow, and I sickened at the sight. It must not remain another

minute. The poor mourner who had dragged her skirts over it must never see it. Thanks to the intense cold it had congealed almost as soon as spilt, and now lay in black clots amongst the fragments of snow that I had broken away when taking the wounded man from the aperture. I gathered it up into one of the skins, and taking it out, buried it in the snow, though I knew it would soon be found by the wolves, as the hole in which I had deposited the game the day before was torn open and left empty.

I now returned to the cabin, and once more arousing the downcast squaw, asked her, by signs, how she wished the remains buried. She quickly comprehended me, and rising to her feet imperatively indicated her intention of taking sole charge of the dead herself. I had no right to persist in offering obtrusive attentions. If the bereaved creature desired to be left alone with her great grief, and if it would be any consolation to her to perform the last duties to the dead by her unaided self, there was no reason why she should not be permitted to do so. I therefore instantly decided to leave her in possession of the hut. So I packed my skins and slung them over my shoulder, took up the fatal gun, and, leaving the remainder of my provisions, I departed.

Once outside under the clear vault of heaven, away from the presence of that cold, still face, I strapped on my snow-shoes and started, determined to keep warm by rapid motion until the teams should come along. The pure, elastic air and bright sunshine, with the glistening beauty that met my eye on every side, had restored my spirits to their usual glow by the time the trappers joined me. They had had fine luck, and were in high glee, which I did not damp by the story of my adventure. I merely told them that there was an Indian party in the cabin, with whom I should like to leave some provisions; and as they had plenty of game this was easily done. So I packed a good supply on a sled, and left the men preparing the noon meal, while I sped back to the dreary house of death with food for the living. I found the fire burnt down, and the lone watcher again crouched on the ground beside the still body. I quietly placed the provisions I had brought on the rough table; and after replenishing the fire again retreated.

Our homeward trip over the glistening snow had nothing worth recounting. I was again in

the city, occupied with the dull routine of business; but my mind was ever travelling back to that snow-buried hut on the distant prairie, and that sad watcher kneeling by her silent dead, while the hungry wolf prowled around, and perhaps broke into the unguarded retreat. This last horrible picture made such an impression on my mind that I could scarcely rest, and at length concluded that I must go out and see how matters stood in the prairie cabin.

It was about a month since the memorable trapping excursion, when I harnessed a single horse-sled, and started alone on the painful visit. The insupportable ride through the rarefied atmosphere had not its usual charm for me, so anxious had I become about the fate of the devoted squaw; and when at last I reached the lonely cabin, I dreaded to enter lest I should find only the bones of the ill-fated pair.

As I came near I noticed that the mouth of my tunnel was much wider and well tramped around, while wolf-tracks were numerous. Again, I noticed for some distance, black, half-burnt sticks, indicating that fiery brands had been flung at the hungry hutes by the lone tenant of the hut. Finally I summoned courage to creep through the tunnel, which was now quite wide enough to render entrance easy. But the door I found firmly fastened against me. As this showed signs of life within, I knocked and talked to prove that I was a human visitor, and to my joy the young squaw stood before me. I asked her, by signs, if she had lived alone there since we parted. She nodded assent; and I saw by a few skins that hung in a corner how she had fed herself in her solitary home. And as I glanced around, I also saw what had kept her there. At the end of the hut farthest from the fire was a long bench of snow; and, as it gleamed and glistened in the light of the flickering blaze, a sensation of dread solemnity came over me, for I knew it was a coffin which the loving widow had formed with her own hands around the body of her lord. I need not now ask why she had not returned to her tribe, and taken shelter in the wigwam of her father. The fond duty of protecting the remains of him she loved from desecration by the beasts of the wild, nerved her to bury herself with him amid the deep snows of winter. I regretted much that I had not brought a stock of provisions and other comforts with me, which I should have done if I

had hoped to find the desolate creature still here. I, however, gave her what food I had and a buffalo robe, though I should suffer both cold and hunger for want of them.

That night I made my lodging by a good fire in a clump of woods, and returned next day to St. Paul. But I still could think of nothing but the dreary life of the poor devoted creature, who had been widowed by my instrumentality, and in a few weeks I again contrived to leave my business and visit her. This time I packed my sled with a good supply of plain comforts, such as I knew a child of the wilderness would appreciate. I found her exactly as I had left her; but she seemed to regard me a little friendly now, and accepted my presents with an expression of satisfaction.

Nor after that did I forget the poor, lone thing. When the spring thaw had begun, and I knew the frozen tomb must give way, and other disposal must be made of the precious remains, I again visited the prairie cabin. As I expected, the scene was quite changed. The snow had sunk from around the hut to within about a foot of the ground, and a few yards from the door was a scaffold at which the squaw was busy working. She had dug holes in the ground in which she had planted poles securely, and on them had placed cross poles and a platform of bark, which she was now tying with thongs made of dried skins. I knew the melancholy purpose for which this scaffold was intended, and was glad I was in time to assist with the final arrangements. The widow seemed pleased when I examined the strength and soundness of her structure and pronounced it perfect. She then led the way into the hut, where I saw that the snow-tomb was melting. Some large sheets of bark lay ready beside it; and taking the hatchet I proceeded to remove the snow. In a short time I had the body uncovered, which had been so well preserved by the frost that it looked as if death had but just taken place. There were neither tears or groans as the faithful squaw helped to re coffin the form she so well loved; and when the bark was firmly closed, her steady arms assisted to bear it out and raise it upon the platform her affection had erected. The solemn duty over, I took my leave and, full of grave thought, departed.

Thenceforth that scaffold was faithfully watched, that neither bird or beast should touch its occupants, until one summer day I turned aside from a bear hunt, and once more approached the cabin.

On the beautiful prairie grass, near the open door, sat the widow, but no longer alone, for across her lap lay a little papoose of two or three weeks old. Rejoiced to see that this comfort had been sent to the desolate heart, I bowed kindly and returned to my party.

At a subsequent hunt that spot was again reached, but the cabin was empty; and where the

scaffold had stood was a grave, fenced around with strong stakes. The poor widow had faithfully watched the body until sure that the flesh had all dried away, when she laid it reverently in the ground without fear of its being molested. Then her long watch was ended; and, lifting her papoose to her shoulder, she travelled away to the wigwams of her tribe."

### AN AZTEC VASE.<sup>1</sup>

BY ELIZABETH OAKES SMITH.

A SIMPLE vase, three inches high,  
Shaped like a gourd half cut in twain,  
Pinched at the neck, and painted o'er  
With flowering grape in blackened dye;  
A quaint, small vessel, with the grain  
Of the old palm, which at the door

Of the rude cottage, years ago  
Amid his dark-browed children, brought  
Its shape from out the golden sand.  
For countless years bright suns have shone  
Since thou wert part of Aztec thought,  
And deftly grew beneath his hand.

Yet thou, small, unregarded thing,  
A potsherd in the golden gate,  
Thou dost survive the wrecks of time—  
Thou dost survive the deadly wing  
Of dark Oblivion, and the fate  
Of buried Empires—in their prime

When thou wast fashioned. Stately trees  
Have grown above thee, and far down  
Their old entangled roots have spread—  
Dark worshippers with bended knees—  
Great Kings, and Priests—mitre and Crown—  
Gone with the unremembered dead:

Old cities with their ceaseless crowd  
Have felt the lapsing of a pall  
That hushed for aye their mighty tread,  
And laid them silent neath the shroud,  
And left thee only here from all  
The long-forgotten, countless dead.

What were thy uses in the yore?  
Did slender fingers in their need  
Clasp thy deft shape, filled to the brim  
With milk of cocoa-nut, or store

Of festal honey?—savory seed?  
Or aromatic herb? or dim,

Rich, purple grape? or golden rind  
Of citron? Did the mother yield  
Thy pretty bulk, to take the spleen  
Of fretful child, while she may bind  
The palm-leaf cradle? or a-field  
Drive the soft lama's silky sheen?

Amid the embers wast thou seen  
Brimmed with some fine, concocted drink,  
And stirred about with yellow reed?  
Or by the doorsill flecked with green,  
Did pette! Congar kitten drink,  
And lap from out thy depths his feed?

Did dusky widow, days of yore,  
Keep thee, remembrancer of grief,  
On bracket high, her sign of woe,  
And thou the ashes held in store  
Of her old feather-mounted Chief,  
Cremated in the long-ago:

Brown-handed maidens, bright and young  
Filled thee with berries—rude with fun  
Tossed at each other lily bells—  
Or piled thee up with red beans, strung  
On cactus thread. All, all are gone,  
And Time through thee their requiem knells.

Sweet idyls look from out thy face—  
Loves of the long-ago smile here—  
Songs by the Aztec lover sung  
To listening maid with blushing grace—  
The lullaby, the mother's tear,  
Over thy disk have shadows flung.

A thousand years look out from thee  
Thou silent Sphinx, foredoomed to bear  
The burden of a Poet's theme—  
Thanks, brave young friend, whose thought of me  
Has sent this wondrous relic here  
To be my inspiration's dream.

<sup>1</sup> Lines upon an Aztec Vase, from the ruins of an ancient city of Central America, sent the author by Captain A. W. Corliss, Camp McDowell, Arizona Territory.

## THE AMERICAN DRAMA—ITS SUCCESSES AND FAILURES.

BY ALBERT E. LANCASTER.

## THE FIRST PAPER.

A WRITER thirty years ago spoke in the following manner of the American Drama; his words are still so full of significance that we cannot do better than reproduce them here: "It is a subject of deep regret that exertions have not been made to revive dramatic taste in this country, and to place before the people those strong claims it has to their notice, their protection, and their patriotism. . . . Our literary men, and we have many amongst us, have written volumes upon every other subject except that of the drama; their silence has given it a wound, which will take years of incessant study and labor to heal; and, when healed, all their care and attention to preserve. This silence is the more to be reprobated and censured, because in England dramatic history is a part and portion of its literature, identified with its interests, linked to its destiny, and associated with the proudest names in the most exalted walks of learning, science, and piety, and who deemed it a worthy effort not only to indite plays, but make the productions of others the subject of learned criticism; in fact, all their writings show a decided partiality for the welfare of the drama. . . . Whatever opinion our readers may have formed in relation to the dramatic character of our land, it is to be hoped (they may learn) that we are not destitute of plays and play-writers, even if we should add the cruel words, 'such as they are.'"

The history of American dramatic literature is yet to be written, and we predict for it in advance a reward which it has well earned during these long years of neglect. In the following articles on the drama and dramatists of our country, we will undertake to raise the veil which has so long hidden from our sight the beauties of our dramatic literature, and in so doing we feel assured that we shall merit the goodwill of our readers and of the general community.

We cannot stop to give an account of the establishment of the theatre in America, as this would carry us beyond our limits. From a consultation

with the best records, we find that the first American play written and produced before the Revolution, and, in fact, the first American drama mentioned in history, is the "Prince of Parthia." The author of this play, which is sufficiently remarkable to entitle it to notice without regard to its possible merits, was Thomas Godfrey, son of the inventor of the quadrant. It was printed in 1765, when Godfrey was only twenty-two years of age. The next dramatic writer to whom our attention is called is Royal Tyler, who was born in Boston and educated at Harvard College. He received a degree in 1779. When the rebellion of Shay broke out, he was aid-de-camp to General Lincoln, who commanded the troops that marched against him. He was an Assistant Judge to the Supreme Court for six years, and Chief Judge of the Court for six years longer. He died at Brattleboro, Vermont, August 10th, 1825. As a writer for the stage he was the possessor of respectable talent. His first play was "The Contrast," which was acted in New York in 1787. During the course of the same year he produced a farce entitled, "May Day." In 1799 he wrote another farce, "Georgia Spec;" this was meant to ridicule the prevalent rage of the day for speculations in Georgia lands. On the whole, Royal Tyler is to be praised for his attempts to establish a native drama, unfit though he may have been in genuine ability.

The first American dramatist who can be said to have engaged much attention was William Dunlap. In the *American Quarterly Review* for June, 1827, we find the following notice of this writer: "The earliest dramatic writer of New York, and we think the best, was William Dunlap, since better known as a painter than dramatist. This gentleman is the author and translator of many excellent plays; many of the former, written on the spur of the occasion to celebrate anniversaries, are of course hardly amenable to criticism. We regret that we are not able to procure copies of the whole, which are said to amount to upwards of forty in number. Among those we do possess

is a comedy called 'The Father of an Only Child,' which the author in his preface states was written as early as 1788, and to have been at the time of its publication the first and only American play that had come from the press. Setting this question aside, the play of Mr. Dunlap was, we believe, the first American play represented on the stage, and if it had possessed no other claim, would be entitled to particular notice on that account. It is, however, in our opinion, one of the best in our collection." This is high praise from an eminent authority which we cannot pass by without consideration. In the paragraph just quoted, however, the reader will have noticed a few errors, which may be corrected by reference to our previous observations. Not to dwell upon these, we think Dunlap's right to the title "Father of the American Stage" is perfectly just. His position in literature is well assured. He was the intimate friend of the heroes of '76, who made New York their place of abode; he dramatized numerous events of the Revolution, and had them produced at his own theatre; he was the intimate friend of Cooke, Fennel, Cooper, Hodgkinson, Charles Brockden Browne, and other celebrities of the day. As a writer he was plain, though correct, always showing perfect knowledge of his subject, and very particular regarding the data and localities of his plays. Like all men of talent who at that period looked to their pen for means of sustenance, he was poor. Yet he was a very successful dramatist, and some of his dramas netted him large financial rewards. Of these the principal are: "The Father of an Only Child," "The Miser's Wedding," "Lord Leicester," "William Tell," "André," "The Stranger" (adaptation), "False Shame," "Fraternal Discord," "The Wife of Two Husbands," "The Soldier of '76," "Battle of New Orleans," "The Life of a Gambler," and "Robespierre."

About the year 1791 an article appeared in the *American Quarterly*, written by the celebrated James Kirke Paulding, which elicited considerable attention from aspiring dramatists. In this article he declared that by a National Drama we mean, not merely a class of productions written by Americans, but one appealing directly to the national feeling, founded upon domestic incidents, illustrating or satirizing domestic manners, and above all, displaying a generous chivalry in the maintenance and vindication of those great and

illustrious peculiarities of situation and character by which we are distinguished from all other nations. He also spoke of the drama as being worthy the highest exercise of the highest attribute of the mind. Such words could not fail to produce a good effect, and it is even probable that their ultimate effect was greater than we can hope to appreciate. Let us remember to the honor of James Kirke Paulding that he spoke when speech was most needed.

In 1795 a dramatic society was started in New York under the name of the Friendly Club. Two of the principal members were Charles Brockden Browne and Elihu H. Smith. The former had been destined for the bar, but disappointed his friends by ultimately refusing to accept the profession of law. The latter was a practicing physician. Browne afterwards became widely known as a novelist. Smith partly turned his attention to the stage, and wrote a drama called "Edwin and Angelina," which was performed during the year 1796.

A very successful American dramatist of the early period was John Burk, whose tragedy of "Bunker Hill," notwithstanding that it was totally lacking in literary merit, proved almost a gold-mine for the author. This play was printed in 1817, and is described by a cotemporary as a most execrable tragedy of the Grub-street kind. Yet Burk was, in many respects, a man of talent and genuine dramatic instincts. There is considerable merit in some of his other plays, the chief of which are, "Death of Montgomery," "Fortunes of Nigel," "Innkeeper of Abbeville," and "Female Patriotism."

The dramatist who principally calls for attention after Dunlap, is Charles Jared Ingersoll, whose talents were of a superior order. This gentleman was at one time a noted member of the Philadelphia Bar, and his rank in the field of general politics was very high. In his nineteenth year he produced a tragedy in five acts, entitled "Edwy and Elgiva," founded upon incidents in the history of England. This work was very promising, when we take into consideration the youth of the writer, and was acted with great success in one of the chief theatres of Philadelphia. Mr. Ingersoll is likewise the author of "Inchiquin's Letters," a work of considerable merit, at one time very popular; his other dramatic production is a tragedy called "Julian the Apostate," printed in 1834.

In this last-named work are many fine passages, one of which, taken at random, may afford some idea of Mr. Ingersoll's power:

"Tormentor of mankind, my country's plague,  
Ambition's toy, and Superstition's fool,  
Fit archetype of overreached Rome,  
With fame inebriate and begrimed with gore,  
Commenting the vain-glorious pyramid  
Which lifts thy iron sceptre high above  
The prostrate nations trodden down by thee—  
Here, to thy beard, I vow that bloody hate,  
That national and everlasting hate  
Which Persians with their mother's milk imbibe—  
Which in my bones and marrow thrills against thee!"

Both Dunlap and Ingersoll made their appearance as dramatists before the year 1800. Between this date and 1809, there was an absolute dearth of dramatic writing. But the last year mentioned was not destined to pass without bringing forth some good fruit. In the month of May a youth by the name of John Howard Payne appeared in New York as an actor, and obtained great success in his new calling. He played in succession, *Young Norval*, *Hastings*, *Octavian*, *Frederic Fribourg*, *Rolla*, *Edgar*, and *Hamlet*. In a publication dated 1815, Payne is styled the "American *Roscins*." But it is not as an actor that we wish to view him here, but as a dramatist; he is, without doubt, one of the best known dramatic authors that our country has produced. John Howard Payne was born in New York, on the 9th of June, 1794. He made his first appearance on the stage in the city of his birth, as *Young Norval*. His was not the *début* of choice, nor of a momentary fit of youthful ambition; stern necessity alone forced him into the rank of actors. No other resource seemed open to him; and disaster wrung from his father and friends a reluctant permission that he should try his fortune on the stage. The conduct of his patron on this occasion was very creditable. This gentlemen approved the young man's course as an absolute necessity, and stood behind the scenes in company with Payne's father during the entire evening of the twenty-fourth of February, 1809, when the future dramatist confronted a public audience for the first time at the Park Theatre. When only thirteen he had been placed in a counting-house in New York, but his love for literature and the drama had quickly led him astray, and he had soon forsaken the paths of business for the more congenial pursuit of journalism. William Coleman, one of the first

editors of the *Evening Post*, relates the manner in which he became acquainted with Master Payne, and his surprise at finding in a boy of thirteen such strength and maturity of intellect. "I conversed with him for an hour," wrote Coleman; "inquired into his history, the time since he came to reside in this city, and his object in setting on foot the publication in question.<sup>1</sup> His answers were such as to dispel all doubts as to any imposition, and I found that it required an effort on my part to keep up the conversation in as choice a style as his own." Mr. Coleman's idea of Payne may be summed up in a single word: a prodigy.

Payne's success as a *débutant* was complete, and his later career justified popular judgment. On the 4th of June, 1813, he made his appearance in London, and was shortly afterwards offered a permanent position. This proposition, however, he rejected, for of late he had made up his mind to become a playwright; he was not satisfied to remain an interpreter, he wanted to be a creator. At last literary pursuits, particularly those connected with the drama, withdrew him altogether from his original profession. Little by little his name grew to be suggestive no longer of the actor, but of the dramatist. We must not forget to remark, by the way, that his departure from the United States and his sojourn in Europe gave rise to many rumors of his change of sentiment regarding the principles of our government. His associating with lords and dukes was not looked upon favorably; and it was said that upon a certain occasion he offered a toast reflecting upon his countrymen. These reports, founded on malicious rumors, rapidly gained ground; the name of Payne was at last only mentioned in this country as a successful *English* playwright. Slander, however, was gradually forced to give way to truth, and we are now proud to acknowledge that John Howard Payne was indeed, in act and in spirit, a true American. As a poet he is known the world over by a single song, and this song is imperishable—"Home, sweet home."

Payne became, some time after his return to this country, Minister to Tunis. He travelled considerably over the continent, and, as a consequence of his relations with the people of France, he contributed to the English and American stage

<sup>1</sup> Mr. Coleman alludes to the *Thespian Mirror*, a weekly which was greatly admired as the enterprise of an uncommon youth.

several successful translations from French dramas. One of his best original productions is a tragedy entitled "Brutus," which long retained its popularity. The number of plays now ascribed to him is forty-five. The principal of these are, "Oswali of Athens," "Married and Single," "All for the Best," "Brutus, or the Fall of Tarquin," "Virginia," "Spanish Husband," "Therese," "Adeline," "Paoli," "The Guilty Mother," "Madame de Berri," "Mazeppa," "The Italian Bride," "Romulus," and several operas and farces. Many of these plays were popular in their day, and contain much that is worthy of recognition. Payne was a true dramatist, and fully understood the resources of his art. To his experience he was able to add an excellent judgment and naturally good taste. If his productions do not always bear the mark of literary superiority, this fact is perhaps due less to himself than to the period in which he lived. He was not sufficiently strong to rise above his age; but no one can deny that he possessed great and varied talents. The year of his death was 1852.

The next American dramatist who calls for attention here is James N. Barker. This gentleman was a Philadelphian by birth; he was a captain in the artillery, and served on the frontier during the last war with Great Britain; he held during his life several important governmental offices, in which he always distinguished himself by his consistent conduct and honorable bearing. He is best known by his dramatic compositions, which are of more than ordinary merit. As early as 1807 he produced a comedy at the Philadelphia Theatre, entitled "Tears and Smiles," and a melodrama called "The Indian Princess," founded on the story of Pocahontas. Both of these plays were successfully represented. The "Princess" was an excellent piece of work, remarkable for its smoothness and melody. The characters of Rolfe and Percy in this piece, are very skillfully drawn, and their antithetic natures are brought out in strong contrast. The following extract will give an idea of the style of the play:

*Rolfe.* Now my sad friend, cannot e'en this arouse you?  
Still bending with the weight of shoul'der'd Cupid?  
Fie! throw away that bauble, love, my friend:  
That glistening toy of listless laziness,  
Fit only for green girls and growing boys  
To amuse themselves withal. Can an inconstant,  
A fickle changeling, move a man like Percy?

*Percy.* Cold youth, how can you speak of that you feel not,  
You never loved.

*Rolfe.* Humph! yes, in mine own way;  
Marry, 'twas not with sighs and folded arms;  
For nought I sought in it, not misery.  
Sir, I have ambled through all love's gradations  
Most jollily, and seriously the whilst  
I have sworn oaths of love on my knees, yet laugh'd not;  
Complaints and chidings heard, but heeded not;  
Kissed the cheek clear from tear-drops, and yet wept not;  
Listened to vows of truth which I believed not;  
And after have been jilted!—  
*Percy.* Well!  
*Rolfe.* And cared not.  
*Percy.* Call you this loving?

There is much charm and sprightliness in this dialogue, which is not unworthy of George Colman. It is certain that Barker was a talented dramatist, who, like most of his brethren, was influenced by the prevailing tastes of his day. Besides the two plays above mentioned, he is author of "Attila," a tragedy; "The Embargo, or, What News?" "Marmion, or the Battle of Flodden Field," "The Travellers," and "The Armorer's Escape." In 1823 he produced a tragedy entitled "Superstition," the scene of which is laid in New England, one of the principal characters being Goff the Regicide. It has frequently been acted, and is usually considered Barker's worthiest play. Before closing our notice of this author, we must allude to a story that is told of his dramatized version of Scott's "Marmion," a story that is replete with significance. This play was first produced at the Park Theatre, New York, and had an astonishing run. Those concerned, chief among whom was William Dunlap, apprehending a prejudice to exist in the public mind against native productions, announced "Marmion" as a great London success. In order that the actors themselves might remain deceived as to the real state of the case, the managers had the drama packed up like all foreign pieces they were in the habit of receiving, and made it arrive in the midst of rehearsal, when it was gravely opened and shown around as an English production. By this stratagem, the piece obtained an impartial trial; and thousands lavished applause, who, if they had known the American origin of the play, would have been unanimous in condemning it. After the success of "Marmion" had become assured, its rightful author was announced; from this moment it ceased to attract. The moral of this story is evident.

An American dramatist of merit and reputation is M. M. Noah, author of "The Fortress of Sor-

rento," "The Grecian Captive," "The Grand Canal," "Marion," "Oh, Yes!" "She would be a Soldier," "The Siege of Yorktown," "Paul and Alexis," "Yeseff Caramatti," and a comedy entitled, "Seven Years in the Life of a Politician." All of these plays were acted with great success. A drama from the pen of Noah always created a sensation in the green-room. A clever writer relates of the first night of the performance of "The Grecian Captive," that each of the audience, on entering the theatre, was presented with a printed copy of the play. This was a sad annoyance to the poor actors, very few of whom knew their parts; and, when the curtain arose, and they perceived that each auditor had a book before him, they were scarcely able to articulate what little they had committed to memory. The embarrassment was universal; but when the audience wet their thumbs and all turned over the pages together, the effect was ludicrous in the extreme.

In fact, Noah was one of the literary lions of his day; according to a cotemporary, he told the best story, rounded the best sentences, and wrote the best play of all the writers of the period. While holding a political office, he wrote several of the pieces mentioned above, every one of which met with eminent success. When a boy, he was a regular attendant of the Chestnut Street Theatre, seldom missing a night. A love of the drama was with him an absorbing passion. According to his own statement, he always retired to bed, after witnessing a play gratified and improved. His first regular attempt at dramatic composition was "The Fortress of Sorrento," a not very cleverly constructed melodrama. During the year 1812 he was requested by Mr. Young to write a play for his wife's benefit, and, acceding to this petition, he produced a little piece called "Paul and Alexis," which proved to be a genuine success. "She Would be a Soldier" was written in three days for Mrs. Hackett, who made her *début* in this play, which secured her an excellent house. His next attempts at dramatic writing were "Marion," and "The Grecian Captive," both of which greatly added to the author's reputation. The remainder of Noah's productions were always seized with avidity by theatrical managers. His last work was "The Siege of Tripoli," which was brought out for his own benefit. The single night of this representation is a memorable

one. The piece was elegantly mounted, the house crowded with beauty and fashion; everything went off in the best possible manner; but a short time after the audience had retired, the Park Theatre was discovered to be on fire, and in a few hours was a heap of ruins. This conflagration seemed to destroy all Noah's energy, for since that occasion he was peaceably employed in settling affairs of State. We may add, to his honor as a man, that he always showed a most magnanimous spirit, never allowing his own misfortunes to interfere with the possible happiness of others. As a dramatist, he was strong and rapid at effects, overflowing with wit, and pleasing in his style. Some of his plays might be advantageously revived.

From about the year 1815 the number of our American dramatists increased considerably. Among the accessions was Lucius Junius Booth, whose tragedy of "Ugolino" was first played at the Arch Street Theatre, Philadelphia, for the benefit of Mr. H. Wallack. This play possesses much poetic merit, and its author was certainly a ripe scholar and a man of good taste and mental acquisitions. David Paul Brown was the writer of two tragedies, namely, "Sertorius" and "The Prophet of St. Paul's." The first of these was acted by the elder Booth in his palmy days with great success. Concerning its merits we need only say that it has bravely stood the test of severe criticism. The latter of the two plays was performed several times, but never with the same degree of success as its companion piece. "The Prophet of St. Paul's," like the dramatic productions of Hillhouse and Longfellow, is better adapted for the reader than for the stage. A critic of the period under consideration speaks of Mr. Brown's style as being smooth and harmonious. Besides a familiar acquaintance with the best models, he possessed a delicate ear, quickly alive to discord. In "Sertorius" it would be difficult to find a single jarring line. The subjoined extract from "The Prophet" is a good specimen of Mr. Brown's manner:

"Thus to emerge

From the dark, struggling, adverse clouds of fate,  
Like the bright sun from a tempestuous sky  
Or the dark bosom of the stormy main,  
All radiant and majestic in his glory,—  
How much more god-like than when rosy hours  
And gentle fanning zephyrs cling around  
His golden chariot, and enamored shed  
Their golden incense o'er his burnished track!"

Two rather clever playwrights were Mrs. Carr, author of "The Fair American," "Benevolent Lawyers," etc., and Charles Breck, author of two pieces, "The Trust" and "The Chase." Samuel Chapman was both an actor and a dramatist, and displayed genuine talents in each capacity. Some of his plays were very successful at the time of their production; from among these we select for mention, "Dr. Foster," "Gasparoni," "The Red Rover," and "The Mail Robbers." Chapman was very highly thought of, both as a man and as a writer, by his cotemporaries; yet he was strangely unfortunate in most of his affairs—money affairs above all. Upon one occasion, when he was playing Staunton, in the "Heart of Midlothian," after gallantly defending Madge Wildfire from the Scotch rabble, he was himself pursued by the sheriff's officers; he escaped, however, in his stage clothes, and found refuge with a friend. Of course an apology was proffered to the audience for poor Sam's "sudden indisposition." His death was brought about by a fall from a horse.

Charles P. Clinch is an honored name in our dramatic annals. This gentleman was the author of four plays, entitled respectively, "The Spy," "The Avenger's Vow," "The Expelled Collegians," and "The First of May in New York." All these were acted with distinguished success. G. W. Curtis wrote a play called "Pocohontas," founded upon the well known American tradition. During its performance it attracted large audiences. It was originally brought out at the Walnut Street Theatre, Philadelphia, and was first printed in the year 1830. The drama placed Mr. Curtis strongly before public notice, and thereafter he gave up a considerable portion of his time to dramatic composition. He is the author of several other plays, the best known of which are "The Launch of Columbia," "The Railroad," "The Pawnee Chief." Da Ponte, an Americanized Italian, produced two tragedies: "The Italian Husband," and "The Roman Wife." Very little is known of this gentleman's personal history.

Many people now living may remember the name of Robert W. Ewing, who, during the years 1825 and 1826, acquired a reputation as a theatrical critic; he wrote under the signature of "Jacques" and became known as a severe censor of the stage. As a dramatic author he showed considerable proficiency, although it may be as-

sumed that the quality of his plays was not proportionate to the quantity. The list of his writings includes "Le Solitaire," "Sponge Again," "The Frontier Maid," "La Fayette," and "Bride of Death."

We can only afford a passing allusion to such names as Manly B. Fowler, John Henry, David Humphreys, Samuel Low, Robert Merry, John Ingham, and Samuel B. Judah. All these gentlemen had original plays produced, but at present there is little left to be remembered of them save their names. It is probable that the theatre owes more than we can perfectly estimate to their efforts and experience; unfortunately our dramatic history throws no light upon their careers, and while in most of their cases a single play is ascribed to each of them, it would be useless to reproduce merely the titles.

The same bare mention will not apply to Isaac Harby. This gentleman wrote three tragedies, "Alberti," "The Gordian Knot," and "Alexander Serverus." His death, which occurred in 1828, ended a short but brilliant career. Like all authors, Mr. Harby had his difficulties and annoyances; but the most provoking and at the same time amusing incident in his dramatic experiences occurred when he presented his beautiful tragedy of "Alberti" to the manager of the Charleston Theatre in 1818; that enlightened person, after attempting a perusal of the manuscript, reported upon it in the following choice language: "De englese was not very coot, dat de play and de incidents were outre bad, very, and he must write de somethin' to catch de people; Mr. Harby vish to write like de Shakspeare man, one great big genius, eh! by gar?"

In 1807 Harby produced the "Gordian Knot." When he first presented it for acceptance he waited a month before calling to learn the manager's decision, and then was informed that the play had not yet been read. But the manager hastened to add that he would make it his business to read it the following week. To make matters more sure, however, Harby requested that prince of comedians, Hatton, to use his influence in the interest of the play; Hatton, in compliance with this desire, expressed a high opinion of the drama, alluded to its splendid stage effects, and the certainty of its drawing crowded houses. A short time later the manager concluded to accept it. In 1819 the celebrated tragedy "Alberti" was

brought out, the principal character having been written for Mr. Cooper. It was highly successful, and is in fact an excellent piece of classical composition. The original object in the writing of the play was a vindication of the character and conduct of Lorenzo De Medici from the calumnies of the Italian dramatist, Alfieri, in his tragedy called "The Conspiracy of the Pazzi." To express

in a few brief words an opinion of Harby, we may say with assurance that he accomplished much good work, and that, if he had lived, his undoubted talents might have acquired admirable development. His death was deeply regretted by all who knew him personally, and especially by those who took real interest in the progress of dramatic art.

---

**"UP AT THE BARRACKS."**

By MRS. ALICE V. COLLIER.

In these days, while we are all requesting our friends, after the manner of the American tourists, to "go us at something old," a leaf from the history of the late war may recall to the mind of some "old soldier," with more or less vividness, scenes with which he was daily familiar, but which have faded from memory as completely as if they too had occurred a hundred years ago. In the ancient city of Frederick (or Fredericktown, as it was called in revolutionary times), in the State of Maryland, are some oblong buildings of brick, not unlike a brick in shape, forming three sides of a square, which were built and occupied by soldiers of revolutionary renown. These buildings are upon the summit of what is known as "Bentztown Hill," in the southern portion of the city, and at the outbreak of the rebellion were enclosed, together with several acres of unoccupied and neatly-sodded ground, with a high white board fence. A room or two in one of these old rookeries was generally tenanted by a seedy individual, designated in the vernacular of the townspeople, as "the man that lives up at the Barracks," and the residents in the immediate neighborhood of this spot of ground are even to this day spoken of by those slow-going Southerners, who do just "as my father did," as "the people who live up at the Barracks," although the old buildings have been torn down long since, and the State Institute for the Education of the Deaf and Dumb erected upon the site.

Let us transport ourselves in imagination back to a sultry afternoon in August of the year 1863. As we emerge from our dwelling into the narrow

street, lined with houses of red brick, the hot sun pours his rays down upon the sidewalk, of the same uncompromising, glaring red, and the very air seems to be quivering with the heat reflected from the houses that hem us in, and the hot bricks under our feet. We proceed for a short distance on Market street until we arrive at the foot of Bentztown Hill. Passing Jail street on our right and the classic locality of Cow street on our left, we soon reach the summit of the hill; in other words we are "up at the barracks." Before us is an arched gateway, which announces in large black letters upon a white ground, that we are at the entrance to the United States Army General Hospital; at the right side of this arched entrance for vehicles is a smaller roofed one; here a soldier sits with musket on knees, apparently absorbed in a yellow-covered romance; but as we draw near we see that he has succumbed to the drowsy god, and, dreaming doubtless of "the girl I left behind me," the entrancing volume is slowly slipping from his grasp. We awaken him, show our passes, "admit Mrs. A., and Mrs. B., and servants," and enter. Within, besides the revolutionary relics of brick and mortar, are innumerable wooden barracks, and white tents dot the green sward at available places between them. In those olden times, our grandmamma has said, "several fair damsels of Fredericktown became enamored of certain dashing Hessians, and receiving proposals from them of a solemn nature, they, nothing loth, bestowed upon them hand and fortune, but after a few short weeks of happiness the gay Lotharios left them, never to return. One of these remained

true to this first love, but at her death her unromantic relatives had her maiden name engraved upon her tombstone."

Wooden sidewalks lead to the barracks, and we proceed to our destination, Barrack S. Let us sit down a moment at the parlor door, as Mr. Van Higgins, the head nurse, calls it. The wooden barracks are all of them painted white, and in front of each is a small plot of ground enclosed with a picket fence, also painted white, and many have been converted into miniature flower-gardens; the convalescents have amused themselves designing shields, flags, mottoes, and so forth; the forget-me-not and gaily nodding larkspur here prove themselves to be true blue, and the little musk plant lends its perfume to "Union Forever." Down either side of the barrack extends the long rows of cots with their sick and wounded occupants. In the centre of the building is Sister Mary Aloysia, bending over an open prescription book on the table before her; now taking from the medicine closet the required articles, she carefully pours the directed quantity into wineglass and tumbler, and the nurses standing by in slippers proceed to administer it in their respective wards. Occasionally a refractory patient declares he will not take the medicine "because it tastes so bad," and Sister Aloysia has to be called. She glides noiselessly to the bedside, the wings of her white coronet waving, a look of sympathy upon her mild countenance; a few soothing words, and the nauseous dose is swallowed, followed by a very wry face when her back is turned.

It is ineffably sad and touching at this hour, when perfect stillness reigns throughout the barrack, to look upon these suffering forms stretched upon their beds of torture, some uneasily sleeping, others grasping with their hands the iron bedsteads, patiently enduring. Hark! a sudden scream followed by pitiful sobbing causes several to start nervously from their sleep. The cries proceed from the occupant of a cot at the left, near the door. Go up to the bed and look at the card affixed; on it is written, "Herman Morrison. Age 16. Rifle ball in thigh. Incurable." Taking the vacant chair at his side, and putting the damp black hair back from his forehead, you take the little hot restless hands in yours, and soon he becomes quiet, and you learn the sad story of his life. The youngest and now the last of three brothers, he passed through several battles un-

harmed. Recently engaged in the skirmish at Monocacy Junction, he received a rifle ball in his hip, and was brought to the hospital. How he turns his head restlessly from side to side and inquires of a nurse passing with a glass of water, "Jim, where's father?" At this moment an elderly man with a worn look enters, and you resign your place. In this corner lies a youth with a face of deathly pallor; "shot through the lungs," the nurse tells you in a whisper. Here sitting on the side of his cot, writing upon the little pine-table before him, is Joe Grandon, an empty sleeve hanging at his left side. Next him is Tommy Graves, a fair-skinned boy with a wealth of bright curling hair which many a young lady might envy, his wounded foot resting upon an empty cracker-box; he is just now intently watching a game of checkers, played by two convalescents in calico dressing-gowns, on which astonishing red roses are blooming. Poor William Baker, emaciated to a skeleton, lying on a water bed, sees an old comrade slowly walking down the barrack on crutches. "Hello, Skinner, up are you? Good for you, old fellow." Skinner replies, "Just wrote to Laurence King; any word to send?" "Oh! tell him I'm doing bully! Tell him I'm not up yet, though."

Three or four cots are placed along the centre of the barrack containing patients dangerously ill, a screen around one of them where the physicians are trying, the second time, to extract a bullet from the shoulder of a chloroformed New Yorker. Next him is Sam Reynolds, whose limb has been amputated this morning. Ah! here comes the most popular fellow in the barrack, Bernard McMullherran, familiarly known as "Bernie Mac," a young Irishman with a colorless complexion, features rather large and loosely put together, black hair cut very short, a very decided brogue, and a cast of humor in his black eyes. Much merriment does he provoke among the convalescents, and brings a smile into many a pale face by his quips and capers. Holding aloft a huge bone fished from the depths of the pail containing a fluid concocted by "the boys in the kitchen," popularly supposed to be beef soup, he gravely suggests that it be sent to the doctors to be preserved as a "specimin;" lifting the can of milk, he exclaims, "Here's a good cow, shure, boys, that niver goes dry; if she does" (with a comical wink at Pap Serman, looking over the top of a

newspaper, who always professes a supreme contempt for Bernie); "bedad, I'll sell her." Relating an incident about a near relative of his, Bernie was asked how near a relative it was? "How near a relashun is it! Begorra, he wuz goin' to marry a sisther of mine once, me boy, and he didn't do it." A kind-hearted fellow too, is Bernie; if we should drop into a farmhouse a mile or two from the hospital some afternoon, our young gentleman may be seen sitting under the shade of a grape arbor, his chair tilted back against a post, a tin-cup of bonnyclabber in his hand, an apple-pie on his knees and near him a matron with her basket of weekly mending, to to whom Bernie is relating his startling adventures by field and flood. The little flaxen-haired baby "in simple dress of sprinkled pink," opens her blue eyes widely at Bernie's extraordinary gestures and holds her little tin rattle suspended in the air, as if she too had a personal interest in the all engrossing topic—the war. Bonnyclabber and battles satisfactorily discussed, Bernie rises, and shaking hands with the baby and pinching the ear of her gray kitten who lies stretched full length in a slant of sunshine near her, he goes around the corner of the house into the orchard, where a row of harvest-apple trees are "pouting thick" with their golden globes. Armed with a broken fence-rail, Bernie rushes to the attack, and a few well-directed blows, brings down a shower of the golden and mellow fruit. Producing a pillow case, not, we regret to say, of an immaculate whiteness, bearing the United States Sanitary Commission stamp, he rapidly fills it. Then removing his regulation cap from his brow, he draws his sleeve across his forehead, leans against the tree and pauses for a moment apparently admiring the landscape. Then shouldering the pillow-case he clears the fence with a spring, and wends his way along the dusty turnpike, occasionally bursting forth with a strophe of his favorite song:

"Oh, Saycesshun, 'aint you sorre,  
For we will whip you dead!"

There is a general lighting up of faces when Bernie reënters the barrack, and passing along lays an apple in each egerly outstretched hand. But *revenons à nos moutons*. Supper-time approaches, and the first intimation we have of the fact is in the person of a stout dame dressed in black who comes perspiring up the steps carrying a large basket on her arm. She is soon followed by two maidens clad in airy buff lawn and white sun-bonnets, accompanied by a small mulatto boy in a very large and very white apron, who snapping his black eyes inquisitively, and turning his head quickly from side to side, reminds one of a puppet pulled by an invisible string. The ladies drop in by twos and threes until a dozen or more are collected; one of the nurses is despatched to the kitchen for the hospital allowance for the barrack, and while another brings plates, knives, forks, and mugs from the room and places them on the long table covered with green oil-cloth, the ladies proceed to open their baskets and pails, and fill the plates with tempting viands. Snowy mounds of *blancmange*, cups of custard, light rusk and the famous "Maryland biscuit," well buttered, tomatoes, red and crisp, sliced with alternate layers of onions (a dish always greatly relished by the soldiers), and crisp green pickles to "sharpen the appetite," are generously distributed, and thoroughly enjoyed by those who are in the happy and hungry state of convalescence; but yonder boy, wasted to a shadow with chronic diarrhoea, looks wistfully at his neighbor's well-filled plate, and contrasts it with his own scanty allowance of dry toast and tea. While the sick men are eating, the ladies chat pleasantly with them, and make kind inquiries about the health and improvement of each. Supper over, plates and napkins are restored to their respective baskets, and as the twilight shadows begin to lengthen all take their departure. As we also passed the last of the shadowy train, Sister Aloysia, who stands by the door lighting the evening lamps, bids us a soft "Good night!"

## EFFIGIES IN BRASS AND STONE.

BY NELLIE HESS MORRIS.

"THE exact representation or image of a person," is an old definition of the word effigy, and an English art critic of deserved good repute (F. W. Fairholt, F.S.A.) tells us that the word cannot be correctly applied, as it

sometimes is, to portraits, "for it conveys the idea of a more exact imitation." One not thus instructed in advance who should saunter through the old Cathedrals of England, and upon the Continent, and view some of the effigies in stone of old-time worthies and unworthies, could be pardoned for imagining that "a caricature" might have been one of the significations of the term effigy—one who knew better than so to misdefine the term, and yet not blessed with an antiquarian eye-glass for his art-eye, would be prone to conclude that a large proportion of the saints and sinners (especially of those of the male persuasion) deemed worthy by our forefathers of "exact representation" must have been marvelously devoid of good looks, not to say downright ill-looking, to have made such *fac-similia*. The reader must not rashly accept the notions of either of these viewers, for we have veritable tradition to support the assertion that St. Cuthbert was a comely bishop despite his homely effigy which graces his

ELEANOR BOHUN.

old Durham; Bishop Marshall, too, of Exeter, was by no means the long-faced, narrow-faced, half-starved being his "exact representation" in his Cathedral would make us believe, but a "merrie," round-faced, well-fed prelate of the jolliest days of the Roman-English Church, when hearty-feeding was not the least-regarded duty of the good fathers and lay-brethren; and no fair skinner over English history need be told that the Lion-hearted Richard was in good looks, no less than in gallant deeds, a fit mate for the beautiful and charming Berengaria, notwithstanding

Hic iacet margareta quondam uxoris Willielmi Cheyne  
que obiit xlviii die mensis Augusti Anno Domini  
m. cccc. lxxviii. Et est in pace.

MARGARET CHEYNE.

her "image" attests her beauty and grace, while his denies him the merest passability of ordinary homeliness. The fact is, Canova and Thorwaldsen and other masters of monumental sculpture, were so tardy in putting in an appearance that the work of cutting these earlier effigies had to be entrusted to ruder hands, and the still ruder hands of ultra-reformers of the "Praise-God Barebones" type have more than aided the hand of time in materially altering many of the old monumental sculptures by flattening or removing many a nose, fracturing many an arm or leg, and otherwise far

otherwise than in the way of improvement modifying the "exact representations" of the "saints" of "y" oldden tyme." Besides, we must bear in mind that the art judgment of our ancestors of *sae lang syne* was not formed by the study of the masterpieces of Michael Angelo, Canova, Thorwaldsen and other masters of like eminence.

The best effigies of old England, at least as works of art, were the monumental brasses which were deftly inlaid in the floors of all the Cathedrals and many of the Parish Churches. Unfortunately, this class of "idolatrous images," as the extremists of the days of Puritanic extravagance called all the stone and metallic figures of "saints" of the earlier days, was almost utterly destroyed during the brief period wherein those extravagants had the sway in England; the portion of the brasses placed them entirely at the mercy of every individual fanatic that they suffered

TOMB OF QUEEN ELIZABETH.

BISHOP MARSHALL.

far more than the stone images which were more generally destroyed under legal enactments by officers of the law. The few brasses which remain, however, amply sustain the first sentence of this paragraph. For example, the inlaid brass monument of the beautiful Eleanor Bohun, wife of Thomas of Woodstock, Duke of Gloucester, which is preserved, unharmed, in Westminster Abbey, cannot but be admired by the most exacting as a superb piece of fine art, while that of Margaret, wife of William Cheyne, in a small Parish Church a short walk out of London, though entirely different, is no less perfect, despite the rather grotesque angels who hold the pillow for her head.

BISHOP GROSTESTE.

The reader must not understand me as intending to imply that the stone effigies, even of men, are all suggestive of caricature, for many of them are worthy of the most masterly masters of later periods; indeed, there are not a few that could not be excelled. I have not space to cite these, but may take the

ST. AUGUSTINE OF CANTERBURY.

effigy of Henry II., not even one of the best, as an illustration; the face is undoubtedly a fair likeness, as it is the same as that shown upon the coin of his reign; the ease and apparent comfort of his reposing attitude are striking, while the drapery is faultless. I have hinted that the effigies of women are generally pleasing and excellent—that of Berengaria the Queen of Richard I., I have before noticed, and that of Eleanor, Henry II.'s Queen, does justice to the queenly grace and beauty and even haughty dignity which history attributes to her.

The effigies in brass were mostly inlaid in stone, and, as I have said, generally set into the floors of Cathedrals and Churches. Those in stone were cut in every possible form and manner and set in every conceivable place: by far the greater number were in the recumbent posture, each upon the top of the tomb beneath which lay the mortal remains of the subject of the sculptured image, as

seen in the picture of the magnificent tomb of "the good Queen Bess;" man and wife frequently, as was meet, lay side by side beneath, and their effigies side by side on top of, the tomb—as in the case of Henry II. and Eleanor. Some of the stone effigies, however, stood in the porch of the Cathedral or Church, as that of St. Cuthbert at Durham, or as a sentinel at the outer door, as that of St. Augustine at the Chapter-House of Rochester; others, like that of Bishop Marshall, in Exeter, and of Bishop Arthelstane, in Ely Cathedral, stood in niches in the walls, usually inside but sometimes outside; still others, like those of Bishops Wykeham, Fox and Waynflete, of Winchester, in that Cathedral, apparently were formed

BISHOP  
ATHELSTANE.

ST. CUTHBERT.

into ornaments, and placed, as trade-marks, upon the portion of the great edifice each had built, and a few were absolutely cut into ornate brackets,

capitals, etc., as at Lincoln Cathedral, where several of the ancient ecclesiastical dignitaries are thus utilized, the effigy of the great Bishop Grosteste being one of those used on a bracket.

I should add in reference to monumental brasses, that in some instances the stones into which they were inlaid were built into altar-tombs, but these were few in comparison with those in floors, while a very few were built into or attached to walls. Though the number of these memorials destroyed in England was very great, there are more preserved there than on the Continent; in England, the destruction was on religious grounds, and the "saints" alone were the victims, but on the Continent, especially in France, the destruction has occurred during the

BERENGARIA.

repeated revolutions, and the "saints" alone have been spared, and these were a small proportion in the latter and a large proportion in the former, as on the Continent stone was generally preferred for monuments to "saintly" heroes and heroines. Brasses were probably introduced into England from Flanders, and some of the oldest specimens are known to have been the work of Flemish artists. In mediæval documents, the material used for monumental brasses is called *cullen* plate, doubtless a corruption of Collogne plate. This form of memorial was doubtless adopted primarily with a view to economizing space in the area of churches.

There is one class of effigies I have not spoken of which were simply of the bust, often only of the face; I mean those upon coins, medals, royal and other seals, etc. These I cannot treat of here, as they would require a special paper to

BISHOP WAYNFLETE.

discuss them alone. The number of effigies of this class may be imagined better than stated when we recollect that almost every king or emperor had coins of various denominations struck, besides seals and often medals, with what was supposed to be the "exact representation" of his royal features upon each.

HENRY II.

ELEANOR.

## THE NATIVE RACES OF THE PACIFIC STATES.

BY BENSON J. LOSSING, LL.D.

WITHIN a few years the native inhabitants of the country lying between the great Rocky Mountain ranges and the Pacific Ocean have been brought conspicuously to the notice of civilized nations by their continual contact, hostile and otherwise, with our expanding population.

Those native inhabitants, now so few, were very numerous as occupants of an almost unbroken wilderness, in all the region bordering on the Pacific Ocean from Alaska on the north to the narrower part of the Isthmus of Darien on the south, where they were first discovered by Europeans. They might then have been enumerated by millions; and they exhibited almost every phase of primitive society, from the naked reptile- and root-eaters of the interior plains, to the polished and well-clad Aztecs of Central America, whose civilization at a given period was equal if not superior to that of Europeans then. These Aztecs and their kindred were almost decimated by Spanish adventurers in the course of a few years, who trampled out whole tribes and even nations. Everywhere along the western coast of our continent, aboriginal savage races, up to the frozen strait within the Arctic Circle, appear to have melted away like frost in the sunbeams, at the touch of Caucasian civilization. Long ago they might have sorrowfully chanted:

"We, the rightful lords of yore,  
Are the rightful lords no more;  
Like the silver mist, we fail—  
Like the red leaves in the gale—  
Fail, like shadows, when the dawning  
Waves the bright flag of the morning."

Hitherto the ante-Columbian history of these races on our western shores has been wrapped in almost impenetrable mystery. In the vague and unsatisfactory tradition of the tribes; in the records of their conquerors and destroyers, and in the speculations of many writers, is involved nearly all the substance of their past history. The facts are few; and to the faithful and skillful labors of modern searchers after truth, who with marvellous patience and heroic industry have studied these nations in the light of personal observations, we are indebted for a greater portion of our

absolute knowledge of these ancient people—their origin, domestic habits, tribal relations, government, literature and religion.

Whence came these races on our continent? is an unanswered question. Hundreds of philosophers, great and small, have sought in vain for the solution of the problem. Each has put forth his theory with solemn gravity, and maintained it with the pertinacity of a martyr; and each supposition glittered in the sunshine of popular favor, until, at the touch of fact, it exploded like a bubble on the surface of water and was soon almost forgotten.

By the syllogisms of analogy, the origin of these nations has been referred to the Eastern hemisphere, some speculators bringing them from one place and some from another. For example, one learned writer (Alexo Vanegas) proved conclusively to his own mind that America was peopled by Catharginians, for both those ancient north Africans and our Indian tribes worshipped fire, practiced picture-writing, pierced their ears for wearing ornaments in them, signalled news by blazes on the great hills, dressed in their best when going to war, poisoned their arrows, and beat drums and shouted on the battle-field. Another (Lord Kingsborough) proves as conclusively that our Indians are the descendants of the Jews, because of similarity of social customs between the ancient Hebrews and the aborigines of Mexico and of our more southern Pacific States; while credulous Cotton Mather declared: "And though we know not *when* or *how* the Indians first became inhabitants of this mighty continent yet we may guess that probably the devil (whom he called 'the old usurping landlord of America') decoyed these miserable salvages hither, in hopes that the gospel of the Lord Jesus Christ would never come here to destroy or disturb his absolute empire over them." Mather's idea that the red race is morally devilish, and not fairly human except in shape, seems to have always been a prevailing one with the civilized man in our country, especially of the type of the belligerent settler, the selfish trader and the unscrupulous contractor. Might not mere theorists concerning

the origin of our aborigines learn wisdom from Mather, who, when satisfied that the delusion of witchcraft had made a fool of him, declared that the subject was "too dark and deep for ordinary comprehension," and referred its solution "to the day of judgment?"

While writers deny that the aborigines of America are of one race originally, they are compelled to admit that there is found a greater uniformity among these dusky nations than exists in Europe; and all agree in allowing them a remote antiquity.

Some acute ethnologists believe that our Indians have a mixed origin, a portion of them being real aborigines, or first people, and indigenous, while another portion are emigrant races from Asia, Mongolian and Malay. An earnest investigator has come to the conclusion that a portion of the Asiatic emigrants (Malays) came in the course of centuries, by way of the islands of the South Pacific, which they settled, and where their descendants are known as Polynesians, for he has observed that certain tribes in California have skins soft and dark, like those of Polynesia. He also discovered that other analogies existed—both have an "open countenance, one wife, and no tomatark." The Indians of Oregon and other tribes bordering on the Esquimaux of the Polar regions, have features and other characteristics in common with the Mongolians. The conclusion is that the Malays crossed from Southeastern Asia by way of the Pacific Islands, and landed on our continent below San Francisco (for none of that type are found north of that latitude); and that the Mongolians came hither from Northeastern Asia by way of Behring's Straits. The question naturally arises, "If our Indians were originally Asiatics, and of course were familiar with the use of the ox, why did they not tame the bison and cultivate the soil?" Humboldt says, in substance, that "what we call savage nations are the degenerated fragments of ancient civilizations." May not this now answer the above question?

The most persevering, painstaking, industrious and well-informed of those who have undertaken a thorough investigation of this subject is Hubert Howe Bancroft, of San Francisco, California, who, in five octavo volumes, having an aggregate of almost four thousand pages, has presented the results of many years of hard study and skillful labor devoted to the development of the treasures

of this mine of ethnological science.<sup>1</sup> The first volume of the work contains an account of the Wild Tribes, the second tells us of the Civilized Nations, the third treats of their Myths and Languages; the fourth, of their Antiquities, and the fifth, of their Primitive History. The ethnologist, the antiquary, the philologist, and the student of the history of the human race, will find spread out before him in these volumes a vast field over which speculative thought may wander with pleasure and profit. It is an hitherto almost unexplored field, and presents wonders the existence of which was almost unsuspected before they were discovered and revealed by this earnest investigator. That his opinions and theories are always correct and tenable may not be affirmed; but the facts upon which they are founded are so clearly set forth that each reader may easily form his own opinions and theories.

The *Wild* and *Civilized* tribes of the Pacific Coast are not so sharply distinguished by the difference which the words *savage* and *civilized* bear

<sup>1</sup> The Native Races of the Pacific States of North America. By Hubert Howe Bancroft. New York: D. Appleton and Company. 1874. In the preparation of these volumes the author condensed the substance of the productions of twelve hundred authors, and the list of these, with those of others which he consulted, published in his first volume, and arranged in alphabetical order, form a most useful bibliography of the subject. In his condensation he has stated fully and clearly the substance of the matter in these books, and in foot-notes has given liberal quotations from them, at the same time giving full credit to the authors.

As no library in the world contained the necessary books and manuscripts on the subject of the native tribes on the western shores of our continent, Mr. Bancroft began the collection of one, in 1859. After securing everything within his reach in this country, he visited Europe twice, where he spent about two years in making researches in England and in the principal cities on the Continent, and exhausted every available resource. After that he awaited opportunities to pick up works not already in his possession. A rare opportunity soon occurred in the sale of the Royal Library of Mexico that belonged to the unfortunate Emperor Maximilian, and which had been collected during forty years by Don José Maria Andrade, of the City of Mexico. Mr. Bancroft purchased the collection, and thereby added about three thousand volumes to his library. Finally, in 1869, having gathered about sixteen thousand volumes, pamphlets and manuscripts, besides maps, and files of Pacific Coast newspapers, he determined to begin his task. With the assistance of Henry L. Oak he indexed the whole matter in his possession, so as to make reference to it easy and effective, and in 1874 the result of his studies and labors appeared in the volumes here mentioned.

to the minds of enlightened men. It merely answers the conditions implied in the definition of civilization given by Guizot, as an "improved condition of man resulting from the establishment of social order in place of the individual independence of the lawlessness of the savage or barbarous life." Under a strict construction of this definition, none of the native tribes of this continent would rank above barbarians. The *wild* tribes are represented by the savages of Central California, enjoying individual freedom, and trusting to the spontaneous gifts of nature for their daily support, while the Quichés of Guatemala, who have civil government and practice some of the arts, might represent the civilized nations.

The Wild Tribes of the Pacific States (who constitute the large majority) are divided into the Hyperboreans, Columbians, Californians and New Mexicans. The Hyperboreans are those who inhabit the country north of the fifty-fifth parallel, and which includes a greater portion of Alaska. The Columbians occupy the region between the fifty-fifth and forty-second parallels, which is drained by the Columbia River and its tributaries, and embracing our State of Oregon and our Washington Territory, and the British possession of New Columbia. The Californians and New Mexicans are within the boundaries of the State of California and the Territory of New Mexico, including the nations of the Colorado River and Northern Mexico. South of these are the wild tribes of Mexico and Central America, all of whom bear intimate relations to the others.

Of the ante-Columbian history of these dusky nations very little is known excepting what their traditions reveal, and these are utterly unreliable. When a Quiché, speaking of the origin of his people, says, "We came from a country in the far east, and travelled over great tracts of land and water, where we worshipped the sun and adored the morning star," the ardent speculative philosopher would spring to the conclusion that they came from beyond the Atlantic Ocean, or possibly from Canada, across the great lakes, when they really meant that they came from some prairie over the Sierra Nevada or beyond the Rocky Mountains, and had traversed a few plains and crossed a few rivers. The speculations of theorists have built strange structures upon such traditions, and enthusiasts among the Spaniards who first came among these native tribes have

declared that they had positive evidence that St. Thomas preached the gospel among them! Others have discovered analogies in forms of worship and in the mythologies of the Indians in Mexico and Central America which seemed to prove that Buddhism had spread over America, from Asia; but the wise Humboldt, who discovered and recorded these analogies, remarks: "One is tempted to regard these coincidences as purely accidental. One is not justified in supposing that there must have been communication between all semi-barbarous nations who worship the sun, or offer up human beings in sacrifice."

We are not compelled to rely absolutely upon traditions for a knowledge of the ante-Columbian history of these races, particularly of those of Mexico and Central America, for some of them, such as the Aztecs, possessed a literature and practiced symbol-writing after the manner of the Egyptian hieroglyphics. With this writing they kept their national records and perpetuated a knowledge of passing events and astronomical calculations. Their records, in vast quantities, were destroyed by the bigoted priests who followed the Spanish conquerors, because they were pagan productions!

So perished knowledge of highest value concerning the culture and previous history of the natives of that region, and in its stead we have the wildest stories invented by the Spanish invaders, lay and clerical, which have passed for history. That there was literary and scientific culture there and a considerable degree of progress in the fine and useful arts, is attested by monuments which remain. From the fragments of their picture-writing and translations from them; from their monuments of art, and from their historic traditions, Mr. Bancroft has made an exceedingly interesting volume (the fifth) on the Primitive History of the native tribes of Mexico and Central America, extending from the sixth century to the Spanish conquest in the sixteenth century.

The persons, language, social habits, customs, religion, ceremonies, weapons, and domestic utensils, were similar among all the tribes of the Hyperboreans, when the Europeans first saw them, from the Frozen Ocean on whose borders the Esquimaux dwell to the southern verge of Alaska and beyond; and the Columbians had many traits in common with the Hyperboreans. In person, the men and women of the more northern tribes were of medium height, well formed, stout and

healthful. Their complexions were as light as that of a deep brunette; their hair was black, coarse and straight; and their faces were egg-shaped and broad. Those nearer the Columbians were taller and darker. They were all generally filthy in their habits and immoral in their social relations. Chastity and truth were almost unknown virtues. The northern Indian man was master of his household. He married without ceremony, and divorced his wife at pleasure. "A man of forty buys or fights for a spouse of twelve, and when tired of her, whips her and sends her away."

The food of these northern Indians consisted chiefly of fish and deer, and they generally detested salt. Their clothing was made of the skins of beasts; their weapons and utensils were constructed of bones and stones; they never buried their dead but left the bodies wherever they fell or perished, to be devoured by birds and beasts of prey, and at the same time, while they manifested such indifference for the *body*, many showed great respect for the *memory* of the departed, spending a long time in mourning for the dead, cutting off their hair, and never making use of the property of the deceased. Their religious ceremonies consisted chiefly in singing songs, and in making speeches to imaginary beings, thanking them for their assistance in curing diseases.

In some parts of the Hyperborean region, they burned the dead with cruel ceremonies, in which the women, as usual, were chief sufferers. The wife was compelled to ascend the funeral pile, throw herself upon her husband's body, and remain there until almost suffocated, when she was permitted to retire, but had to remain near the body to keep it in a proper position and to tend the fire. If through pain or exhaustion she fell, she was held up and pressed forward to duty by others, and her cries were drowned by wild songs and the beating of drums. Generally the hair was all burned from the head of the wife; and she was compelled to wear a sometimes heavy sack filled with the ashes of her spouse, for two years. Frequently they end this servitude by committing suicide. Some among the northern Rocky Mountains burned with the deceased all of his effects of every kind and those of his nearest relatives, and a family was often thereby reduced to great destitution and sometimes to actual starvation by this custom.

The Columbian group were less savage than

their northern neighbors, and more picturesque in their persons and costumes. The Haidahs especially, who inhabited the shores and islands from the Prince of Wales archipelago to Vancouver's Island, were tall, comely, well formed and of light complexion, some of their girls having skins as fair as that of an English woman. Their hair was black and coarse; their faces were broad, and their cheek-bones were high. The men did not wear garments excepting in very severe weather, when they wore skins, and blankets which they wove from dog's hair and stained with various colors. At other times they covered their skins with a thick coat of paint, and were considered in full dress when this covering was polished. When preparing for a feast, they added figures of birds and beasts, and a coat of grease with the down of water-birds sprinkled over the body. A coat of tar and feathers would have made for them a splendid uniform.

The Haidahs were skillful in the construction of canoes, weapons and implements, and they sculptured stone ingeniously. Their wealth, which consisted of implements, wives and slaves, gave them rank and power. Polygamy was everywhere practiced among them, and the husband had absolute control of his wives. Vice was rife among them, and the whisky of the white man has made them more vicious and degraded. Like their neighbors, the Haidahs burned their dead, and were not unlike them in many of their domestic habits. Their dwellings were lodges made of poles covered with skins or the bark of trees; their food consisted chiefly of fish and sea animals, and the clothing of the women was made of the fibre of wild hemp, prepared for use by being beaten on the rocks. Their government was exceedingly simple and generally absolute in a chief; slavery was universal, and all captives in war were made slaves.

The Nootkas occupy Vancouver's Island and the adjacent continent near the shores, south of the Haidahs, and these with the Shushwaps are principally within British Columbia. The Sound Indians, the Salish and Sahaptins, Chinooks, the more southern members of the Columbian group, inhabit Washington Territory and a part of Oregon. The Sound Indians and the Chinooks are on the seashore, and are superior in development, physically and mentally, to the other tribes of the group within our domain dwelling in the interior east of them. In their general character-

istics they do not any of them differ much from the Haidahs. They are generally of greater stature; but their government, religion, habits, dwellings, food and domestic arrangements were and are nearly the same. Women and slaves perform all manual labor, while the "lords of the soil" remain idle, or engage occasionally in hunting and war. They differ in their languages, but there are many words and phrases common to all these tribes. The Chinooks, the most southerly of this group, have more of the Mongolian type of person, and are more dusky than the others. Their faces are broad and round; their noses are flat and fat, with large nostrils; their mouths are wide and thick-lipped; their eyes black, dull and expressionless, and their hair black, coarse and straight.

The California group proper occupy the whole of the State of California and Southern California in Mexico, and are divided from the Shoshones, an extensive tribe east of the Sierra Nevada, in Southeastern Oregon, Idaho, Nevada and Utah.

There is a greater diversity of tribal names among the California Indians than elsewhere in America; and among them are found the most degraded of the aborigines of our continent. Some of those in Central California do not yet wear clothing, build houses, cultivate the soil, navigate the rivers nor hunt much. They are without morals and religion; and when the Roman Catholic missionaries found them there was no special evil to combat or good to cultivate, they were so near the brute creation. These are the "Digger Indians," who live on roots and sometimes burrow in the ground, that our early overland emigrants to California met on the way.

The Northern Californians are much superior to the Central and Southern Californians, and are not unlike the more southern of the Columbian group. Among them are the Klamaths and Modocs, with whom our government has had some trouble. Those who inhabited the Yosemite Valley were made up of a mixture of tribes, and were outlaws plundering the surrounding tribes, and taking their spoils to that almost inaccessible retreat. These plundered the first white settlers in California, who, in 1850, banded and drove the marauders out of the Valley into the mountains.

As we approach the boundaries of Southern California, we touch upon the outskirts of the region of Aztec civilization and an improvement

in the character of the aborigines is apparent. The early voyagers say that the young people of the adjacent islands were as white as the Spaniards and had light hair and ruddy cheeks; the women having beautiful forms and brilliant eyes, and were modest in their demeanor. In their habits, mode of living, and other social features, the southern Californians were superior to their more northern kindred.

The New Mexican Indians are inhabitants chiefly of northern Mexico, and have been made familiar to us by the depredations of some of their tribes, particularly the Apaches, Comanches and Navajoes. These Indians present many aspects in common with their northern neighbors and display a tinge of the Aztec civilization. The wild tribes of Mexico and Central America differ very little in their general characteristics from those already mentioned.

In this mere glimpse of the Native Races of our Pacific Coast, where the Europeans found them, is suggested a most attractive field for study and research. It gives only a hint of the riches gathered in Mr. Bancroft's five volumes. Two of them are devoted to an exhaustive discussion of the Civilized Nations and their Antiquities, whose dwelling-places were in Mexico and Central America. The pages of the volume that describes the civilized nations glow with themes and incidents as fascinating as those of the wildest romance; while the one that treats of the antiquities of these nations embodies the substance of all that has been written on the subject from the time of the conquest until now.

The whole subject is one of vital interest, especially to Americans, for, over our country, westward of the great Appalachian range of hills, are scattered evidences of the existence of an ancient civilization—the works of a pre-historic people who are known by the general title of The Mound-builders. It seems strange at the first thought that the history of such a people or peoples should have been irrecoverably lost; and yet stranger still is the fact that the very *sites* of the large towns of Pompeii and Herculaneum in Italy—suburban cities almost of the once Mistress of the World, grand and beautiful, with high civilization, should have been utterly forgotten for centuries after their inhumation beneath the ashes and lava thrown out from the horrid throat of Vesuvius.

## THE FAIR PATRIOT OF THE REVOLUTION.

BY DAVID MURDOCH.

## CHAPTER XVII. THE ANTEDILUVIAN DEBATE CONTINUED.

THE stranger calling himself Captain Whittesley was attracting notice, and yet no one knew why, since he had shown his papers to be regular and his bearing was dignified. Elder Swart, however, had as yet no suspicion. Too simple-minded, he believed all men to be as they seemed, yet he could not help being surprised at the effect of Whittesley's eye on some of the Dominies, and while on the way from the church to the court-house hall he said:

"So you know something about our Dominies? I supposed you to be ignorant of all our religion, and of all our private concerns on the west side of the North River. Have you been in Ulster before?"

Just at this moment Jan Freer stepped up to the captain, standing in the path before him, with the evident intention of speaking to him; but the effect of Whittesley's eye on the spirit of the rough Dutchman was like that of a man on an inhabitant of the forest; he all but fell, and allowed the captain to pass; while recovering himself, he stared after Whittesley with mouth open and twisted legs, that showed the uncertainty of their owner's intentions. He was wakened out of his confusion by a full chorus of laughter that came from the loungers standing on the tavern-stoop opposite, whither, through the force of habit, he turned to go.

"What's the matter with you, Jan, that you gape so after the Yankee stranger? You seem as if a witch had scalded you."

"The devil it is, or else the spy is come back again." And he went on to tell the same story of getting the "fifteen shillings and sixpence," and of its being the dearest money he ever earned. He only wished he could hear him say that and count it out to him as before, and he could tell more than any of them knew.

Thus the suspicion grew, and while no man would have dared to put his thoughts into words, there were few who did not feel strangely as this man passed by them even on the other side. By this time it was known that he had broken up the

Classis in some way, and all felt curious to know if he was about to do the same to the Congress. Still Elder Swart, who had taken Captain Whittesley under his care, had no suspicion in his mind.

Congress was met, and had already proceeded to business. They were a set of grave and able men, composed of the best and the wisest of our State, and of whom any State might well be proud. Philip Van Cortlandt sat as President, while around a plain deal table, covered with books and papers, sat the Roosevelts, the Dunscombes, and the Morris's of New York City; Cantine and Rhea of Ulster, with a host of men, such as Adgate and L'Hommedieu, Brasher and Van Zandt, and Wisner of Orange.

The point before the Congress was one that had been discussed warmly on the preceding day, and would have passed but for one of those artful manœuvres which public bodies see played before them, without the possibility of hindrance. The freedom of all the slaves of the State was seriously demanded, and even earnestly prayed for by many. All the members from the city were in favor of it, though it cannot be said of them that their voices were raised through an extra share of humanity, but because, having none or few of their own, it would be no great loss to them; while the members in the country, being sadly pressed for military duty, required their blacks to remain and work for them at home. That kind-hearted man from Suffolk, L'Hommedieu, produced his motion, which had lain on the table for weeks, and would have been acted on before, had not that cautious man from Ulster, Adam De Witt, seen that let but one member be wanting, no quorum would be left, so he slipped out of doors, and the motion fell to the ground for that day.

The other side were in full force, though not over strong, and their orator was in the depth of his argument, as the two men we have spoken of entered. It seemed to Elder Swart as if two or more of the leaders gave a sudden start as they caught a glimpse of his companion's countenance. The orator on his legs evidently felt something

like a cold chill running down his spine, for he faltered in the midst of his sentence; and after reading a resolution against the "expediency of any measure which would liberate the slaves at the present time," sat down confused.

At the close of this act, one member rose in great fervor, arguing the humanity and the justice of a measure which would "set all free, since all were alike entitled to liberty; and what more fit and proper time than the present day, when struggling for it ourselves?"

The answer to this was prompt, and was regarded by the other side as complete.

While these cross-firings were going on, Elder Swart observed that his new-made acquaintance was exchanging signs and motions with persons present, such as he had seen among members of the Masonic order, which excited his attention so much that he resolved to watch more closely; for though he was but a blunt-looking man, the times had developed his perceptive powers so fully, showing that somnolence was no part of his real character, however it might appear. At the very moment his conscience was awakened, Governor Clinton entered the hall, walking right into the centre, exchanging a few courtesies as he passed the different chairs. Sitting down immediately opposite our two acquaintances, he lifted his eyes in a state of abstraction, as if intending to listen, not to see; but the instant he fastened his sight on the man called Whittesley, it seemed as if a snake had fascinated him. Nor did the other shrink from the scrutiny. It was plain that the Governor had the least power of eye: for, as if by impulse, he stooped forward to the ear of Swart's acquaintance, whispering: "Let us leave the hall for a moment."

"No need of that," said the man addressed, who sat in the most imperturbable coolness, while the Governor shook with a visible tremor, like what an animal shows when something alarms it, though it may not move.

"How far are they from us?" was the anxious inquiry of the Governor.

"At the Elbow below," was all that the other said; and it seemed as if his lips did not move as he spoke.

"Who are on board, and for what do they come?" said the State officer, quickly, "and what is the errand that brings them?"

"What he wrote to you concerning, brings

himself, for he would trust no one else; and the love of adventure induced — to steal on board, as she threatened in her letter to your lady."

"My God," said the distressed Governor, "what shall I do? I could shoot him, after despising his bride; but what shall I do with that romantic fool! How shall I dispose of her?"

"She is already disposed of," was the cool answer.

"God be praised," broke in the Governor again. "I can turn *him* off, but *she* would wile the partridge from the hawk; and were she to come here, as she threatened last summer, it would ruin me with my enemies; and yet I would sooner die than see a hair of her head hurt. Where is she gone? You say she is disposed of."

"Stolen, and taken to the mountains," was the answer that came from the strange man; for no one, looking at him, could see that he spoke, unless they narrowly watched his mouth.

"Stolen, and taken to the mountains! Stolen, and taken to the mountains! Gracious heavens! what do you mean? How do you know? Where have you been wandering?"

"Silence, your Excellency. You are observed. Carry that to the President, and sit down in your own place."

The Governor did as he was told, when very soon the President arose and said:

"Gentlemen of the Congress, we have other duties before us than that which now takes up your attention. This missive informs me that the ship Vulture, under the command of General Vaughan, may be expected to put a body of troops on shore somewhere at the mouth of the Rondout for the purpose of destroying the stores in this place, and dispersing this convention of the free State of New York. What is your pleasure in the premises?"

The commotion which arose after this announcement soon gave place to a vigorous debate concerning the duty of the Congress remaining in session till driven from the hall at the point of the bayonet.

"Remain; surely let us remain in the place where our fellow-citizens have put us. It is for us, as the heads of the people, to stand firm and show ourselves to be men of nerve. Our blood may be the shower that will water the root of the tree of liberty, and the pears it will bear in the future years of the country's history will be richer in flavor and more nourishing than the tree of

England, with even Lord Chatham in the topmost branch."

This was said by Colonel Pierre Van Cortlandt, who was furious in his courage, and seemed to have in his mind more than he chose to utter. The next who succeeded him was less restrained, pointing evidently at the Governor, casting glances all the time at that side of the house where Elder Swart and Captain Whittesley were sitting.

"Fight! Yes, let us fight," said Judge Cantine, who had his own reason for being envious of the position which Clinton, the son of an Irishman, occupied over him, a native Dutchman; "there is sometimes good reasons for making a man's cousin a General and another a Governor. There is much in a name. Putting such power into the hands of men near of kin with the enemies of our country; more by reason that cases of Madeira can find their way before kindly offers of services are sent. Fight! yes, rather lose our lives here than our heads on the scaffold."

The Governor, who heard all this and understood the meaning of the insinuation, was waiting to meet these secret thrusts by something that might tell more forcibly than words; but the President, who perceived the storm that was brewing, reminded the members that they had turned aside from the question before them into undignified personalities.

"We have other work upon our hands this day," said he, with great dignity, "than to fall below ourselves, by throwing out dark insinuations, which must tend to divide us, when we ought to show an undivided front to the enemy. You men of classical lore can tell who it was among the ancients, who finding a spy in his camp sent him back to his master, after showing him all his strength, so that a good report might be rendered. How do you mean to meet the enemy, should he be rash enough to land his forces on the river bank?"

The business of the Congress was becoming so confused toward the close of the President's short speech, that his advice all but fell unheeded upon ears listening to private words. It was more of a mob debate than that of sober statesmen. Those persons against whom the insinuations were aimed were hotly engaged with their assailants; and among them Governor Clinton was the hottest. His Milesian blood was up, and would have boiled over, had not Judge Cantine met him as a man

shaped out of Holland clay may be supposed to receive the knuckles of an Irishman in a fury. How far the fray might have been carried, history does not tell, but for the booming of a cannon from the river side which informed the debaters that a common enemy was at hand, which demanded both property and person. Here a calm and dignified member stood up, to whom all gave heed the moment he opened his lips:

"President and Gentlemen: We are on the eve of another struggle; and though it may sound strangely in your ears, I rejoice at the prospect of blood being shed, and of fire being kindled. You will agree with me when I read to you what has been sent hither by a trusty and careful friend in New York, written to me in cipher, with which you must be satisfied through my interpretation:

"TO THE HON. MORRIS:—The messenger who gives this into your hand will explain it fully. Vaughan goes in charge of an expedition to Albany, to fight as he loves to fight. Sir Henry goes to bribe his cousin; Vaughan swears he will burn the spot of blood out, if there be any cousin in this colony of rebels."

With this the hitherto silent member sat down, while a second cannon boomed through the air, which by this time was becoming so filled with voices out of doors that little could have been heard within, however inclined any one might be for speech-making. Besides, the constant going in and coming out prevented the desire which the eager men had of rising up against the treason they imagined they saw in all from whom they differed. Another report, and they separated in hot haste, for now they knew that the danger was imminent. Since Vaughan and his soldiers were near there was no time to lose.

In the meantime all the suspecting members had their eyes on Whittesley. Orders had been privately issued to watch all the roads out of Sopus, and stop every one that might be seen escaping from observation, and bring him before the commanding officer, Colonel Hausbrouck, who, being a true Dutchman, was loyal to that interest. But in the midst of the personal commotion, some say of the fright, which the approach of Vaughan occasioned in the Congress, Whittesley found his way out; nor was it observed, till Elder Swart started up, asking where the Yankee captain had gone.

On the road to Plattekill, riding at full speed, a

single horseman was seen towards the dusk of the evening, but the folks of Sopus had business of their own on hand; and the strange captain was not thought of more that day, though Jan Freer maintained till he died, that it was the same man who had hired him in the night, and gave him fifteen shillings and sixpence for a sail.

#### CHAPTER XVIII. LOVE STRONGER THAN DEATH.

His Majesty's ship, the *Vulture*, well named, was making slow progress up the Hudson River on a special expedition on behalf of the northern army. General Vaughan held a *carte blanche*, on which he might inscribe what he saw fit, provided that the general cause were advanced.

As this voyage was regarded in New York in the light of a pleasure trip for sport, more than as an expedition of a warlike character, there were numbers who sued for permission to join it, so that they might witness with their own eyes those romantic scenes spoken of and sung since the days of Raleigh. In this way the enthusiastic and loyal sought the opportunity of a pleasure sail on board of this powerful ship.

Sir Henry Clinton either sought or demanded a small cabin for himself and family. He held also a *carte blanche* of another character. He deemed that he himself was the sole keeper of his Majesty's private seal; but Vaughan would play second to no one. The king had many friends who dwelt far inland. Messages must be borne thither for their encouragement. Gifts from the crown were to be scattered liberally. Every man must have his price paid to him. Before that could be counted out the man must be known. "George Clinton, Governor of this new State, was well known to be related to Sir Henry, and the rebel might be bought, could he be seen by himself. All efforts had hitherto failed, though friendly word and deed had passed between them, such as gentlemen of self-respect, always show even in times of war. Frequently, in a jocular vein, the knight had threatened to pay the Governor a flying visit, just to see whether his good blood had all oozed out or not; while the latter, with equal good humor, replied that Sir Henry would find that he had plenty of "blood left to show all his Majesty's servants that he was still a man, though he had become a rebel."

These friendly banterings were accompanied, at times, by substantial presents and tokens of

good-will, in the shape of Cheshire cheeses, Burgundy and Port, landed from New York by some skiff that ran in under cover of Fort Washington, where General Clinton, the rebel, kept his Majesty's forces at bay. These unloadings of good cheer were suffered to pass unmolested, the carrier being none the wiser. Mrs. Clinton of the country, sending one time to her ladyship of the city a firkin of her own butter from the cow, with a pot of apple-butter from the orchard, wrote, "It would help Miss Margaret's dry bread to slip down easier."

Sir Henry had come to the conclusion that perhaps his cousin George might be won over to the right side—could he but have a chance of seeing him *incog.*, who could tell what the result might be? There had lately arrived a full pardon for all past offences, and full power was held by himself to advance the colonists who might be worth advancing, to any station. This George Clinton was one of those very men, and, to tell the truth, the worthy knight was so proud of him that he declared boldly, had he been anything else than what he was, a true rebel, he would have despised him as unworthy the name he bore, and no cousin of his.

These explanations are needed to account for the presence of those whom we find on board of the *Vulture* sloop-of-war. In the cabin were seated a deeply interested company, whose countenances denoted an agony of mind and a tenderness of feeling which were in singular contrast to the objects presented on board of a war-vessel.

The main person in this group was a man over fifty years of age, of deeply-lined countenance, showing determination and firmness of purpose, though at this time his lips betrayed the yielding of the soldier to the nature of the man. The quiverings of those lips were the only signs seen of what was moving the strings of his heart. Something more than great public events was the cause of that restlessness, and the fiery glances which shot forth from beneath his bushy eyebrows showed that a crisis of some kind was near at hand. Pacing the cabin floor with uneven steps, when his back was turned he could be seen brushing away the tear, lest his weakness should be betrayed to his friends; though even with his face averted, his frame told the careful observer that deep passion was working within.

A lady, somewhat younger than he, but past

the flower of beauty, sat in a richly ornamented chair, in a still more dejected state of mind than her lord. Her hair, brushed back and raised upon a frame of wire beneath, according to the fashion of the times, showed a brow of more masculine form than one loves to look at in a woman dwelling at home. Not a wrinkle showed her former griefs, if she ever had any, and all lines of care were alike absent from her whole face. She had seen only the sunshine of life; at least no cloud had rested long enough to leave its shadow. A dress of fawn-colored velvet hung loosely upon her body, clasped at the neck by a brilliant diamond, with some smaller gems of the same water in her hair. The robe was no stinted pattern, as the amplitude of its folds showed, even when she sat; but when she arose, the long train, which she managed so gracefully, indicated that she had moved in a wider saloon than the narrow cabin to which she was now confined. Not so careful to restrain her tears as her partner in grief, she was still far from showing a vulgar sorrow. Rising to one of her ecstasies, she took hold of the gentleman's arm, and in the most beseeching and touching manner embraced him before she said:

"Henry! my dear Clinton, let the young men have leave to go in search of our beloved child! let them go but for one day. Alas, it may be too late already. Oh, my dear daughter! where are you at this moment? in the hands of that cruel monster! I entreat you as a wife, a mother, your own wife, to yield and suffer them—one of them if not both—to make the effort. You will reproach yourself forever afterwards, unless you give your consent now."

Sir Henry allowed his lady to vent her grief and her desire in words before he attempted to speak; then turning around and looking calmly but decidedly into her face, he said:

"Georgiana, you must not ask what it is impossible to grant. We are but a few miles from that rebel's nest, and Vaughan has resolved to burn them out, and how can he spare two of his chief officers, when so much depends on suddenness and promptitude? Do not urge it at this critical moment. Duty is above all other considerations."

"Oh, my child! my child! and must I sacrifice thee at the shrine of duty? Oh, surely the God who gave thee to us would look down with leniency upon a neglect that would save life and restore thee. Would that I could as easily fall

before my sovereign at this moment—as easily as I can before my God, and my husband, and I am sure that the parental feeling of the good king would yield at once, and save even a whole city willingly, though they be rebels, for the sake of saving that dear girl, that he put his hand upon and said, 'bless thee, child, for as thou art beautiful now, what wilt thou be in womanhood?' Could he but see her, and hear me! Oh, Clinton, yield, yield as you love me, and would save yourself from bitter days!"

"Duty, duty," was the only answer the agitated father gave, as he kindly led the fainting lady to her seat, and turned away toward the cabin door, which opened at that moment, when there entered two young men dressed in the different uniforms of the army and of the navy, to which they respectively belonged. They were of about the same age, and of the true English build, firm, stout, and yet lithe of limb. Though evidently proud of their station, and ready to do battle in behalf of their king, they were for the moment under the same spell that held Sir Henry and his lady; one bore the family contour of face, and was recognized at once as a son; while the other, of darker hue, and more athletic form than his companion, unmistakably belonged to some branch of the Clintons, of which there are many. The one ran to his mother, who folded him in her arms, and sobbing out, said: "Spare me, O God, one child, since the other has gone. Thy ways are mysterious. The one that was truly the fawn for gentleness and grace has fallen into the jaws of the wolf; and the other, exposed to every danger, is here. How long, thou knowest, O God! O my God!"

The son was silent on her bosom, but his eyelids swam in moisture as he was whispering some words in the ear of the broken-hearted mother, who seemed to give little heed for some minutes, till by-and-by she caught his meaning, and became as still as a child asleep, evidently deeply absorbed in what he was communicating. He rose up kissing her cheek, which she returned with such transport that it appeared more like a farewell embrace than a simple adieu. There were intelligent glances passing between mother and son, which a watchful observer would have understood to mean a mutual understanding as they parted.

In the meantime, the companion of young Clinton, who had just entered, was entreating his

uncle to take the responsibility of allowing him to leave immediately on the search after the captive lady, whom we may guess to be none other than Miss Margaret Clinton, the present ward of our young Dutch maiden, Elsie Schuyler of Hoogenhuisen. The knight was invulnerable to all entreaty, and even angry at the urgency of the youth; though no doubt his anger was assumed to save himself from an open outburst of feeling.

"Urge me no more, Bertram, as you love me and would serve your king. It would ill become even me, though I had the power, to release you from the duty just now before you, since it is mine to encourage merit and bravery, rather than to screen a coward."

"Uncle! Sir Henry, what do you mean!" said the fiery youth, at the sound of the word coward, almost forgetting the distance between himself and the party addressed.

"I mean," said the knight, "that my nephew's name must never be associated with that of coward, even by the breath of suspicion, to which it would be certainly liable if he should be allowed to have his own way."

"God knows, and Sir Henry knows, that the dangers I would encounter are tenfold more than those I would avoid, and most willingly would we encounter both were time not so precious; another day, and my d—" He was going to say, my dear Margaret, but checked himself, saying, "cousin will be on the road to the valley of Ske-nuda-wa, on the Susquehanna, where that villain Kiskataam said his wigwam was still standing. Could I get within pistol-shot of him, that serpent eye of his would not fascinate another bird from its twig, and that smooth, wily tongue would not tell another Indian lie in the shape of a tale."

Silence prevailed in that small circle for some minutes, and when it was broken it was by the chief in self-reproaches at his own former laxity of duty.

"If I had but refused that bewitching child her request, of coming up this cursed fine river with us, there would have been no trouble; but her voice has always been law to me in all things where her love of nature and of the romantic are so perfect. Her raptures as she surveyed this new country and this river, that I hate to look upon now, always charmed me; and by these very means I have lost her altogether. I should have resisted her to the last, and I am justly punished for my tenderness."

"Clinton! Clinton!" said the lady, "do not blame yourself nor the child, for the fault lies with me. I begged on her behalf that she might see the dominions of those Indian kings that she admired; and that false-tongued serpent told her so much of those mountains which we now see in bold outline, that her imagination became fired at the prospect, so that I really thought at the time, her brain might become fevered unless she were gratified with the sight of them. That brilliant fancy has always been a source of exquisite pleasure, and pain. Ah, poor child! how I loved to hear thee tell us of Switzerland, and of Scotland, and wish that you could only see from the top of some high mountain on the vale of the Hudson!"

"I never could bear the hateful savage," said the knight, with great bitterness; "and had my counsel been followed, he would have been dismissed from the service long since. He always quailed under my eye since I ordered him to leave headquarters, where he was found in too close proximity for any one but a friend, or a spy. I believe him to be the man who carried the report of our planned attack upon Fort Washington."

"Yes, your Excellency," said Bertram, "it was your dislike to him that kindled his revenge, so that he has nursed it ever since his last journey to the north and west, and he found the chance too easily when he obtained the help and countenance of another."

"Of another!" all exclaimed at the same moment. "Who else, and why should any one have any design upon such a pure being as Margaret?"

"It may not be known to you," continued Bertram, "that my cousin was urgently pressed to receive the addresses of Colonel Clifford, previous to that unhappy affair between him and his friend C——, which led first to his separation from his young and beautiful wife, and then to her death, when C—— vowed eternal revenge, which made you, Sir Henry, deem it best to send Clifford to the north, under the command of Burgoyne, who gave him the charge of Fort Niagara. I go over these points for the purpose of making out what we used to call a hypothesis."

"Well, Bertram, you are very long in coming to the point; please reach your conclusion as quickly as possible."

"Kiskataam incidentally mentioned the name of Clifford, as an officer he had seen, and when I innocently asked the Indian if he knew the com-

mander of Fort Niagara, he hesitated to answer, and then waived the reply, which I could not account for in any other way than by his being under the pay of Clifford, and he has come on here at this time both to gratify his revenge against Sir Henry and to do the wicked work of his master."

"But Clifford," said Lady Clinton, "would not dare to return to society again. He knows that the king would never allow a man so lost to honor to see his face in the army, or his name upon the list."

"My dear aunt," said Bertram, "men under the power of a fierce passion, will rather lose their souls than go ungratified. Like a wild animal, Clifford thinks only upon the object of his desire. Honor, peace, and future reward, here or hereafter, are all thrown away for the time."

Sir Henry, who sat in astonished silence during Bertram's recital of his suspicions, broke in here, by saying it was "utterly impossible that Clifford, or any man of the army, could be so lost to honor and gratitude as ever to act so unworthy a part, after the responsibility which was taken by myself, to remove him where the stigma would not be seen. Besides, I had a letter from him lately, in which he expresses himself in the most becoming manner. See, there it is at this moment. It refers to matters of a public nature chiefly, but a postscript is added, in which his remembrances of my kindness are made in the most delicate and appropriate manner."

"Please, sir, to say who it was that brought you that communication," said Bertram, with great readiness. "If it was the Indian my suspicions are confirmed."

"It was the villain Kiskataam," said the sorrow-stricken father, now fairly infected with the feeling of his nephew; "and here, in further proof, he says, that business will call him down to the frontier, where the plan is being carried out, along with the Mohawk chief, to remove some captives from the rebel's country back to Fort Niagara. He will be happy to receive any commands from me, or from Miss Margaret, either concerning the war or the romance of this wonderful country, where nature plays on her harps equal to herself."

"Yes," said Bertram, "the dishonored man is somewhere up there, and is at this very hour watching the ship and waiting for his prey. There

is no time to lose, and since we are not to be allowed to leave to-night in search of Margaret, I may as well, in the presence of my aunt and of Clarence, lay my own suit at your feet, and beg you to smile upon our plighted faith."

"Bertram," said Sir Henry, in amazement, "I have no daughter, and if all you tell us be true, there will be but pain remaining for you, and for us, increased by the consent you would obtain in a moment, did I but know how to direct you honorably."

"Oh," said Bertram, "I could run over the mountains like the deer, with the name of the loved one on my lips; and hear me she would. Your consent would give me wings."

"Hear me, then," said the grieved soldier. "Were my daughter present, I would put your hands in one, and give you my blessing. In the meantime, we must to duty, and perhaps a flag of truce to my cousin George, the Ulster rebel, may be effectual. We shall see."

The ship had turned the Elbow, and was catching the wind sufficiently, so that she might at any moment come to anchor. A stiff breeze from the southwest was bringing her into the Rondout Creek, where, under cover of the night, they intended to land a body of men, who were to march up to the village of Sopus, burn and destroy it, and return immediately. A company was detailed under the command of a superior officer, with Clarence Clinton as his aid; Bertram begged, and was allowed to go along as a volunteer, he being a lieutenant on board of this same ship.

"Now, Georgiana, I would give a thousand pounds this day, were you back in New York. This is no place for you, though you be the wife of a soldier." This was said by Sir Henry, in a spirit that showed his mortification at being caught in such a mean attack, which he would have been glad enough to have read about, but being so near was identifying him with it. Besides, the loss of his daughter affected him almost superstitiously; and he would have countermanded Vaughan's orders, if he could but dare the responsibility. Lack of decision was ever his great defect.

"I could wish myself back in England, and you with me," said the Lady Georgiana, "were we honorably out of this murderous war. I believe the judgment of the Almighty is falling on us for the share we have had in robbing so many hearthstones. O God, what right have we to complain

of thy justice, when we are engaged in the very act of destroying the peace of a whole village."

"Georgiana, do have mercy upon me at this hour, if you have none upon yourself. You know that this landing is entirely contrary to my mind. I feel that it must end against us; and it will ruin the plan that I have been preparing for six months past. You know what pains I have been at, indeed, I may say *we*, to conciliate these colonial cousins of ours, now all to be frustrated by the headstrong vanity of Vaughan. Never would I have given my consent to what must break up all our chances of bringing over the very head of this new State, and a general to boot. Curse Vaughan for all this." And with that he went on deck, where he found his son, who, with a restrained voice, asked his father's blessing.

While together, Bertram and Clarence had formed a desperate plan, to which the mother was to be privy—to leave immediately after the attack was completed, and have their names appear among the missing, for which no one would be responsible but themselves. They hoped to be able to justify their conduct by their success. In the meantime, it was necessary to inform Lady Georgiana, lest her heart break at the thought of their being dead, or prisoners among the barbarous rebels. In the anxious and excited state of the mother's mind, the scheme was listened to with delight; and when parting, she exhorted her son to do his "duty like a gallant man first, and then pursue the murderous villain to the end of the earth; but bring me back my dear child—your own sister, my son, and there is my blessing. But what shall I say to your father, when he finds you have not come in with the rest? I must weep, while satisfied that you have gone on my errand."

"Sir Henry," said the youth, "will bear up well till we return, which cannot be more than a week at the most; and if you see a fire on the mountain—that second highest peak that we admired to-day—at midnight, after forty-eight hours, or twenty-four hours beyond that time, know that we are safe, and have got trace of Margaret; then you can tell father."

"Go, then," said the mother, "but I tremble lest you be lost in the mountains. Now I think of it, that rebel cousin of your father's, in one of his letters, sent me this hair ring, which his daughter worked for me. You see that it has the initials of her name in the centre. Should you

get into difficulty, take this, and here is a copy of the note I sent to her, with my thanks. These will prove you to be our son, and the blood relation of that same mock Governor."

"We will keep out of his way, for he may play Brutus, and condemn us all the more sternly because we are his kindred. I have a more certain way of escape than that," said Clarence. "I have heard that same false Kiskataam tell of his places of defence on the tops of these mountains. You saw him sitting with us a whole hour, and pointing along the ridges, marking out distinctly the cloves, and telling us of the roads which lead over the country, so that I can have but little difficulty in tracing him, with some help from the inhabitants. One spot of great interest he told us of, and which seemed to have attractions above the rest, even to him, where two little lakes lie close to each other, on the sides of these hills, fed from the surrounding heights, looking like twin sisters brimful of love, surging over their affections in a stream that quietly steals through the trees till it dashes over a high precipice a few miles below, then finds its way to this river. I can follow that as my guide, and find him safely lodged among his own thickets."

"Clarence, you are too like your sister in that romantic spirit. It may lead you astray, as she has been decoyed; so depend not upon anything you have heard from him, but take these tokens of private friendship to George Clinton. Rebel Governor as he is, he must be an honorable man, possessed of a warm heart. He will not suffer you to be injured should the day go against you."

The two young men agreed upon their signals and upon where they were to meet; two shrill whistles at brief intervals of time, an hour after midnight, unless they met earlier, should the attack be successfully made and over before that time. Bertram had possessed Clarence with the same opinion he had formed himself, that Kiskataam was on his way to Canada by the western route, and their only chance of overtaking him was to start up the mountain at the nearest point, and get beyond the rebel border, when, as king's officers, they would pass free through the country of the friendly tribes, who were the only inhabitants west of the Kaatskills. "We can get before them," said that ardent youth, "for they must travel slowly for Margaret's sake."

"But you said that you believed Clifford was in

this scheme, and will he not be ready to receive her with sufficient force to resist our attempt at rescue?"

"Let us trust to chance for that; none but the brave deserve the fair. A traitor is always a coward; and I am persuaded that the arch hypocrite dare not show himself to Margaret, the daughter of his patron and friend, till the romance is pressed out of her mind, through her captivity and grief. He then will appear as her delivering angel, claiming her hand in gratitude."

"Your love, Bertram, has made your fancy

creative; but it is as well that we be prepared for the worst. Here let us swear fealty on her behalf; living or dying, we are one."

"Agreed," said the other, as he took hold of his friend's hand; "and whoever survives to-night shall carry out the plan to the end."

The order to march ran secretly along the line, when the sense of duty swallowed up everything of individual interest. The sacking of a village or the changing of a guard was the same to men under a rule of iron.

## WOODED AND MARRIED.

### CHAPTER XXI. SUNSHINE AND SHADOW.

THE two friends parted, but not to sleep.

Guy's happiness kept him restless. He would have liked to have sat till morning descanting on the manifold perfections of his betrothed; he had kept Will a full hour after the last "good-night" had been said, listening to his animated plans for the future; but the worn, weary look on Will's face at last warned him to desist, and to tax no longer his sympathising patience.

Strong excitement always stimulated Guy Chicester like new wine; sleep would not come at bidding. Honor's sweet looks, her words, her precious caresses, haunted the happy lover; and though his waking dreams at last terminated in a brief nap, he sprang up long before it was light, and summoning his faithful companion Kellet, set out for one of his interminable walks over hill and dale.

Will, on the contrary, lay open-eyed and anxious long after the darkness had passed into twilight, and twilight into the gray dawning of another day.

Such nights were not new to him. Often and often he had risen from his couch and trimmed the midnight lamp, to relieve bodily uneasiness and induce slumber by hard mental labor. In the darkest hours of his pain such wisdom and strength would come to him, that they who saw his pale face radiant with some secret joy would marvel at the triumph of the soul over so frail a body.

While others slept none saw him kneeling, some-

times for hours, before his open Bible; none knew of the strong cries for help that went up to heaven—of the bitter conflicts that were fought by one poor priest, whom men pitied; none knew the loneliness of the great heart which was learning every day to know its own weakness more—a heart that had chosen poverty and the company of Christ's poor, that asked nothing for itself but to spend and be spent in its Lord's service.

And yet there were times when William Elliott reproached himself for unfaithfulness, when his soul was torn by a sense of unfitness and neglect of duty, when his measure of strength seemed small, when he looked for help and found none. Great souls have these crises; it is the refined metal that goes down into the furnace.

A terrible anxiety was racking the heart and brain of William Elliott when the gray morning broke and found him watching.

"Just like him," he thought, "to remember others in the first hour of his happiness; another man would have wrapped himself in pardonable egotism at such a time. What a grand, whimsical nature it is!—generous, yet as simple as a child. Was it wrong of me to warn him? A man cannot quite outlive his passions; and she—all women are so sensitive. Why, even I, though I love him dearly, I think we should be better friends apart. His will is so strong that it would almost constrain people to sacrifice their conscience, at least in trifles."

He pondered again, and then broke into a fresh

channel: "Only to know what is right—my poor Dym! And yet it would be cruel kindness. I have had my warning, a double one. 'Thus far shalt thou go, and no farther,' seems written up against me if I take this path. A little while ago, and I should have hailed this offer as a godsend; rest, study, friendship—what more could I ask of life? But now I should soon score underneath them idleness, vacuum, soul-weariness. I am not what I was; this northern air is deleterious to my moral nature. Oh, for the safety of the traces again! Shall I venture it for Dym's sake? No, no; I will go back to my old work, though I break down under it."

His right hand clenched itself as it lay on the coverlid; the secret workings of some strong emotion made the cold sweat stand on his forehead. Had he found a lion in his path, that the whole man seemed girding himself up to do battle? "My God, judge Thou the right, for my wisdom has become foolishness to me," he prayed; but still the old argument went on.

"Shall I do evil that good may come? Will it be evil if I do it for my child's sake—she is so young and weak? Will it not be cowardly to shrink from this new work? And yet, if what I fear should happen, would it not have been best to have taught her to depend on her own resources, rather than on so sorry a protector? Poor little Dym! and yet it would make her so happy."

And then a sudden weariness came upon him. "I will wait a few days, and then I will speak to Dym," he said to himself. "Woman's instinct is often wiser than man's reason; perhaps when we discuss it together, I may be better able to judge than I am now." And then he slept.

It was the gray dawn of another day when a strange dream came to him. Falling asleep, a sudden remembrance flashed across him of a childish speech Dym had once made to him. Memory plays us these tricks sometimes; mere trifles come to the recollection of dreaming men, they say, and often in that dim borderland between waking and sleep some vivid image of past days will suddenly arise and startle us.

And so it was that Will drowsily bethought himself of a certain deep hanging lane, full of red nuts and sweet with blackberry thickets, where once, many years ago, he had walked with his little sister.

She was a dark-eyed child then, and he remem-

bered how he had to stoop for her chubby hands to clasp his arm. By and by they had set down on a stile to rest, and he had gathered her a great bunch of rowan-berries.

"You are my king, Will Conqueror, and this shall be your sceptre," she had said, pushing the crimson glory into his hand.

"A poor king, my pet."

Dym played with the mountain-ash thoughtfully.

"Will, when you grow up, I wonder what sort of man you will be."

"What sort? Why, you silly child, like other men, I suppose."

"Oh, no, no," replied the child earnestly; "not like other men, Will; you have a look on your face which reminds me of those men in red and blue in the painted window at church."

"Hush, little profanity; those are saints and martyrs."

"Why don't you be a saint and martyr too, dear? and then when you are dead they will put a glory around your head. Wouldn't you like a glory better than anything, Will?"

"I should like to smell blackberries again," muttered Will, dreamily. Where was he? There was the deep, rutty lane again, the rowan-trees, and the trail of honey-suckle, but no chubby child's hands met over his arm, no sweet child's face lifted itself in the sunshine.

He sat himself down on the old stile; some birds sang from the nut copse, a white butterfly glanced hither and thither; the stillness oppressed him, the green gloom of the overhanging trees, the unchanging sunshine; he felt heart-sick, overwhelmed with sadness. Suddenly, by some strange instinct, he knew he was not alone; some unseen power seemed to root him to the spot; he could not look around, and yet he felt impelled to speak.

"Where is the child?" he asked.

"She is a child no longer," responded a voice behind him; "children seldom weep. Do you know me?"

"I know your voice. Don't let me see your eyes, they would frighten me; men cannot look on angels."

"Am I an angel, then?"

"I will hold your white robe tightly—so. No, you must not leave me. I have lost my way; if you be woman as well as spirit, show me my place."

"Learn wisdom from a child's lips. Look for it among the noble army of martyrs."

"Was she right, then—will they put a glory around my head?"

"Peace, poor soul! there is no glory needed but His; take this." The robe slipped from his nerveless fingers; he was alone. On the ground lay a cross, heavy and spiked with iron; a blood-red cluster of rowan-berries lay upon it.

And the voice! Waking up, Will fell on his knees and stretched out his trembling hands, for he knew that he had entered into the cloud.

"Have you seen Guy this morning?" was Mrs. Chichester's first question, as Will entered the breakfast-room; "Dorothy tells me he has not gone up to London after all."

"It was not necessary, he thought better of it," returned Will, hesitatingly; he was not sure how far he might trench on his friend's confidence. As he took his seat opposite to his hostess, Mrs. Chichester's eyes, dim as they were, were struck by the young clergyman's paleness.

"You do not take care of yourself, my dear Mr. Elliott; you let Guy keep you up too late at nights."

"It was my own fault," returned Will, mildly; "he surprised me in a fireside meditation when he came in from the Cottage."

"What, did he go over to the Cottage again last night?" Mrs. Chichester's tone had a trifle of displeasure in it.

Will wisely held his peace.

"It is time for me to put in an appearance when you cross-examine my friend in my absence, mother," exclaimed her son, gaily, as he and Kelpie entered at that moment, bringing plenty of fresh air with them.

"Why, how you startle one, Guy!" remonstrated his mother, half laughing. "When are you and Kelpie going to leave off your vagabond ways? Put back your hair, you foolish fellow; have you been walking bareheaded in this wind?"

"Wood! I scarcely felt a breath of air. Faugh! we feel like hot-house plants here," as Will hovered at the opening door. "Give me some coffee, *madre*, please. I am afraid I am unromantic enough to state I have an enormous appetite this morning."

Mrs. Chichester looked fondly at her son as her hands were busy among the cups and saucers.

"How well, how handsome he looked!" she thought; "other men were not to compare with him." Perhaps her maternal eyes were partial. Guy Chichester's face was too irregular and strong featured to be called handsome, but it was a goodly face enough for all that, bronzed and ruddy with health, his keen eyes sparkling with animation, and the curly head and beard looking none the worse for being dishevelled by the wind. Mr. Chichester ran his hand carelessly through them as he was bid. "I hope you got more sleep than I did, Elliott. Mother, look at him; he has a headache."

"Nothing to mention," returned Will, his pale face flushing a little. "I think, as I have already breakfasted, that I will go to the library and write some letters; that is, if Mrs. Chichester will excuse me."

"Do so, by all means, and then you will be ready to walk over to the Cottage, presently."

Mrs. Chichester waited till Mr. Elliott had left the room, and then she turned to her son.

"You almost live at the Cottage, Guy, now Honor is better; don't you think it would be as well to cease such frequent visits? It sets people talking, and it is all no use."

Guy Chichester pushed away his plate and walked to the window, he was obviously at a loss how to reply.

"I know you do not like advice on this subject, but you ought to see for yourself that Honor disapproves of it. She has seen Mr. Elliott several times, but she has never yet been well enough to admit you."

"On the contrary, I saw her last night."

Mrs. Chichester looked aggrieved.

"You might have told me so before, Guy."

Guy whistled softly, and took another turn across the room. By-and-by he stopped.

"Mother, should you be glad if I brought you a visitor?"

"That depends on who it is. What, you don't mean to say Dr. Grey will let Miss Elliott come home? O, Guy, I shall be so delighted to get her back."

"Miss Elliott, always Miss Elliott!" returned Guy, impatiently. "How fond you are of that little thing, mother! Have her back, by all means, if the doctor will let you. Not but what you are right, and she is a dear little creature," he added, repenting of his momentary roughness.

"But I was not speaking of her. Mother, may I bring Honor?"

His tone was so peculiar, that Mrs. Chichester looked up into his face quite startled, and what she saw there made her cast her arms about his neck.

"O, Guy, my dear, dear boy! has it come right at last?"

"At last, mother."

"Thank God for it! I have wished it; you know I have wished and prayed for it, Guy."

"I believe you have, Mother."

"It has come to this, that I have been driven to wish my own son were lost to me; if I did not love you better than myself, I should be a miserable woman now."

"Nay, I hope not, *mère chérie*."

"Do you think a mother is happy when she loses her only son? You are my boy—my boy with my husband's eyes—and I must give you up to Honor."

"I can belong to my wife and to my mother too."

"Mothers are strange things. Forgive me, Guy, I am a jealous old woman; but you were my only one, and I have made you my idol. God has punished me for it by giving us all this misery. But you are going to be happy now, my dear. We shall all be happier, shall we not?"

She took her son's hand and kissed it. Guy's heart smote him as he looked down on this fond faithful creature. "He was the only son of his mother, and she was a widow." Had he been all to her that he ought to have been? Had he not left her to her loneliness, distressed her with his strange humors, burdened her with his sorrows and had she ever reproached him? Since his boyhood she had been his gentle companion; the beautiful young mother he remembered singing lullabies over his infant cot had become to him the loving friend of his manhood. He was a man when she had come to him and wept out her widowed tears on his breast. How she had clung to him! With what fond words, with what sacred tears, she had prayed her boy to comfort her! And yet had there not been times when her very love had wearied him—when his pride had chafed under those soft exactions—when he could have wished those silken bonds could have held him no longer? How her jealousy had fretted him! He had revolted against the sweet tyranny of her

monopoly—his mind had larger needs than those of which her woman's soul had dreamed. The widow would have kept her son to herself, but what had he become—a wanderer, a citizen of the world, a voluntary exile. A disappointed love had been her rival; a woman's fair face had come between her son and happiness, and had made discord in their quiet home.

She had taught herself to wish that Honor Nethcote would be his wife; but could she—would she ever be able to love her? The daughter-in-law she had imagined for herself was some soft clinging creature, whom she could have petted and patronized—some one like Dym Elliott, for example, only with Honor's beauty. Would Honor ever come into her heart of hearts, and be a daughter to her? How coldly she had ever borne herself to Guy's mother! There had been no lack of gentleness, perhaps; but the pride, the chilling reserve of her manner, the quiet unchanging rebuke for the distrust that had come between them. Yes, she had injured Honor; but was it not for the younger and happier woman to forgive such injury? Did not Honor's very superiority and nobleness of nature lead her to such reconciliation? The narrowness, the soft bigotry, the pardonable jealousy, that had weakened Mrs. Chichester's influence with her son were impossible faults with Honor. Her love flowed in broader channels—her generosity feared no rival. Guy might have lavished his affection on a thousand objects, and she would have held her place without a moment's doubt.

A gulf of sadness rolled between this mother and son. These misunderstandings are not rare even between two love each other; but it may be doubted if the remorse were not heavier on Guy. All sorts of vague regrets agitated the mind of this singular man, always moved by sudden impulses; his mother's kiss humiliated and abashed him. He could have gone on his knees and asked pardon for all his fitful humors. Good heavens! these mothers have such patience! A thousand, ten thousand times he had wronged her gentleness, and she had borne with him as a very angel might have done. Honor, perfect as she was, had not a tithe of her sweetness and gentleness. What had he done that two such women should love him?

He cast down his eyes and groaned as Mrs. Chichester ventured on her humble caress. Why should she not humble herself before her boy?

"We shall all be happier now, shall we not, dear?" she had asked: but Guy had not as yet bethought himself of an answer.

"Guy, shall I come with you this morning, my dear?"

"You, mother!" rousing up from his reverie.

"Why, it is for me to bring Honor to you."

"Nay, my dear, I do not think so," replied Mrs. Chichester gently. "Six years ago you brought Honor to me; now it is for me to go to her. These cold winds, too, and she is still an invalid. It is not like your wonted wisdom, Guy."

Guy bent down and kissed her abruptly.

"Mother, you are an angel! Yes, you shall come with me." And then, as though he were afraid of trusting himself to say any more, he went quickly out of the room.

The sound of wheels brought Will out of the library. He looked surprised when he saw Mrs. Chichester ready equipped and leaning on her son's arm.

"Are you coming with us, Mr. Elliott?"

"I think so. Dym will be looking for me; but perhaps I may be in your way," he added hastily, as the reason for this early visit became apparent to him.

Mrs. Chichester smiled graciously.

"My son's friend is never in my way. I am only going to see Honor"—she hesitated slightly, as though words were difficult to her; "Guy will have told you what has happened."

Guy nodded.

"You have my warmest congratulations," was Will's answer, as he treated her to one of his winning smiles. "Your son knows what I think of Miss Nethecote."

"You must reserve your congratulations for Guy," returned Mrs. Chichester, a little sadly.

"Do you not remember what the old proverb says about a son marrying?"

"Proverbial philosophy may be at fault sometimes, my dear madam," replied Will earnestly.

"I am no true prophet if you do not find it so in this case. You will have a noble daughter-in-law."

Mrs. Chichester was silent. Every one sang Honor's praises; but when would Honor come and put her arms around her neck, and be a daughter to her?

Honor and Dym were sitting together when Guy's tap was heard at the door. The greeting

between the three was a somewhat silent one. Dym was nervous. She thought Guy wanted Honor to himself, and faltered and almost broke down over the few words she had schooled herself to say to him. Guy saw her embarrassment, and very good-naturedly put an end to it.

"Don't trouble yourself to make a pretty speech, Miss Elliott. I hate congratulations. There, I know exactly what you want to say;" and he patted her hand kindly and turned to his betrothed.

"Honor, my mother is down stairs; she is waiting to see you."

"To see me!" Honor flushed a little, but there was no hesitation in her manner. The visit was evidently unexpected by her. Perhaps in her inmost heart she had wished for a delay; but there was no reluctance in her tone as she said, "We had better go down, then."

But there was a little stateliness in her step as she entered the room, and an exceeding quietness of bearing as Mrs. Chichester came forward to meet her and folded her in her arms.

"My dear Honor! I am so glad of this!"

"It is very kind of you to come and see me, Mrs. Chichester: it was for me to come to you."

"I do not think so, Honor."

"Ah, but it was. When Guy told me you were here, I felt sorry that you should have given yourself such trouble. You should have sent for me, and I would have come."

"I wanted to thank you for your goodness to my son."

Honor's head lifted itself a little proudly; but she looked at Guy, and her eyes grew meek instantly.

"For my goodness to myself, you mean," she said, with a soft smile.

Mrs. Chichester looked at her wistfully, and sighed. How lovely she was this morning—fair enough to gladden any lover's eyes. What mother would not have rejoiced that her son should win for himself such goodness and beauty? And yet Mrs. Chichester sighed.

Honor had placed herself by her side; but already their hands had insensibly fallen asunder. Under her lover's eyes, Miss Nethecote's brief haughtiness had vanished—in her whole mien there was gentleness tempered with reserve; a large benevolence, a chastened joy too deep for words, shone in the clear gray eyes.

Words seemed to break up the even furrows of

her thoughts. Utterance was difficult to her. Not even to Guy's mother could she speak of her happiness. It lay down too deep for mere surface sunshine.

Mrs. Chichester found this silence chilling. She was a demonstrative woman. She liked to express her feelings—to talk out her joy aloud. The "fatted calf," the "coals of fire," were to her goodly interpretations of different phases of life. She liked the outward and visible sign of things. She wanted this woman—so sweet in looks, so silent in tongue—to fall on her neck and call her mother; and she felt disappointed, almost to injury.

"We must forget all that has gone before, and make a fresh beginning," she said a little sadly, when she had waited for Honor to speak, but Honor had still remained silent. "I trust, my dear, that in your heart you have entirely forgiven me."

"For what?" returned Honor, with a look of surprise. "We have forgiven each other, have we not?" The speech jarred on her. Why should the past be brought up again, she thought, to mar the peace of the present? In the old days Mrs. Chichester had not been good to her; but was it for any one to remember it? "Hush! it is not right to speak of this now," she said, with a touch of peremptoriness; but Mrs. Chichester thought her manner was wanting in graciousness.

"I think you are right, Honor," assented Guy in a low voice. He was holding himself aloof from the two women, watching them anxiously. Was it blame to him if he drew comparison between them? if, with the omniscience of love, he read Honor's silence aright, and thought his mother's words less beautiful?

"You are so good, Honor, that I know you will feel rightly about this. But I am growing old, my dear: it will make me happier if you will try to love me."

"I will try," returned Honor simply.

No wonder Mrs. Chichester thought her cold. The daughter she would have had would have knelt at her feet, and kissed her again and again, on hearing such winning words. No marvel if Honor's truthful "I will try," smote chill on her heart.

She arose, with a little sense of injury breaking the sweetness of her humor. "I will go to Miss Elliott now. I daresay Guy wants you to himself for a little while;" and as neither of them dared

to controvert the fact that the interview was slightly irksome to all parties, she was not contradicted. Guy moved with some alacrity to the door, and was only just in time to prevent Mrs. Chichester from a hasty stumble over a little carved footstool that stood in her way.

The fall would have been a serious one; and her son felt justified in administering a rebuke.

"Mother, why have you become a foe to all footstools lately? You must remember you are not as young as you used to be, and you ought not to move about so quickly."

"It was very careless of me," returned his mother. She still panted slightly from the shock, and Guy kept his arm around her. From some cause or other she had turned a little pale.

"You are all right again?" he inquired tenderly.

"Yes, dear; let me go now." But he still detained her.

"Wait a moment, mother; there is no hurry for Miss Elliott. Stewart gave me some letter you had dropped in the carriage. Let me see, where it is?" He dived into his pockets and soon produced it. "Why, it is from Trichy, and I declare the seal still unbroken. Do open it, and let me see what she says about Frank,"

"Won't it do presently? I am really in a hurry to get to Miss Elliott. I will tell you all about it at luncheon time." But Guy chose to be obstinate.

"I would rather hear it now, please."

Mrs. Chichester flushed painfully, and her hand trembled as she broke the seal, and then she handed it to her son. "You may read it for yourself, then, Guy."

"What! before you have looked at it yourself?" he returned in some astonishment. "I don't think Trichy would care for me to read all her letters. Just run over it and tell me the contents."

Poor Mrs. Chichester! She was hardly mistress of herself in this emergency. She adjusted her gold eye-glasses with a hand that even her son noticed shook visibly. Her nervous agitation attracted Miss Nethecote's notice. She leant forward and watched her steadily, and then her face suddenly grew troubled.

"You used not to be such a slow reader, mother; why, you have not turned the first page yet," observed Guy, who already repented of the delay.

"Beatrix's handwriting is so small and cramped; you make me nervous hurrying me so, Guy."

"Small and cramped! Why, I can read that scrawl from here. Let me see. "Yes; Frank sends his love, and says he will not fail to execute Guy's commission. There is a dress parade to-day, and Captain Stewart and Major Drummond"—turn it over—Why, mother, you have got it upside down!"

Guy's impatient tone did not mend matters.

"I did not know; there is so little light in the room," she faltered.

"So little light!" echoed Guy incredulously, for the spring sunshine was flooding the little room.

Honor rose from her seat and put herself between them.

"Don't Guy!" I will not have her teased. Don't you see?" turning to him with a look of pain—"can you not see what is the matter?"

The poor lady stretched out her hands to her son.

"He does not know. I have tried to keep it from him. Guy, my dear boy, you must not be impatient with your mother. I cannot see well; I am going blind."

"Blind!" Guy started and turned pale. Honor looked pitifully up into his face, as he put her aside, and took his poor mother in his arms. What improbable tale was this she was telling him? He looked at her eyes almost angrily; and then he could not disguise from himself that some film seemed gathering over their brown brightness. "Blind!" he repeated in a voice of despair. "O mother, mother!" The poor fellow could hardly contain himself for pity and horror. His heart, always tender over misfortune, swelled indignantly against this new affliction.

Mrs. Chichester leant her head against his shoulder. The pain of concealment was over; her secret was hers no longer. Her son's arms were around her; she felt almost comforted. She cried a little, it is true; and then yielded herself to the sweetness of the consolation.

Guy's misery was intense. If he had ever cloaked his love under a garb of wilfulness or roughness, it stood revealed now; and he knew that in her helplessness she would be dearer to him than the mother of his youth had been. His sad face touched Honor inexpressibly.

"Dear Guy, this blindness may not be irre-

mediable," she half whispered. But Mrs. Chichester heard her.

"They think it is cataract. It will be partial blindness for a few months, perhaps years, Dr. Garnet says. You must not fret about it, Guy. I shall get used to it; and perhaps in a few years, if I consent to an operation, my sight may be restored to me, if—if—"

"If what, darling mother?"

"If what Dr. Garnet fears does not happen;" and in answer to her son's further questions, she admitted that during the past month or two certain symptoms had occurred that made the doctor hesitate in pronouncing it simple cataract. There had been a great deal of pain; and she readily acknowledged that the wisest way would be to place herself without delay under an experienced oculist.

"We will go to town at once. Mother, you have acted wrongly in not telling me before. This delay may be fatal."

Mrs. Chichester shook her head.

"No, Guy; if my fears be true, no oculist can do anything for me. Do not distress yourself, dear. The world will not be quite dark to me when you are in it. When it grows very hard you must help me to bear it;" and she stretched out her hands to her son again; but it was not he who caught them and pressed them to his breast.

"Yes, we will help you, Guy and I. Do not cry. You will have two children to love and cherish you. I will work for you, and read to you, and you shall tell me how to comfort you."

Was that Honor kneeling at her feet, with the tears running down her face? Were those Honor's arms wrapped so tenderly about her? Could it be Honor's voice so broken and full of love?

"You are Guy's mother, and you shall be mine too. I did not love my own mother more dearly than I will love you. When Guy brings me home, you will let me be your daughter?"

"My own daughter!" And as Honor dried the dim eyes on her own handkerchief, and kissed the cheek that had grown wan and faded lately, Mrs. Chichester's head dropped upon that pure bosom, and she whispered, "My God I thank Thee for this; for whereas I was blind, now I see." And Honor, looking up, read her reward in her lover's eyes.

## CHAPTER XXII. WILL CASTS IN HIS LOT WITH ST. LUKE'S.

A FEW days after the family gathering at Nidderdale Cottage, Honor and Dym were sitting together, when William Elliott quietly made his appearance.

It was Dym's last day at the Cottage.

On the following afternoon, Mrs. Chichester and her son were going up to London, and Honor had consented to accompany them. Will had promised to take his sister to Ingleside, and remain a week with her, and then he would go back to St. Luke's.

On the morrow, Humphrey Nethecote would be left alone.

A few days only had passed, but already preparations had been set on foot for the marriage. Neither Guy nor Honor was young; their mutual affection had been proved without a doubt. In this case there was nothing to invite delay; even Humphrey could not raise an objection.

"We have already lost six of our best years," Guy said to his betrothed; "and though I am loth to hurry you, Honor, I think we should not go far into the seventh."

"I will do as you wish," was her simple answer. "When you are ready for me, I will come to you. I am not strong yet, Dr. Grey says, but I grow less weak every day."

"These bleak winds try you," returned Guy, fondly. "The change south will do you good. If we set half the London milliners and dress-makers to work, do you think you can be ready by the middle of May?" he added, mischievously.

He was a little baffled by the smile that accompanied her answer. Of course she would be ready for him. Had he bidden her, she would have married him in the dress she wore. She would have put her hand in his, and followed him through the world, if he had asked her. Had she not given him her heart—her faithful, sorely-tried heart? Had she not elected him king in her woman's kingdom, and could she say him nay in a matter of days and seasons?

Dym, who was rather a harsh censor, as most young persons are before the knowledge of their own angles soften those of other people, felt herself a little disappointed in her estimate of Miss Nethecote's character, when she saw the earnestness, and even anxiety, with which she applied herself to the business of the trousseau.

She and Mrs. Chichester were from morning to night arranging and descanting on the several shades of colors and the difference of material. Guy used to laugh when he came in to fetch Honor for a walk or drive, and found them in the thick of an argument between satin and moire-antique. Honor would be sitting with bent brows over a paper list—for all shopping was to be deferred till they got to London—and Mrs. Chichester, oblivious of the knitting in her lap, would be nodding her head and smoothing her dress with soft excited fingers, as one article after another was specified and checked off.

"Grogam again," Guy would say, with a whimsical smile. "What, is it necessary to be married in all these dresses, Honor?"

But Dym, who knew his ways, saw he was not ill pleased.

The girl had her secret grumble out one day, when Honor and she were alone, which was seldom enough. Mrs. Chichester was always at the Cottage, and Guy came morning, noon and night, and woe betide them all if Honor were absent or busy; his self-sacrifice would not brook her for more than a few hours out of his sight. Dym used to pity Honor for having so exacting a lover, but in her heart she thought it delightful; could any one be more handsome or chivalrous? she thought.

Humphrey used to quiz them sometimes in his slow way; he called them silent and unsociable, and in truth they were very quiet lovers. Dym's shrewd girlish eyes read differently. She saw that Honor was always grave and preoccupied when Guy was not with her; and there was a look in Guy's face, as he followed her slow graceful movement about the room, that told Dym she was the light of his eyes, and the very joy of his heart.

Dym had her own code of ideas on the subject of lovers, and she chose to consider herself a little aggrieved at the fuss and ceremony Honor seemed to consider necessary; not that it was her business she told herself. It must be confessed that Dym was strangely irritable just now.

"I never can understand the fuss people make over weddings and funerals," she said, in her quick, dogmatic way, when Honor had asked her opinion on some trifle or other. "I suppose I like feathers and finery as much as women generally do, but somehow it seems to take off the sacredness of it so."

"I will decide on having a silver-gray silk; Guy likes it. Yes, I know what you mean," looking up. "These things seem incongruous when you are not inclined for them; but one cannot go against custom."

"I never expected to hear that from you, Honor; you are the most unconventional woman I know. I should not have thought," hesitating a little, as though her words might be considered ungracious, "that you would care so much for these things, especially now."

"Why, it is only now that I have begun to care for them. My dear Dym," smiling now as she caught sight of Dym's serious face, "it is very certain that you have never been in love."

"How can you tell that?" returned Dym, obstinately. She flushed up as though Honor's words annoyed her. She was subject to all sorts of cold and hot fits just now.

Mr. Chichester made up his mind his little friend was capricious, but Will grew more gentle with her every day.

"If you had been in love you would understand why I do care so much. You cannot think the pleasure that all this gives me," she went on, wittily. "Don't you know Guy will see me in all these dresses? Have you not found out what a critic he is in such a matter?"

"He said once he liked white," observed Dym, half to herself.

"I shall have some white dresses certainly, evening as well as morning," returned Honor, accepting the suggestion with all gravity. "I have known Guy so long; that I have discovered all his favorite shades. Some colors quite hurt his eyes. It costs me a little trouble, but I know I will gratify him."

She finished with so sweet a smile that Dym felt rebuked for her censoriousness. But not even firm, affectionate and honest-hearted as she was, could guess the breadth and depth of a love like Honor's.

It was just at this juncture that Will entered.

"I did not expect to find you here, Miss Nethecote," he said, with a little surprise, as he quietly greeted them both.

"Mr. Chichester has gone to York," returned Honor, with the frank blush with which she always spoke of him, "and it is so bitterly cold that I have not ventured to go up to Ingleside. Mr. Chichester is coming presently, I believe."

"Yes; she has sent her love, and she will be with you in an hour or two."

"You are tired," observed Honor, with one of her quiet glances, as he drew an easy chair to the fire and spread his thin hands over the blaze.

The corners of Will's mouth showed the fragment of a smile.

"Your supposition is correct, Miss Nethecote, I am afraid. Your happy valley is not to compare with Rasselas's. I think even *ennui* is preferable to east wind."

"Ah, it has made your rheumatism worse."

"Nothing of which to speak," was the somewhat comical answer. "I have only been flagellated by a scourge at every street corner. I think those Greek pagans were to be forgiven for their superstition, when they thought a noisy divinity was bawling in their ears in an unknown language. I wonder if their bones ever ached when they worshipped him."

Honor's only answer was to pile one fragrant pine-knot on another. Will watched the strong white hands as they handled the smooth logs so deftly. When she had done she still kept the place on the rug, looking down on him.

Most women look better in a sitting than a standing attitude; they can walk, but few have the art of posing themselves gracefully. Honor Nethecote never looked better than she did now; her grand figure, drawn to its full height; her hands folded before her; the set of her head perfect; but her eyes, how kindly they looked at Will!

"Miss Nethecote, why will you make me feel so uncomfortable?" Will would have elucidated his own words by rising and offering his chair, but she stopped him.

"Please do not disturb yourself, I like standing."

"Well, you have the advantage of me every way," returned Will, resignedly, but with a touch of gentle sarcasm. "It appears I am to look up to you in spite of my efforts to hold my own."

"For shame, Mr. Elliott! Dym, why do you let your brother talk so?"—and there was a generous flash in Honor's eyes. "After that I must take the lowest seat I can find, to be sure that I have brought myself to my proper level."

"Can we always find our level?" returned Will, softly. "The ground would have to open, and let a few of us sink through it, in that case. Perhaps, as I am here to ask your assistance, you

had better resume your former commanding position, Miss Nethecote."

"My assistance!" with some surprise; but the gentleness of her look added, "How can you find it in your heart to be so satirical to me!"

"Yes, if you will be so good as to give it," was the courteous answer. Will was properly grave now.

Honor had beckoned Dym to the cosy-looking chair beside her, and Will, shading his eyes from the sudden blaze, could see the two upturned faces directed towards him with some little anxiety; at least, Honor's looked anxious. Dym hardly knew if Will were jesting or in earnest. Evidently Will was in no hurry to explain himself; he leaned back in his chair, and his left hand toyed with the little gold cross, a gift from Dym, that hung suspended to his watch-chain, as he noted the pleasantness of the fireside picture; Dym's shadowy little face, no longer bright and sparkling, and Honor's fair profile and coronet of ruddy brown hair.

"What is it, Will?" asked Dym at last, somewhat wearily.

She stirred a little as Will began his subject; Honor listened with grave intentness; she was evidently prepared for what he had to say. When he had finished, Dym caught her breath, and then sat up and looked at him with a moved face between laughing and crying.

"Well, Dym."

"Oh, Will, is it really true? How kind, how generous, of Mr. Chichester! Oh, I am so glad!" and the little creature—for she was a little creature beside Honor—sprung up from her seat and threw her arms around his neck.

"Softly, my dear child! Why, what an excited Dym it is! We have not talked about it yet;" and as Will gently freed himself from her embrace a cloud came over his face that was not lost on Honor.

"Dym, dear, I do not think your brother has finished all he has to say."

"Of course not. We shall not have finished all night long," exclaimed Dym, in the same hysterical voice. "Oh, Will, to think you will not be worked to death any more at that dreadful old St. Luke's!"

Did Dym guess she had hurt him, that she laid her cheek so fondly against his?

"I could not help it, Will; it is such a great,

ugly, dingy place, and you never get a moment's rest when you are there."

Will listens with a curious smile.

"Is it dingy?" he wonders. There are wide street-corners, where the sweet air blows straight from Hampstead and Highgate; there are patches of green to be seen between the houses; when he walks up the street, the children look at the bowed figure and the bright, kindly eyes, and smile and curtsy; the women come to the door with rough neighborly greeting; and even the sweep in Paradise-row pulls a grimy forelock as he passes. He has friends among them—many and many a one. It is not all rags and filth and wretchedness. How many life-histories he has conned among them—noble ones some of them—that would put to shame the most exciting fiction ever written! Humble heroes and heroines in real life, with unwashed faces perhaps, with rough knobby hands, with threadbare coats and patched gowns. Will knows them all; he has sat among them and given them the right hand of fellowship often and often.

Will likes to see the children he has baptized growing up about him; he gathers the bigger ones around him on Sunday afternoons, and tells them Bible stories—childish histories of Joseph and Samuel and Timothy. Little Dick Maynard thinks he would like to be Samuel best—Samuel's little coat, the altar lights, the swaying censers, Eli's hoary head, the hush, the mystery, the soft coloring, have wrought a vast impression on the crippled boy. Dick rehearses it all in the little garret when he and his family of linnets are alone. "When I grow up I mean to be a prophet," says Dick, with a flicker of his sandy eyebrows.

Poor little childish dreamer! The linnets sing on in their cage; the crutches are propped against the wall; the dust gathers on the accordion; Dick's little worn cap hangs against the door. Where is Dick himself? Ask the childless parents as they gather around their empty hearth; ask stalwart Richard Maynard, who took the loss of his crippled boy so ill that his honest heart nearly broke under it; ask Susan, wiping the tears with her apron from her comely face, as Guy Chichester puts the same question.

"Dead and gone, sir. After what happened he just fretted his dear self away; took on and pined like double his years. Those are his birds, sir. Richard will not let any one clean them but himself. And there are his school-books, writ-

ten so prettily; he was a rare scholar when Mr. Elliott learnt him. Going, sir? Ah, well, there isn't much to detain you here now!" and Susan wipes some more tears away as Guy Chichester goes out of the door.

All sorts of thoughts come into Will's mind as Dym nestles at his side, and Honor sits thoughtfully gazing into the fire; and he rouses himself with difficulty and looks at his sister.

"I was afraid you would take it in this way, Dym."

"Afraid! why, dear?"

"I might have known you would be glad for me to leave St. Luke's. Perhaps I ought not to have told you, but I want you to advise me; you—and you too," looking at Honor.

Miss Nethecode seemed a little disturbed.

"Surely you cannot doubt what our advice will be! But then," breaking into a little smile, "we are not disinterested."

"You would have me accept the squire's offer?"

"Have you any objection, Mr. Elliott?"

"Pardon me, that is begging the argument. I mean, do I dare to hope that I should be welcome among you, in spite of my infirmities?"

Miss Nethecode leant towards him and stretched out her hand.

"More welcome than I dare to tell you. Come and we will prove it, Mr. Elliott."

"Thanks," replied Will, hastily, as he returned the cordial pressure; "I may hope, then, that you will be my friend in this matter, Miss Nethecode?"

"Most surely," the touched gravity of her face bearing witness to her words.

"Then may I ask you not to add one iota of your persuasion to this, but to help this poor child to see it in another light, and to soften the squire's disappointment if I feel bound to refuse his goodness?"

"Will, you are not serious!" exclaimed Dym, starting from her kneeling posture.

"Sit down again, Dym, and answer me a question. Do you wish this for your sake, or mine?"

"For both our sakes. Oh, Will, how can you think I could be so selfish as only to think of myself! Of course it would be delightful to live with you, and do everything for you." She went on rather less soberly. "We could have the very cottage that we planned to live in; there is one

to let in the village; such a tiny place! with a honeysuckle over the porch, and a strip of garden in front; there is a little room looking on to the weir, where you could write your sermon; and such a beautiful rowan tree over the gate!"

Will shivered, rowan and rowan berries always reminded him of his dream. "It is all very pretty, Dym, and very inviting, but your cottage wants something else."

"What is that?"

"A quiet conscience."

"Nonsense, Will."

"Ah, but it does. The little room looking over the weir may be well enough, but how am I to get my sermons written, if I am not to practice what I preach?"

"Dym does not understand you," observed Honor. She had not once taken her eyes off the brother and sister; she began to apprehend Will's meaning—he was nerving himself for a refusal.

"But she will try to understand me, will she not?" was the gentle answer. "I know how you would like that cottage, Dym; and it is just that that makes it so hard to decide. I know, too, that for some things it would be better for you to come to me when you leave Ingleside."

"You think, then, she must leave it," interrupted Miss Nethecode, but her color rose with the question.

"Yes," returned Will, looking at her. "I know what your generous purpose is, Miss Nethecode, but it will not answer. Dym feels it too; she has told me that when you come as mistress to Ingleside, her work there will be over."

"I thought, perhaps—" but there Honor hesitated, and again Will gave her one of his mild glances.

"I can interpret your thoughts better than you can," he said, cheerfully. "I know you too well to fear you will do the injustice to either her or yourself to allow her to take a daughter's place at Ingleside; your very love to your future husband insures your devotion to his mother."

"How well you read me!" returned Honor—and this time the frank eyes were swimming in tears; "this is what I wish—what I have desired with all my heart to do, only I cannot bear that Dym should be banished."

"She will not be banished from your love, Miss Nethecode. I know Dym well enough to be sure she would not willingly usurp your place;

and knowing this, it does seem hard to send her out into the world again."

"I am older and wiser now. I can work," interrupted Dym, proudly. Will passed his hand over the soft hair with a caressing gesture.

"You will work, and bravely too, dear. I have never doubted your courage, Dym; but you will think me hard for all that."

"I do not understand you, certainly," was the uncompromising answer—Dym's heart was growing a little sore and angry over Will's strange hesitation—"when we have always wished to live together, when you have so often been lonely and wanted me."

"I shall always want you, Dym, darling. I wish I could take you back to St. Luke's with me now"—but a strange earnestness coming into his voice—"my heart fails me when I think of leaving my work."

Dym did not answer; and he went on: "I am not fit for new places. I am a poor creature, Dym, and the old grooves fit me best; the time has gone by," he went on more hurriedly, "when I should have been happy in this dream-cottage of ours. I should like to have you near me, but I should be restless without my work. Granted that the strain is great, that I have too much to do at St. Luke's, it is better to wear out than rust out—as I should do here."

"For shame, Will; rust out among your friends and in this lovely place!"

Will shook his head sadly.

"Even here; the worn-out hack runs best in its old traces. You want to turn me out to grass, Dym, and I have no appetite for it; even the weir and the honeysuckle will be less sweet to me than the children's faces in the dingy streets you hate."

"Will, is this your only reason?"

Perhaps Dym's question was abrupt, for Will's pale face grew a little paler over it.

"If I have other reasons—good only to myself—my child must trust me with them," he returned, quietly. "They lie between me and my conscience. Will you try not to think me too hard, Dym, because I have refused to share with you the only little gleam of sunshine that has fallen across our path? Will you forgive and trust me still that I am doing the right thing, though you do not know all my reasons?"

It must have been a sullen nature that could have resisted that pleading voice. Dym could

not. "I have nothing to forgive; you are always right, Will," faltered the little sister; but evidently the struggle was a hard one, for as he stooped down and kissed her she suddenly caught her hands from his and sprang away; and Honor could hear a low sob as the door closed behind her.

Will rose as though to follow her, and then he sat down again.

"She is a dear good child," he murmured, and his tone was full of pain. "Miss Nethcote, you will keep your promise, you will try to comfort for her disappointment, and help Mr. Chichester to see this in its true light?"

"I will try, but I am rather doubtful of my success. If you knew how he has set his heart on this—he and all of us!"

"It does me good to hear it. When I go back to St. Luke's it will be sweet to remember that you all wished me to come among you. Believe me I am not ungrateful—you do not think me so?" hesitating, as though for her to speak.

"No, not ungrateful; no one who knows you could entertain such a thought for a moment; but I think you are wrong."

"In what?" returned Will, with a sudden flush.

"Do you need to ask the question?" she replied, looking at him with eyes full of kindness. "We are your friends, and yet you deny us your confidence. You are in trouble; you have some secret fear or anxiety upon you; rather than tell us, you will go back to St. Luke's and bear it alone. Is this fair, is this kind, Mr. Elliott?"

For one moment the thought crossed Will's mind that he would partially unburden himself to this large-hearted woman, who looked at him with such honest eyes, whose voice was so full of sympathy; but the next minute he rejected it with scorn: it was weak, cowardly; he knew enough of Miss Nethcote's benevolent nature to be sure it would cast a shadow over her brightness, she was so pitiful over any sort of suffering.

"Some walk in sunshine, and some in shadow, each in his own path; it will not lighten the burden because I shift it off on other shoulders," thought Will.

"Will you trust me?" she repeated, coming a little closer to him.

"I cannot," replied poor Will; his head drooped on his breast, a sudden pain tortured the poor heart. Was this the end of it all—had he been wrong—was it all a mistake? Who knows?

"At least, you will let us do all we can for you?" pleaded Honor. "When I was sick, you visited me; when I was unhappy, you consoled me; it is you to whom we owe our happiness, Guy and I will never forget that."

"I only did my duty," responded Will, sadly; "it was one more to whom to minister. You have your life before you, Miss Nethecote—I told you so then." He paused—some change came over his face, some strange energy into his voice—and as she was about to speak, with some sudden impulse he turned and blessed her as she stood.

The rooms at Nidderdale Cottage were empty when Humphrey came back to them the next evening. Will had taken his sister up to Ingleside, and he and Dym were having a quiet time together.

Dym secretly reproached herself for not enjoying it more; in spite of her efforts the week wore slowly away. Will was all that she could wish; he drove out with her, walked with her up and down the sunny terraces, read and talked to her, but still there was something wanting. Reading and conversation had lost their flavor; strange silences fell between this brother and sister, who had hitherto been all in all to each other. In Dym's manner there was a little reserve, a slight infusion of gravity. Will's gentleness could not lay the uneasy spirit. Will, as he looked at her, sometimes feared that something had quelled the sweet buoyancy of her spirits forever.

What was it? I wonder if Dym could have answered? A secret dispensation troubled her serenity. Was she sick or unhappy, that this sudden loathing had come upon her? You may be sure that Will dealt tenderly with the girl's soreness and irritability. Had her faith in him received a shock? did she distrust the kindness that had refused to make a home for her?

Will could not tell; they had never referred to the conversation they had had at the Cottage. Dym talked little about St. Luke's; she listened patiently, but without interest, when Will told her about the new schools that Mr. Chichester had promised to build, and how, when the vicarage was finished, he was to have rooms in it, and live with Mr. Benedict, who was a childless widower.

"I shall be quite rich then," observed Will, cheerfully. "Fifty pounds a year more, and no

rent to pay. You will come and stay with me then, Dym, weeks and weeks at a time. You know Mr. Benedict will be glad to have you for your own sake as well as mine. His sister, Mrs. Musgrave, comes to him for months together."

"Yes, Will," returned Dym languidly; come to him—of course she would come to him. She looked at Will with puzzled eyes when he asked how soon she would have to leave Ingleside. How could she know? There were all sorts of plans revolving in Mr. Chichester's mind, Dym believed; something was said of his taking Honor away for a long time. Honor wanted to see Rome and Switzerland; and then Dr. Grey had spoken of a winter at Mentone; it might be that she would be still at Ingleside for months.

"I am glad to hear it," was Will's reply. But there was the same dull, puzzled look in Dym's dark eyes; was she glad too? perhaps so. It had come to this, that the very stones of Ingleside were dear to her; that she would rather stay there in the empty, solitary rooms than leave it for another place.

Dym had her visitings of compunction after Will had left her: after all, had she treated him kindly?

She came out and fingered his wraps with little cold hands when the carriage drove around to take him to the station, and then busied herself with the parcels of sandwiches the housekeeper had thoughtfully sent up as provision for the journey.

"I suppose you send your love to Dick?" inquired Will, as he invested himself with some difficulty into his great-coat.

"Yes, yes," she returned, bursting into tears. Oh, why had she been so hard and disagreeable to him? He was everything to her—father and mother and sister and brother in one; he had never thwarted her, never spoken unkindly to her all her life long, and yet how often she had been cross with him!

"Take care of yourself. I cannot bear you to go. Promise me you will come and see me again," she sobbed, clinging to him.

Will looked at her in a little surprise, but he was kinder than ever, Dym thought in her penitence. She stood at the door waving her hand and trying to smile as the carriage rolled down the sweep; he could see the flutter of her gray dress on the terrace long after he was down the hill; the sun was shining on the vicarage walls as

he passed, on the gay beds of crocuses, on the green meadows with their clumps of alders and small black cattle; the mill-wheel was whirring as he passed, and two of the miller's rosy-faced daughters were gathering up the piles of sweet, sun-dried linen; down by the river there was shadow and coolness; the water came frothing over the great stones; above was a gray sweep with a dull brightness on it; there was the cottage with the porch and the rowan tree; and then Will folded his arms and looked no more.

Dym had a long cheerful letter before many days were over. Will spoke as though he were glad to be back at his work again; he was better and stronger, his long rest had refreshed him; he was ready to throw himself heart and soul into his labors. Every one had welcomed him, from Dick, who had composed a new tune on the occasion, to old crossed-grained Widow Bates, who had actually scolded him in one breath for gadding about, and then told him he was a "sight good for sore eyes." Will had seen his Birsith friends twice; Mr. Chichester had made one of his head-long descents on St. Luke's, and had carried him off, in spite of his entreaties to the contrary, to the pleasant Kensington house where they had established themselves.

It was an artist's house, Will told her; a sunshiny old place, with a long narrow lawn and a cedar tree, with curious landing-places, and odd-shaped rooms full of heavy carved furniture; the studio opened out of the drawing-room, where they took their coffee. Will from his seat had a strange vista before him, the suits of armor, velvet doublets, tall goblets of red Venetian glass, sunshine, fencing foils, a statue or two, yards and yards of finished and unfinished paintings.

Will put in a little bit of painting himself very prettily; he made Dym see it all. Honor in her white dress standing against the crimson drapery; Guy leaning negligently against a bust of Pallas Athene; Mrs. Chichester in her brocade and ruffles, sitting so erect in her high backed chair. "Miss Nethcote sang to us, she has a beautiful voice, mellow and rich. I liked to hear Chichester's grand bass chiming in now and then," wrote Will. Dym put down the letter with a little sigh. How plainly she could see it all! There was a pleasant perfumy sweetness about the picture; there must have been tulips in the tall Venetian glasses; little spots of violet fragrance, dotted

here and there about the room; the window would be open, and reflect the shadow of the cedar. Dym could almost hear the short racy sentences scattered broadcast from behind the bust of Pallas Athene, and Honor's voice chiming like silver bells.

One day they had all come down to St. Luke's, almost taking Will's breath away. Paradise row had never known such an excitement as when Mrs. Tressilian's fine carriage had put them down and rolled away. One little urchin had cried "Hurra!" when Jeames, in his plush and powder had clambered up beside his friend, the coachman. Poor little man! even the smart hammercloth was a mystery and astonishment. The horses curvetted as grandly as the pony in the circus, Dick confided to his mother afterwards. One may imagine with what feelings Dick clutched his crutches and shuffled away as the tall lady with the kind eyes came up the steps; even Mrs. Chichester's white curls were alarming. Dick's accordion sounded a few terrified notes as it rolled down into the area.

"Is Mr. Elliott at home, my little man? There's a bright sixpence for you. Surely you have not forgotten your old friend?"

Dick's bright eyes dance delightedly as they go into the narrow passage. "Was it for this he refused to come to us?" thinks Honor.

There is the open door, the bending figure over his books; a little, fiendish-looking, dusky kitten squatting at his elbow. How small and dingy it is! Flower-pots and books, shouting children, and dullness. Will pushes back his hair with a little bewilderment, as Mrs. Chichester's white curls and Honor's beautiful face come within the radius of his vision.

"Ah, ha! we have caught you," cries Guy, taking him by the shoulders. "The spider in his den—the student at his books. Do the inhabitants of Kentish-town understand the mystery of five o'clock tea, I wonder? We have come to tea—my mother and Honor and I—and we want you to show us St. Luke's and the new vicarage, and the site for the schools—to do the honors of Kentish-town, in fact."

Will tries hard to wake out of his bewilderment as he shuts up Hooker's "Ecclesiastical Polity." Will Mrs. Maynard's kettle be boiling? Has she teacups and saucers enough? He remembers guiltily that, in a moment of weakness, he had given

his afternoon portion of milk to the thirsty kitten. But Mrs. Maynard had two capital ingredients in her character—resources and ideas. Will wonders mildly at all manner of good things group themselves on the tables; milk—no, it is actually cream, cool Devonshire butter—a crusty loaf, a very *chef-d'œuvre* of bakery, tea cakes and marmalade, even a few pink prawns reposing on green leaves. Worthy Mrs. Maynard gives a little nod of triumph as she leaves the room; and Will blesses her in his heart. Honor takes her place, and makes tea with her usual quiet grace; the rest gather around the table; the kitten finds its way to Guy's knee, and is petted and christened "Damon" on the spot. This is better than the studio at Kensington, Will thinks; his worn face—and Honor thinks it is paler and more worn since she saw it last—lights up at the sight of these dear people gathered around his little table. How happy they all are! what a running fire of wit and raillery from Guy! He is full of mischief to-night; he rails a little on the subject of Honor's finery; he declares that half the shopwomen in London are engaged on that fabulous trousseau. Honor bears it well; the bright smiling eyes enjoy the fun, but in Will's opinion she looks just a little jaded.

"We shall all be glad when we get back," she says, when Will hints at this; "shopping and sight-seeing are very tiring things. Mrs. Tressilian has taken us to the theatre twice; Mrs. Chichester has it, and so Guy thinks we ought to go."

Mr. Chichester took Will aside before their visit was over. "We have been to the oculist," he says. "After all, it is a simple cataract; the pain was merely a little local inflammation; she has caught cold, he says. But there is no doubt that it has made great progress; she can scarcely see at all—less than we thought. Mr. Paget thinks that in a few months both eyes will be ready for couching."

If Mrs. Chichester be more blind, Will thinks, she has never looked more cheerful. The most perfect understanding seemed to prevail between the three. Guy's manners were denuded of their little roughnesses; Mrs. Chichester turned her face oftenest to her son; but she seemed to depend most on Honor. It was Honor who laid aside her wraps, smoothed out the soft curls, and hovered around her with a thousand nameless attentions; Honor who sat beside her, and talked to her while the others discussed some parish news; Honor who seemed to anticipate every want before it could be named.

Did Guy notice this devotion? Will saw him watching them once, while he was detailing a new scheme of the vicar's; something soft and luminous came into Guy's eyes, and then the two men looked at each other.

They had no need to speak. "Can any one be like her? Am I not blessed beyond my deserts?" Guy's eyes seemed to say, and Will smiled an assent. Each understood the other's thought as well as if expressed in words.

## UPWARD!

By H. W.

WOULDS'T thou make thy poor life glorious;  
Climb the mountains as they rise;  
Sweep the heavens from their summits,  
Crowd the god-light in thine eyes.

Tread life's darkest depths as gladly,  
Though nor sun nor stars may shine,  
And the elements all madly  
Rush to crush thee and combine.

From the grave of hope, from ashes  
Of a life burnt to despair,  
She shall rise to woo and bless thee—  
Charity, divinely fair.

She shall twine her arms about thee,  
Turn thy sadness and thy tears  
Into nameless joys and beauty,  
Love thee through the endless years.

## NOTES AND QUERIES.

**Charles Carroll of Carrollton.**—We are indebted to Robert Coulton Davis, Ph.D., for the privilege of making the accompanying engraving of the medal engraved and struck at the United States Mint, Philadelphia, in commemoration of the entrance of Mr. Carroll upon his ninetieth year, September 20th, 1826. It was presented in 1867, by Charles Carroll McTavish, grandson of Mr. Carroll, to Colonel M. J. Cohen, who subsequently presented it to Mr. Davis. Mr. Davis has the medal in bronze and in silver. The portrait upon the medal, it will be seen, differs from both of the portraits in the December MONTHLY, pages

us that eternal happiness, or eternal misery will be the destiny of man in the life to come, the most pious the most exemplary have trembled at the thought of the dreadful alternative: oh! what will be the fate of those, who little think of it, or thinking, square not their actions accordingly.

Though I disapproved of Mr. Jefferson's administration, & was dissatisfied with a part of Mr. Adam's, both unquestionably greatly contributed to the Independence of this country; their services should be remembered, and their errors forgotten & forgiven.

This evening I am going to Baltimore to attend tomorrow the procession & ceremonies to be paid to the memories and services of those praised & dispraised Presidents.

The Baron de Montreuil & his family are now here—they are indeed amiable & we are all delighted with their manners, ease affability and cheerfulness when they return to France the society at Washington will feel the loss.

I was not in Congress when the vote of Independence was taken as soon as I took my seat I signed that important declaration which has thus far produced, & I hope will perpetuate the happiness of

these States—you say you should be happy to see me; why then do you not come to see me the distance is not great, and you are young compared with me. I shall always be happy to see you at this my summer & autumnal residence. Wishing you health & happiness I remain

Dear Sir y<sup>r</sup> friend & hum Ser<sup>t</sup>

CH CARROLL OF CARROLLTON.

To Charles H Wharton Esq  
city of  
Washington

The Maryland Historical Society has republished Charles Carroll's Diary of his visit to Canada with the Congressional Commission in 1775, edited by Brantz Mayer.

**Dr. Allison's School, Thunder Hill, Chester County, Pennsylvania.**—In a foot-note to the article under the title "Henry Laurens vs. Charles Thomson" (Vol. VI., page 264), it is stated that according to Henry Simpson, the academy of Rev. Francis Allison was at Thunder Hill, Maryland, while Dr. Sprague places it at New London, Chester County, Pennsylvania.

The explanation of this seeming discrepancy is this: In 1741 Mr. Allison established his celebrated school on a farm owned by him and where he resided, in New London Township, Chester County, Pennsylvania. This locality was then and has been ever since known as Thunder Hill. At the time the school was in operation at Thunder Hill, the line

404 and 405, and we know of no other which it resembles. Mr. Davis thinks the medal portrait must be accurate because it was executed by Christian Gobrecht, the well-known die engraver of the Mint for many years, and Mr. McTavish in a note to Mr. Gobrecht, wrote: "The impressions of the dies you sent me were very much admired by every one at a dinner given on the birthday of my grandfather, and pronounced excellent. Mr. R. Gilmore says the execution of it is superior to the one he had executed in Europe."

We are also favored by Mr. Davis with the original letter which we copy herewith; it is intensely interesting as evincing the piety and patriotism of Mr. Carroll in his old age, traits which were conspicuous throughout his life. It is also valuable as containing testimony corroborative of Jefferson, that the Declaration was signed by the members before the engrossing and formal signing of the 2d of August. Written in his ninetieth year, it rests upon the memory of an aged man, and would not be strong original evidence; but it is strong as corroborating Mr. Jefferson's "Notes."

Dear Sir

1826 July 19<sup>th</sup> Doughoragan

I received the 17<sup>th</sup> your friendly letter of the 14<sup>th</sup> instant. as I am fast approaching to the last scene which will put an end to all earthly cares, & concerns, I am looking to that state from which all care, all solicitude and all the passions, which agitate mankind, are excluded—Revelation instructs

between Pennsylvania and Maryland was unascertained and in dispute, and the Maryland surveyors frequently came into Pennsylvania and laid out lands for persons who claimed under Maryland rights, and the same thing was done by the Proprietaries of Pennsylvania in what is now Maryland. The lands at Thunder Hill were surveyed under a Maryland claim, and hence were said to be in Maryland; but by the subsequent running of Mason and Dixon's line they were found to be in Pennsylvania.

Mr. Allison maintained his school at Thunder Hill until his removal to Philadelphia in 1752, when it was transferred to Rev. Alexander McDowell, by whom it was afterwards

"L'Arc de Triomphe de l'Etoile," Paris.—Mr. Thompson, in his paper on "The Moorish Empire in Spain," alludes to this celebrated triumphal arch of Napoleon, and we give herewith a good picture thereof, as also of the "Arco della Pace," at Milan. The great Napoleon having made his famous road across the Alps at the Pass of the Simplon, ordered the latter magnificent arch to be erected at its southern, or Italian, terminus, in commemoration of his great achievement, and named it in token that the achievement was one of peace rather than of war; but before he had completed it the great man had fallen and the territory having come into Austrian control, the Austrian emperor

"L'ARC DE TRIOMPHE DE L'ETOILE," PARIS.

came to Newark, Delaware, where it became the foundation of Delaware College. While the school was under the charge of Mr. Allison, it had as pupils many who afterwards became distinguished in public life. Among these, besides Charles Thomson, Secretary of the Continental Congress, may be mentioned Dr. John Ewing, Provost of the University of Pennsylvania; Dr. David Ramsay, the historian; Dr. Hugh Williamson, author of a History of North Carolina and other works; Rev. Dr. James Latta, Rev. Dr. Matthew Gifford, and three Signers of the Declaration of Independence: Governor Thomas McKean, George Read and James Smith.

J. SMITH FUTHEY.

ordered the completion of the superb work of art, making it commemorative of Austrian prowess and of his own good fortune. It was completed in 1838, is wholly of white marble and is unrivalled for beauty and elegance by any of the larger triumphal arches of Rome, or by the Parisian Arch "de l'Etoile." There are several large and handsome arches in and near Paris, erected by Napoleon to celebrate his great triumphs, but "L'Arc de Triomphe de l'Etoile" is the largest and most superb of them all; it forms a mass about a hundred and fifty feet wide by seventy-three in depth, and a hundred and sixty in height. There is great simplicity of form, on account of the outline being unbroken

by columns and projecting entablatures. There is one large arch running east and west, and a smaller one running north and south; the large arch is nearly fifty feet wide, a hundred high, and seventy-three deep; the smaller is sixty feet high by about half as broad. There are no columns or pilasters, but the surfaces are richly covered with sculpture. The entablature has the extraordinary depth of twenty-three feet;

"ARCO DELLA PACE," AT MILAN.

the frieze is covered with sculpture in relief; the mouldings of the cornice, archivolt, and impost, are richly carved; the soffits of the archivolt and vaults are panelled and laid out in sunken compartments, and the piers are covered with wreaths and inscriptions. On the east and west fronts, on either side of the arch, is a colossal group of sculpture nearly sixty feet in height, and comprising figures twenty feet in height.

**George Clinton.**—It is eminently proper that the biographies prepared by the Congress of American Authors which are to remain the standard authorities on the subjects of which they treat, should, before final publication, undergo thorough scrutiny. It was with the intention of having my sketch of Clinton freely criticised before its crystallization into book form, that I sent it to *POTTER'S AMERICAN MONTHLY*. I am accordingly glad to have the views of such an accomplished and discriminating critic as Colonel Etting upon the article in question; for everything that emanates from his pen must be read with interest and respect. Colonel Etting says, "I must request Mr. Stone to give us his authority for his statement that his [Mr. Clinton's] influence upon that body [the Continental Congress], in moulding its sentiments and directing its action, has never received the recognition which it deserves."

In reply, I would say, that I think my view of the influence of Clinton in the Continental Congress is just. He was a violent Whig, as I know from a careful examination

of the complicated proceedings of the New York Assembly in the early part of 1775. Indeed, Clinton's views were so strong and pronounced that my statement is a very safe one to make.

2d. In regard to *voting* for Independence, I am free to admit that I followed, too blindly perhaps, Drake; and my expression "*voted for*," should be changed to *favoured* independence, for, as before hinted, this, in my judgment, he most certainly did.

3d. As for the invasion of New York, Colonel Etting seems to understand me to say that it prevented Clinton's voting for Independence, whereas I meant to say only that it prevented Clinton's being present at the signing of the Declaration by the *general body* of the members, which I suppose is true.

4th. The phrase, "and in May, 1775," should have, as the Editor of the *MONTHLY* suggested in the September number, the word "and" transposed to the end thus, "in May 1775, and favored."

5th. Regarding Colonel Etting's allusions to the apparent lukewarmness of New York State, such is not the case. The Continental Congress resolved on May 15th, 1776, to recommend all the Colonies to adopt

new forms of government. This was tantamount to declaring Independence. The New York delegates, on June 8th, 1776, wrote to the New York Provincial Congress to ascertain its sentiments on the question of Independence which was expected to come up shortly in Congress. Meanwhile, Sir William Howe arrived at Sandy Hook, June 25th, 1776. An immediate attack on the City of New York was expected. The New York Provincial Congress made Washington a sort of dictator to defend the colony. About this time a new Provincial Congress was elected.

The day the new Provincial Congress was chosen is said to have been June 19th. It was elected for the express purpose of acting on the question of Independence, as the previous one did not consider itself authorized so to do.

The old Provincial Congress seems to have continued sitting for some days after the new one was elected, but of course can be excused for not authorizing the delegates in the Continental Congress to vote for Independence. They purposely left it to the new Provincial Congress, which opened at White Plains July 8th, 1776, and which, on the very next day, passed UNANIMOUSLY a resolution approving the Declaration of Independence. The fact upon which Colonel Etting lays so much stress—that the New York delegates in the Continental Congress were not the voters of the adhesion of New York State—is a purely private and local affair between them and the New York Provincial Congress. Nor does it in the slightest degree affect the question of the *willingness* of New York to declare itself

independent. There was very little Toryism that dared to show itself to the public at this late date. Most of the leading New York loyalists had either left the State or were hiding. Indeed, as a matter of fact, New Yorkers were as nearly unanimous at the time as New Jersey or Pennsylvania.<sup>1</sup> Finally, when the vote was taken for formal Independence, the New York delegates who for local reasons could not act for their State, were probably better disposed than those of Pennsylvania, who could act and yet were intending to vote four against Independence and three for it—and it was only by great persuasion that two of the four were induced to dissent themselves so as to turn the minority into a majority.

WILLIAM L. STONE.

**The Expeditions of George Rogers Clark.**—*Reply of William West Henry to Samuel Evans.*—I would not again appear in your columns in reply to Mr. Samuel Evans, upon his claim that Pennsylvanians composed part of the command of Colonel Clark in his expedition to the Northwest in 1778, had not Mr. Evans published in your November number the roll of Captain James Willing's company, with a certificate of Captain Robert George that part of them joined the service at Virginia in the Illinois department. Mr. Evans states that the company was composed of marines from Pennsylvania, and would make the impression that they shared the dangers, and were entitled to share the honors, of Clark's expedition. I find that this company was in the United States service, and composed part of Colonel Daniel Brodhead's command stationed at Pittsburg.

Mr. Bancroft, in the sixth volume of the last edition of his *History*, page 192, states that this company was composed entirely of Pennsylvanians, and was partly filled up by enlistments as they went down the river after leaving Pittsburg.

I can, however, admit Mr. Evans's statement that it was a Pennsylvania company, and am prepared to demonstrate that they were entitled to none of the glory accorded to Clark's command in his famous expedition.

Let me briefly recall the main incidents of this expedition, as related by Clark himself: On the 18th of January, 1778, he left Williamsburg with a commission from the Governor to raise a force within the borders of Virginia with which to attack the British posts in the Northwest. He proceeded to the western frontier of the State for this purpose, but meeting with considerable opposition, more particularly in the territory of dispute between Virginia and Pennsylvania, he determined to march on with the men he could raise in West Augusta, and with three companies he arrived at the falls of the Ohio (Cincinnati) in May. Here he encamped on an island, and, having been joined by Captain Montgomery with a few Kentuckians (Kentucky then being part of Virginia), he drilled his little army.

On the 26th of June, 1778, he set out from this point to attack Kaskaskia, his whole force consisting, as he expressly states, "only of four companies, commanded by Captains John Montgomery, Joseph Bowman, Leonard Helms and William Harned." (See "Dillon's History of Indiana," page

135.) With this force on the 4th of July he took Kaskaskia. From this point Captain Bowman proceeded with a detachment to Cahokia, about sixty miles up the river, and that post surrendered to him. A Catholic priest, named Pierre Gibault, who was found at Kaskaskia, made his way to St. Vincent's, or Vincennes, and through his influence that post was secured to Clark without a struggle, and Captain Helms was sent to hold it. The Indians finding Clark in possession of the British posts, soon entered into treaties with him, and he thus got control of the whole Northwestern country, except Detroit and the territory adjacent to that town. On the 17th of December, however, Lieutenant-Governor Hamilton, with a force of eight hundred men, recaptured Vincennes, which was but feebly garrisoned, and Clark, finding his situation critical, determined to risk all on the recapture of that important post. After a march through the flooded bottoms of the Wabash in the depth of winter, which earned for him the title of "the Hannibal of the West," he surprised Governor Hamilton, and Vincennes was surrendered to him on the 24th of February, 1779. He then made treaties with the neighboring Indian tribes, and commenced his preparations for an expedition against Detroit, which he never accomplished. The Legislature of Virginia in the meanwhile, by an act passed in October, 1778, formed the County of Illinois out of the territory captured by Clark, and appointed Colonel John Todd as its civil commandant.

It was this possession of the Northwest by Virginia which secured that territory in the treaty of peace with Great Britain, as is well known, and Virginia by her deed of cession afterwards conveyed it to the United States.

In order, therefore, to establish the claim of Pennsylvania to any part of the honor of acquiring the Northwestern Territory by furnishing troops to Colonel Clark, Mr. Evans must show that Pennsylvania troops were engaged in the capture of some one of the British posts I have mentioned, in the campaign commencing 26th June, 1778, and ending 24th February, 1779.

The certificate of Captain George, which Mr. Evans produces, does not designate in terms the date of his transfer of Willing's company to Clark's command, but the conclusion is irresistible that it occurred on the 3d of June, 1779, when they considered their service in the United States expired. The certificate is as follows: "I do hereby certify that I received the within-named men and officers from Captain James Willing, with orders to proceed to the Illinois and Fort Pitt, which men are disposed of (deaths and desertions excepted) as specified within; that is to say, such as end on June 3, 1779, having joined the service of the State of Virginia, in the Illinois department, under my command," etc. This conclusion is confirmed by a letter of Colonel Brodhead to Colonel Clark, dated Fort Pitt, 4th April, 1780, and given in the "Pennsylvania Archives," Vol. XII., page 216, in which he writes: "I am amazed at the return made by Captain George of the men belonging to the Continental service, which were sent down the river under command of Captain Willing [misprinted Wheeling]. It differs much from the return I received from Captain McIntyre. He alleged that some of the men's terms are expired, and that they do not incline to return to their respective corps; but admitting their terms were really expired, which is denied, they ought to have proper discharges from the commanding officer of their

<sup>1</sup> In this connection, the reader will recall among other, if not riotous, incidents the English act in New York City, the one of pulling down the statue of George III. in the Bowling Green, and running it into bullets. This, it is true, was at the beginning of the struggle, but shows, nevertheless, the "entire" state.

corps, and must be considered as deserters until they obtain them. I wish you to inculcate this principle. I order those men under some proper officer up to this place, that justice may be done them and the public."

Mr. Bancroft tells us also, at the same page from which I have quoted, that Captain James Willing's company captured and occupied Natchez and other points on the Lower Mississippi during the spring and summer of 1778, and if so, they could hardly have formed part of Clark's command in the Northwest during that year.

I need not rely, however, on this evidence that Captain Willing's company was turned over to Clark after the capture of Vincennes and the end of his campaign; I have the contemporaneous testimony of Colonel Clark and Captain Bowman as to when Captain George arrived with Willing's company in the Illinois department, and of the fact that they took no part in the campaign. The journal of Captain Bowman from 27th January to 20th March, 1779, is published as an appendix to the little volume entitled "Clark's Campaign in the Illinois," published by Robert Clark & Co., Cincinnati, 1869. Under date of March 15, while at Vincennes, he makes the following entry in his journal: "There arrived an express from Kaskaskia, by which we learn that Captain George, with forty-one men, had arrived from New Orleans, and taken command of Fort Clark; and also that James Willing had resigned his command to the said Captain George, and that he and Captain Mackintire had embarked for Philadelphia."

At page 83 of the book, Colonel Clark in his narrative having mentioned that he left Vincennes on the 20th of March, 1779, and returned to Kaskaskia, adds: "During my absence, Captain Robert George, commanding the company formerly Captain Willing's, had arrived from Orleans, taking charge of the garrison, which was a considerable reinforcement to our little party."

It is perfectly clear, therefore, that after Captain Willing's company had captured Natchez, and brought into subjection the Lower Mississippi, they returned, and stopped on their way at Kaskaskia, after that post had been for months in the possession of Clark, and while Clark was absent engaged in the capture of Vincennes. It was impossible, therefore, that Captain Willing's company could have formed any part of the force under Colonel Clark with which he captured the British posts in the Northwest in his campaign of 1778-79. This company is entitled to full honor for what they accomplished in capturing the posts on the Lower Mississippi, but they were engaged in that business while Clark was in the Northwest, and they have no right to share the honor of his enterprise, with which they were not connected.

Mr. Evans, without being able to prove it, continues to assert that Clark's command in this campaign was composed of men from Pennsylvania as well as Virginia, and very charitably adds, "The greed and State pride of General Clark no doubt led him to give all the glory to the Virginians." I have shown that Mr. Evans is claiming a part of the glory of Clark's campaign for a company of Pennsylvanians who came to Kaskaskia after it had been long in the possession of Clark, and remained there to welcome him on his return from his successful expedition against Vincennes, themselves doing no part of Clark's marching or fighting in the campaign. I will leave your readers to determine which of the

two shows more of greed and State pride, General Clark or Mr. Evans.

Mr. Evans's idea of the "truth of history" seems to be so fixed that I despair of convincing him of the error into which he has fallen. I am glad that I have found Mr. Bancroft less tenacious of error. Upon reading my first article in the MONTHLY criticising his statement that Southwestern Pennsylvanians composed part of Clark's command in 1778-79, he has not hesitated to admit his error, and in the sixth volume of the last edition of his History has stated that "Virginians in the service of Virginia" composed this command.

WM. WIRT HENRY.

"Tom Moore's Cottage" (MONTHLY, December, 1876, page 467).—The NOTE on this subject recalls some facts in regard to the poet's visit to this country, in 1804. It is now pretty well settled that he never resided in a cottage on the banks of the Schuylkill; and the farther statement of some recent writers that his stanzas commencing,

"I knew by the smoke that so gracefully curled"

were written there must be rejected. Tom Moore remained in this country but a few months, and while here he journeyed about considerably, and remained some weeks in the vicinity of the Falls of Niagara, where he was the guest of Major-General Sir Isaac Brock, commander of Fort George. From this point he passed on to Lake Ontario, descended the St. Lawrence River, and returned to Ireland. The circumstances attending the writing of the stanzas referred to have been stated as follows:

"During his pleasant visit to General Brock at Fort George, the poet started one summer morning for a solitary walk up the river to Queenstown. After proceeding three or four miles the day grew intolerably hot, and he seated himself under the shade of the trees that bordered the roadside, for rest and relief from the heat of the sun. While sitting there, before he resumed his journey, his eye was caught by the ridge of a roof rising just above the trees hard by, and a thread of smoke that lazily curled upward from the chimney. The sight, common and frequent as it is, served on this occasion as an instant inspiration; and taking from his pocket a pencil and some old letters, the poet jotted down these verses, first published in his 'Poems relating to America':

I knew by the smoke that so gracefully curl'd

Above the green elms that a cottage was near,

And I said, 'If there's peace to be found in the world,

A heart that was humble might hope for it here!'

It was noon, and on flowers that languish'd around

In silence reposed the voluptuous bee;

Every leaf was at rest, and I heard not a sound

But the woodpecker tapping the hollow beech tree.

And, 'Here in this little wood,' I exclaim'd,

'With a maid who was lovely to soul and to eye,

Who would blush when I prais'd her and weep if I blamed,

How blest could I live, and how calm could I die!

By the shade of yon sumach, whose red berry dips

In the gush of the fountain, how sweet to recline,

And to know that I sigh'd upon innocent lips,

Which had never been sigh'd on by any but mine!"

The surroundings of "Tom Moore's Cottage" on the Schuylkill are unquestionably romantic and Arcadian, but they did not inspire the charming verses which have been set to sweet music and afforded delight to many generations.

**Old Fragments.**—If some old paper-mill could tell how many precious fragments of valuable history it has destroyed, its catalogue would indeed be long, its story wonderful, and its impression upon the minds of the people sad and alarming. The master-wheel, toiling day and night in the deep, dark wheel-pit, to move the sharp grinders to deeds of destruction, knows not what it does; the unconscious gudgeons, smooth and bright from revolutions through long years of incessant grinding, turn around nimbly at command, without pausing to reflect, and precious documents pass into pulp to speak no longer of the ages and generations that gave them existence.

We feel at times that we would we had the power to silence these paper-mills, or put some fierce statutory watchdog at their doors to prevent war on the relics of the past. We felt thus lately when, on their way to one of these mills, we met a man and a bag, and found in the latter certain remains of an old Bible whose type would fix its age at two hundred years. Between the leaves of the old Bible, we found a curious old document which we copy in full, all save its vignette, seal, and antique type:

WILLIAM TAILER ESQ; LIEUTENANT GOVERNOUR and Commander in Chief, in and over His Majesty's Province of the Massachusetts-Bay in New England in America.

TO OLIVER WHITING ESQ;

By Virtue of the Power and Authority unto Me granted by His Majesty, I do hereby constitute and Appoint you the said OLIVER WHITING to be CAPTAIN of a Company in the Regiment of MILITIA in the County of Middlesex Commanded by JOHN TYNG ESQ, Colonel. You are therefore to take the said Company as CAPTAIN into your care and charge and duely to Exercise both the Inferiour Officers and Soldiers thereof in Arms, and to use your best endeavours to keep them in good Order; who are hereby commanded to acknowledge and obey you as their CAPTAIN, and you to follow and obey such Orders and Directions as you shall from time to time receive from My Self, or any other Superiour Officer, according to the Rules and Discipline of War, Pursuant to the Trust hereby reposed in you.

{ SEAL. }

Given under my Hand and Seal at Arms this Twenty-fourth of January in the Second year of His Majesty's Reign. Annoq. Dom. 1715.

W<sup>m</sup> TAILER.

By the Honourable  
Lieutenant Governours Command  
Sam<sup>l</sup>. Woodward, Sec<sup>y</sup>:

The document has a beautiful vignette of flowers, and the Governor's seal, much defaced, is of wax, and placed high up on the lower left-hand corner of the paper.

On the back of the document, over which brown paper has been pasted, we find the following biographical endorsement:

"This Relic was presented to me by Oliver Whiting my second cousin lineally descended equally as myself from our great ancestor Oliver Whiting, born in Ballearica Middlesex

County, Mass. Oct 8. 1665, he being the third son of Rev. Samuel Whiting, who was first Minister of Ballearica in 1653, and oldest son of Rev Samuel Whiting first Minister of Lynn, Mass. born in old Boston, Lincolnshire England, 1597, who emigrated in 1636 to Boston, Mass.

Philadelphia

Nov. 4. 1857

JOHN WHITING."

The old Bible itself, doubtless, had a most interesting history—but who shall ascertain and record it?

CHARLES C. SAFFELL.

**The Liberty Bell.**—An excellent little book under this title has recently been published. There are a few errors in it which ought to be noted in the columns of the MONTHLY:

On page 2. The original wings to Independence Hall were not removed "about the year 1829." 1815 was about the time.

Page 91. If Francis Hopkinson was born in 1737 and died in 1791, he must have been more than fifty-two years of age at the time of his decease.

Page 93. Dr. Benjamin Rush died in 1813, not in 1831.

Page 114. For *Carolina County*, Virginia, read *Caroline County*, Virginia.

Page 161. In the second stanza of Dr. Holmes's poem, lines 2 and 7, for *aroused*, read *around*. *Aroused* does not rhyme with *resound*, and *slumber aroused* is unmeaning.

Page 177. Should not B. Can, be *B. Carr*? D.

**George Clinton.**—It is almost superserviceable to add anything to Colonel Etting's remarks in the December MONTHLY, on the action of the New York delegates in Congress on the 2d of July, 1776. The following extract, however, from a letter of Joseph Hewes, dated Philadelphia July 8th, 1776, bears so directly on it that we think it will interest the readers of the MONTHLY:

"I send you the Declaration inclosed, all the Colonies voted for it except New York; that colony was prevented from joining it by an old instruction. Their convention meet this day and it is expected they will follow the example of the other Colonies."

This letter will be found in full in "The American Antiquarian," New York, February, 1871. It was then in the collection of Dr. Charles G. Barney. F. D. STONE.

**REMARKS.**—We presume that no one will now question the fact that New York's representatives in the Continental Congress did not vote upon the question of Independence, especially after the candor of Mr. William L. Stone in his reply to Mr. Etting, which we give earlier in these NOTES AND QUERIES. And now, this fact admitted, it is but just to bear in mind that they did not refuse to vote, and the Provincial Congress of New York did not decline to instruct them to vote, for Independence because either were opposed to that great act. Though the *Colony* failed to vote, the *State* failed not to act, for liberty and independence. Her Revolutionary record as a State excuses the "magnanimity of the Centennial authorities in giving her a 'day in Court.'"  
—THE EDITOR.

## CURRENT MEMORANDA.

**Our Chinese Cousins.**—We have often thought of introducing the "Heathen Chinese" to our readers as a part of the CURRENT MEMORANDA of these days: for if they can't or won't be American citizens, they certainly are becoming numerous and important enough to be considered as among the stirring phenomena of our complex civilization. The cities of the Pacific States have, of course, for a good while felt the influence of these bronze faces. There Chinese pig-tails, short skirts and pants, and stumpy, pecky, heathen-looking shoes, have been perambulating carelessly enough in the midst of California Christianity for years now. And the Western editors, many of them immigrants, or sons and daughters of immigrants, from Cork and Dublin, have quite numerously decided that the immigrants from Hong Kong and Yokohama had no business to leave home, or if they, feeling the universal impulse of the race to seek better quarters for their heads, felt that they must migrate—why did they not go to the moon, or perhaps to Dublin; why did they come here? and being here, said Western editors have many of them treated these cool pagans as though they had no rights which naturalized American Irishmen were bound to respect. Recently the "two great political parties" have taken up the question, and referred it to that last resort of all desperate questions—the Congress of the United States. Every sensible man knows that this means despair. Congress has not adjusted anything for years, except the question of the salaries of its own members, the "postal question," and the little affair of the "franking privilege," and each of these points is only laid over for the next Congress. Congress has its own speculations to look after. The law of our civilization is that each man looks out for himself and minds his own affairs, in Congress and out of it. The Chinese will have to adjust themselves, irrespective of Eastern or Western editors, and without the slightest regard to Congress, or remain unadjusted.

Recently, a Mr. Edwin D. Mansfield, LL.D., has furnished a pretentious article on "The Chinese Question in the United States," which appeared in the November and December number of the *International Review*, a periodical the very name of which ought to be a guarantee that it would treat the question in a cosmopolitan sort of way. But the gist of Mr. Mansfield's labored pages seems to be that the political conventions having referred the subject to Congress, there we may leave it, with the following question, to our minds about as illy befitting an LL.D. as any question well could be: "Have we, then, no right to say that idol gods shall not be worshipped in idol temples?" Now that is very profound even for an LL.D. of the nineteenth century. But it is hardly the sort of question that ought to deface the pages of an *International Review* in our times. There is properly no question for discussion in the matter. There is great temptation to ridicule; and a few points seem clear enough to our eyes: 1st. That the recent political conventions were not at all "great" in any sense

that implies power to meddle with or decide upon any question regarding the disfranchisement or moral ostracism of a whole race of men, or of any-questions with a keen moral edge. 2d. That said conventions should have had nothing to do with or say about the Chinese question. 3d. That Congress has nothing to do with it. 4th. That by the Constitution of the United States this is not only not a Christian nation, but not necessarily a religious nation at all. We may individually be as religious as we please, or are capable of being. The Constitution protects us; but for all it cares, we may be Christian or Pagan, Catholic or Protestant, Brahmin or Buddhist. Nor has any Convention or State a right to act in violation of the letter and spirit of this liberty. 5th. All the Constitution demands in the matter is that foreigners be naturalized. 6th. That to refuse naturalization to the Chinese would be a direct violation of the Constitution. 7th. That to treat the Chinese as a "semi-civilized type of our North American Indian, come here to share the empire which his barbarous cousin has lost," which is Mr. Mansfield's way of putting it, while it might have done for the cant of a backwoods Methodist camp-meeting a hundred years ago, is not to be tolerated in these years. Because he does not wear tight coats and trousers and high heel boots, and stovepipe hats, and speaks a language that Mr. Mansfield, LL.D., probably does not understand, though it was pregnant and brilliant with clearest wisdom and philosophy before the English tongue was dreamed of, it does not at all follow that he is a savage. In fact the logic of history would reverse the order. 8th. That there is but one right, honorable, manly and constitutional thing to do in the case, and that is to treat the Mongolians who come to these shores simply in the same way, letter and spirit, as all other foreigners are treated. If they are ready to fulfil the conditions of naturalization, naturalize them, and let them have fair play with the rest of us; if they don't want to be naturalized leave them in the same position, as to property and laws and in every sense, as we leave all other unnaturalized people. Sauce for Irish is sauce for Mongolian too. It does not concern the Constitution whether a man burns or buries his dead. If the Chinese take their dead home for burial it is only a more expensive way; and there is in it to us a beautiful reverence which Christians would do well to study even if they cannot imitate.

To one long accustomed to thinking of this entire planet and of any special nook and corner of it as the home of mankind, and who has always considered this new Western world as in a particular sense the legacy of the race, not belonging in any exclusive sense to Englishmen or Dutchmen, or to the children of such who happened to be born this side the Atlantic, all talk about suppressing immigration, and disfranchising races of men because they have black skins or yellow skins, or flat noses and retreating foreheads, sounds ridiculously presumptuous if not blasphemous. The Declaration of Independence and its sequel, universal suffrage,

may be grievous blunders, but we are positively committed to them until a new idea is born. The thing must now be fairly tested, not by locking the back-door against the Mongolian, and barring the front-door against the African, but by throwing wide all the entrances of this new home of man, letting black and white and brown come in and have a fair head to head and hand to hand struggle for whatever it is we are after—character, wealth, empire, religion, philosophy and future control as the case may be. This land does not belong to the Puritan or the Pope, but to whatever ablest and best of the sons of men can plant their feet here and grow to harmony with the future thoughts and demands of the future hours.

Fifty years ago and thousands of us who are now calling this our country, and saying what we will do with it, were not supposed to be found anywhere in the earth. And likely enough the parents of those who talk the loudest were utterly unfamiliar with the American accent of the English language. It is simply bluster, gentlemen. This land does not belong to the politician either. He may as well learn that. He will soon have to learn it in ways that are not pleasant. He cannot keep the Mongolian out if he would. Heaven only knows, some son of Zoroaster may be President of the United States within a hundred years; and judging from the light of the last two thousand years, who is foolish enough to assert that he might not make a better President than some unknown son of Pius Ninth or some yet unborn child of a modern Pennsylvania politician?

If the Chinese can do as good or better work at lower wages than the Irishmen or Englishmen, it is a sure sign that he is a higher, not a lower, type of civilization, and has learned more of the true economies of nature than has his old too-blustering neighbors. The question of work and wages has never yet been adjusted in this country, or in any country for that matter, and cannot be here or elsewhere, till the whole world is ready for an adjustment that shall be as true and just and cosmopolitan. As we read history, the Puritan and the Pope, that is modern civilization, as it is called, has as much to learn from Egypt and Asia as the African and Mongolian have to learn from Boston and Rome. It is not some Methodist camp-meeting or infamous political caucus of politicians that the nation is coming to. It is a new and broader thing under the sun than either of the "great parties" now extant is dreaming of. And into the formation of that new and grand future of this great land the Mongolian and his ideas will enter as part and parcel of the warp and woof out of which the fates are weaving the garments of time. The stove pipes and swallow-tails are not to have things all their own way here. What will come remains to be seen, and there will be lots of time to consider the matter.

Doubtless the Chinamen will perjure themselves occasionally, and steal now and then; doubtless they have many ways that are dark and tricks that are vain, but a just and candid person would be slow to admit that the Mongolian was, on the whole, more of a thief or liar than the Caucasian. Doubtless many of the Asiatic vices are mean and low enough and Pagan certainly to the last degree; but we have yet to learn of any "pagan" vices that are meaner and lower than many forms of "Christian" vice. And as to Mongolian forms of cruelty, if they can beat, in hardness, depth and

meanness the crimes and cruelties that have for the last twenty years been the special attractions of our Christian newspapers, by all means let us find it out; let us see what new and viler features the devil has in the hearts of our fellow-men of other nations. Let us see what real work there is for preachers, editors and reformers generally before we can hope for any enduring or even endurable Platonic or other republic in this all too quack-ridden and cant-blinded world. But soberly, this land is to be the home, or at least the cradle of the reconciled and united races of the world, and the brave and true among us must welcome that fact and do our utmost to make it not only the cradle of universal liberty but of a larger virtue and juster laws.

**The Next President, and How to Get Him.**—Ever since the seventh of November, election day, the best and worst editorial, political, judicial and general large and small heads of the country have been working on this question. At this writing the lucid word remains unspoken, unwritten. The light that all men are anxiously waiting and looking for has not come. It probably will not come by any discussion, others' or ours. In this case as in all cases, it is more than probable that some unexpected action, some deed undreamed of to-day will fix the nation's course in the matter of deciding who the next President shall be. Since election day the discussion on the part of the leading daily and weekly papers of both parties has been calm and earnest. The popular voting evidently surprised and staggered a great many Republican leaders, and the Democrats, on the whole, were too well pleased to be extravagant and unwise. Out of all this anxiety and expression of counter-opinions, many points of value are evolving themselves, much needed general information is finding its way into the heads of the masses of the people. Among these, more sharply defined than heretofore are the following: The people are understanding as they never understood before, that the framers of the Constitution the fathers of the country after much debate, deliberately concluded that the election of President of the United States was an all too serious and important a matter to be decided by the popular will. And here it occurs to us to suggest that were the fathers alive again and with us to-day, we hardly think their opinion would be changed.

It is true, as a recent leader in *Frank Leslie's Weekly* expresses it, that "times have greatly changed since 1787;" but to assert that the change has been wholly or largely in favor of popular patriotism, unity and intelligence would be a hazardous assertion. The franchising of tens of thousands of ignorant immigrants, the extending of the suffrage to the emancipated negroes, the divisions of sentiment growing out of the question of slavery and the civil war, have been and are still such as to imperatively demand a broader wisdom and a purer principle in the political leaders of the next fifty years than have distinguished those of the past fifty years. And the fact that in some States and Counties during the recent election, black and white citizens were found voting direct for Hayes and Wheeler and others direct for Tilden and Hendricks, instead of for the State electors, and that in other cases men were found voting only for the electors of their own districts, instead of for the whole State ticket, and

the fact still further that mutual charges of gross frauds in both parties, North and South, are made and not doubted, all go to show that the average intelligence and the average conscience have not changed and improved to a sufficient extent to justify either party in advocating any Constitutional amendment looking to a popularizing of the Presidential elections for the future.

Meantime, it is held on all sides that to have the present election decided by a couple of South Carolina or Florida negroes, though a possible, and under some circumstances an endurable contingency, would be in this case a calamity, which various editors of both parties are calling by various moderate and immoderate names. A recent number of the *Nation* seemed to strike nearest the truth of the matter, and to express more clearly the general intelligence and feeling when it said: "If this is not a political outrage, it would be hard to say what is." Meantime, Mr. Nast's cartoon in *Harper's Weekly* for December 9th, giving a pair of scales with an ignorant Irishman in one scale and an ignorant negro in the other, is a daring expression of the hardest truth the educated American citizen has tried to learn and dispose of for many a day.

The perplexity of the present case is intensified by the fact that as yet we do not know what will be the precise nature of the question to be decided; whether it will be that of a "failure to elect or a disputed election," as the *Nation* aptly puts it. There is a Constitutional provision for the former emergency but none for the latter. At this writing the latest utterances of *Harper's Weekly* on the subject seem to assume that the counting of the Returning Boards in South Carolina, Louisiana and Florida, will be considered valid, and it says that Congress must provide in time against any trouble, and suggests that "There are plainly two ways in which this can be done. One is to agree to act harmoniously under the present provision of the Constitution which requires the President of the Senate to open all the certificates from the States in presence of the Senate and the House, after which the votes are to be counted, and the person having the votes of a majority of the electors appointed is to be President. This view regards the counting as merely ministerial. At present this is the only provision. If no other be made, this will govern. The other way is to agree that if any question be raised by a member of either House, the objection shall be disposed of in a manner that shall be accepted by both sides as final."

Now that questions will be raised no sober-minded man can doubt, and that magic "manner" of disposing of said questions is the only unknown and troublesome point in the business. The *Nation* suggests that some Republican elector, of conscience, shall see the great opportunity, and vote for Bristow, thus making the question, a failure to elect instead of a disputed election. Then the election of President and Vice President would devolve upon Congress, and as the House and Senate are now constituted we should have Tilden for President, voted in by the House according to States, and Wheeler for Vice-President voted in by the Senate individually.

Now Tilden and Wheeler do not sound bad together, and perhaps this is the coming compromise.

**Civilization and War.**—The peace-society men of these generations will probably all die without seeing the time when the children of men will cease to blow each other's brains out, and burn each other's homes; but their theories are right on the humanitarian side of them, notwithstanding. Any and all wars are simply an insult to the name of civilization; a parody on the ideas of brotherhood and humanity. Nor does there seem to be any choice of its horrors. To talk of the Bulgarian cruelties as something new and special or characteristic of Turkish ferocity is simply hair-splitting over a sort of crime that is universal. It is in the idea of killing a fellow-being that the infinite enormity lays. To kill a woman is a little more shocking, but not more criminal than to kill a man. To what extent the necessity for killing modifies the crime it will be difficult to say. Man seems to inherit the appetite for blood. The most docile peace-society men are fond enough of their beefsteak. But every rib-roast is a trophy of the murderous instinct. The struggle for life seems to imply the sweeping out of stars or souls that stand in our way, and if the fittest survive, it is certain that they survive by butchery. Neither is Nature herself squeamish in the matter of life-taking. The sea and the earthquake snap a million lives in two without shedding a tear.

How far man, by necessity, imbibes this inherent cruelty of the universe and the carnivorous tendency, and hence what fixed absolute certainty there is that a certain average number of human beings will each year find untimely graves either by "accident" or war, it may as yet be difficult to say, and with so many beautiful theories of spiritual truth and salvation, one does not like to admit that the proportion for the next decade will be as large as the last. But in these hours it looks very much as though the cannon was to take the place of the gospel of St. John for the next few years in almost all the Christian nations of the world. We are simply advanced enough to say it is infamous, but still too akin to nature to dream of its early cessation.

It may, however, be necessary for some as yet undiscovered sanitary causes that a certain number of human beings should be murdered each year. It would be a little heretical in these times to suggest that there was any moral reason for this sacrifice. But think for a moment of the apparent waste, not only of lives lost, but of the energy of body and mind annually thrown into the work of preparing for war. Think of the countless military and naval colleges and schools of all lands; the wit and means required to support them. Think of the countless places devoted to the manufacture of weapons of destruction. Think of the time and talent of the race given to this dastardly work of killing each other. Then, imagine for a moment that all this time and varied energy might be given to works of science, of improved mechanics, to philosophy, morals, religion, and works of peace. In a few years the world would doubtless be more Christian, but it might be slightly over-populated, and then the old need of destruction would be felt and the killing soon be gone over again. The true course seems to be to view the battle field as the huge, quick-acting and, though painful, necessary digestive apparatus of the world, without which the dyspepsia of the race would become unendurable.

## THE DRAMA.

**Crown of Thorns, or Anne Boleyn.** By Anna Dickinson.—On Tuesday evening, December 5th, 1876, we had the pleasure, for the first time, of seeing and hearing our little townswoman, Anna Dickinson, in her somewhat new rôle as a dramatist and actress, the play for the evening being "Crown of Thorns, or Anne Boleyn;" and we want to embrace this first opportunity of setting down our emphatic word in her favor. We are not blind to her defects, and shall endeavor to point out a few; but the first impression was not only surprisingly gratifying, it was positively inspiring. We say surprisingly so, because from her first appearance on the stage in Boston till this day those gentleman usually known as dramatic critics have given but niggardly of their comparatively worthless praise, and have quite bountifully lavished upon her their vapid criticism. Whole columns of this stuff have been poured out over her diamonds, her dress, the defects of her figure, the limited scope of her voice, the monotony of her intonation, with a lot of senseless talk of regret that she did not take the stage her first chance, if indeed she were right in making it her choice at all; while comparatively little has been said or seen of the high order of the quality of the woman's genius, which, unaided, and in the face of many tender and wise and unwise oppositions could and did first make a world-wide reputation as the brightest, most capable, and incisive reform lecturer among us, taking her place side by side with the ablest men in the country, and then for reasons which concern mainly herself and her friends, made or is making a reputation as a dramatist and actress, which, without waiting for the further development of our thought, we here must positively assert is, taking the two together, the creative and the dramatic, not only higher than, and superior to what any American woman has yet done, but superior to what any American woman has yet attempted to do. Most of all this, with the countless fine points of heart and intellect and culture involved therein, the critics have overlooked. And though we knew well enough that Anna was a bright girl capable of the very best things, we had allowed our head to assent to the questionable verdict that perhaps she had missed it in giving her womanhood to the stage.

We will not discuss the comparative dignity of the platform and the stage. There is room for infinite twaddle on the subject; and the room will always be well filled. The simple truth is that it is not the place, or the calling, pulpit, rostrum, editor's chair, platform or stage, but the *man* or the *woman*, himself or herself, that gives dignity or contemptibility to any meanest or highest place or vocation in the universe. In the present instance it is but just to say that this brave and bright little woman, noble as the purest essence of womanhood can be, and smart as the combined Quaker and Puritan instinct will allow of, has given dignity to both the spheres she has chosen; and though she has her defects of nature and training—and where is the man or the woman that has not, of some sort or another?—we have yet to learn that she has ever imposed upon an audience

a stupid lecture or a vapid play, not to mention a soulless and senseless hack criticism of a lecture or play. The girl, and the girl grown to womanhood, has always given her soul's best to the work she has chosen, and to the people, many or few, who have been fortunate enough to listen with unprejudiced ears to her lectures or her plays. She is a genius that the American people in general and the Philadelphia people in particular, may well be proud of, and the sooner dramatic critics are instructed by managing editors to find this out and write accordingly, the better it will be for the papers whose reputations are concerned in the matter. Further, we do not hesitate to say that in her case the step from the platform to the stage is simply that from plain, good earnest preaching, to that of the highest artistic teaching; it is out of the sphere of ordinary moral instruction into the sphere of moral teaching controlled by art. The simplest clear head knows which is the higher of the two, and of heads that are neither simple nor clear, such as the heads of ordinary dramatic critics for instance, it matters little what they think or know on any subject.

Now, as to the special play in question, the manner of its coming to us, its titles, scope, merits and defects, and the manner and degree with which said merits and defects are uttered and overcome by Miss Dickinson, we will be brief, and as lucid as might be, from simply seeing and hearing a single performance. First, of the manner of its coming to us. We are positive and clear that a person of Miss Dickinson's previous reputation should have made her *début* in Philadelphia with more éclat and advertising than was done. The Academy of Music should have been secured, under the very best management, and the whole city have been made to feel that a rare treat and honor awaited them. And we cannot help saying here and now to Miss Dickinson: there is no need for modesty. Make a bold, brave appeal to the American public, in this new sphere, and they will not only hear, but applaud and honor you. Both you and your work are worthy, and the result cannot be doubtful.

Of the two titles of this play we feel just as positive that but one of them is the true and necessary one, and that the other ought to be dropped. The drama is essentially historic, with a preponderance of beautiful sentiment—whether too much or too little, never mind just here—tragedy marks only its close. The title should picture the general spirit, not the exceptional and final element. "Anne Boleyn" is not only simple and beautiful, it tells the whole story. It is a name to the simple utterance of which every Saxon and Anglo-Saxon heart responds. It is complete and perfect, attractive; at once womanly, queenly, sentimental and tragic. "Crown of Thorns" is, in this case, simply a morbid fancy, a sort of pathetic fallacy. It is heavy; too awfully serious for dramatic attractiveness; is, in fact, beyond the scope of the play. Is a dry, sapless, withered affair any way, and might in this case and other cases, without detriment to any known portion of the race, be thrown into the fires of oblivion and burned as kindling-wood for the needed flames of the future.

As to the drama itself, it is on the whole exceptionally good. It is not equal to Shakespeare. It has not the polished artistic finish of *Queen Mary*. But it is in most respects better than any American drama we know of. It is natural, beautiful and charming in its sentiment and love-making, but a little stretched and over-serious in its idealism of love's immortality. The woman seems to hold her maiden faith here, and has apparently never touched that bitter depth which Swinburne recently sung in his "*Deserted Garden*," where, amid the eternal silences

"All are at one now, roses and lovers."

But the play as a whole is too simply and exclusively sentimental for a drama. Amid the passes and play of love, hate and revenge there should be, as there was in the real life, and is always in the intercourse of high souls, such as are here portrayed, more wit and flash of intellect, more sublimity of speech and action in the moral elevations and downfalls. It is too emphatically a woman's play. Anne Boleyn is well done, is positively heroic, and not only commands attention—she captivates the mind and soul. It is a triumph at once flattering to the author and ennobling to the world. Percy, too, is well done, yet there should have been more vital gallant intellect in the man. His body and voice are right, and his intentions simple, manly and good, but such a love for such a woman, under such conditions, should have made the stars strike fire; mind and tongue should have flamed forth in more brilliant words. If we heard aright, there was one bad slip in Percy's love letter written to Anne just previous to his banishment. No refined soul of man would ever say that the voice and eyes and *smell* of his lady love were ever with him. It might have been a slip of the reader, or a failure of the ear, but the word had a dull, hissing sort of sound among the seats near us, and if it is in the text ought to be scratched out instantly. Of all women, Miss Dickinson ought certainly to have love letters enough to fall back upon that have no such word as this on their fair pages.

This same limitation of the circle of the drama to the emotional sphere, bitter or beautiful, is still more marked in the characters of Wolsey and Cromwell. Wolsey was not more of a devil than many another man in his day; but he was a larger genius, and in certain emergencies, made prominent in this drama, he went beyond himself, and struck right home, like fierce, lambent lightning, with thoughts and tears that shook and inspired the heart and intellect of the world. And Cranmer was not the unmitigated tool he here appears to be. We would have had, would still have, Miss Dickinson expend her good head on these defects and remedy them. The play is too simple. It is not grand enough for the souls that figure in it.

Again, among the various lords and dukes, and chambermaids and servants introduced, there might be less dialogue, and more sharp, telling wit. This phase of the play is a little too sombre and tame, but the gist of it all is there, and these improvements could be made with study and time. The king is not much of a fellow, and the style of him as put on the stage in this case is rather Scotch-Irish than English. He hates and raves much better than he loves. But Henry, in fact, had a tender side to him, and was deeply and largely gracious to the ladies at times.

But these are only minor defects, after all, and can, as we said, be remedied. In conception and execution the play is a marvel of success, when one remembers that its author devoted her life for many years to the plain, dry work of a platform lecturer. The necessary changes to be made in the structure of thought from one sphere to the other are many and keen; but the transition in this case is admirably accomplished. The play is brimful of nature, and is well worth perfecting. The best dramas are really all of them the work of many heads. Anne Boleyn will not be the least among them. The play has symmetry, tone, character, dignity, and must succeed. It has not quite enough of the popular element in it to appeal to the crowd. Some of the improvements here suggested would at once make it more perfect and more popular. But the thought in it and its unity and harmony are such as to command and hold the attention of the very best order of minds.

As to Miss Dickinson's acting. It should not in any case be forgotten that she is acting her own play, and the intellect of the woman should lift her out of the mere sphere of dramatic physicality. It is not a mere rhetorician, but a bright, intense woman's soul and mind that meet us here, and the work for the critic is higher than most of the species imagine. And it may as well be settled once for all that the creative intellect, uttering its own thoughts, in the drama or elsewhere, will not have all that strictness and variety of intonation that the mere actor will have. We do not mention these points by way of apology. The creative intellect has something infinitely better; fidelity to nature, and an absoluteness of intensity, in tone and look and action, that no mere player ever had or can have. Frequently during the play in question, a lady with us, who was by no means disposed to be lenient, and in every sense capable of criticism, remarked, "What a pleasure to find a woman who really knows how to express intense emotion." It was not done by a mouthing of the lips, it was done by a fresh calling up of the powers of the soul. The scope of Miss Dickinson's voice is certainly quite limited, and it does not in all cases seem to be under perfect control, but what it lacks in range it more than makes up in its intense naturalness, and we never have heard a woman who loved as sweetly and tenderly and hated as madly and strongly, and so aroused the fires of justice slumbering in the soul, as did this woman, of whom the nation will still be proud. There was altogether too much fuss over the block, however. It was a little tiresome. The real Anne died braver and calmer than that, and so would her portrayeur.

The general action of the play is well arranged. The personal changes of seven years' wifehood of Henry the Eighth are well managed, but Percy might somehow have shown a sign or two of aging, and the King himself. Perhaps, however, men do not grow old as perceptibly as women.

The most painful part of the play is the fact, palpable enough to those who knew this noble little woman seven or fourteen years ago, that her health is badly broken. The full force of the once close knit and splendid energy is not found, but it seems only to be slumbering. A few weeks of the mountain, a few months of absolute rest would recreate and reinspire all again.

## LITERATURE.

**Daniel Deronda.** By GEORGE ELIOT. *Two volumes.*  
*New York: Harper & Brothers.*

For many months now Daniel Deronda has by turns interested and disappointed tens of thousands of readers of first-class fiction on both sides the Atlantic Ocean. It has not, in many instances, provoked sleepless enthusiasm, but it has probably commanded more careful thought than any one of the author's previous works. In this is its strength and weakness. Daniel Deronda is the hero by design, and Mrs. Lewes takes infinite pains to make him heroic and inspiring; but the truth is, that neither the hero or the authoress comprehends or is fully in sympathy with the proposed object of their heroism. George Eliot is doubtless an excellent writer—a rare genius, say, but she has not in her the stuff out of which to make a redeemer of a broken race or a broken world. She has looked beyond her vision, and handled a subject too large for her delicate hands. The result is that the world refuses to be interested in, much less enthusiastic, over Daniel, and Gwendolen Harleth becomes the real heroine; but sufficient pains have not been taken with her to make an acceptable heroine, and so the book, though an immense pecuniary success, is a failure when judged by the highest standards of fiction and art.

Of George Eliot's later works, it is said that her husband, Mr. Lewes, revises, and to a great extent controls the shaping of many of their expressions and thoughts, and that the woman, married, is working to a great extent under the spell of his more ponderous and enslaved intellect. There is all the difference between Adam Bede and Daniel Deronda to make one believe an assertion of this kind. Adam was a pure child of Nature, a noble figure in a limited sphere. Daniel is to a great extent the child of Cant, and of only half-believed theories of man and the world.

Daniel Deronda is a new proof that the imagination won't do for heroes of the largest type, or for any heroes, for that matter. Most people now understand that Dickens's characters were not imagined at all, but sketched from life. It is so with George Eliot, and all writers. Mrs. Lewes had seen and known the other faces and souls. The soul she would make out of Daniel Deronda is not known to her. There are lots of heroes of the hearthstone, the home life. Our existence is endurable because of these, and quick eyes catch their figures and reproduce them in more or less readable novels. A hero of humanity, one that can gather a race in his heart and lift the solid earth up in his hands, is only evolved now and then through infinitely deeper struggles than Daniel Deronda ever knew; and, once for all, it may as well be understood that no human hand can paint him until he himself has come. In a word, realism and not idealism is the law of destiny.

It is but commonplace to say that there is much fine and clever work in these pages, many a vivid sketch of life, and many a charming scene, and many a pointed, pithy and brilliant thought of morals, life and society. In fact, no

intelligent reviewer should forget that Daniel Deronda, "whatever its shortcomings," is a work of genius and originality such as no living English writer but its author could have produced. Had it been the work of an unknown novelist it would have made his reputation. Had it appeared say twenty or twenty-five years ago, it would have gained, if not the wide popularity, certainly the fame acquired by the writer of "Adam Bede." It possesses in a marked, one might perhaps say in an exaggerated, form the features which from the first have distinguished George Eliot's writings. The book is open to criticism, but its demerits, such as they are, become apparent only when it is tried, as it ought to be, by the high standard of its author's own best productions. The carping criticism which attempts to treat a defective work of genius as if it were a commonplace performance is completely disposed of by one fact: Daniel Deronda has for nearly a year excited an interest such as no novelist but George Eliot now knows how to kindle.

A correspondent of the *New York Nation* a few weeks ago asked the following pertinent question relative to this work: "Why is it that George Eliot has not a word to say upon the change in the relations of her hero to Christianity consequent upon his discovering himself to be a Jew? Is her silence explained by the fact that Deronda, being identified with no form of belief, and having made no professions of a religious kind, passes from a mild skepticism or tolerance before the Church to an equally easy attitude in the synagogue? It seems impossible to suppose so earnest, conscientious, and devotional a nature indifferent to the system of religion in which he has grown up. He must inevitably regard Christ as one of the greatest figures in history, if not the greatest helper of man; and, in any event, a spiritual conflict seems unavoidable, unless, indeed, like the wise Nathan, Deronda stands upon some elevated moral plane from which all forms of faith are seen blending beautifully together. But how are we to take so much for granted with regard to one so subtly analyzed for us in every other particular? We should at least have followed with interest an attempt to seek out and set in order Deronda's situation in its distinctively Jewish and Christian aspects."

We should rather say that Daniel seems to vibrate in a hazy atmosphere where the ghosts of all faiths are vanishing without himself having any fixed faith which comprehends the end from the beginning, and so hurls its needed force against the tottering spiritual world. The trouble is not that George Eliot's powers are failing, but that she has attempted a book beyond her sphere. The book betrays no want of power. The interview of Deronda with his mother, or Gwendolen's confession, has at least as much intensity as anything which has come from George Eliot's hands. The Meyrick family may stand side by side with the picture of Caleb Garth and his household as a sketch of home life. Sir Hugh, Lady Mallinger, and, above all, Klesmer and Miss Arrowpoint, are additions to the number of portraits with

which George Eliot has enriched the literature of English romance. To Klesmer and his wife, indeed, particular attention should be directed. Their story is a mere fragmentary episode, not telling directly on the main plot of the novel. It is apparently introduced to set off, by way of contrast, the baseness committed by Gwendolen in accepting Grandcourt. But it is an episode which for humor and insight is comparable to the best thing in *Middlemarch*. For if George Eliot disappoints her readers, it is not from any lack of the peculiar humor which they have been led to look for. There is not, indeed, the same superabundant overflow of wit which is to be found in the conversation of Mrs. Poyser, but a person who does not see the whole insight and sense of humor displayed in the description of Klesmer's call on the Meyricks will probably not greatly appreciate any part of George Eliot's writings. Nor again is the keen moral insight which gives half their impressiveness to our author's works wanting in her last production. The profound influence for good or bad of one character over another is in a sense the theme of the whole book. Deronda's mere glance checks Gwendolen's career at the gambling-table, and brings her conscience to life. Grandcourt's absolute selfishness depresses the moral nature of every person with whom he comes in contact. Mordecai inspires Deronda with his own enthusiasm. The crowning scene of the whole tale commemorates the triumph of a dead father over the will of his living daughter. The seventh number of the book, which might well have been the last, describes the crisis in the life both of Daniel and of Gwendolen to which the whole story leads up, and the whole of this marvellous number contains nothing more wonderful than the art with which the reader is made to perceive that the Princess and her father shared, under all their opposition to each other, essentially the same character. The relentless will of the old Chartist reappears in the Princess, and the selfishness of the daughter casts back a light on the despotic imperiousness of her father. The interview between son and mother ought to be read and re-read by all who wish to enter into the characteristics of George Eliot's genius. Fragments detached from a perfect whole are always unsatisfactory, but the two following passages are fine specimens of our author's last work.

The first contains the description given by the Princess herself of her own character:

'But,' she added, in a deeper tone, 'I am not a loving woman. That is the truth. It is a talent to love—I lacked it. Others have loved me—and I have acted their love. I know very well what love makes of men and women—it is subjection. It takes another for a larger self, enclosing this one'—she pointed to her own bosom. 'I never was willingly subject to any man. Men have been subject to me.'

In the second the same character is analyzed by George Eliot.

'The speech was in fact a piece of what may be called sincere acting: this woman's nature was one in which all feeling—and all the more when it was tragic as well as real—immediately became matter of conscious representation: experience immediately passed into drama, and she acted her own emotions. In a minor degree this is nothing uncommon, but in the Princess the acting had a rare perfection

of physiognomy, voice, and gesture. It would not be true to say that she felt less because of this double consciousness: she felt—that is, her mind went through—all the more, but with a difference: each nucleus of pain or pleasure had a deep atmosphere of the excitement or spiritual intoxication which at once exalts and deadens.'

Put side by side with this the sentence in which Gwendolen concludes her confession:

'The rope!' he called out in a voice—not his own—I hear it now—and I stooped for the rope—I felt I must—I felt sure he could swim, and he would come back whether or not, and I dreaded him. That was in my mind—he would come back. But he was gone down again, and I had the rope in my hand—no, there he was again—his face above the water—and he cried again—and I held my hand, and my heart said, 'Die!'—and he sank; and I felt, 'It is done—I am wicked, I am lost!'—and I had the rope in my hand—I don't know what I thought—I was leaping away from myself—I would have saved him then. I was leaping from my crime, and there it was—close to me as I felt—there was the dead face—dead, dead. It can never be altered. That was what happened. That was what I did. You know it all. It can never be altered.'

No one who reads these passages will dream for a moment that George Eliot's hand has lost its cunning, or that those who devoured her last work need justify their admiration for it. The fact, however, that Daniel Deronda has disappointed even those whom it has fascinated is apparent, if proof were wanted, from the constantly repeated assertion that it contains most striking passages; for to single out particular beauties for admiration is almost to imply that the beauty of a composition is doubtful."

*The Nation* says: "George Eliot's readers were interested in the fate of Gwendolen, and not one in a hundred cared whether Daniel did or did not turn out to be a Jew and become inspired with Mordecai's enthusiasm. George Eliot's interests were evoked by the position of the Jews and the character of Daniel. An infinity of labor and skill has been expended in order to bring readers around to the writer's point of view, and to enlist their interest for Mordecai and Mordecai's dreams or principles. Judaism is first shown us embodied in all the grace and charm of Mirah. An introduction to the Cohens serves to set forth the marvellous contrast between the sordid details of actual life and the ideal visions of a prophetic nature. The Cohen family, moreover, give a touch of life and humor to what might otherwise seem an unsubstantial dream. The dialogue at the debating club sets Mordecai's principles in as clear a shape as any in which perhaps they can be exhibited. The reader, like Deronda himself, is thus with extraordinary art led up to a position from which he may look with sympathetic admiration on the prophet who dies satisfied with the conviction that he has found a disciple, and with the words on his lips, 'Where thou goest, Daniel, I shall go. Is it not begun? Have I not breathed my soul into you? We shall live together.' The skill with which George Eliot has labored to enlist the reader's sympathy for Mordecai is wonderful. It lacks nothing to excite our complete admiration but success. For, to speak the honest truth, the immense *Tour de force* ends in failure. The pain of Gwendolen at parting from Deronda

touches the feelings of a hundred readers for one who is moved by Mordecai's dreams of a new return of his race to Jerusalem. Is the fault here with George Eliot or with George Eliot's readers? We do not undertake to answer the question. To do so with any completeness would involve an investigation into difficult moral problems. That there is in George Eliot's mind a feeling if not a principle as to the sacredness of race, which at any rate does not necessarily approve itself to the moral judgment, is clear. It is further clear that this sentiment has, in the Spanish Gypsy no less than in Daniel Deronda, jarred on the feelings of those most susceptible to George Eliot's influence.

The predominance of what may be fairly termed the chorus is the main characteristic by which George Eliot's earlier and later works are distinguished from one another. This chorus, it is true, is a feature of every novel which George Eliot has produced. The author at times directly, at times through the mouths of villagers or artisans, constantly reflects on the progress of the drama, notes the development of the character of heroes or heroines, and points the moral of their conduct. To object to this is futile, for to object is in effect to admit that you do not appreciate George Eliot's whole mode of thought and writing. That Mr. Main should, apparently with the author's sanction, collect together 'wise, witty, and tender sayings' from George Eliot's writings may be open to remark, and certainly suggests that George Eliot thinks more of the duties of a teacher than of the reputation of an author. But any one who does not appreciate the wisdom and wit to be found in all the novels published by the author of *Adam Bede* had better at once lay these novels aside. What we note is not the moral aim of the works but the mode in which the moral instruction they contain is now enforced. In George Eliot's earlier works the chorus, kept in the background, the tale told its own moral. In *Middlemarch*, and still more in *Daniel Deronda*, the chorus becomes obtrusive. The aphorisms which head the chapters are long, though often impressive, texts, suggestive of a sermon, and the chorus is not kept outside the narrative, but plays the action of the piece to press home truths which intelligent readers might in many cases discover for themselves. Occasionally the result of superfluous moralizing is to produce a painful jar. Compare the following two passages from the works of the same writer, each of which deals with a somewhat similar situation.

The first describes Gwendolen's arrival at her husband's home, and the sudden revulsion of feeling produced by Mrs. Gaster's letter:

'Grandcourt entered, dressed for dinner. The sight of him brought a new nervous shock, and Gwendolen screamed again and again with hysterical violence. He had expected to see her dressed and smiling, ready to be led down. He saw her pallid, shrieking, as it seemed with terror, the jewels watered around her on the floor. Was it a fit of madness?

In some form or other the Furies had crossed his threshold.'

The second describes the shock to Arthur Donnithorne when he returned home elated with the sense of actual worship and future good intentions to find the letter announcing: 'Hetty Sorrell is in prison, and will be tried on Friday for the crime of child-murder.'

'Arthur read no more. He started from his chair, and stood for a single minute with a sense of violent convulsion in his whole frame, as if the life were going out of him with horrible throbs. But the next minute he rushed out of the room, still clutching the letter. He was hurrying along the corridor and down the stairs into the hall. Mills was still there, but Arthur did not see him as he passed like a hunted man across the hall and out along the gravel. . . . When Mills got to the stables the horse was being saddled, and Arthur was forcing himself to read the remaining words of the letter. . . .

'Tell them I'm gone—gone to Stoniton, he said, in a muffled tone of agitation, sprang into the saddle and set off at a gallop.'

Who can read the passages side by side without seeing that in each case the horror of the situation tells its own tale, that all moralizing is out of place, and that the misplaced reference to the 'Furies' risks the descent from the height of tragedy to the bathos of a sermon?

The remarks, further, of the chorus, though often striking, are sometimes more strained than impressive. A long passage which contrasts the pettiness of Gwendolen's hopes and fears with the greatness of the issues and interests raised by the war of Secession, supposed to be waged at the time of Grandcourt's courtship, concluded in these words: 'What, in the midst of that mighty drama, are girls and their blind visions? They are the Yea and Nay of that good for which men are enduring and fighting. In these delicate vessels is borne onward through the ages the treasure of human affections.' Here one may legitimately ponder over the precise meaning of an enigmatic sentence. When we are told that Deronda's mind 'glanced over the girl tragedies that are going on in the world hidden, unheeded, like the tragedies of the copse or the hedgerow, where the helpless drag wounded wings forsakenly and streak the shadowed moss with the red moment-hand of their own death,' we know well enough what is meant, and that the meaning is only too weighty; but we may reasonably suspect that the desire to give force to the author's meaning is gradually overreaching itself, and leading George Eliot to pass from the eloquence of simplicity to the affectation of conceits. The narrative of Hetty Sorrell's tragedy contains no reference to 'red moment-hands.'

The impression of a want of simplicity is increased by a study of the mottoes which adorn or deface each chapter. They are often effective: a stanza which forms the motto of the second volume compresses into seven striking lines the moral of the whole book. But any one who doubts that the long-winded reflections taken from the commonplace-book or the unpublished works of George Eliot afford examples of the way in which a statement that has a meaning may be overloaded by the conceits in which it is expressed, should examine carefully the motto to the first chapter, and consider honestly whether a rather commonplace sentiment is not beaten out into an inordinate number of words.

But to criticise the minor defects of a great writer is poor work, and it would not be worth while to notice strained expressions did they not afford a sign of the transition from description to analysis, which is the characteristic and, in our judgment, the defect of our author's later works. The

tendency to over-analysis produces its most disastrous effect when George Eliot places before the reader a character such as that of Deronda, on which has been expended an infinity of thought and labor. There is something absolutely painful in the kind of vivisection to which his physical and moral qualities are subjected. Of his eyes, his voice, his complexion, the expressiveness of his countenance, and his perfect beauty we hear more than enough. The unravelling of his moral nature gives rise, no doubt, to suggestions which are in themselves full of instruction. 'His plenteous, flexible sympathy had ended by falling into one current with that reflective analysis which tends to neutralize sympathy. Few men were able to keep themselves clearer of vices than he, yet he hated vices mildly, being used to think of them less in the abstract than as a part of mixed human natures which it was the bent of his mind to trace with understanding and pity.' In these sentences is contained a profound explanation of that strange combination, which in modern days is often found to exist, of moral purity with the absence of indignation at vice. If you seek for an explanation of the fact that men who are virtuous and love virtue yet scarcely know the feeling which theologians call an abhorrence of sin, you cannot do better than study the passage we have quoted. But as page after page is filled with reflection of a similar kind, the reader feels that he is studying an instructive essay on human nature, but is not obtaining a picture of Deronda. The author, too, is dissatisfied, and, returning again and again to the hero's character, retouches a portrait which the very painter seems hardly to consider a likeness. When dealing with minor characters or carried away by the stress of the drama, George Eliot falls back on artistic instincts and paints with a bold hand. Hence Sir Hugh, Klesmer, Miss Arrowpoint, the Princess, and Joseph Kalamyos are full of life, whilst Deronda, and even to a certain extent Gwendolen, are bundles of qualities.

The deficiency, however, in the portrait of Gwendolen is only an indirect result of George Eliot's passion for reflection and analysis. Her character is rather incomplete than indistinct. The author has expended so much space on the elucidation of the play of varying motive and sentiment which decides Deronda's conduct, that she seems to have wanted the space needed to fill in the outlines even of her most important characters. Gwendolen's selfishness, waywardness, and caprice are made clearly apparent. Why a girl so selfish should have felt as many much better women would not have felt the wrong done to Mrs. Glasher, is never made really clear. The process of her 'conversion,' for no other term describes the awakening of her conscience, is itself rather hinted at than explained. The horror of something like the guilt of murder is intelligible enough. The sensitiveness of conscience which kept Gwendolen miserable in the midst of prosperity, before the commission of what the world would have held a great crime, needs more explanation than it receives. The grandest tale George Eliot has written has for its theme a woman's salvation from sin and misery under the influence of a man better than herself. No one ever felt they needed further explanation either of the repentance of Janet or of the influence of Mr. Tryan. Gwendolen's conversion will always remain a but

half-explained enigma. Something the same may be said of Grandcourt's character. A motto to one of the chapters hints that Grandcourt exhibited the complete development of selfishness. His soul had morally died before his physical death. Such things may be, but one feels that some of the reflections lavished on the character of Deronda might have been well employed in drawing out with more clearness the steps by which Grandcourt had sunk from a man into a mere incarnation of joyless selfishness.

Another result of George Eliot's habit of analysis is that there exists occasionally a great difference between the portrait of a hero which George Eliot presents to the public and the effect which the hero's character makes on the author's own mind. This was conspicuously apparent in the case of Will Ladislaw. The same thing is true of Deronda. We can scarcely be mistaken in supposing that Daniel is meant to portray a character coming near to human perfection, in which all the strength and energy of a man are blended with the sensitive tenderness and keen personal sympathies of a woman. It is at bottom his perfect goodness which appears to have roused the conscience of Gwendolen. His exquisitely sensitive conscience enabled him to save Gwendolen when many men in his position would have been false to her or to themselves. Yet, despite the art used to make Deronda's virtues apparent to the reader, it may well be doubted whether the man, as actually drawn, will kindle much admiration even amongst those who most highly admire George Eliot's genius. He is incurably weak. He is at every stage of his life a slave to circumstances. He never ventures to ask Sir Hugh whether he is the baronet's son, and through life was thus oppressed by an unfounded belief in his own illegitimacy. He can determine on no career till fate or the influence of Mordecai forces him to take up a pursuit in life. A question from his mother reveals to him that he is in love. A question from a stranger determines him to devote himself to the service of his countrymen. Accident and the suggestion of a friend lead him to propose to Mirah.

No doubt he is full of kindness and sympathy, but his character has a painful touch of what may fairly be called 'priestly,' though not in the worst sense of that word. He has a genuine concern for the souls of his neighbors, especially when these neighbors are pretty women. He sermonizes and flirts at the same time, though both the flirtation and the sermonizing are unconscious. His mixed weakness and sympathy lead, as is natural, to cruelty. He puts off revealing to Gwendolen his marriage and his plans till that revelation becomes the hardest of blows to the woman whom his influence had aroused to goodness. He has, it is true, a charm. His mother calls him a 'beautiful creature,' and throughout the whole description of the interview between son and mother you feel it difficult to think she is not addressing a daughter. The interview is perfectly true to nature. Here as elsewhere George Eliot's drawing is truer than George Eliot's reflections on the character drawn. Daniel remains morally as well as physically a 'beautiful creature.' It is not of such stuff that reformers are made. When Deronda wanders off to the East we feel sure that he will travel about year after year doing deeds of kindness and

cherishing noble aspirations, but further removed than even a passionate dreamer like Mordecai from working out any deliverance either for his people or for mankind. George Eliot might urge that our estimate of *Deronda* is unjust. We doubt not that in a sense this is so. Our very point is that from some cause or other *Deronda* is so drawn as not to produce the intended impression on the reader. That this failure to ensure an intended effect is closely connected with George Eliot's increasing tendency to analysis is at least highly probable. This tendency is at any rate the real cause of all the legitimate dissatisfaction which many of those who most keenly appreciate *Adam Bede*, *Romola*, *Silas Marner*, or *Middlemarch* feel with regard to *Daniel Deronda*. The book is a marvellous production. It exhibits all and perhaps more than all the power of George Eliot's earlier works, but as you read that throughout reflection predominates over spontaneous creation, and that the chorus usurps the place of the actors. Admiration for the result of labor and meditation cannot banish regret for the abundant life of *Adam Bede* or the unbroken harmony of *Silas Marner*.

In one respect, at all events, the judgment of the public is clearly justifiable. Sufferings or difficulties exceptional in circumstances and in nature ought not to evoke the same interest as are aroused by miseries or perplexities which appeal to wide human experience. It is in this that *Middlemarch* rises so much above *Daniel Deronda*. The half-tragedy of *Dorothea's* life, and the complete intellectual

ruin of *Lydgate*, each depend on causes of wide operation. The circumstances of each are peculiar, but there are hundreds of women who have made shipwreck of happiness because they have endowed some commonplace man with imaginary virtues; and in every town or county there must be found *Lydgates* who have missed their vocation through the combined unkindness of circumstances and weakness of their own will. The key-note of *Middlemarch*—the misery of a missed career—is one to which many minds can respond but too easily. The same thing is true of all George Eliot's greater works. *Romola*, it is true, deals with a distant time and past state of society, but the essence of *Romola* is eternal. The selfishness of *Tito*, the nobility of his wife, the religious influence of a great teacher, are reproduced under varying forms in every age. The same holds good in a measure with regard to the fall and the awakening of *Gwendolen*, but does not apply to the difficulties of *Deronda* or the struggles of *Mordecai*. The novel, again, is deficient in any character which is at once alive and heroic. *Daniel* and *Mordecai* are no doubt meant to be of an heroic mould; but whoever puts *Romola* and *Savonarola* side by side with *Deronda* and *Mordecai* will see the difference between life-like painting and labored description, and admit that there is at any rate some reason for feeling that a work which would have made the reputation of any other writer is not on a level with the best creations of George Eliot's genius."

## SCIENCE AND MECHANICS.

**Flowers and other Plants in our Homes.**—It may be interesting to some of the readers of Margaret Field's interesting little article on "Making Home Beautiful," in the December MONTHLY, to be advised that, notwithstanding a rather prevalent sentiment to the contrary, the presence of plants, especially of flowering species, in our homes is beneficial rather than prejudicial to health. Indirectly their benefit can be readily understood by the least scientific, inasmuch as they compel the admission of more light (even of sun-shine) and air to the rooms they occupy, and it requires no argument to demonstrate the benefit to human creatures of plenty of light, and of fresh pure air judiciously admitted to the rooms wherein they are wont to abide. Nor will any cavil at the claim that the benefit to the moral and mental natures, of having the rooms we inhabit made bright and cheerful, as flowers or even flowerless plants must aid in making them, must extend to the physical nature in some degree. But science has shown that directly and positively plants contribute to physical well-being, admitting always that no plant of known noxious character should be admitted to poison the atmosphere within a closed room—but this class of plants can be excluded without materially reducing the possibilities of making home beautiful. Exercising good sense in the selection of the floral friends we admit to our homes, science tells us that we shall make our homes more

healthful as well as more beautiful by cultivating window and indoor gardens. A recent writer, George H. Perkins, Ph.D., in *The American Naturalist*, in a capital article on "Hygiene of House Plants," cites the well-known fact that "Florists, who spend much of their time in greenhouses, are as a class unusually healthy, and sometimes these people sleep for weeks in the greenhouse with not the least evil effect." "It is also a well-known fact," he says, "that asthmatic persons often find great relief as they enter a greenhouse and breathe its air; even those whose complaint prevents comfortable rest elsewhere find little or no trouble in sleeping in a greenhouse."

**Consumption and its Cure.**—In a recent number of the *British Medical Journal*, Surgeon Major W. T. Black says: "It is living in the open air in a fine climate that is really beneficial for consumptives, and not the mere climate of itself." In illustration of this proposition, he details the experience of an officer of a British regiment who had contracted phthisis while stationed in the south of England. After submitting to medical treatment for a time, he obtained sick leave and partially recovered, but, on returning to duty, the malady returned with alarming development of consumption, the upper lobe of the right lung being seriously involved—in the third stage, with cavities. Upon examina-

tion by the medical board he was invalided, and finally sold out his commission. He then took to an almost unintermitting living in the open air in the more healthful regions of England and upon the continent, devoting his time largely to hunting and other horseback exercise. For some two or three years Surgeon Black did not see him, and then met him and found him well-nigh restored to perfect health. *The Medical and Surgical Reporter*, in commenting on this, says: "If this is not new, it is at least too often forgotten," and adds another illustration from observation.

**Colors that Run** may be checked in their evil course by soaking the fabric, be it calico or what-not, for an hour in a bucket of water containing a tablespoonful of turpentine.

**Linnæus and Evolution.**—A writer in the *Scientific American*, after awarding the great naturalist just praise for his inestimable service to natural science by his classifications of plants and animals and new system of nomenclature based thereupon, absurdly tells us that "all that Lamarck and Darwin did was to extend Linnæus's exceptional theory to the origin of all species whatsoever." He does not, however, tell us that the line between sense and nonsense just lies between the carrying of a theory to, and the attempting to carry it beyond, its proper boundary. Linnæus's "much learning" had not "made him mad," and he was content to know "what is truth" without seeking to manufacture truth on a theory of his own.

**Kerosene and Gas in Japan.**—It seems that the Japanese are "willing to learn" what they have not known, and among the advantages the people have derived from contact with other peoples is an increased and improved enlightenment by the introduction of kerosene and gas. The natives are entering into the manufacture of lamps for the one and the building of works and manufacture of apparatus for the other.

**A Simple Protector for Grapevines.**—In the French Academy of Sciences recently, M. Gachez stated that a row of red Indian corn planted between every two rows of grapevines attracts the phylloxera from the roots of the latter to those of the former and thus saves the vines from their worst enemy.

**Artificial Butter.**—The *Scientific American* says, editorially: "We are assured by competent authority . . . that quite recently no less than fifty artificial butter factories were counted in this city [New York]; and large quantities of artificial butter are sold in the market by wholesale dealers, or are purchased directly from the manufactories by large retailers, and offered to the consumer as genuine butter." It is stated that the most critical palate cannot detect the difference—the artificial is said to taste exactly like the genuine, if not more so (that is, better), while Professor Chandler has pronounced the artificial "actually more healthful than the average cow butter sold." From the history of this industry, as given by the capital paper above quoted, we learn that the first process patented was by "Bradley in 1871, and by Peyrouse in the same year," but one Hippolyte

Mège, in 1873, patented the first successful process. Recently, "Dr. Henry A. Mott, E.M., a promising young chemist of this city [New York], who for some years back has been engaged in investigating the subject," and whose "researches have included the actual manufacture and testing of the various compounds patented," has found the butter "philosopher's stone," or the "true process for producing artificial butter;" the "salient feature" of his invention "is that he produces, not tallow disguised as butter, but butter itself." "Hon. X. A. Willard, President of the New York State Dairymen's Association, an able butter expert, admits his surprise at the flavor, and declares the butter the best yet made." Just here comes a notable fact: the popular prejudice which makes it necessary to sell the artificial as genuine butter enables its manufacturers and the dealers to realize larger profits than they would be content with, and deprives the consumers of the actual benefits of the discovery; the cost of manufacture of Dr. Mott's best, does not exceed thirteen cents per pound.

**Cold in the Head.**—The London *Lancet* so strongly recommends the new remedy of Dr. Ferriert for this complaint that we believe it must be worth trying, and we therefore give the formula: Trisnitate of bismuth, 6 drachms; pulverized gum arabic, 2 drachms; and hydrochlorate of morphia, 2 grains. Used as a snuff, "creates no pain, and causes the entire disappearance of the symptoms in a few hours," according to the *Lancet*.

**A Two-Story Street Car.**—A New York City Railway Company has placed upon its road a novelty in the way of a car with an upper deck; there are two benches placed back to back lengthwise of the centre, and over these is stretched an awning securely fastened to resist the strain of the motion of the car as well as the force of wind. A stairway is placed so that it does not materially interfere with the lower story, or body of the car.

We learn from *The Independent*, that Professor Tayler Lewis, the renowned author of "The Six Days of Creation," has been suffering for some months from sciatica and neuralgia, and is much worn with pain and sleeplessness. He is unable to write; but it is hoped that the remedies employed will restore his physical strength. His mental strength is as vigorous as ever. He has not been able to attend to his college duties since last June. For some years he has been entirely deaf. He is seventy-four years of age.

**Dr. Peters**, of Alabama, describes in the *American Naturalist* the case of a large spider, which was observed to drop ten or fifteen feet from a tree, and seize and kill a minnow three inches long. Madame Merion's story of the large *Myiagula arcularia* catching humming-birds has been confirmed by modern travellers; and now it would seem that fishes also fall a prey to these sagacious animals.

**A Scotch chemist** has discovered that in many cases the porcelain lining of cast-iron cooking utensils is exceedingly dangerous, because some acids and even salt dissolve out of the enamel lead and arsenic.

## WILMINGTON, PAST AND PRESENT.

By WILLIAM HENRY THORNE.

OLD SWEDES' CHURCH.

TO DAY we know of no city in the Union that at once so combines the North and the South, and is so expressive of the special features of the Old South and the New, as the City of Wilmington, Delaware. Here the Puritan, the Quaker and the Planter have plodded and tugged and builded together, and quicker than most cities of the South, Wilmington is showing and will show the effects of the invasion of Northern industry and invention. It was the last place to yield some of the striking features of the old regime. It is one of the first to show signs of a large future prosperity. Slavery persistently lingered there until the fourteenth amendment to the Constitution, and even to this day citizens of Wilmington occasionally find themselves under the lash at the whipping-post, at New Castle.

From the very earliest times of our national history, and particularly ever since the day the broad, genial and sensible face of William Penn came beaming up the Delaware River selecting sites for cities which he intended should be practical illustrations of those ideas and laws of justice and charity that were then turning themselves over in his mind, the spot on which the thriving City of Wilmington now stands has been a place of considerable interest, the centre of a steady, persistent, and prosperous sort of industry, and at first the refuge and

then the home of a unique, select and varied culture. From 1609, when Hudson discovered the Delaware, and 1610, when Lord De la Ware entered Delaware Bay and afterwards got the river and State called after his name, till 1664, when the Duke of York came into possession of the territory, to 1682, when it was conveyed to Penn, the Dutch had fought the Indians over this spot, and the Swedes had fought the Dutch, and better than all fighting, had uttered their reverence by building, in 1698, what is now known as "The Old

SOLDIERS' MONUMENT.

now forming the State of Delaware came into Penn's possession until the present hour, the at be still more puzzled. In fact a Philadelphian, though he locate in Wilmington, may hardly dare

WILMINGTON HIGH SCHOOL.

first borough and then City of Wilmington has seemed as much like him as the great City of Philadelphia, and as to general appearances, tone of life, and business industry, the two towns, though differing so much in size, resemble each other more to-day than any other two cities in the country.

Wilmington is really the only city of any note in Delaware. Most of the energies of the State flow into it, and a good deal of talent from other States finds itself building ships, railway cars, car wheels, carriages, and pushing the general industries of our times, gathering fortunes and making homes there in these days. It apparently took a good while to find out that Wilmington, not New Castle or Dover, or other place, was the favored spot of nature for the leading industries of Delaware. On entering Wilmington the traveller from Philadelphia, by way of the Philadelphia, Wilmington and Baltimore Railroad, will be sadly bewildered if he attempts to determine the points of the compass by the lay of the streets. If accustomed to Philadelphia, where the numbered streets run due north and south, and the named streets, with few exceptions, run east and west, he will probably

be still more puzzled. In fact a Philadelphian, though he locate in Wilmington, may hardly dare hope that he will ever get himself exactly square with the polar star in his adopted city. Leaving Philadelphia for the South, with the Delaware River to the left of you and keeping it to the left, and yourself seemingly going due south all the while on reaching Wilmington and stepping out the right-hand side of the cars, the Christiana River to the left of you, and apparently the Delaware a little further to the left, and on your right the numbered streets running parallel to the river, Front street, Second street, etc., just as in the city of Penn, and the very faces of the houses the same, only pinched and dwarfed a little, you naturally im-

agine that Front street and all the numbered streets run north and south as in the larger and sister city; but it is all a provoking blun-

HARKNESS'S ACADEMY.

der. Before reaching Wilmington the Delaware veers to the west considerably, and the railroad

as it approaches the city follows the inclination of the river; in fact, after passing the graveyard of the Old Swedes' Church, a part of which sacred spot said railroad cuts off in its practical determination for a good roadway to the city at the least possible expenditure, the trains run about due west for four or five blocks, then a little northwest

are now laid out from the city reservoirs, at Clayton and Eighth streets, clear to the edge of the Delaware River, and to-day Eighth and Market, the neighborhood of the new Masonic Temple, and only about a half mile from the Old Swedes' Church and graveyard, may be considered the centre of the present city, and probably the

centre of the future city for the next fifty years, the numbered streets running right into the Delaware, and Market street running parallel to the same. But you must follow them without any regard to where the sun sets or rises. The streets are cut through, and the mills all run without the slightest reference to these things. The Old Swedes' Church and graveyard is the only human arrangement in Wilmington that regards the poles or the courses of the sun. It was evidently laid out and built by the compass. It backs to the east and faces the west, as if confidently waiting for and expecting the glories of the future years.

In the second period,

what might be called Penn's period—not that he lived through it but shaped it—from 1700 to 1800, Wilmington got itself built into a respectable English-American Quaker village, the landmarks of which are now rapidly passing away; settled on a name for itself and its charming, romantic stream; became packed with little legends of romance and mystery, built its first mills on the Brandywine, started its bank accounts, and really got well on that line of industry and economy which have made it a city of a few rich and many humble but cosy and comfortable homes.

It was first called Willingstown from a settler, and then Wilmington from an English Earl of that name, a change which was not difficult to make, and which still tends to keep the memory of Earl and settler green. The Brandywine, called by the Dutch Brand-wijn, gets its name, it

FAULKLAND, OLIVER EVANS'S OLD MILL.

for half a mile, then, on leaving the city, in the neighborhood of the depot of the Wilmington and Reading Railroad, the engineer is steering southwest again.

In passing through Wilmington, after crossing the Brandywine, the railroad follows pretty nearly the line of the Christiana river, the course of which within the corporate limits of the city of Wilmington alone, is at least toward the forty-eight cardinal points of the compass. The ways of the Brandywine are scarcely less tortuous and whimsical. And instead of the numbered streets running north and south and parallel to the rivers, one or the other, they really run parallel to nothing at all; but, taking the Delaware River as the boundary, and it will really be within a few years the commercial wharfage front of the city, the numbered streets run at right angles to it, and

is said, from the circumstance of a ship loaded with brandy having foundered at its mouth. Not many years ago there were people living in Wilmington who are said to have remembered seeing the tops of the masts of the ship that was made immortal by this little accident, and forever associated with one of the most romantic rivers in the world.

The spot sparkles with instances of sentiment and history. In the early days the Christiana was five or six times its present size, and the space between the Christiana, the first bend of the Brandywine, Shelpot Creek and the Delaware, now all marked off on the map in squares, as a part of the Wilmington of the future, and formerly known as Cherry-Tree Marsh, was in the first days of the settlement entirely covered with water. In 1672 George Fox touched upon this spot. "We came to Christian River," he says, getting the name a little wrong, as enthusiasts are apt to do, their feelings leading them astray, "Where we swam over our horses;" this incident, giving Charles Reade the opportunity for that expression of caustic wit, "Hereabouts George Fox, the first Quaker, built a fire in 1672, to dry his immortal leather breeches." Here Elizabeth Shipley, the Quaker prophetess, got herself a practical husband through the influence of a brilliant dream. And one of the oldest and wisest ladies living in Wilmington to-day, it is said, fell in love with her future husband years before she had seen him, and while the three thousand miles of the Atlantic rolled between them, simply from hearing his name,

"Nameless here, forever."

A French teacher of note, William Cobbett, lived on "Quaker Hill," now Fourth and West streets, in 1794, and later went to Philadelphia and founded Peter Porcupine's *Gazette*. Latrobe, the architect, lived here in the first quarter of this century.

Here, too, about fifty years ago, a pretty French girl used to play and eat peaches, maintained by funds mysteriously supplied from Louisiana, and ignorant of all connections except a peculating guardian. It was little Myra Clark (now Mrs. Gaines), who woke up one day to find herself the heroine of the greatest of modern lawsuits, and

the credited possessor of a large part of New Orleans.

But time and space fail us to tell of the legends that centred here while Wilmington was shaping itself into a town of two or three thousand inhabitants, building its first Quaker meeting-houses, Presbyterian chapels, cloth and flour mills, and in a word starting on the road to the progress of

MASONIC HALL AND OPERA HOUSE.

the last seventy-five, notably of the last twenty-five years. More than forty years ago, or about 1833, a writer in the "Encyclopedia Americana" declared that here at Wilmington, is the finest collection of flour-mills in the United States, known as the Brandywine Mills. And though this distinction of "finest collection in the United States" could hardly be applied to them at this time, other cities East and West having far outstripped Wilmington in rapidity of growth in all directions, yet the Brandywine Mills are still

well-nigh as noted as the far-famed charming beauties of the stream whose rapid current keeps their swift wheels flying around. Here is a vivid glance at one of Wilmington's historic mills, with incidents worth remembering:

"The best location for such a structure, where water-power just met tide-water, and shallops drawing eight feet could load up at the shore, was selected in 1762 for mill-buildings which still stand, and which were for many years the most famous in the country, regulating the price of grain for the United States. The business soon overflowed, and necessitated the building, in 1770, of the structures represented in our engraving, the whole group, on the two sides of the stream, being under one ownership, and known as 'Lea's Brandywine Mills.' Hither would come the long lines of Conestoga wagons, from distant counties, such as Dauphin and Berks, with fat horses, and wagoners persuading them by means of biblical oaths jabbered in Pennsylvania Dutch. From these mills Washington removed the runners (or upper stones), lest they should be seized and used by the British, hauling them up into Chester county. When independence was secured, the State of Delaware hastened to pass laws putting foreign trade on a more liberal footing than the neighbor commonwealths, thus securing for her mills the enviable commerce with the West Indies. Much shipping was thus attracted to Wilmington, and the trade with Cuba in corn-meal was particularly large. It was found, however, that the flour of maize invariably rotted in a tropical voyage, and thereupon the commodity known as kiln-dried corn was invented at the Brandywine Mills: two hundred bushels would be dried per day on brick floors, and be thought a large amount, though the 'pan-kiln' now in use dries two thousand in the same time. The dried meal was delivered at Havana perfectly fresh, and pay received, in those good old days of barter, in Jamaica rum, sugar and coffees."

The fine old mills are still in operation, manufacturing into meal about a million bushels of wheat and Indian corn every year.

When steam was introduced to revolutionize labor, and railroads came to supplement water-transport, they found the manufacturers of this prosperous town ready to avail themselves of every improvement, and pass at once from the chrysalis state into the soaring development of modern

enterprise. If one wants to get a fair idea of the Wilmington of to-day, let him, on leaving the train at the dingy old depot—a marvel of slowness and unenterprise when compared with the average splendid condition of the Philadelphia Wilmington and Baltimore Railroad, and particularly with the beautiful little stations that meet the eye all the way from Philadelphia to Wilmington—on reaching the depot let him look around for an hour or two among the mills in the immediate vicinity. Here he will find a perfect network of appropriate structures of the Harlan & Hollingsworth Company, where the various processes of American ship-building are successfully carried on. The buildings of the Lobbell Car-Wheel Company will command his attention; and the establishments of the Jackson & Sharp Delaware Car Works will be found to be among the most

FOUNTAIN.

complete and extensive works of the kind in our country; the Diamond State Works; the Plate Iron Rolling Mills; the Walton & Whann buildings for the steam manufacture of super-phosphate, and various other lesser manufactories, will claim attention and repay a visit.

On reaching the corner of Water and Market streets, turn up Market to the right, and you are at once in the midst of the modern busy retail life of the town. The leading houses in the various departments of trade are too numerous to mention here. It is the usual thoroughfare of stores for a town of forty thousand inhabitants. In the neighborhood of Fifth and Sixth and Market the live newspapers of the place have their offices of pub-

lication. The *Commercial*, Republican, formerly a two cent, but now a one cent, daily would probably claim the most newspaper dignity and character. *Every Evening*, independent, embodies what a few years ago was a good part of the talent of the *Commercial*, and is decidedly a live and spicy evening visitor. The *Morning Herald*, Democratic, has a tone of less experience and more violence. There are other dailies, and some weeklies, all trying to save their own necks and the common country as earnestly as possible.

Stepping along Sixth street to French, the Public High School No. 1 will be found. It is a large structure, conveniently arranged for the purposes that led to its erection, and is a fair indication of the interest long felt by Wilmington in educational matters, while the subject was sadly neglected in other portions of the State. In the neighborhood of the newspapers on Market street is the Clayton House, Wilmington's new hotel, costing about \$200,000 for erection, and built on the temperance plan. A little farther along Market street is the Opera House and Masonic Hall, built by the Masonic fraternity at a cost of about \$200,000. Near this point, at Ninth and West streets, is the Grace Methodist Episcopal Church, one of the handsomest Methodist churches in the country. These buildings are pointed out to the visitor by the younger Wilmingtonians as indications of what the new and larger Wilmington of coming years will be.

At Tenth and Market the new academy recently built by J. C. Harkness, for educational purposes is worthy of notice. Further along on the same street is the palatial-looking residence of Colonel Henry McComb. It was a quiet Southern-looking house previous to the war, but is now, as are the more public buildings just mentioned, a clear indication of the incoming of the Northern spirit into this once modest little Quaker town. In the

vicinity of Colonel McComb's modernized mansion are several old-fashioned substantial and more home-like residences of the Southern sort, in which the old spirit still reigns.

Along Delaware avenue, the mansions of Job H. Jackson and of Henry L. Tatnall represent the lavish modern spirit again, while a little beyond them, opposite the cemetery, are more fine old residences of the times gone by. Still further out the avenue,

CLAYTON HOUSE.

a superb brownstone mansion, built by Mr. Hollingsworth for a private residence, is now occupied by the Catholics for a first-class academy. In the same locality, a little down toward the Brandywine, is a solid-looking brick structure known as Heald's Hygeian Home, Drs. Pusey and Mary H. Heald, proprietors. The entire place has a look of health and an atmosphere of pure air about it and the living is delicious enough for the gods, and particularly blessed for all those persons given to weak, that is abused and hence unhealthy stomachs. It is the most progressive and Northern of all the institutions of the new Wilmington. Toward the suburbs of the city on Delaware avenue, there are some very rich and beautiful modern dwellings, notable among which is the house built a few

years ago by Mr. J. T. Heald, one of Wilmington's best and most enterprising men, but now owned and occupied by Mr. Washington Jones, another public-spirited and leading citizen of Wilmington. Along the Brandywine, in addition to the mills already described, are Jessup & Moore's Paper Mills, Bancroft's Woolen Mills, Dupont's Powder Mills, and others less noted, all mingling their practical humdrum of daily life with the nameless beauties of this delightful river. Among other leading industries of Wilmington, may be mentioned the thriving morocco factories

servedly receive a special description at our hands. They are all first-class, excelled by no similar establishments in the country, and they all indicate on what sure bases the future growth and prosperity of Wilmington are founded. Among the newer ventures of the city should be mentioned the Wilmington and Western Railroad, begun in 1871. It was well conceived, and the beginnings of it were executed with promptness and apparent success, but the undertaking was probably a little premature for the size and relative locality of the city, and though it will eventually be of benefit to

IRON SHIPBUILDING WORKS.

of Messrs. Pusey, Scott & Co., also that of Mr. Washington Jones, already referred to; the immense ship-yards of Pusey, Jones & Co., and Messrs. McLearn & Kendall's Coach Manufactory.

As long ago as the year 1825, when the gallant French-American patriot Lafayette was the guest of Eleuthère Irénée Dupont, the founder of the famous powder mills, was so impressed with the change of the intervening years since he had before been hereabout, that he wrote in the "Album" of his host's daughter:

"After having seen, nearly half a century ago, the bank of the Brandywine a scene of bloody fighting, I am happy now to find it the seat of industry, beauty and mutual friendship.

JULY 25, 1825.

LAFAYETTE."

Would the limits of this notice permit, the business enterprises mentioned might each de-

Wilmington, many persons earnestly interested therein lost heavily by the undertaking.

The Wilmington and Western Road crosses Christine River in the suburbs, then follows the valley of Redclay Creek, past all its mills and local improvements, sends visitors to Brandywine Springs, and passes the birthplace of the inventor Oliver Evans, while its contemplated extension will pass it close to the birthplace of Robert Fulton, in the Peachbottom slate region of Pennsylvania. No bad omen for a steam-road, to have had its ground first broken at the cradle of one steam inventor and to lead to the cradle of another!

It is all a part of the new spirit that is shaping the little Christinaham of two hundred years ago into one of the great and beautiful American cities of the future.

I send to POTTER'S AMERICAN MONTHLY, the American Historical periodical, the above copy of an unpublished letter of Washington, because it seems to me likely to prove especially interesting to its readers at a time when the Centennial Exhibition has been displaying to crowds, congregated from the Old World as well as from the New, the vast agricultural and mineral resources, and the brilliant manufacturing triumphs of the great and greatly-growing Republic, and when, as I learnt from an article in the New York *Tribune* of the 29th of June, "the Ensign of the Republic" and its origin was discussed with unusual interest.

Nothing can more strikingly bring home to those who contemplated the industrial marvels of the Centennial Exhibition the wonderful progress which the United States have, in the last one hundred years, made in manufactures and wealth, than the fact, shown by this letter of the Father of his Country, that one of the most business-like dwellers in the "Old Dominion," then one of the wealthiest and most advanced of the American colonies, if not the wealthiest and most advanced of them, had to send to London or Bristol to procure nails, locks, glass, putty and other ordinary materials needed for the repairs of his Virginia home, Mount Vernon.

MUD ISLAND,

Fac-Simile of a Drawing made by Colonel

Several letters of Washington to Mr. Robert Carey will be found in Sparks's eleven volumes of Washington's letters and papers. He had acted as London factor for Mrs. Washington's first husband, Mr. Daniel Parke Custis; and after her second marriage Washington continued to consign

This letter to Mr. Robert Carey came into my possession through one of the books ordered by Washington for his stepson's studies happening to be the work of my Episcopal great-grandfather and namesake, John Conybeare. Young Mr. Custis, in all probability, read very little of the

MUD ISLAND,

Fac-Simile of a Drawing made by Colonel

to Mr. Robert Carey the tobacco from her Virginia estates, and to order through him books and other things required for his stepson and ward, young Mr. Custis, to whose separate account Washington in his present letter directs Mr. Carey to debit the books ordered, as it was incumbent on him as guardian and administrator of his stepson's property to account to the General Court of Virginia for all sums expended from the minor's income, for books or other educational requirements.

books so ordered for his use in the close of the year 1773. Before the books could have been twelve months in his hands England's American colonies were banding themselves together to resist the ill-judged exactions of the English government, and young Custis was called away from peacefully studying the English Bishop's defence of "the Christian Religion" to join in the defence of American rights against ill-advised English oppression, and to act as an aide-camp to his stepfather, who, in 1775, was

BEFORE THE ATTACK.

Dowman, commanding the British Battery.

appointed General and Commander-in-Chief of the army of independence. Young Mr. Custis was present at "Headquarters, New York," when, in October, 1781, the war of independence was virtually brought to a close by the capitulation of the British army under Lord Cornwallis, caught

manship, tell us a good deal more than this. When the letter first came into my possession, several years since, I found the broken halves of the divided seal attached to the two edges of the letter. Having cut them off, placed them together and mounted them on card-board, I

AFTER THE SURRENDER.

Dowman, commanding the British Battery.

camp fever there, and died a few days afterwards. His only sister had died shortly before the date of the unpublished letter which I send; and the black wax of its seal shows that Washington, when he wrote it, was still in mourning for his step-daughter.

Those fragments of black sealing-wax, impressed with a seal which is of English work-

THE SEAL.

found in them the answer to a question which I had often asked, but always asked in vain, of American friends, how the Stars and Stripes came to be adopted as the American flag. I had on that broken seal the Washington arms before me, arms which are still to be found in monuments of the Washington family in a Northamptonshire parish where a branch of the family, long since extinct in England, resided some two centuries ago, and looking at the armorial bearings on that seal, alternate stripes of red and white, with three five-pointed

stars *en chef*, I felt no doubt that the Stars and Stripes of the ensign of the Republic are in fact the Washington arms adopted and but slightly modified.

It is well known that many national flags have had a similar origin. Henry the Fourth of France, the founder of the house of Bourbon, caused to be adopted the white flag charged with the escutcheon of his family, three golden *fleur de lis* on a blue shield; the adoption or non-adoption of which by France has so recently made a sort of political crux.

In like manner the United Netherlands adopted as its republican banner the armorial bearings of the family which had so staunchly and gloriously led the van in the Dutch struggle for independence. The eloquent historian of that struggle, Motley, perhaps the greatest of American historical writers, in describing the capture of Cadiz, alludes to this in the following words (Vol. III., page 385): "Four hundred volunteers under Prince Lewis Gunther of Nassau, now sprang on shore, and drove some eleven hundred Spanish volunteers back within the gates of the city. . . . Young Nassau stormed the bulwark, sword in hand, carried it at the first assault, and planted his colors on its battlement. It was the flag of William the Silent. *For the republican banner was composed of the family colors of the founder of the new Commonwealth.*"

Now, it is beyond question that the republican banner of the United States of America is composed of the colors of the Washington shield, as shown in the seal I send herewith, and which is described heraldically as "field argent, barry gules," in other words, a white ground with red stripes, so as to form alternate red and white stripes, such as those of the American flag. It is equally beyond question that the Washington arms gives us *en chef* three stars, not the true six-pointed stars of heraldry, but the five-pointed spur-rowels or "mulletts" of heraldry, and that the United States flag also gives us in its canton a like five-pointed star, spur-rowel or mullet, for each of its confederated States. It is, therefore, with no little surprise that I read in a recent American publication of great authority ("Ripley and Dana's Cyclopædia") the following words: "It is not known by whom the stars were suggested. By some they have been ascribed to John Adams; and by others it has been urged that the entire

flag was borrowed from the coat-of-arms of the Washington family, but both conjectures are without proof, and the latter is improbable."

Improbable the latter conjecture assuredly is not, as is sufficiently proved by the coincidences of the colors and the *five-pointed* stars to which I have called attention. Nor is it improbable that John Adams would have gracefully suggested the stars to his countrymen because they formed part of the armorial bearings of the "Father of his Country." And nothing is more probable than that the stars and stripes being so proposed as being the armorial bearings of the Commander-in-Chief, who was so manfully leading the united Colonies to victory and independence, should have been gratefully adopted by the Congress of 1777. Might not proof that this was the actual fact be found in some of the still extant newspapers or private letters of the period, if carefully examined? I am aware that the recorded Resolutions of Congress throw no light on the question of the origin of the republican flag beyond the following naked resolution of Saturday, the 14th of June, 1777: "*Resolved*, That the flag of the 13 United States be 13 stripes alternate red and white; that the union" (*i.e.*, the canton of the flag) "be 13 stars white in a blue field representing a new constellation."

The resolution next preceding that quoted above is as follows: "*Resolved*, That the Marine Committee be empowered to give such directions respecting the continental ships-of-war in the river Delaware as they think proper, in case the enemy succeed in their attempts on the said river."

The enemy did succeed in those attempts, although the forts on the river were held against the British troops and ships by Colonel Green, at Red Bank, and their commanding officer at Fort Mifflin, as long as tenable, with such exemplary gallantry as not only satisfied Washington, but caused Congress to vote to either officer a sword of honor "for his late gallant defence of the fort," etc. Through the kindness of my friend, Mr. Seudamore, a grandson of Colonel Francis Downman, an artillery officer who commanded one of the attacking batteries, I am able to send two interesting sketches of "Mud Island," in the Delaware River, the upper sketch showing the republican flag flying over it, as it appeared in October, 1777, before the engagement; and the lower sketch showing the captured island, with its dilapidated buildings, and the British flag flying

over the ruins. A map of the Delaware showing Mud Island and the English batteries will be found in Sparks's "Washington Correspondence," Vol. V., page 156.

It will be observed that the republican flag in the upper sketch shows the red and white stripes clearly, but the stars are not clearly shown in the canton of the flag, which bears in the centre of the canton what looks like a single Turkish cross; but which may be intended for the thirteen stars grouped together into a star, as was not uncommonly done in the earlier flags of the army, the resolution of Congress leaving it to the designer of each flag to group the thirteen stars as he pleased. In the Navy flags the stars were, as are the thirty-seven stars of the present flag, arranged in parallel lines.

Whatever may be intended to be represented in the canton of the republican flag shown in the upper of Colonel Downman's two sketches, it appears to be certain that Washington's army had flown the stripes, though without the stars, some sixteen months before October, 1777, the "great moon" hoisted at Cambridge on the 2d of June, 1776, when Washington joined the army of independence as its Commander-in-Chief, having borne the alternate red and white stripes, probably as a compliment to its new and popular General.

I am aware that it is alleged that a Philadelphia Regiment of Horse, Markoe's Horse, had carried, as early as 1774, a flag showing like alternate red

and white stripes, and that such original flag is still in existence. If any of your readers can give reliable facts as to this cavalry flag, they would prove of great interest. Considering the active part which Washington, in 1774, took in the debates in Philadelphia, and in the organization of the Southern army, if such a cavalry flag was really flown as early as 1774, it might have been an adoption of Washington's armorial colors, though without the stars.

It is well known that the earlier war flags of the Northern troops showed neither the red and white stripes, nor the stars. The "union jacks" flown by some of the United Colonies at the commencement of the struggle, were simply adopted from the English flag. The Pine Tree Flag which was flown by the first war-ships fitted out under Washington was more characteristic. More characteristic still was the Rattlesnake Flag, flown by Hopkins's ships, on which flag was emblazoned a rattlesnake with thirteen rattles, represented as in the act of striking, with the motto, "Don't tread on me"—a flag so characteristic that the United Colonies might with good reasons have retained it, had not gratitude to the "Father of his Country" naturally suggested the adoption of the Washington armorial bearings as the fittest flag for the armies which he was nobly leading with unwavering pluck through the fearful trials and varying fortunes of a conflict which at its commencement seemed so arduous and unequal.

### MY PERIL AND ESCAPE.

I WAS a very bold and fearless girl, and my brothers and sisters often dared me to go into lonely places in the dark, or do perilous feats of various kinds, which challenges I never refused. Often they set out to play tricks on me, but it usually happened they fell into their own traps, while I performed my part in safety.

We lived in a large old house, built of English oak, and bearing its nearly two centuries very lightly. It opened to the south, and the two large parlors looked to the east and west. The dining-hall and spacious kitchen formed the square of the house, while at the west and back was another large room, sometimes called the great porch, and at the east and back was the dairy and

another porch. There were three stairways leading to the upper rooms and a garret, whose ample space was broken only by the great chimney in the centre.

We had a gay and lively house, and were used to a great deal of company and visitors, for my parents were greatly given to the old-fashioned virtue of hospitality. The humblest wayfarer coming in at the porch was entertained kindly and bidden God-speed, as well as the guest whose elegant carriage and span drove around to the front door on the southern side.

It was a summer day, and warm, bright and beautiful. The morning promised a lovely day. Just after our early breakfast, a merry party came

riding down the lane in carriages and on horse-back, and calling joyously for my father and mother to accompany them on a pleasure trip. They were accustomed to this mode of impromptu festivity, and gayly answered that they would soon be ready. It was only the day before that my father had returned from the Australian gold-fields, and had brought with him a bag of gold. I knew he had this, for I had seen him the night before counting some out of it, and putting it into another bag.

Thomas brought the chaise to the door. Father's favorite black horse, whose coat looked like lustrous velvet, and who stepped so proudly, was pawing the ground impatiently as he appeared. He handed in my beautiful mother, and I stood looking on with childish pleasure at her beauty and rich dress, that so became her.

I hastened indoors again to see them wind down the private way that led through our extensive grounds, and half wished I were old enough to go with them. Hearing a slight noise, I turned and saw a stranger, a figure not unusual, a man with a bundle hung on a stick.

He was leaning on the stone wall, and apparently looking after the carriages. He came forward in a moment, and asked if he might sit down and rest, and if I would kindly give him something to eat. Of course I said yes, and with light steps soon had him a substantial lunch of bread and cheese, which he came into the kitchen to eat. Betsey and Hannah were busy, hurrying to finish their work, for they were going out to tea and to spend the evening. They talked gayly about their visit, paying little attention to the stroller, who was quietly eating. He had laid his straw hat on the floor, and I saw that his head was bald on the top, and the thinnish hair brushed up from behind over it.

He had prominent ears, low forehead and large mouth, with a receding chin, where grew a stubby beard of grizzly black, like his hair. I did not know why I observed all this, or his eyes, small and hid under grayish brows, that seemed to glance furtively about him, when no one appeared to be looking. His voice was harsh and croaking, and had startled me when he first addressed me.

We were used to strollers of all kinds, as I have said. Perhaps I was mentally contrasting his repulsiveness with my father's noble and dignified features. He seemed to me very ugly. I was glad when he had finished his meal and risen to

go. He asked permission to light his pipe, which was readily granted. He went out directly, passing accidentally through the dining-room and out of the great hall, where he lingered for a moment or two. He had thanked me civilly enough for his breakfast, but the girls laughed and nodded as he went out, and said they should think I had picked up a raven.

All that long, bright day I was busy and happy in the flower-garden, or sewing, or reading; and when the girls left, looking very cheerful at their half holiday, I wished them a merry time, and told them not to hasten home, for Thomas should come for them. I expected my father and mother soon after eight o'clock, and I told Thomas that he might go about that time, as they would soon be home, and it looked a little like rain. Heavy clouds were gathering in the west, and the thunder rumbled sullenly. He took the covered wagon and old gray, and, before he stepped in, said:

"Miss Ann, I think you had better fasten the doors, as you may be all alone for a short time if I go so soon. Would you not rather that I should wait till your father comes?"

"Oh, no, Thomas; I don't mind being alone in the least, and you ought to go, lest it should rain hard, for it is more than two miles to ride, and they may not wish to leave in a minute. I expect father and mother every moment. Don't wait."

So Thomas left, and the wagon rattled merrily up the lane. I bolted the doors, because he had told me to, for otherwise I would not have thought of it. It grew dark rapidly, and the thunder began to peal heavily, while the wind rose, and the flashes of lightning grew more vivid and frequent. I went to the east parlor, and looked out to the south, but the sudden lighting up of the sky and the falling darkness did not interest me long. I could not see out very well, either, as the honeysuckles covered the windows. The large mirror reflected me as I turned away to cross the room, and I stopped a moment with a natural vanity, for I was young and fair enough to look upon.

I let all my hair fall loose, and wound it in long, shining, brown curls over my fingers. It certainly did look handsome, for it was very thick, and fell below my waist, and curled almost of itself as it fell. There came a great flash of lightning, and I saw distinctly reflected in the glass a face looking in at the window. It was an instant

of terror, but I neither screamed nor moved. The face could not see my face, and I kept my body still, and rolled the long, shining rings off my cold, white fingers. It was an ugly face, and I recognized it. I had seen it that morning, and I knew what lay before me. I prayed inwardly a brief prayer for help.

Turning from the glass, I went steadily toward a table that stood near the window, and on which I had left my candle. I moved steadily as usual, and took up the water pitcher and looked in, then took my candle and went towards the kitchen. The lightning kept flashing, but the face did not come again. I dropped my candle on the kitchen hearth and put my foot on the wick. I set down the pitcher on the dresser, and with soft, light footfall, hastened through the west room up the front stairs, into my father's chamber, and softly closed and bolted the door at the head of the stairs. I unlocked his box, took out both the bags of gold, relocked it, and made my way into the great chamber.

I heard voices; I heard the doors tried below. I knew it was not my father. I dared not tremble nor grow faint. I went through that room and two others to the garret stairs. I hardly breathed. I heard a window pushed up; more than one person came in at it. I felt about me in the dark. There was a sliding panel in the inside of the doorway. I pushed it, and it rolled back. I entered into a long closet under the stairs, and slid the panel carefully into its place. I felt cautiously to see if all was safe. I pulled my dress close about me lest it might be caught, and the door not closed tightly. Then I waited. I heard steps coming up the stairs. I heard a search through all the rooms below. My heart beat till I thought that each bound must be audible, heard voices—one voice, the Raven's. I knew that harsh croak. It told me nothing. The face had revealed all to me. The man must have learned in some unaccountable way of the bag of gold, and hamed too when here in the morning that I was to be alone. It was all plain to me now. He had returned and had brought accomplices. My peril was terribly imminent. Very soon the steps and voices came my way. I could distinguish plainly the words that were spoken.

"Dnat her! she must have seen you."

"No matter; we'll split the box open with this

41

I knew the ax was in the little porch. Thomas

had set it in when he had done chopping the brush, as it looked like rain.

I heard the steps and voices move away, a dull, crashing sound, and then stifled angry tones. I knew they had opened the box, and found nothing but the papers. I knew they would now search for me. I heard them as they looked into every room and closet, and came up the stairs separate. They all met at the foot of the garret stairs. A thick board was between us. I thanked God that the panel was close shut. I knew it; for no ray of light came through.

"She must be up here," said the Raven, "and we'll soon have her."

"I'll warrant she is here, and I'll wring her neck if she makes a noise about it."

But the thorough search was ended, and the voices grew very angry and full of frightful oaths and threatenings. They sat down on the garret stairs to hold a parley. A spider ran across my face. A spider puts me in mortal fear. It was with a great effort that I kept from screaming.

"Come," croaked the Raven, "let us go and get the silver; that will be something—that will be something."

"Curse the silver. It's the gold I've come for, and I'll burn the house if I don't find the girl! So let her look out!"

A cold perspiration. Would they perform their threat?

"Good! then the rats will squeak. Down drop the money bags, and we'll choke the girl to make her dumb."

"Hold your noise. The old man will be coming home. We'll be caught here. Be quick."

"Who cares for him! He's only one: a bludgeon will give him a handy little headache as he comes in."

"And his wife?"

They spoke low, hideous words that made my flesh creep. I almost was ready to call aloud, to open the panel, to give them the gold, and bid them go. They got up, and the steps and voices went down. It was horrible there in the dark. I was stifling. I moved the panel slightly. No light entered. I slid it softly back. My resolution was taken. I would get out of the house, run down the road, and meet my father. I would save him. I left the gold in the closet, shutting it in close. I stole down two steps into the chamber below. I knew there was a window open there. I crept across the room, listening keenly. I lifted

myself cautiously on the window ledge, and caught a branch of the cherry-tree which grew close to the house. Swinging myself lightly out, I hastily descended the trunk of the tree, and found myself on the ground, safe.

No. The lightning flash betrayed me. The Raven's voice shrieked hoarsely:

"There she goes! Catch her! Quick! This way!"

Out at the front door came the pursuers, hardly ten steps from me. I dashed toward the thick shrubbery to throw them off the track. Fortunately I knew the way, every step of it. They were guided slowly by the sound and flashing light.

"Shoot her by the next flash!" cried one.

My flying feet struck loose boards. I was passing directly over an old, unused well, very deep, and and it gave back a hollow, resonant sound. Almost the next moment I heard a crash, the report of a pistol, a heavy fall, oaths and a deep groan. Shuddering, I sped on through the garden, up toward the cider-press, over the stone-wall, down the hollow, up the hillside, over the fields. No steps followed; no voices shouted after me. I ran down to the second bars, and let them down. It began to rain a few great drops, then fast, then it poured. I was wet to the skin. I ran on, for I heard advancing wheels coming rapidly; I stood in the road and cried: "Father! father!" The chaise stopped. Another chaise behind stopped also. It was our next neighbor's, who lived a quarter of a mile further on.

"Ann, my child. Good heavens! What is the matter? What has happened?"

I told the whole in a few words, amid eager exclamations of joy at my safety, of surprise, even of anger, because Thomas had left me alone.

"Don't blame him, father, I insisted on his going."

A hurried consultation took place. My father was very brave. Our neighbor was very timid. He proposed going on to his house and returning with weapons. In the meantime I had got into the chaise and crouched down at my mother's feet, who was half crying, and wholly thankful to feel me there.

We rode on, and came to our gates under the willows. There were lights in the house, but all was still. Nothing moved. My father put the reins in my mother's hands, and opened the other gate that led up the lane.

"Will you go home with Nathan?" said he.

"And leave you here? No."

"Take your wife home, Nathan, if you will, and come back."

"We will stay by you."

"Let us reconnoitre then, a little."

They got out, leaving us sitting still. The rain fell less heavily. They got something that would do for weapons from the tool-house. They went all around the house—all was quiet. They went in. We sat still, speaking few words, my hand clasped in my mother's, and my frame trembling with fright.

"Thomas is coming?" I exclaimed, eagerly.

"I hear the wheels."

We called to him as he came to the gate, for he could not see us. He drove through and called out:

"What is the matter?"

We told him sufficiently, and he left Betsey and Hannah, and went in at once, with only the heavy whip. We did not wait long. Nathan came out directly.

"What have you found? Who is there?"

"Nothing. Nobody."

"Are they all gone?"

"Yes, with some of the silver and a few things. We don't know what yet."

The horses were put under the shed, and we all went in. Father said calmly:

"We will take a lantern, Thomas, and look around out of doors a little."

I knew they would go to the old well. I stood and looked out of the window and saw the gleam of the lantern as it moved. In a very few minutes they came back.

"One of them is dead," said my father, "and the other lies at the bottom and groans. The third has escaped."

They laid boards across some barrels in the shed, and brought up the dead man and laid him on them. His comrade, who fell in the well, had shot him through the head as he plunged through the boards. His ugly face was uglier. It was the Raven. That night my father's prayers were very solemn, and his embrace was close as he gave me my good-night kiss.

The robber in the well was bruised, but not seriously hurt. The law took him to punishment. The third escaped. I was never left at home again alone.

## THOMAS PAINE.

BY SAMUEL YORKE AT LEE.

THOMAS PAINE.

THOMAS PAINE was not an atheist. In his "Age of Reason" he makes his "voluntary and individual confession of faith with all sincerity and frankness," as follows:

"I believe in one God, and no more; and I hope for happiness beyond this life.

I believe in the equality of man; and I believe that religious duties consist in doing justice, loving mercy, and endeavoring to make our fellow-creatures happy.

But I do not believe in the creed professed by the Roman Church, by the Greek Church, by the Turkish Church, nor by any church that I know of. My own mind is my own Church."

His "Age of Reason" was written in January, Vol. VIII.—7

1794, in Paris, and dedicated to his "fellow-citizens of the United States of America."

I doubt whether Paine would have written, or at least published, such a work in this country; but the tide of sympathy in France carried him away. This tide was the natural outburst of indignant wrath provoked by the bigotry and tyranny of the priesthood.

Paine says that nothing in his "Age of Reason" can apply, "even with the most distant disrespect, to the *real* character of Jesus Christ. He was a virtuous and an amiable man. The morality that he preached and practiced was of the most benevolent kind, and has not been exceeded by any."

I offer this brief synopsis of his views for the

purpose of removing any prejudices which might affect a proper estimate of his political character. His arguments have not in the least shaken my faith in the divinity of Jesus Christ, in the inspiration of the word, and in the doctrines of redemption, regeneration and salvation. I am not alarmed by attacks on my religion; and any creed that cannot maintain its position against the objections advanced against it by poor Paine ought to be swept away.

My design is to exhibit Thomas Paine as an American patriot.

He was not a native of this country, having been born at Thatford, Norfolk County, England, on the 29th of January, 1737. His father was a staymaker, and being one of the Society of Friends, and distrustful of much "carnal knowledge," took Thomas away from school at the early age of thirteen, and set him at work coopering the thoraxes of his customers. Five years of such a life seems to have made him desperate, and so he shipped as a "hand" in a privateer; but four years afterwards he resumed his trade at Sandwich, married, and occasionally preached dissenting sermons. In 1760 he removed to Margate, where his wife died. Thence he returned to Thatford, where he became an exciseman, then went to London as a teacher in an academy, but in a year was reappointed exciseman; thence he went to Lewes, where he married again, and tried to make a living as a grocer and tobacconist, but in two years failed, and was sold out in April, 1774. These adversities must be attributed to his literary predilections and to domestic troubles; for during this period he wrote a pamphlet and was separated from his wife. In the month following his insolvency he went to London, where he became acquainted with Benjamin Franklin, on whose advice he emigrated to this country, where he arrived in December, 1774. In the ensuing February he was employed to edit the *Pennsylvania Magazine* in Philadelphia. His contributions were signed "Atlanticus," and attracted great attention.

Paine's mind and heart must have been hungry and thirsty for the principles of political liberty and the rights of man, for he at once understood the points of controversy between the Colonies and the Parliament of Great Britain. In January, 1776, only thirteen months after his arrival here, when a "reconciliation with the mother country

was the wish of almost every American," he issued a pamphlet entitled "Common Sense," which, in the language of Dr. Rush, "burst upon the world with an effect which has rarely been produced by types and paper in any age or country." Elkanah Watson, in his "Men and Times of the Revolution," describing an interview with Paine at Nantes, in France, where he had just arrived—1781—as Secretary of Colonel Laurens, Minister Extraordinary from Congress, expresses "the deepest emotions of gratitude towards him, as the instrument of Providence in accelerating the declaration of our Independence." Mr. Watson continues: "He certainly was a prominent agent in preparing the public sentiment of America for that glorious event. The idea of independence had not occupied the popular mind; and, when guardedly approached on the topic, it shrunk from the conception, as fraught with doubt, with peril, and with suffering.

In 1776 I was present, at Providence, Rhode Island, in a social assembly of most of the prominent leaders of the State. I recollect that the subject of independence was cautiously introduced by an ardent Whig, and the thought seemed to excite the abhorrence of the whole circle.

A few weeks afterwards Paine's 'Common Sense' appeared, and passed through the continent like an electric spark. It everywhere flashed conviction, and aroused a determined spirit, which resulted in the Declaration of Independence, on the 4th of July following. The name of Paine was precious to every Whig heart, and had resounded throughout Europe."

If the reader will turn to page 108 of Mr. Watson's book, he will see that this praise was not dictated by any personal partiality towards Mr. Paine. Mr. Watson was annoyed and "disgusted" by Paine's manners as a man, but could not repress his admiration of him as a patriot.

When our fathers declared independence they were not ready for battle. There was very little powder in the country, and it was for this reason that Congress forbade the usual military salute to Washington when he appeared before the army at Boston as Commander-in-Chief. Paine in this emergency immediately studied chemistry, for the purpose of discovering how to produce saltpetre, published the result of his experiments, and formed a company to supply the national arsenals, gratuitously, with powder. He also volunteered in

Roberdeau's flying division, and when his services were no longer needed, he acted as aid to General Greene, in the Fort Lee campaign. During the gloomy December of '76 he published the first number of the "Crisis," on the 19th of that month, the effect of which was quite as startling as that of "Common Sense." It was read at the head of every regiment, and six days afterwards the soldiers won the battle of Trenton.

In April, '77, Paine was, on motion of John Adams, appointed Secretary to the Committee on Foreign Affairs, but resigned that office in January, 1779, in consequence of having been censured, unheard, by a faction in Congress. His offence was having written a series of letters in the *Pennsylvania Packet*, denying the validity of Silas Deane's claim against the Government. His course was, however, vindicated at the "annual town-meeting" held in Philadelphia in the following July; and, as a manifestation of confidence in his integrity, the General Assembly of Pennsylvania elected Paine its Clerk, at its meeting in November.

In 1780 he resolved to revisit England, for the purpose of propagating republican sentiments, but was dissuaded by General Greene. In June of that year a letter was received by the Assembly of Pennsylvania from General Washington, stating that, notwithstanding his confidence in the attachment of the army to the cause of the country, he feared that the privations they endured would exasperate them into mutiny. This letter was read by Paine as Clerk. A despairing silence pervaded the hall. At length one of the members said that it was in vain to contend any longer, and that they might as well give up. The House adjourned. Paine immediately wrote to Blair McClenaghan, a merchant of Philadelphia, explaining the urgency of affairs, and enclosed five hundred dollars, the amount of salary due to him as Clerk, as his contribution toward a relief fund. McClenaghan called a public meeting, and read Paine's letter. A subscription was promptly made and £300,000, Pennsylvania currency, was collected, and the army relieved.

In 1781 Paine accompanied Colonel Laurens as Secretary to France, whence he brought \$2,500,000 in silver, by the aid of which Washington made the movement southward which ended in the capitulation of Yorktown.

The war was soon closed, but Paine was still

active for the promotion of the public welfare, until April, 1787, when he sailed again to France. Meanwhile he received many tokens of respect. The University of Pennsylvania conferred on him the degree of A.M., he was elected a member of the American Philosophical Society, and by special invitation enjoyed for a time the hospitality of General Washington. Congress, too, presented him with three thousand dollars as a testimonial of their appreciation of his important services. The committee say, in their report to Congress, "that Mr. Paine rendered great and eminent services to the United States during their struggle for liberty and independence, cannot be doubted by any person acquainted with his labors in the cause and attached to the principles of the contest."

Paine was in Paris when the Bastille was destroyed, and received the key of it from General Lafayette, as a gift to Washington, and it is still exhibited at Mount Vernon. While in France he published his "Rights of Man," dedicating the two parts of that work to General Washington and to General Lafayette respectively. A hundred thousand copies were printed and distributed by translation all over Europe.

In September, 1792, Paine was elected a member of the National Convention of France, and took his seat. He affiliated with the Girondists, and was a member of the committee which framed the Constitution of 1793.

He advocated the trial of Louis XVI., but voted against the sentence of death. Madame De Stael says: "Thomas Paine alone proposed what would have done honor to France if it had been accepted—the offer to the king of an asylum in America." His speech is worthy of transcription, and I copy it from Wright's "History of France," Vol. II., page 634.

"I very sincerely regret the part which was yesterday adopted by the Convention with regard to the punishment by death. I have the advantage of some experience in subjects of this nature. It is almost twenty years since I engaged in the cause of liberty, by contributing to accomplish the Revolution of the United States of America. My language has always been the language of liberty and of humanity. Experience has taught me that nothing so much exalts the spirit of a nation as the union of these two principles in all circumstances. I know that the public mind

throughout France, and especially in Paris, has been heated and irritated by the dangers to which the country has been exposed; but, if we look forward to that period in which those dangers and the irritation they have produced have been forgotten, we shall be able to perceive that the very transaction which, to our present view, bears the semblance of an act of justice, will then appear as a deed of vengeance. My anxiety for the cause of France is now converted into an anxiety for her honor; and should it be reserved for me, after my return to America, to write the history of the French Revolution, I would much rather have to record a thousand errors proceeding from a regard to humanity than a single one inspired by too severe a principle of justice.

France has, at this time, but one ally—the United States of America; and this ally is the only nation that can furnish her with naval stores; for the Northern powers, who have commonly supplied them, are, or very soon will be, at war with her.

Besides, it most unfortunately happens that the object of the present discussion is regarded in the United States as their best friend, as the parent of liberty. I am able to assure you that his execution will spread an universal affliction among them; and you have it now in your power to spare your best friends so much sorrow. If I could speak the French language, I would at your bar present a petition, in the name of my American brethren, for the delay of the execution of Louis."

This speech, translated from English, was read in Convention, and caused a "complete tumult;" but the sentence of death was confirmed by a vote of 380 to 310.

This speech was the knell of Paine's popularity in France. The Convention passed a decree for the expulsion of all members who were foreigners by birth, which was soon followed by another for the imprisonment of all persons in France who were born in England. Paine was immediately seized and thrown into prison, wherein he remained from January to November, 1794, notwithstanding a petition from all the Americans in Paris for the release of the "apostle of liberty." After the death of Robespierre, Paine, on the intercession of James Monroe, our Minister, was liberated; and, in December, 1794, resumed his seat in the National Convention.

After the reorganization of the government, and

the inauguration of the Consular Executive, Paine was treated with particular consideration by Bonaparte, who actually engaged his services for establishing a republican form of government in England, which he was then preparing to invade and conquer. But the project having been abandoned, apostles of liberty were in the way in France; so Paine set out on his return to the United States, and arrived at Baltimore October 30, 1802, after an absence of fifteen years, and immediately went to Monticello, whither he was invited by Jefferson, there being no arrangements for hospitality in the White House.

Paine's philanthropy had not, as it often does, reduced him to poverty. New York had presented him with a farm of three hundred acres, with necessary buildings, in consideration of the fact that "Thomas Paine did, during the whole progress of the Revolution, voluntarily devote himself to the service of the public without accepting recompense therefor; and, moreover, did decline taking or receiving the common profits which authors are entitled to on the sale of their literary works, but relinquished them for the better accommodation of the country and for the honor of the public cause."

Pennsylvania, for the same reasons, presented him with £500. New Jersey gave him an estate in Bordentown; and Virginia would have granted him a tract of land worth more than £4,000, if he had not, during the pendency of the bill, published a pamphlet denying the title of that State to the Northwest Territory. Notwithstanding this free expression of unfavorable opinion the bill was advocated by Washington, Madison, Lee and Patrick Henry, but was lost by a majority of one.

Paine spent some time visiting places and persons, and finally settled in New York, occasionally spending a few months on his farm at New Rochelle. He died in New York, June 8, 1809, in his 73d year.

His remains were buried on his farm; but his bones, ten years afterwards, were resurged by William Cobbett (Peter Porcupine), who took them to England. His will shows that his pecuniary resources were ample; and, although he did not recant any of his published opinions, he certainly did not esteem his theological achievements as his chief merit, for he says—"the place where I am to be buried to be a square of twelve feet, to be

enclosed with rows of trees, and a stone or post-and-rail fence, with a headstone with my name and age engraved on it as the author of 'Common Sense.'" A cenotaph was erected, in 1839, near the spot of his original sepulture; and I hope that some reader may visit the locality and tell us whether it is now standing.

"Thomas Paine was about five feet ten inches in height, and broad shouldered. He was plain but dignified in appearance. He wore his hair in a queue with side curls, and powdered. His eyes were full, brilliant and piercing. As a public speaker he was not fluent; but in conversation he was fascinating." So says a writer in "Appleton's Cyclopedia," to whom I am under obligations for much of my material.

I have never read or heard of any dishonest or dishonorable act of Paine. He was very earnest in his convictions, and perfectly fearless of consequences in expressing them. When he went to France in 1787 he left a nation of friends, and he was held in high personal esteem by such men as Washington, Jefferson, Franklin, Witherspoon and Rush. His experience and observation in France had disappointed, grieved and exasperated him. The insults and abuse he met in many places here soured his temper, and his reflections and conclusions must sometimes at least have tended to cynicism. The social customs of those days were not adapted to allay the fever of his mind, and his consequent nervous irritability fretted him to moroseness. Joel Barlow, an intimate of his while in France, says, August 11, 1809, in answer to a letter "calling for information relative to the life of Thomas Paine," that he was one of the most benevolent and disinterested of mankind, endowed with the clearest perception, an uncommon share of original genius and the greatest breadth of thought, and that he ought to be ranked among the brightest and most undeviating luminaries of the age in which he lived; yet with a mind haunted with vanity which he was too proud to conceal; unable to endure the contempt of his former friends and fellow-laborers, and the scoffs of a new generation that knew him not. He never kept the best company in England and in France, till he became the object of calumny in certain American papers for his adherence to what he thought the cause of liberty in France, and till

he conceived himself neglected by his former friends in the United States. From that moment he gave himself very much to drink, and consequently to companions less worthy of his better days.

Indeed, as early as 1781, Elkanah Watson, at the page hereinbefore indicated, thus describes Paine's personal demeanor: "He was coarse and uncouth in his manners, loathsome in his appearance, and a disgusting egotist, rejoicing most in talking of himself, and reading the effusions of his own mind. On his arrival being announced, the Mayor and some of the most distinguished citizens of Nantes called on him to render their homage of respect. I often officiated as interpreter, although humbled and mortified at his filthy appearance and awkward and unseemly address. Besides, as he had been roasted alive, on his arrival at L'Orient, for the . . . and well basted with brimstone, he was absolutely offensive, and perfumed the whole apartment. He was soon rid of his respectable visitors, who left the room with marks of astonishment and disgust. I took the liberty, on his asking for the loan of a clean shirt, of speaking to him frankly of his dirty appearance and brimstone odor, and prevailed on him to stew for an hour in a hot bath. This, however, was not done without much entreaty, and I did not succeed until, receiving a file of English newspapers, I promised that after he was in the bath he should have the reading of them, and not before. He at once consented and accompanied me to the bath, where I instructed the keeper in French—which Paine did not understand—to gradually increase the heat of the water until '*le monsieur était bien bouilli.*' He became so much absorbed in his reading that he was nearly parboiled before leaving the bath, much to his improvement and to my satisfaction."

But whatever may have been his private errors and infirmities, they ought not to be conspicuously obtruded. His political integrity and great public services were acknowledged by our forefathers of the Revolution, and we, their descendants, may not indeed deny the existence of such faults, but we ought to put them in the shaded background of a Centennial picture radiant with the glory of his patriotic deeds.

## THE PONY-RIDER'S MISSION ACCOMPLISHED.

THERE was an excited crowd gathered about the Pony Express Station at McPherson's. The western-bound rider had arrived with a bullet in his leg, and reported that the Pawnees were off their reservation and were advancing on the settlement. He had met them between the last station and McPherson's, and they had given chase. McPherson's could boast of but seventy-five souls at that time, before the railroad came, and there were but forty men capable of defending the place. Whatever was to be done had to be done quickly. Fort Grattan was eighty miles northwest, and a rider was despatched in haste. Fort Kearney was seventy miles southeast, and who would summon aid from there? It was a dangerous undertaking. The route lay right through the hostile country, and the messenger would be almost sure to meet the Indians. The pony-riders, as a general thing, were fearless men, but this proposition was fraught with so much danger that they were loth to undertake it.

"Ef Slade was only here!" cried an old man, "ther'd be no hesitation while wimen an' children were in danger!"

"I'll go!" and a bright-eyed, fearless-looking young fellow stepped forth.

"Good!" said the old man, pressing his hand; "old Jim Johnson sez so! Old Jim Johnson! You hear me! There's more sense in Essex's cazaba than the hull lot of you. Pick your hoss, boy, and ride for your life. See, there's Nelly lookin' at you. For her sake, Willy, ef no one's else. Thirty-five helpless wimen an' children; think of it! Ride your best, an' when you git to the station you may git a relief. Post 'em there, and when you git to the fort tell the commandant to send on some cavalry as soon as possible. Fetch the sojers, an' we'll send the reds to Californy! Nelly Johnson's yourn as soon as you git back. Good-by, boy, an' God speed ye."

There was a spring, a rush of hoofs, and the ride to Kearney had begun. Right gallantly the horse sprang away at his rider's bidding, and the eyes of sweet Nelly Johnson kept upon them until horse and rider faded away upon the horizon.

Love was one incentive for the pony-rider's mission, and the desire to save the people of McPherson's from a bloody death was the other.

Did man ever risk life in a better cause? Onward swept the little horse, her flying heels throwing up a cloud of dust which hovered in the air for hundreds of yards behind her. To the left of them glided the still waters of the Platte, and on the right stretched the boundless green of the prairie. The rider sat firm as a rock, his dauntless face looking straight ahead and wearing an air which seemed to say it was all for the sake of Nelly Johnson.

You may talk of the Mamelukes, the Tartar horsemen, the savage Bedouins and all the wild riders, but what are they to compare with our American pony-riders—men who were fearless, and braved every danger; who ran the risk of life in every mile they dashed over; men who were expected to do fifty miles at top speed in daylight or dark, rain or shine, hot or cold? But the railroad has done away with the pony-rider, and we hear no more of such exploits as that of the renowned Jimmy Moore.

Onward swept the brave little horse, and at last the station came in view. A minute more and horse and rider were at the door. No relay was there to meet them. Not a sign of life was to be seen, but there were hoof tracks on the ground in every direction, showing that the relief had fled. Giving the horse a drink, the rider mounted, and again they were on the way to Kearney. Further on they came upon a large object in the centre of the trail. It was the western-bound stage with horses gone, the driver between the fore-wheels with a bullet in his head, the passengers lying about the road, and the conductor in the boot, wounded unto death. One horrified look, a pause, and faster fled the horse. Mile after mile is left behind, station after station is passed, and no relief. Will they ever get to Kearney?

On the prairie to the right of them appear a host of mounted men. They are the pets of the Peace Commission, on their annual maraud. Turning with a triumphant yell they speed to head the rider off. Narrower grows the space between them, and the gallant horse redoubles his exertions. In the van of the savages rides a tall chief, mounted upon a powerful horse, his plumes streaming in the wind as he urges the noble animal he bestrides. Young Essex can escape if he turns back. But

no! The sweet face of Nelly Johnson and the shrinking forms of defenceless little ones come before his view, and dashing the perspiration from his brow, the pursued dashes onward. But a few miles more and succor is at hand!

Nearer come the pursuers. Now ride, young Essex, for it is three-score lives to one! Speed, brave little horse; strain muscle and nerve and heart, for your work will be well done! Ride, young Essex, for everything is at stake. Onward rushed the horse, the hoofs beating time to the short, quick breaths. The gap closes! Twang! A sharp pain in the side, and the rider reeled in the saddle, but for an instant only. Bending low in the saddle, the whip is raised for the first time, and faster fled the horse.

And now the green ramparts and stockaded gates of Fort Kearney came in view. The baffled

savages turned and set out rapidly up the trail, while the fainting rider checks the faltering steps of his dying horse. One last, last look at the waving sea of green; and they enter the gates thrown open to receive them.

In the centre of the parade stands a group of men about a horse and rider. The horse is down now, and from his nostrils gushes the life-current, and beside him lies the rider.

Young Essex raised his head from the arm which supported it, and said:

"Pawnees off their reservation. McPherson's station's cleaned out—help—quick? My love to—to—Nelly—Johnson—"

And, grasping the reins with stiffening clutch, the barbed shaft eating out his soul, he sank upon the pony's neck.

Their brave hearts had ceased to beat.

## THE FATHER AND CHILD.

BY RICHARD WILTON, M.A.

As up and down a shady place,  
I walked with melancholy pace,  
A cloud upon my heart and face  
Of sin and sadness;  
Suddenly flashing on the view  
My little boy in white and blue  
Came running up the avenue  
With look of gladness.

And all a father's love leapt out  
Instinctively, and clung about  
The child, subduing fear and doubt  
With tender yearning;  
As if he had been sent to prove,  
By living sign, that higher Love,  
Which waits and watches from above  
Each son's returning.

Who made the eye, shall He not see?  
The ear, shall He not hear? And He,  
Who, in creating, gave to me  
A father's feeling,  
Shall He not feel?—and kindly greet  
A son that weeps before His feet—  
With kiss of reconciliation sweet  
His pardon sealing.

For one constraining cause alone  
That child was dear—he was my own—  
Spontaneously my love had grown;  
And how much rather  
Shall I, "the work of His own hand,"  
The yearning love of God command—  
Can He my prayers and tears withstand  
Who is my Father?

## DON'T TAKE IT TO HEART.

BY GEORGIANA C. CLARK.

THERE'S many a trouble  
Would break like a bubble,  
And into the waters of Lethe depart,  
Did not we rehearse it,  
And tenderly nurse it,  
And give it a permanent place in the heart.

There's many a sorrow  
Would vanish to-morrow,  
Were we not unwilling to furnish the wings;  
So sadly intruding  
And quietly brooding,  
It hatches out all sorts of horrible things.

How welcome the seeming  
Of looks that are beaming,  
Whether one's wealthy or whether one's poor!  
Eyes bright as a berry,  
Cheeks red as a cherry,  
The groan and the curse and the heartache can cure.

Resolved to be merry,  
All worry to ferry  
Across the famed waters that bid us forget;  
And no longer tearful,  
But happy and cheerful,  
We feel life has much that's worth living for yet.

## ARCHITECTURAL PROGRESS, AS SEEN IN THE RELIGIOUS EDIFICES OF THE WORLD.

By REV. WILLIAM BLACKWOOD, D.D., LL.D.

### I. INTRODUCTORY.—PYRAMIDS AND TEMPLES OF EGYPT.

In a rude state of society the builder merely aims at providing for the necessary wants of man-

CHINESE PAVILION.

kind. The varieties of climate, the suddenness and the range of atmospheric changes, together with the delicacy of the human organization become factors in determining the course of the primitive laborer, who aims at little more than furnishing a shelter from the vicissitudes of the seasons. Nevertheless, it is a fact that in all countries where progress has been made in building, and where architecture has reached the condition of a science, it will be found that traces of the earliest structural forms continue to appear on the more elaborate edifices which the taste and wealth of progressive ages may erect. In a primitive state where men relied for their existence on the produce of the chase, or on supplies that might be secured from rivers, the shelter of a cavern or the rudest covering would minister to their wants. A pastoral life obliged the shepherd to roam from

place to place, and hence he was obliged wherever he sojourned to have his habitation at hand wherever his flocks could find pasture. A tent thus became the house of the nomad shepherd. When the cultivation of the soil became a main source of support, the fixed habits of the agriculturist necessarily

PORTAL OF AN EGYPTIAN TEMPLE.

led to the erection of a permanent home, and thus the rude hut had its origin.

It would not be correct, however, to say that in all ages and lands the prevailing types of build-

GATEWAY OF A CHINESE TOWN.

ings proceeded from the influence of one cause merely; as different agencies combined to produce the forms of edifices which prevailed in various

TEMPLE OF THEBES.

countries. Nevertheless it is true that different ages or styles soon became established in different regions, and these forms continued to appear from age to age. Thus the wandering Mongol had his tent as he followed or guided his flock, and hence to the present day the Chinese house is really a

TEMPLE OF EDFOU.

modification of the Tartar tent. A common Chinese plate on which an ordinary house is displayed with its peculiar roof, its quaint shape and its ornaments in wood along the ridge pole and at the eaves, in forms that closely approximate to the movable tent of former ages, will show how deeply the primitive habits of the early ages cling to the

rather to trace the progressive stages of the building art as they may be seen on the banks of the Nile, in Greece, in Italy, during the Roman period, in the Byzantine, the Norman and the later styles of pointed ecclesiastical structures which reached their perfection in the great Cathedrals of Britain, France, Spain and Germany.

WALL AND BUILDINGS AT PEKIN, CHINA.

Chinese mind. A Chinese town is largely in appearance a collection of fixed tents, and so permanently lodged in the Chinese mind is the idea of the tent, that large edifices and even towers are really successive stories of tent-like edifices.

Our object, however, is not to show how widely this adherence to old forms has spread, and how long from age to age it has continued to appear in the edifices of different nations; our aim being

By some, the origin of Egyptian architecture has been found in subterranean excavations, and in the enlargement of natural caverns in the hill regions that bound the valley of the Nile. It is true that among the Egyptians a taste for cave dwellings has existed from the remotest age, and owing to climate and habits of the population they are resorted to at the present time; but other Oriental nations had recourse to such habitations,

as is evident in various nations of Asia. It must be admitted, however, that the effect of the climate of Egypt, and the experience of the coolness and the shade of cave dwellings had an import-

that the dwellers on the Nile had been early civilized. When Abraham entered Egypt, two thousand years before Christ, he found a country long possessed of the arts. Religion had demanded

TEMPLE OF Edfou.—See second engraving on page 105.

temples, sovereigns had perpetuated their glory in vast edifices, and while the common people had their habitations, not the least remarkable element in the social condition of the country was the regard that was paid to the under-ground, or rather hill-excavated cities of the dead. It is held by many that the culture and religion of the Egyptians were developed in the region of Meroe, and that, following the course of the Nile, they spread northward over Lower Egypt. At Memphis and Thebes the magnificence of this early civilization was displayed in the vast structures which were erected in these capitals, the remains of which at the present day fill the minds of travellers with admiration and wonder at their magnitude and regret at the ruin which has overtaken them. Some Egyptologists have carried back the origin of these edifices to a very remote antiquity. Taking into consideration the yearly average rise of the soil, caused by the inundation of the Nile, it would seem that the present elevation of the surface above the level on which the monuments of Thebes were built, would establish the conclusion that these great structures must have been erected about 4760

an influence in modifying the forms of the great Temples which gradually rose on the banks of the Nile.

The primeval history of Egypt is shrouded in the darkness of distant ages, but the Bible and the literature of Greece and Rome combine to show

years before the commencement of the present century.

Such a conclusion, however, does not rest on any historic proof, and it is altogether at variance with the Mosaic and Old Testament chronology. It has also been held that, as at Thebes, fragments

have been found of stone which have been wrought on the reverse or inner side before they were placed on the walls of the present ruins, and

CONSTRUCTION OF A PYRAMID.

it is held that this demonstrates the fact that a former civilization had existed in Egypt before the monuments of Thebes had been commenced.

The brilliant period of Egyptian art commenced in the middle of the twelfth century before Christ, in the time of Sesostris or Rameses, and continued for the space of five hundred years. Then came the rule of the Persians, which gave place to that of Alexander, and in time Egypt fell under the sway of Rome.

The grandest displays of this golden age of Egyptian magnificence are those which date from the age of Sesostris, and which still attest the splendor of Homer's hundred gated Thebes, the metropolis of ancient Egypt. This great city extended two geographical miles in all directions from a centre, and its ruins may now be seen in the several villages which occupy its site, around the temples and palaces of Luxor and Karnak, the splendor of which may be conceived of by the traveller who rambles along an avenue of colossal sphinxes six hundred feet long, and who wonders at the extent of the sepulchres and the vast proportions of the palace at Medinet Abu, or who meditates on the wonder of the Rock-Tombs, or "graves of the Kings," and the solemn grandeur of the Temple of Denderah, below Thebes.

The great monuments of Egypt consist of the pyramids, the tombs of the Kings, their palaces, and the temples. The pyramids form a class by themselves, and they are unlike other edifices. Their form was a simple mass usually resting on a square base, the sides facing the points of the compass, and sloping upwards towards a central point or apex. This angle of inclination is not always the same, and hence the proportion of the base to the height is found to vary. Evidently

they were built in platforms, and covered or reveted with a coating of granite. In the interior there are halls and passages which served as the burial chambers of the monarchs who raised them; and a good deal of skill is displayed in the construction of the roofs of these chambers to prevent the weight of the superincumbent mass from crushing them in. Architecturally, the pyramids are not masterpieces of science; but owing to their enormous size, their great simplicity, their age, and the obvious cost and expenditure of human toil in their erection, they never fail to impress the mind as being justly reckoned among the wonders of the world. The largest is at

GALLERIES OF PYRAMIDS.

Gizah, and it has a perpendicular height of 448 feet, while the base is 728 feet on each side. St. Peters in Rome attains an altitude of 448 feet,

Salisbury is upwards of 400, and Strasburg, the loftest spire in Europe, is 468 feet high. As the apex of the pyramid is at present only 25 feet

Symbolism and mystery were important elements in the religion of the ancient Egyptians. The figures of their gods were symbolic, and as Plu-

PYRAMIDS OF GIZEH.

lower than this great altitude, and as the reveting or outside casing is gone, there is no doubt but that in its perfect state it was as lofty as the spire

tarch has observed, the sphinxes with which the entrances of their temples were decorated signified that Egyptian Mythology was mysterious and

THE GREAT SPHYNX.

of Strasburg, and when the quantity of material used in their construction is considered, these tapering spires are as nothing compared to the enormous masses of stone that tier above tier rise in the pyramids of Gizeh.

emblematic. This idea was carried out in the arrangement of the different parts of their temples, as the inmost shrine was at the farthest end in a small apartment usually dark and separated from the entrance by courts and passages of vast

extent, and here the sacred object was preserved and kept from the sight of all but the priestly guardian.

Owing to the climate of Egypt, it has never been a woodland country. Palm trees are found about the deserts of Lybia, and near Denderah

it is evident that they had made great progress also in the department of construction, for many of the blocks which they used were of enormous dimensions, and that they were lavish in their use of material is shown by the fact that the walls of some of their temples are of the almost incredible

INTERIOR OF THE TEMPLE OF DENDERAH.

timber of all kinds is scarce, as the soil is not suited to the growth of trees. The acacia and the palm do grow, but the oak does not, and fir has to be imported from Arabia; and thus for solid structures of great magnitude the old builders of Egypt were shut up to the use of stone, which abounds in profusion, and in the use of which the Egyptians were great proficient, as may be seen both in the rock-temples which were excavated and adorned with sculpture, and in the temples which were erected in the open air. While the sculptures and the hieroglyphic figures which adorn their palaces and temples attest the progress of their workmen in the art of the hewer of stone,

thickness of twenty-four feet. At Thebes, the walls of the principal entrance gate are at the base no less than fifty feet thick. Then again the stones instead of being dressed as in modern masonry on one side, are cut inside as well as outside, and the whole mass is solidly jointed together, thus tending to secure the durability of their monuments. In these great structures no arch is ever introduced. The columns stand at such short distances that great stones can reach from capital to capital, and thus the roof is formed of huge blocks laid on horizontally and forming a solid bed.

In almost every respect the Egyptian temple

differed from the Greek. Both inside and outside the Greek temple might be seen at one view, but the Egyptian was made up of an assemblage of vestibules, courts, passages, and apartments of different sizes connected together, and all united making a great edifice surrounded by an inclosing wall. Usually the design included the temple itself with its vestibules and side buildings in which the priests resided. Around this part of the temple was a court which formed an enclosure, and before it was placed a peculiarly shaped entrance gate or passage way of enormous size called a pylon. In many cases a second, and even a third fore-court was erected and a pylon was placed before them. These pylons were approached by avenues, in many instances six thousand feet long, having colossal sphinxes on either side, and these avenues were entered through smaller gates or pylons resembling the great masses of this form which guarded the entrance to the temple proper.

PILLAR IN TEMPLE OF  
DENDERAH.

The pylon was of stupendous size, massive in the walls and so lofty that it overlooked all the parts of the structure that lay beyond. In direct opposition to modern ideas of architectural beauty the pylon was low in the middle and elevated at either end as the spectator approached the temple. The central part was merely a wide elevated gateway, and over the horizontal entablature or lintel a symbolical egg or globe with wings outstretched on either side was engraved. On either side of this gateway the flanking towers of the pylon rose, the long side faced the entrance front, and the shorter ends stood on the outside and right and left of the gateway. The walls sloped gently inwards, and thus the appearance of these masses was pyramidal in form. Their flat wall-like surfaces were covered with colored sculpture, and on the top was an entablature formed of a fillet

and a deeply projecting cavetto. As in other parts of the temples, the pylons had a flat stone-covered

TEMPLE OF DANDOUR.

roof, and in their interior were dark apartments, the use of which is not known. There seems to be no doubt but that these great masses were placed at the entrances of the temples to excite the feeling of wonder and awe, and the effect on the minds of all who approached them would be increased by the long rows of colossal statues and obelisks through which they had to pass. On passing through the entrance gate into the fore-court, columns were arranged in rows around it, and from the tops of the columns to the enclosing walls blocks of stone were laid, thus forming shaded cloisters or walks. From column to column, as in the entrance gateway, was an entablature with a cornice terminating in a cavetto, thus carrying out the style of the age and country. As no arch is ever found in these structures, the columns stand so close to each other that the space between them is usually about one and a

THE LARGER ROCK-CUT TEMPLE OF IPSAMBOUL.

half of the extent of the column's diameter, and seldom does this distance reach to twice the diameter of the lower part of the shafts. A person on passing into one of these temples after passing through the entrance gateway would find himself in the great fore-court with its columns forming a covered way along the sides; opposite to the entrance gateway he would pass through a second gateway into another space having several rows

of columns supporting the roof; advancing through another gateway he would pass into a court with three or more rows of columns, the inner row being higher than the others, so that over the roof which rests on the lower series light might enter somewhat on the principle that clerestory windows are used to light mediæval churches. Farther onwards the visitor would enter a narrow chamber, also adorned with columns enriched

with sculpture and massive capitals, and then after one or two vestibules the innermost shrine would be reached by a single door. This sanctuary was always small, without light, and around it were apartments for the priests and such dresses or sacred vessels as they required for their service.

The walls of the temples were covered with sculptures richly colored, and the lower rows, separated by hands from those above, were of greater breadth. These figures usually represented the objects of the vegetable world. The columns, which were also similarly ornamented, were usually thick and heavy, rising to a height that varied from three or four or even five times the diameter at the base; the shaft never diminished in thickness. It rested on a plinth or base, and the capitals

expanding, or of a cluster of flowers or leaves tied by a band around the head of the pillar. Square

RUINS OF KARNAK.

SMALLER ROCK-CUT TEMPLE OF IPSAMBOUL.

displayed a wonderful amount of variety in their form, but the prevailing idea was a representation in stone of some flower or bud sprouting out and

piers occur very frequently in the tombs, and in other buildings they sustain the roof, while the colossal statue is placed in front of them without any beam or weight resting on the head. Temples of such massive proportions with their multitudinous columns, their dim shadows and the multiform symbols of hieroglyphic figures which covered the pillars and the walls must have appealed to the Egyptian mind with great power. Outside they appeared to be stupendous boxes of

stone, to an observer who looked at them from the sanctuary end, box after box becoming greater until at the far end the great pylon overtopped the whole,

but inside the misty shadows, the figures on the walls, the long vistas, and the changing forms from court to court must, to the Egyptian mind, have been a source of awe and reverence.

A smaller form of temple existed, known as typhons, which consisted of a simple house in the form of a parallelogram, having the door in one end. There were two or three chambers placed consecutively according to the size of the building. These temples stood on a perpendicular substructure, and a flight of steps led to the doorway. These typhons bore a relation to the greater temples similar to that which a small chapel or parish church did to a great cathedral in mediæval times.

AVENUE OF SPHYNXES, THEBES.

The arrangements of the rock-temples were similar to the plans of the structures which stood in the open air. Thus at Ipsamboul there are the colossal figures at the entrance. A passage leads to a court or hall with four columns or piers on each side which reach the roof, a doorway leads to another chamber with four piers, thence a vestibule, and farther still the shrine, with two small apartments, one on each side, and similar in form, both being entered from the vestibule.

A few details will serve to show the enormous magnitude of the greater temples and to establish the fact that the Egyptian people lived for the maintenance of the royal and sacerdotal classes. In modern States law recognizes the individual, and protects him in his individual rights. In Egypt the masses lived for the State, and accordingly the remains of State edifices may now be seen thousands of years after their erection, while

the home of an Egyptian farmer or gentleman cannot be found.

The temple of Edfou, which belongs to the first class, was four hundred and ninety-seven feet long. The sanctuary end was one hundred and fifty-five feet broad, while the stupendous pylons which stood right and left of the entrance gateway extended two hundred and twenty-six feet. Such a pile, with its approaches of statues and obelisks, must have been overwhelming in its effect on the common mind. Vast as this temple was, it recedes before the magnitude of the temple of Jupiter at Thebes, which was more than fourteen hundred feet long by three hundred feet wide exclusive of the porticos that led to it. At Karnak the ruins of the temple cover an area of a mile and a half in circuit; its principal front faced the river, and it was approached by an avenue of sphinxes which terminated at two colossal statues of granite standing like towers. One of these remains, but it has lost much of its original height. Beyond these towers was a court three hundred and twenty-nine feet by two hundred and seventy-five feet, with a double row of columns in its centre and a covered corridor on either side. Beyond this court was the great hall of assembly, 329 feet by 170 feet, with a central avenue of twelve enormous columns 66 feet in height and 36 feet in circumference. There were seven side rows of columns 122 in number, smaller than those in the centre but still of gigantic size, their height being 41 feet 9 inches and their circumference 27 feet 6 inches. Farther there were other courts and halls for the space of 600 feet, with numerous columns and obelisks, one of which remains, and it is 92 feet high by 8 feet square, surrounded by a peristyle of figures. As in other temples, the walls were decorated with sculptures, and the great hall was especially gorgeous in its details.

About a mile from Karnak are the ruins of Luxor, similar to those at Karnak but of smaller proportions; on the left bank of the river was the superb Memnonia, celebrated for its so-called vocal statue. It was formed out of enormous mass sienite, which must have weighed not less than fifty tons, but is now reduced to fragments. Details like these will serve to indicate to the modern mind the loftiness of conception, the majesty of design, and the rashness of that energy which aimed at building for all ages, and which centuries that followed the Egyptian civilization have never in these elements of public life had a parallel.

## THE AMERICAN DRAMA—ITS SUCCESSES AND FAILURES.

BY A. E. LANCASTER.

## THE SECOND PAPER.

JAMES A. HILLHOUSE, though not a dramatist in the stricter sense of the term, finds a place in dramatic history as rightfully as Byron. A true poet he undoubtedly was, and the dramatic glow which he gave to his principal compositions suggests the channel of his thoughts. He was born in New Haven, on the twenty-sixth day of September, 1789. He died in 1841. The work upon which his fame rests, "Hadad," has justly been considered his masterpiece. As a sacred drama it is one of the best that has yet been given to the world. The scene is in Judea, in the days of David; and as the agency of evil spirits is introduced, an opportunity is given to bring forward personages of strange wildness and elevation. For a work like this, declares an able critic, Hillhouse was peculiarly qualified. A most intimate acquaintance of the Scriptures enabled him to introduce each minute detail in perfect keeping with historical truth, while from the same study he seems also to have imbibed the lofty thoughts and the majestic style of the Hebrew prophets. The two other dramatic compositions of Hillhouse are "Demetria" and "Percy's Marque." Of these dramas it has been well said, that the scholar studies them as the productions of a kindred spirit, which had drunk deeply at the fountains of ancient lore, until it had itself been moulded into the same form of stern and antique beauty which marked the old Athenian dramatists.

James Kirke Paulding, the celebrated American novelist and critic, was the author of a comedy, "The Lion of the West," which was acted in New York with great success, and often repeated. It was first played at the Park Theatre, on Monday evening, April 2d, 1831; and later at the Chestnut Street Theatre, Philadelphia, October 28th, 1831. George P. Morris, the well-known song writer, wrote a play called "Brier Cliff." This was performed at the Chatham-Street Theatre, New York, in 1825. The most flattering comment that we can make in its favor is, that it was often reproduced, and never failed to attract appreciative audiences.

Another once popular dramatist, Richard Penn Smith, was a native of Philadelphia, and a member of the bar. From his father he inherited a taste for letters, and was early distinguished for the extent and variety of his acquirements. His first appearance as an author was in the columns of the *Union*, where he published a series of papers under the title of "The Plagiary." Towards the close of the year 1822 he purchased a newspaper, and assumed the duties of an editor. Five years he continued at this work, when, finding it both wearisome and unprofitable, he abandoned it and resumed his profession. To the discipline which editorship necessarily imposes, he probably owed, in a great measure, his facility in composition. While engaged in professional duties, he produced a number of plays, both in prose and verse, which showed remarkable versatility. His favorite study, indeed, was the drama, and with this department of literature he was thoroughly familiar. With the dramatists of all nations and all schools he possessed an extensive acquaintance. Fortunately it is not alone in the critical appreciation of the work of others that he deserves attention. He showed conclusively by his own labors that he did not lack power to accomplish good results in dramatic creation. The following are his best productions, most of which were performed with complete success: "Quite Correct," "The Disowned," "A Wife at a Venture," "The Sentinels," "The Water Witch," "My Uncle's Wedding," "The Bravo," "Caius Marius," and "Deformed."

A passing anecdote relating to Smith may not be inappropriate here. Like nearly all authors, he occasionally produced work that was unworthy of him. Luckily he was blessed with a not too sensitive nature. On a certain evening, at the conclusion of a performance of one of his plays, a friend met him in the lobby, and, being ignorant of the authorship of the drama, asked the author, not without a sneer, what the piece was all about. "Really," was Smith's grave answer, "it is now some years since I wrote that piece, and, though

I paid the utmost attention to the performance, I confess I am as much in the dark as you are."

As a conclusion to our remarks upon this author, we may mention that "Disowned" and "Deformed" were both successfully performed in London, an honor which no other American play had received up to that time. The tragedy of "Caius Marius" was written for Edwin Forrest, and was brought out by him at the Arch Street Theatre, Philadelphia. This production has solid worth; the plot is well managed, the chief characters are strongly developed, the language is uniformly vigorous, and many of the sentiments are highly poetical. The following extract from it will illustrate more forcibly our opinions:

"They live like devils, but they'll die like gods!  
Pledge me a cup to Mars, who stood my friend  
In times of greater peril than the present.  
My brain's on fire! Ha! see another comes!  
.....  
My army's made of shadows, and will startle  
If but a breeze blow rudely. There was a time  
When Roman soldier was a fearful name!  
Oh! where are ye who battled by my side  
In Africa! Men now are made of fears,  
And blanch and tremble if a face but frown.  
Speak out thy errand, if thy faltering tongue  
Retain its functions still. Speak, speak, I say!"

Joseph Bartlet's is a name well known in American dramatic history, though not connected with anything very honorable. Bartlet's only claim upon our recognition is the fact that he demanded the honor of being the first American who had a play represented on the English stage. The title of this production, without considering the question of his truthfulness, is unknown. It is more probable that the honor thus claimed really belongs to Richard Penn Smith. However this question may be decided, Bartlet successfully forced himself upon public recognition, and was regarded as a happy playwright. As a man he was by no means held in high esteem. He reflected no credit on the profession of which he was a member. After his death a reputable writer alluded to him in the following style: "No mourner followed his hearse, no poet sang his dirge, and where rest his ashes no one will inquire; so pass away the profligate and the unprincipled." This epitaph speaks for itself, and to it we need add nothing, though we could wish to take something away. If Bartlet's name is to be preserved, it will only be in connection with the curiosities of American dramatic literature. A characteristic anecdote

was often told of him, that carries its moral quite as well as any elaborate biography. One night while Bartlet was at the theatre, a play in which his countrymen were ridiculed was performed. This drama represented a number of rebels captured and brought into the British camp; on inquiry being made as to their occupations before they became soldiers, the answer was that they were of different callings; some were barbers, some tailors, some tinkers, shoemakers, etc. At the most interesting point of the scene, Bartlet arose from his seat in the pit, and cried: "Hurrah! Great Britain beaten by barbers, tailors, tinkers and shoemakers! Hurrah!" The effect was instantaneous. Bartlet became popular—the popularity of audacity.

A very clever and popular dramatic writer, and one whose imagination possessed many elements of power, was Nathaniel Harrington Bannister. This gentleman was a very hard worker, and he produced a great number of plays, most of which attained high success. Still it must be confessed that his natural vigor often carried away his judgment, so that where he sought grandeur he only found bombast. On general principles, therefore, we must condemn his productions; as an experienced and successful playwright, nevertheless, he claims our attention. He displays an excellent command of language, and the dramas to which he has given the most care show decided merits of incident and imagination. The best known of these are the following: "Marriage Contract," a comedy in five acts; "Murrell," played successfully in different portions of the country; "The Gentlemen of Lyons," a piece very highly spoken of on various occasions; "Roman Slave," a tragedy in five acts; "Two Spaniards," and several others. He also wrote a drama called "The Wandering Jew," which consisted of no less than fifteen acts! Two of his best tragedies are "Caius Silius" and "Psammetichus," the latter of which was intended for Edwin Forrest. He also wrote the drama of "Putnam," which was produced at the Old Bowery in New York with Hamblin in the principal rôle; it ran over one hundred nights, and the author received only fifty dollars for the copy! Long runs and bad pay seem to date from a past generation!

One of the best known of our tragic writers is John Augustus Stone, many of whose plays were pecuniary successes. He was author of the two celebrated tragedies, "Fauntleroy" and "Meta-

mora." The former of these pieces was first acted in Charleston, and often repeated subsequently. The latter was acted in various cities of the United States, always with great success; it was specially written for Edwin Forrest, who paid the author five hundred dollars for his work. Mr. Stone was likewise author of several other dramas, the principal of which are "Tancred," "The Demoniac" and "The Ancient Briton." This last was generally considered his finest production. It was first played in March, 1833, at the Arch Street Theatre, Philadelphia.

Cornelius A. Logan enjoyed, during his career as a dramatist, a distinction for which many worthy persons are even now ambitious. He produced a comedy in three acts, entitled "The Wag of Maine," which the New York critics pronounced "the best American comedy yet written." It was brought out towards the close of 1835, and ran many successive nights. Mr. Logan was also the author of two or three excellent farces. As a general writer he wielded a vigorous pen, and he was a bold defender of the stage wherever occasion required. Rufus Dawes, the poet, was the author of a tragedy called "Athenia of Damascus," which was written expressly for Mrs. George Jones, and published by Coleman of New York, 1839. The New York press alluded to this work in high terms of praise, placing it unanimously among the finest dramatic works of the day. We are not aware that Mr. Dawes ever carried his inclinations for the drama any further. "Athenia" is the only dramatic work now ascribed to him.

In the year 1830 a premium of three hundred dollars was offered by James H. Caldwell for the best tragedy offered to him as an opening piece for his new theatre in New Orleans. The successful work was "Irma, or the Prediction," and its author was James H. Kennicott, of New Orleans. The tragedy was printed in 1830, and just eight years after this successful venture Mr. Kennicott died in Texas. Upon the production of "Irma" the play met with the most decided marks of public approbation. Some passages from it are very fine, as for instance:

"By heaven!

Her step speaks majesty of soul, like that  
By which the Trojan knew his goddess mother.  
Such is the soul that might have filled the void  
Within my withered heart. She should be mine.  
The eagle pairs not with the timid dove,  
Nor would I mate with soft and melting beauty."

A lady who acquired considerable reputation as a dramatist several years ago was Caroline Lee Hentz, who wrote an admirable play entitled "Lamora," a scholarly criticism of which appeared in the *Western Magazine* for February, 1833. In the month of January of the same year "Lamora" was produced with a fine cast at Caldwell's New Orleans Theatre, and its success was unequivocal. It is perhaps the best play founded upon Indian traditions which this country has brought forth.

Samuel Woodworth, whose name is almost as well known as that of Paine, through the popularity of his poem, "The Old Oaken Bucket," was a very talented dramatist. His chief works were, "The Deed of Gift," acted in Boston; "The Widow's Son," "The Forest Rose," both acted in New York, and others of which we fail to find record. Mr. Woodworth, as a writer, was careful and considerate. At the time of our war with England he was the editor of a weekly paper called *The War*, which he conducted with marked ability. In the year 1823 he and an associate established *The Mirror*, of which he was at first the editor, and to which he subsequently became a constant contributor. His songs and dramas made his name very popular, and both showed genuine merit. Another writer whom we must here mention briefly was F. C. Wemyss, a well-known authority on dramatic questions. He was the author of "Red Rover," "Captain Kidd," "Norman Leslie," and "The Jewess." He also adapted the tragedy of "Cataline," which was produced at the Walnut Street Theatre, Philadelphia, with great success.

An American dramatist whose name should always be held in the highest esteem is Robert T. Conrad, the author of two of the finest plays ever produced in this country. We allude to "Jack Cade" and "Aylmere." Conrad was a Philadelphian by birth, and, like many others who have succeeded in the world of literature, was originally destined to shine at the bar. He was a frequent contributor to the periodicals of his day. His first dramatic production was "Conrad, King of Naples," a tragedy, which was successfully performed at the Arch Street Theatre, Philadelphia. He was the founder of a daily paper, the *Commercial Intelligencer*, which was afterwards united with the *Philadelphia Gazette*. His greatest success was made when he produced his second tragedy at the

Walnut Street Theatre. This composition was the well-known "Jack Cade," which was very warmly received by the public. This play was, indeed, a real success, and its merits are very numerous. Conrad was a man of no ordinary talents. He was a scholar and a thinker, and he always weighed opinions before accepting them. His prose is remarkable for its clearness and terseness, and all his works bear the marks of careful thought and matured experience. "Aylmere," the second of his two great dramas, will rank (so declares a competent critic) among the finest dramatic productions in our language. The plot is simple, yet strongly developed; the characters are vigorously drawn; and the diction is lofty and poetic. Take the following passage as a sample:

"In the breathless gloom  
I sought the Coliseum, for I felt  
The spirits of a manlier age were forth:  
And there, against the mossy wall, I leaned,  
And thought upon my country. Why was I  
Idle and she in chains? The storm now answered!  
It broke, as Heaven's high masonry were crumbling,  
The belted walls nodded and frowned in the glare,  
And the wide vault, in one unpausing peal,  
Throbbled with the angry pulse of Deity."

These two plays, "Jack Cade" and "Aylmere" are sufficient to preserve Conrad's name from oblivion, and they will always be considered, we do not doubt, an honor to our dramatic literature.

The next dramatic writer who calls for consideration is J. S. Jones, a native of Boston, who was well known as an actor and writer in the Eastern States. Many of his dramas have been produced in various cities of the United States. He was educated for the practice of medicine, which, we believe, he never wholly forsook. Yet his tastes were literary, and his love of the theatre occasionally drew him away from the less congenial pursuits of anatomy and physiology. He was the author of the following pieces: "Eugene Aram," "The Green Mountain Boy," "Tam O'Shanter," "Custom," "Diamond Cut Diamond," "Witches of New England," "The Quadroon," and a great number of others. He also wrote a prize-drama, entitled "The Wheelwright," for which he obtained a reward of three hundred dollars, and which was played in Boston in 1845.

We must here mention the name of Thomas Dunn English, as the author of two celebrated pieces entitled respectively, "The Battle of the Frogs," and "Handy Andy." This gentleman,

who is still living, has made an extensive reputation in literature, and he has always ranked high as a careful writer of energetic prose and pleasing poetry. "The Battle of the Frogs" may be termed an operatic satire, and at the time of its first production it excited much attention. "Handy Andy" is founded upon Lover's novel, and was originally performed at the New York Chatham Theatre, with great success.

Some of the best works in our dramatic literature date from about the year 1840. We are obliged to pass by such names as Caldwell, Finn, Haynes, G. W. Harby, John Blair Linn and George Lippard, all of whom were prominent in their day, and confine ourselves to the five or six who distinguished themselves by special merits. The chief of these were Bird, Rees, Mrs. Mowatt, Sargent, Steele, and Willis.

Dr. Robert M. Bird rapidly acquired great distinction among American writers, both as a dramatist and novelist. At first he wrote for the *Philadelphia Monthly*. Edwin Forrest, who did so much to draw forth and fitly recompense native dramatic talent, was the means of introducing Bird to the American people. The latter had written for the great actor a tragedy entitled "The Gladiator," which proved to be an eminently successful speculation. This play possesses numerous literary merits, although it was written exclusively with a view to production on the stage. Some of the scenes are strikingly original, and the language is strong and noble. It was followed by a second tragedy, "Oralloosa," founded upon the cruelty of the Spaniards in Peru, and worked out with great care; although an excellent work, it never acquired the popularity of its predecessor. Bird's next production was "The Broker of Bogota," which has often been called his finest drama. It is more quiet and finished in its design than "The Gladiator," and does not appeal through any sensational interest. For this reason, perhaps, it failed to have a very warm reception upon the occasion of its first presentation. Subsequently it was performed by Mr. Forrest with marked success. Dr. Bird was the author of a third tragedy, entitled "Pelopidas," which seems to hold a position between the "Gladiator" and "The Broker of Bogota." His novel of "Nick of the Woods" has been very often dramatized, although the best version of it was written by Mr. G. W. Harby, of New Orleans. This play has been produced in every city of the Union, and

has always met with flattering success. All of Dr. Bird's novels have been republished in England, and, in general, they have been equally successful with his dramas. The author received in youth an excellent classical education, and his knowledge of modern languages was extensive. He was born at New Castle, Delaware, and received his degree of M.D. from the University of Pennsylvania. But he never practiced in his profession. The first representation of "The Gladiator" was witnessed at the Arch Street Theatre, on the evening of the 24th of October, 1831, by the largest audience ever therein assembled.

James Rees was a prolific dramatic writer and an impartial critic, although none of his plays can rank with the productions of Conrad and Bird. Many of his dramas were originally brought out in New Orleans, and others in Philadelphia. His national drama of "Anthony Wayne," produced at the National Theatre, in the latter city, January 13, 1845, had an uninterrupted run of forty nights. Some of his more popular pieces were: "The Headsman," "Charlotte Temple," "The Squatter," "The Unknown," "Marie Tudor," "The Invisible Man," etc.

Mrs. Ann Cora Mowatt was the author of "Fashion," one of the most successful comedies produced during the present century. This lady was the daughter of Samuel G. Ogden, a New York merchant. By her mother's side she was granddaughter of Francis Lewis, one of the Signers of the Declaration of Independence. At the early age of fifteen she was married; after her marriage she applied to various studies, above all language and literature. She wrote occasionally for the magazines, sometimes under her own name, but more often under a *nom de plume*. Her articles signed Helen Berkley had a wide reading. She always showed a decided taste for the drama, and she wrote several plays that were performed in private. One of these was "Gulzarra, or the Persian Slave," which was published in 1841. In the following year Mrs. Mowatt began a series of dramatic readings in public, which were very successful. But a fit of illness put a stop to this kind of work. In 1843 she published a novel called "The Fortune Hunter," which obtained an extensive circulation. In the month of March, 1845, her comedy of "Fashion" was produced for the first time at the Park Theatre. This play, as Mrs. Mowatt herself declares in her "Autobiography of an Actress," is a satire on American

*parvenuism*, and is intended to be a good-humored one. "No charge can be more untrue," says the indignant lady, "than that with which I have been taxed through the press and in private—the accusation of having held up to ridicule well-known personages." To quote the authoress further: "There were no attempts in 'Fashion' at fine writing. I designed the play wholly as an *acting* comedy. A *dramatic*, not a literary, success was what I desired to achieve. Caution suggested my not aiming at both at once." To state the result briefly, "Fashion" obtained an immense success. It was acted three weeks in New York to overflowing houses, and was only withdrawn because previous engagements compelled its withdrawal. It was then played fifteen successive nights at the Walnut Street Theatre, Philadelphia, and was received again by the critics and public with unbounded enthusiasm. The dramatic critic of the *New York Albion* spoke of the play as a sensation unexampled in theatricals. Some time later "Fashion" was produced in London, at the Olympic, a theatre whose company was then unrivalled. Here again its success became assured. The *Sun* prefaced its lengthy and laudatory criticism with these remarks: "Rough and ranting melodramas had formed the staple of what America had hitherto sent us; but last night this reproach was wiped out, and there was represented at the Olympic Theatre, with the most deserved success, an original American five-act comedy, . . . which as regards plot, construction, character, or dialogue, is worthy to take its place by the side of the best of English comedies."

Mr. Epes Sargent is widely known as a graceful poet and miscellaneous writer, but his reputation is founded chiefly upon his drama of "Velasco." His first appearance as a dramatic author was in the winter of 1836, when his "Bride of Genoa" was performed at the Tremont Theatre in Boston. This drama is in five acts, and it is based upon events in the life of Antonio Montaldo, a plebeian, who at the age of twenty-two made himself Doge of Genoa. In his delineation of the hero, Mr. Sargent follows history very closely, although the story which he has interwoven with Montaldo's career is full of romance and fiction. This play proved successful in Boston and in most of the other cities in which it was produced. But the author's next work was of a much higher order, and rapidly eclipsed his first effort. As a piece of dramatic art "Velasco" has received universal

commendation. It was first brought out in Boston, in November, 1837, Miss Ellen Tree sustaining the character of Zidora, and it was subsequently performed at the principal theatres in New York, Philadelphia, Washington, and New Orleans. "The general action of the piece," says Mr. Sargent, in his preface to the published drama, "is derived from incidents in the career of Roderigo Diaz the Cid, whose achievements constitute so considerable a portion of the historical and romantic literature of Spain." This subject has been frequently treated by dramatic authors, and the "Cid" of Corneille is, in many respects, the finest tragedy in the French language. Mr. Sargent's work deserves high commendation, as it is unequalled by any other treating the same story in the English language.

Nathaniel P. Willis has long been one of the most popular of our poets. In the year 1839 he published in London a volume entitled "Two Ways of Dying for a Husband," comprising two dramas, "Bianca Visconti" and "Tortesa the Usurer." Of these "Bianca Visconti" principally claims our attention. This tragedy was one of the poet's ablest productions, and merits a high place in the history of our drama. For the scene of the play Mr. Willis chose the rude court of Philip Visconti, Duke of Milan, in the fifteenth century. The celebrated soldier of fortune, Francesco Sforza, is the principal male personage, who married Bianca Visconti, the Duke's only daughter. The fictitious incidents of the drama and the background of history are cleverly interwoven. His portrayal of the character of the heroine is very fine. By the introduction of the part of Pasquali, a whimsical poet, the deep emotion of the play is lightened by a vein of humor. Altogether, the tragedy shows great depth of feeling, remarkable dramatic power and insight, and talent for construction. It is written partly in prose, partly in blank verse, and the latter is full of grace and poetry. The following extract will suggest an idea of his style:

"Now since the serpent  
Misdled our mother, never was fair truth  
So subtly turned to error. If the rose  
Were born a lily, and, by force of heart,  
And eagerness for light, grew tall and fair,  
'Twere a true type of the first fiery soul  
That makes a low name honorable. They  
Who take it by inheritance alone—  
Adding no brightness to it—are like stars  
Seen in the ocean, that were never there  
But for the bright originals in heaven!"

"Tortesa the Usurer" is another production of the same class, although both of these dramas are better suited to the closet than to the stage. Mr. Willis also wrote a comedy entitled "The Western Heiress," which, we are sorry to say, was a lamentable failure.

We have now reached the last name in this period of our dramatic literature, a period which may be said to end with the year 1850. Silas S. Steele, the most prolific of all the American dramatists, now offers himself to our notice. As a dramatic writer (declares a critic) who grasps with a giant's strength all the elements of his art, Mr. Steele has no equal in the United States. His subjects were as varied as his style. In his beautiful drama of "Claudare" we find energy of style allied to all the graces of poetry. Of his nautical pieces James Fenimore Cooper expressed his highest opinion. He also wrote comedies, farces, comic operas, and burlesques. Everything seemed to be within the range of his talents, and almost everything in his hands turned to success. He had a great command of wit, sparkling dialogue, and forcible expression. His fancy and imagination are not less deserving of praise. At the same time he was essentially original in his thoughts, scene-pictures, and effects. No American dramatist ever displayed such a combination of antithetic talents, and none ever produced work so remarkable in both quality and quantity. He wrote about forty pieces, nearly all of which were performed with distinguished success in most of our principal cities. The dates of these productions range between 1835 and 1845. The most celebrated are the following: "Claudare;" "Kasran, or the Crusaders," a melodrama; "Lion of the Sea," a nautical drama; "The Brazen Drum;" "Washington and Napoleon;" "A Night Down Town," a highly successful Ethiopian opera, written for the John Smith, and played all over the United States; "Philadelphia Assurance," a burlesque on "London Assurance;" "Stewart's Triumph," performed successively a great number of nights; "The Fawn's Leap," a pantomime ballet; "The Grecian Queen," a tragedy in five acts; "King Henry VI.," a tragedy; "The Pauper's Festival," and "Gazene," an idyllic play. Of the others some are equally excellent though less celebrated.

With Steele may be said to end the earlier dramatic period of our literature; the later dramatists and those of our own day next call for consideration.

## THE FAIR PATRIOT OF THE REVOLUTION.

BY DAVID MURDOCH.

## CHAPTER XIX. THE SPORT OF A FOOL, CASTING FIREBRANDS, ARROWS AND DEATH.

THE corps held their way, guided by some men of the country in the king's cause, through a broken piece of land for about three miles from the river. The greatest caution was exercised; not a word above a whisper was spoken, for the troops of King George had learned well enough that it was dangerous to go hunting on these hunting-grounds, so far away from Windsor Castle. The reputation of the Ulster militia for bravery had been heard of ere this, and the party might be caught in their own trap—a very common thing in those times.

"Are these Dutchmen as good at handling arms as the Yankees?" whispered Clarence to a private at his side, whom he knew to be a native of the country, and who at the present time acted as one of the guides. "Do you suppose they will fight? or do they know sufficient of this quarrel to risk their lives against the king's troops?"

"Fight!" said the other, "yes, and on principle, too, as I am a living man. There is not one of them but knows their rights, and their wrongs too, for that matter. Their Dominie instructs them in all these affairs, and drills them into line, Sunday and week-day."

"And does something of the fighting too, you think, if I may guess from your speech!" This was said with a sly sneer, which the young officer could not hide.

"The use of the sword is not despised by these Dominies; and some of them go so far as to insist that the minister should carry the ark before the army, as the priests did in the old wars; and if you, sir, had looked as often as I have into the large, black eyes of the man who teaches the folks where we are going, you would believe as I do." This was said with so much warmth of feeling that Clarence began to suspect that he was speaking to a partisan of the country.

"So then you know and rather respect this man you call the Dominie up here? how does it happen that we have you here in our ranks?" said the officer, with some sharpness, as he looked

into the man's face to ascertain the effect it might have upon him.

"This cause, sir, like another we read of, has set father against son, and son against father." This was said with feeling. "It is enough," he continued, "that I am now under the king's flag, and sworn to be true. I can be this without losing my reverence for the Dominie, or my love of his flock. He will fight if he needs to take the field; and my advice to you is to keep out of the range of his gun, if you want to leave the field a living man."

"Ah, a good shot is he?" said the interrogator. "I love the man that can shoot straight and fair on all sides, though I should hate to be taken down by a priest. How shall I know him in the field?"

"My description," said the earnest young man, not minding the jests of his superior, "will not be required. He lets his presence be heard and felt. He has little mercy upon a Tory; and if I were to fall into his hands, he would do with me as he did with a mean Cowboy, tie me to his horse's tail, and ride me to death."

"And would you stand patiently to be tied?" said Clarence, laughing quietly at the guide's solemnity. "He must have great power over you, since he could not keep you near him."

"That is a tale by itself, sir," said the private; "but were I to see his three-cornered hat there before my face at this moment, I would stand still and deliver arms; for then would I be certain that his long Geneva bands would hang at his breast, his white locks be streaming over his shoulder; and my heart would cease to beat that instant."

"Certainly he must be a dangerous man, to be so near us at this time, and we depending on your guidance. I must watch you, and treat you as they do horses that are led out of a fire, throw a sack over your eyes, and then you will be but a blind guide. But what makes you look so fixedly? What do you hear? You cannot see anything in the dark?"

"The old church drum is beating the alarm! There will be fun in old Sopus before morning."

"Church drum!" said Clarence, in laughing surprise. "Do they call the people here to church by tuck of drum? A well drilled flock they must be. His wardens, then, must be captains and sergeants, and his clerk a bugler."

By this time the invading force had reached a rising ground, from which the village could be seen in daylight, but was now only discernible by the twinkling tapers carried unsteadily in all directions. Silence reigned through the company. The officers consulted in whispers; all seemed to be waiting for the word; nor did they wait long, for two dark figures, that rose at a signal, stood before the rest, and were met by the chief in command, who soon returned and gave the word "forward!"

The orders were to burn the stores and the public buildings, to spare the inoffensive inhabitants, and to kill only those who offered resistance. They rushed down in double quick time, and were soon on the streets of the place, which presented a spectacle of activity, showing that some notice had been given of their approach, and that the people were moving their household stuff from their dwellings in all directions. On a road over which Bertram passed with his men, going to the north, were horses and oxen, drawing rude carriages piled with household goods, and women with their children. With round tables, of the time of King Arthur, were seen glittering eseritoirs of mahogany, brought from Holland. Clarence stumbled upon an old vrow, who bore off a set of china, while following her was a young damsel carrying a huge antique looking-glass, that had reflected the face of her grandmother when a bride in the Netherlands. A rude soldier tossed with his musket a bundle out of the hand of a full-bottomed matron, which turned out to be a silver tea-pot, and other plate of value; but his officer coming up, prevented the spoliation, so that she carried off her prize, which became from that moment the more valuable. Screams were heard from the dwellings, caused through fear more than hurt, while men were seen in the yards behind the houses running to the rendezvous, where Colonel Haasbrouk was mustering his men and preparing for the defence. Among these people were found some of the most prominent in the Convention, and not a few of the reverend Dominies who had figured that day in the ecclesiastical assembly, with their lay brethren by their side.

Time pressed upon the invaders, each one being furnished with a torch dipped in tar, and his orders given to burn only public stores; but the blood of the tiger was up, and words could not restrain him, more especially when liquors in abundance were at hand. The heads of casks were driven in at a stroke, which allowed the soldier, always thirsty, to drink till he became satisfied. Fire and alcohol gained the mastery, and all the generals in King George's army, with himself at their head, could not have stayed the havoc of a general conflagration. The officers fought with their own men, swearing as only soldiers can swear at such times; but what does a drunken mercenary care for life or property when led to their destruction.

In one half hour after commencing their ravages, the bugle sounded a retreat. The deeds of fire and blood were done. It was but the work of half an hour, and though the bugle sounded loud and shrill, it was no easy matter to gather up the stragglers, who had dispersed for booty and other objects. Such as were not insensible to danger flew to the gathering spot, while the blaring notes told the militia, who were coming in large numbers, that now was their time. The blazing dwellings showed to their watchful eyes many of their enemies, who were seen, some dancing like demons in drunkenness, and others, skulking behind in the dark, equally demoniac, while the sudden report of a gun, and the sharp shriek which followed, declared the death of some other victim of this night's work. The English commander saw the necessity of a rapid movement, as the danger of being surrounded was becoming every moment more imminent, and it was therefore with wise precaution that he had left a party behind to keep open his retreat; for already, on the road to the river, Captain Henry Schoonmacker had assembled a number of the true-hearted militia to intercept; and perhaps he might have succeeded had not the Dominie come up at that time and warned him, in true hunter's style, against putting the catamount in a corner.

"Give a bridge of gold to a flying enemy," said the good man, "else he will fight through and kill hip and thigh. Let us to the fences, and smite them as the wise men of the east did at Lexington—lie in ambush, as the children of Israel did before Ai."

The Dominie was obeyed as if he had been captain. The men all lay flat on their faces,

while the reverend man himself and Schoonmacker stood behind a tree, reconnoitering the approach of the enemy. The Dominie saw them the moment they rose on the high ground east of the village; his fingers got uneasy, and his gun came to his eye; when crack went the piece, which brought the word "Halt" from the English leader who marked the point whence the flash appeared. Captain Schoonmacker, mad at the Dominie, cried out, "What's that for? You've fired afore the time."

"I could not help it," said the enraged Dominie. "I heard that Skitilink Yaacob Tenbroek laughing among them, and I thought I might hit him; but now that they know we are here, let us all give it to them." And with that the brave good man roared out "fire," when a scattering volley made the woods ring. No damage was done to the invaders; but as it would be risking too much to pass by the defenders, a party was detailed to dislodge them, a matter not perceived by the eager watchers, who were prepared to take the soldiers in flank; when, to their own great surprise, they were attacked with a fury in the rear, which made them tumble off helter-skelter in all directions leaving the main road clear, down which the king's party passed at rapid pace, for well they knew that time was worth more to them than gold. The Whigs, though spread over the field for a short space, soon came together, and pursuing along the skirts of the woods and behind the walls gave out fresh volleys, which did no harm, as all was yet quite dark. These were returned at short intervals, more for the purpose of frightening their pursuers, and keeping them at bay, than in expectation of doing execution. It was during one of these halts that Clarence perceived that Gabriel Smidt, the guide with whom he had held the private confabulation on the way up, gave a start, and then fell flat to the ground, which surprised his officer very much, as he had shown more than common bravery all the night throughout, which made him ask:

"What do you see there that makes you fall back as if you were shot?"

"Do you see that black spot on the fence there, no bigger than a crow?" said Smidt. "Look how it rises higher and higher."

"Well, what of it?" said the other. "What if it be a crow, a drop of lead will bring it down even though it were a witch. I could hardly

believe that a man of your temper, from what I have seen of you, would be frightened by a scarecrow!"

"Laugh as you please, that cocked hat, as I told you, has made me more afraid than a dozen of rebels at another time. I feel at this moment as I used to do when I could not say my Heidelberg."

"Pugh!" said an Englishman at his side, "is that all? let me put a pill through it, and I will say my catechism all the better after it is over."

"You shall not do it," said the Dutchman, "else you and I are enemies forever. The image of my old mother is now before me, saying 'Gaby, Gaby, min' de Dominie.'"

But the Englishman had no such scruples, and before his comrade had time to interfere, the firelock had spoken, and to the astonishment of all, and the horror of Gabriel, the hat stood up as brave as ever."

"Does not that prove," said Gabriel, "what my good old mother always said, that these ministers were black owls to shoot at? I never saw the man yet that prospered after he lifted his hand to smite one of them."

"Give me a good fat steak and I will venture the shot," was the unbelieving cockney's sneering reply.

"See," said Clarence, suddenly startled himself, "all the fence is lined with heads, and that as far as we can see. We must dislodge that pertinacious crew once more. True enough, they sit like so many crows—rather ravens ready to pick our bones. Not quite yet, boys." The men were ordered to lie flat on the ground till measures could be taken to dig the rebels out, or find a way to the left, and give them a wide berth. This would have been the plan, only there were voices heard in that very direction, so that appearances indicated that they were surrounded, and must fight their way to the river, in the face of thousands. While waiting in council, Gabriel Smidt crawled up to the fence, and climbing over he laid hold of that same cocked hat, which soon lost its terrors when he perceived that the whole was but a *ruse* to gain time. The hats were all put on poles, and placed on the top of the fence, so that from their regularity and number, they seemed a company of men waiting with muskets ready to discharge their fire. Gabriel took the old hat, putting it on his own head in real wag-

gery, which nearly cost him his life; for no sooner did they see it move, than twenty muskets were fired at once, none of them taking effect, for there followed the loud laugh of the discoverer, and as loud a curse at the "old deceiver" for the trick he had put upon them, which they regarded almost in the light of a defeat.

Notwithstanding all this levity, the leaders were far from being at ease in their minds. It was plain that time was gained by the country party by these tricks, and that was loss to themselves; and it would have been fatal to the king's troops, indeed, had there been proper discipline observed on the other side. Instead of silence, they let their voices be heard, so that the ship's company were made aware of the danger, and sending up a few rockets, which were understood as telegraphic signs of warning by their friends ashore, who paused till they heard the firing of the ship's guns, that reached the field where the militia were in ambush, allowing a reinforcement to land and follow up the advantage. Beset in front and rear, the Dominie's party had to make way and allow the regular soldiers to pursue their course. The reverend man was seen walking in front of the men, exhorting them to keep steady and not to fire too soon.

"Yes," said Captain Schoonmacker; "do as the Dominie bids, not as he does. But there now, hear that;" and there came a round ball whizzing through the air close by the rank. Then a second and then a shower of grape that fell like hail among the trees. The men, uneasy and seeing no enemy, scattered, as the Dominie said to them when he got on the other side of a knoll: "Cowardly creatures that you are! fleeing like so many sheep."

"Yes! yes!" said a staid-looking farmer, whom they sometimes called Elder. "The shepherd fleeth in the front of the flock faster than the rest."

"And where would you have a shepherd but in the front of his flock, as David always was?"

#### CHAPTER XX. MORE DANGERS THAN A BATTLE.

CLARENCE. Sir Henry Clinton's son, being in the land service, and feeling greater responsibility than his cousin, was oppressed in spirit on leaving his command. He would be reported among the missing, but his sense of honor was fine. The feelings of his father and the risk he ran of being

dishonored, were far more to be feared than the being in a hostile region. As he mused, he recalled the promise he had made to Bertram, and he became decided. When he reached the trysting place, it was surrounded by country people who had crowded behind the knoll to shelter themselves from the ship's artillery; and nothing remained, therefore, for the young soldier but to take to the fields and trust to luck. The flames of the burning village rose high, and by that inexplicable influence by which a fire at night attracts all animals, man with the rest, he turned his face thither, hoping that chance would aid him. Perhaps he had an undefinable notion that he might fall in with his father's cousin George, the governor, and obtain, through his mother's name and sign, a pass through the hostile ground though his feelings and determination were to pursue his own way, so as to get to the mountains before the morning fully dawned. This was all he knew of the distance between the river and the highlands.

In walking along by himself he had time, and was in the mood for reflection. "Is it," he soliloquized, "like Christians to become incendiaries? Can the king give the right to trample upon life and domestic peace? Were not these quiet people defending their homes and their altars? No wonder the Almighty is angry with our family. Why should I and the rest of the army not suffer? I never expect to see my sister in this world. A curse on this war."

This soliloquy, expressed audibly, nearly cost him his life; for the sound of the human voice goes far in the fields at night. Superstition is quick-eared. The one who listened at this witching hour was no coward, though equally as uneasy in mind as Clarence. Gabriel Smidt, the guide of the attacking party, had also taken through the fields after convoying the king's troops to the ship, for a reason of his own. He recognized the voice and the gait of the young Englishman. Without more ado, he made himself known, and while the recognition was awkward on both sides men like them, accustomed to sudden surprise and in the habit of watching against them, soon get over their feelings. Their effort was to hide their real intentions.

"I have left something behind me in yon village that I would not lose for a thousand pounds," said Clarence.

"There has been many a fine thing lost there this night," said the private, "and among others, some things lie there which will never be gathered up." On saying this, he cast his eye sidewise, as if trying to scan the face of his companion, who, though he did not relish the jest, was in no place to resent it; so turning the conversation on other matters of a more general kind, he said:

"From appearances, we must be a long mile yet from the village."

"That depends," said the imperturbable Gabriel, "upon a man's feelings. It is a longer way for me now, when my heart is heavy, than it was when I worked on these fields, and went home with heavy heels and a hungry belly; but to you who have just gained a victory, it ought to be a short mile."

"If I remember," retorted the young officer, with some surprise at the turn the conversation was taking, and with a degree of alarm which made him finger his belt, "you had some share in that victory; I saw you fighting and firing with the best of us. And now let me ask you, in the king's name, why you are here?"

"Ha, ha," said Gabriel, "we are both equal here, where the king's word is no longer law; but lest you should be tempted to do as my superior might do, and which I might retaliate on you, though your inferior, I will open my mind to you at once, and say what I know of your affairs, and that I am under promise to help you in this enterprise."

"Who could have told you of our intentions? There is but one person besides in the world who knows about me here. No matter, then, give me the countersign and we will trust each other as far as we know what is in ourselves now, till we become better acquainted."

"Agreed," said Gabriel; "and now let me take you around, so that we may avoid all scouts outside; for you must know that I could go through these lanes blindfolded. But I have a message for you from the lieutenant: he expects to meet us near this stone barn." The young sailor, in the ardor of his feelings, had pushed forward to the rendezvous before Clarence and his companion had reached it, so that he had time to sit down and reflect on the prospect before them. His friends soon came up to him, and they immediately entered upon a council of war. The two Englishmen gave themselves up into the hands of

Gabriel, as their only course for the present; though it must be confessed that their confidence in him was not unmingled with doubts.

"My advice," said the prudent guide, who soon discovered their fears, "is to obtain the assistance of some one of the secret service men, of whom there are many in these parts who know that snake of the mountains, Kiskataam, and who for a trifle will scotch him with great pleasure. His haunts are well known to these Tory blades, who keep their tongues well in, and their knife in a sheath of hypocrisy till they get the chance of smiting."

"Well, can you undertake to find the man you describe, and make a bargain that will keep him honest?"

"Bless you, gentlemen," said the guide, "my life is not worth a cabbage-head were it known that I am now within a hundred paces of my mother's door-yard. Do you see that light twinkling there between those two trees? But you cannot see the trees—trees of a patriarchal size are before the door; and my good old mother, kind soul, is in the old house behind them; and"—

Here his voice grew thick. Tears came to the eyes of all the three in sympathy, and yet an hour ago, they saw houses of the same kind in flames, and the inmates shrieking and fleeing from them in terror of their life.

"How comes it," said Clarence, "that you are here with your head in the lion's mouth? Some love affair, no doubt, like other men of like passions."

"Affection, gentlemen, is much the same in rich and poor; and when it is pure and powerful, it will carry a man through deeper floods than you have ever seen on sea, and hotter flames than we have ever seen on land. I must leave you now, so that I may meet the old woman in that house; and then I shall die in peace, if she lay her hand once more on my head, and ask over me a Dutch blessing 'vaart wel;' I will send you a guide who is a Tory in his heart and a Whig in his speech, follow his directions strictly. I will keep a secret watch over you till you get into the Indian country: beware that you do not trust the rascal with more of your secret than you can help." With that the unhappy man disappeared.

The two adventurers stood waiting and listening to the sounds which came up from the burning

buildings, that cracked and fell, blazing up as if stirred by demons, who shouted and screamed with devilish glee. All the evil spirits had not left with the invaders, for the wicked grew wicked so fast that they scarcely knew themselves, so sudden was the transformation wrought upon them. Dogs howled for their masters, and for the hearth where they had been accustomed to lie; women were sobbing or shrieking, while huddled in corners were groups of old men and boys, prophesying and listening to one another concerning the evils that would yet follow this night's work. Vengeance was deep and dark upon the faces of the old, and scudded swiftly over those of the young, as a cloud sweeps over a sunny field.

Clarence, who grew impatient, crept forward alone to the window of a low, dark stone house, that stood close by the road, where he saw what made him shrink back as if some one had struck him. It was in use for the time as the hospital of the place, where lay the wounded and the dying, in their blood and groaning with pain. The Dominie had returned from the chase himself, leaving the men to watch the movements of the ship, which left the village almost without inhabitants, except the aged and the decrepit. This was so far favorable to our adventurers, keeping them from being discovered. The good man was now about his own peculiar calling, ministering consolation to the dying and bereaved. His exhortations were made up chiefly of Scripture from the low Dutch, mixed with the vernacular of the region which would have defied the most learned body in all Germany to have translated literally.

He offered up one of the most fervent prayers that ever the listeners heard. Accustomed as they had been to the calm, cold manner of the English church, and occasionally hearing some strolling Methodist, they were unprepared for fervor united with spirit-stirring language which bore meaning to the understanding as fully as it gave solemnity to the manner. "He is a man of power," Gabriel would have said, "whether he be in the sick-room or on the battle-field." He could face Satan's hosts with as hearty goodwill as the red-coats. He held as part of his creed, that both belonged to the same army; and if any one had asked him that night, what was the color of Apollyon's coat, he would have said promptly, "scarlet."

As he proceeded in his devotions he grew

calmer, speaking more softly; and it was evident that his words had a soothing influence upon the listeners. His language was now altogether in the Dutch tongue, as if he had forgotten all but that, which he knew was the early speech of the man who was dying, and who would recur to that in his last moments. "Hoe dierbaer is uwe goeder dierenheit O Godt, dies de menschen kinderen onder de schaduwe uwer vleugelen toevlugt nemen."

"That is true," said some one who came imperceptibly to the side of Clarence, who seemed touched with visible emotion, repeating in the English tongue what was pleasant to his heart in the Dutch. "How excellent is thy loving kindness, O Lord! therefore do the sons of men put their trust under the shadow of thy wings." When the young officer turned around to see the new comer, he found Gabriel again by his side, sobbing as a child weeps when his heart is nigh broken. It was real grief, and no one was disposed there to turn it into ridicule. There was, however, in this more than the mere sight of suffering humanity.

"Come away," said another person who had remained hidden till now. "If you stay here any longer, your friends will fall into the hands of the Philistines. Hear how they shout, as they come on to join their friends."

"This is the guide I spoke of," said Gabriel. "The sun will soon be up and I must hide my face in some hole; but how gladly would I change places with Hank Snyder in there, to deserve that good man's blessing."

"Quick! out of this," said the new comer, "else you will get his curse, and a horse-pistol shot to fasten it; see, he is moving to the door."

The four had gathered under the shadow of a large maple-tree, and were in close consultation concerning the future. Clarence and Bertram were confounded at the minute knowledge which Gabriel had of them, and of their purpose, and became quite passive in his hands. He entered at once into their scheme, and gave directions in such a way as betokened authority over the man addressed.

"You will take these men," said he, "by the quickest and the shortest road to the mountain, through Kiskataam's country. There is an attack to be made upon the Boermen of the Viatts about this time, and Brandt is to lead it. Try and get

to his rendezvous, and put these gentlemen under his care. They will tell their own story to him, and obtain his assistance."

"What if we cannot get through in time to catch that red-skin? The attack on the Whigs has been made already; Dominie Schuneman had a despatch yesterday saying that the great Mohawk was on the South Mountain, and we have had other word that we can understand." Here he gave three snifters, which was a sign understood by Gabriel.

"Petrus Van Vliet," said Gabriel, with some haste, "you are to do the best, and no fun. These gentlemen are king's officers and on the king's business, and that, the Dominie says, requires haste; and let me tell you that it also requires honest men. Remember that Geordie's whelps have arms longer than Petrus Van Vliet's." Here the speaker held up his finger in a threatening manner. The other gave a grin, saying under his breath, and with some emphasis: "George's bayonet is wearing shorter every hour, and that he has melted an inch of the point. But it is time to put on these duds, so put off your buttons, boys." This was something which neither of the two had thought of. To be taken in disguise would lead to a spy's death. To be taken in their own clothes would only cause imprisonment, and, at the worst, their being shot honorably as soldiers on duty. They hesitated. But the new order was inexorable, and Gabriel was silent; so making a virtue of necessity, they laid aside their red and blue for the sheep's gray, the livery of the country. In fact, though Petrus had kept the secret to himself, he had stripped two of the men who were lying dead on the field, that he might furnish these travelling dresses; and taking those cast off from the two young men, he hid them so that he might use them, as he knew he could, profitably on some other occasion in deceiving the opposite party at the game of "give and take." As short a time as possible was consumed in these preparations, under the superintendence of Gabriel; and Petrus, being one of those men who work for the highest pay, was assured of reward according as his work was well done. His eagerness at getting all that he could appropriate to himself was the key to his character.

"You may know your man," said Gabriel, pointing to the other who had stepped aside to lift a button that shone among the litter at his

feet, blowing the dust out of its eye and putting it in his pocket, all unconscious of doing any uncommon thing. "You will see that he has his price, so use him, by the grace of high promises, till you see he is becoming greedy of gifts as well as of graces; and when it comes to the last and the worst, see, there is a pair of 'covenant-keepers,' which you will need some time, perhaps; but always remember, as the Dutch wives say, 'Better faze a fool as by vetch dem.'"

With this advice he put a pair of pistols in each of their hands and bade them adieu. They were now in the hands of the slippery Petrus, who took them by a foot-path which ran along a stream, till he came near to what evidently appeared, even in the gray of the morning, to be a graveyard. The dark stone monuments were visible, while the silence which prevailed, in contrast to what had in the early part of the night been experienced, was heavy and oppressive to the hearts of the young men, upon an enterprise far more hazardous than a pitched battle. There was not a whisper uttered by either, and even Petrus was prudently silent; but coming to the corner of a field, he abruptly seized Clarence by the arm, and standing between the two, he whispered, as he pointed with his finger to an object that moved slowly a few paces from them, "See! see!" They looked, and saw the figure of a man. "See! see!" and the covetous hypocrite's teeth chattered as he tried to laugh off his fear. "'Tis only the Dominie talking to the dead. He says himself that he stands between the living and the dead. He does not know that we are here. But we must go faster than at this pace."

This was said to keep his own courage up, for the truth was, had his two companions not been firm and courageous men, they would not have kept company long with him; but they seized him by the collar and dragged him a mile, till he got over his fright, when his tongue began to loosen, and to boast of what they knew was false, that he was a very bold and determined "dare devil."

A later occurrence showed that all three were but flesh and blood in courage, and that none of them had more than they needed. A large black dog came running toward them with a mixture of gladness and fierceness strange to the young men, till Petrus at last told the secret, and with as much unconcern as if he had done a meritorious deed.

When the animal came near he began to smell the clothes which the two strangers had on, and then to look up in their faces with a strange mysterious fear which made the blood run chill in their veins. After acting thus he left them, barking fiercely, till he got to a gate on the road, which he leaped over, when he set up a howling most terrific.

"That is Tobias Snyder's dog, Pompey," said Petrus; "he knows his master's clothes. What wise creeturs these dogs are, to know about dead men."

The wearers of the dead men's garments began to realize for the first time the predicament they were in. All that they had heard in their lifetime of the sagacity of the dog came to their minds, together with the likelihood of being found out and suspected of being the murderers of those who had so recently worn them. "Murder will out," they said, smiling bitterly the one to the other. Perhaps, after all, there was a grain of superstition at the core, pointing to the ghost of the murdered man following the garb in which he was last dressed. This incident impelled all the three forward with increased speed, in the hope of making their way a few miles further before the day dawned. The two strangers, in their eagerness, outstripped their guide, and at one time they began to suspect that he had given them the slip. Fear, however, was impelling him as rapidly as he could move, for by this time he had learned he had to do with men of determined purpose; besides, he was also aware of the power which Gabriel wielded over him behind the scenes. Tired all were, though not caring for sleep; yet it was necessary for safety that they should lie still for some time. Arriving at a low stone house, built as if intended to last till the mountain near it should waste away, he gave three knocks, and a fourth small touch with his knuckle, when a large fat wench of the genuine Guinea breed admitted them, without questioning the new comers. Not so an old woman who put her head out of a recess inclosed by doors, where she lay on her bed, and cried out, with a sharpness that rose from impatience and fear, joined with old age:

"Vat's de matter noo, dats tou here at dis time oo de morning, ven oos wanted at Sopus? Te dog has been here howling like te wolf, and te old man down wid his gun vatching te Tories once. Budien vay his here?" and with that the

old woman looked at the strangers with sharp scrutiny.

"Never mind, Dame Wynkoop," said the wily Petrus; "twae Weegies on a message to the general at Albany from the governor, keeping out of the way of the konink's sogers." This was said in the ear of the good lady, who received it as it was intended, lying down mumbling something to herself in Dutch. Meanwhile, the unwieldy African wench was bustling about preparing breakfast for the family, and casting side glances all the while at the coat Bertram wore, till fairly overcome by her curiosity, she seized hold of the lappel with the evident intention of giving it a more narrow scrutiny. Petrus saw the difficulty, and coming up slyly, he slipped a bright silver dollar in her hand, saying in her ear:

"Give us the high outside chamber, and keep the old vrow quiet when the old man comes."

With a sly wink he left, going up a hidden stairway, signalling his companions to follow. When he got there, and had sat down to bread, milk and meat, which he found for them, he said: "Now you must rest as you can till the night comes on, or sooner if I see my way clear. In the meantime, you are to pass for what I have represented you to be, good Whigs going on business to Albany as soon as you are rested."

"Surely," said Clarence, "we may go at any time of the day through these wild regions without meeting any crowd of people or any very cunning men."

"Wild regions! Do you call these cultivated farms wild regions?" said the indignant Petrus. "The finest wheat in the world grows here, and the apples of the garden of Eden are springing out of the clefts of the rocks. And if you suppose there are no people near, let me tell you that the road is lined with houses like this all the way to Catsbaan, and there, in the grand stone church, a garrison is lodged just to nab the king's men in disguise, and strangers would run some risk. I can assure you. They place about the same value on them that they do on foxes and the like—twenty shillings a head at the clerk's office."

"Then you would not make much by delivering us up," said Bertram, looking slyly into the face of the half-jocular Petrus, who was enjoying his own joke till he saw that both the gentlemen were looking to the state of their pistols.

"Judging from that barking thing in your

hand," said the guide, "I might fill one grave more than you have filled already, and lie down without my fee. But let us all to bed. The old wench has engaged to walk sentry, and I always sleep with one eye shut and one ear open."

Sleep they did, as soldiers and sailors sleep, with their senses so quick that the smallest noise would have awakened them and quite soon they were awakened.

Within doors, and just below where they were lodged, and all around the house, the greatest confusion prevailed, arising from the return of people from Sopus, bringing with them one of the family residing in the house where they were lodged, who had been killed in the melee. It was a fearful sound to any listener, but to those who had so much cause to dread the vengeance of the country as the followers of the king, it was horrifying. Curses both loud and deep were uttered upon the Tories and on the soldiers, mingled with the sobs of the women weeping for their dead. The old man's grief was affecting to hear the young men, who began to think of the effect which the news of their being "missing" would have upon their father and uncle.

"Where is that rascal gone?" said Bertram, "surely he has not left us here in the hands of our enemies. See the crowd around the house; keep back from the windows. We are surrounded, by St. George!"

"Hush!" said the other; "hark to that voice, I know it, or I must have heard it in my sleep," and both put down their ears to the floor, listening, when they discovered that of the Dominic, who was comforting the mourners. "They have died in a noble cause; the cause of God and the country. They were good men that fell, and your son was a good lad, and you will soon follow."

"Do you suppose his Majesty could ever conquer a people of such stern principles as these Calvinists? For my part, I have always told my son that these New Englanders resembled the Scotch that I lived among at Edinburgh more than they did the English. And the chaplain was sure to chime in with his heretical Calvinists—Fatalists. 'No,' my father would say, 'they have a will that conquers in spite of faith.'"

"I think it will be the same here. When the Hudson runs up the stream the king will conquer human nature that has religion to help it."

At this part of the play, Petrus came slipping in at the door, when they beckoned him near, saying: "You have brought us into the panther's den very soon, but here is the cure for two at least," as a pistol's muzzle turned toward that worthy's body in a threatening manner. But he, without changing color, merely said:

"Yes, and it will depend upon how you behave yourselves if you ever get out of it. You are suspicious of this place as a trap, and so think of blood-letting, as if I had brought this on you. But who killed the old man's son? Did I hurt any one last night?"

"What have you to do with that? was it a part of the bargain between us that you should deliver us into the hands of the men who will take vengeance on us as murderers? You must account for this, and that here on the spot."

"Hear me, and then kill me if you must; but I would die with a clear conscience toward you at least, if I can. There is only one way of escape for you, and that is by giving yourselves up into the hands of these men; for they know already that two of the king's troops are here."

"Give ourselves up!" both almost shouted out. "No, by King George, we will fight till we die first. Here we are, up in this citadel, well armed, at least, though badly provisioned;" for as Bertram said this, Petrus was swallowing the last morsel of bread brought in the morning.

"All very fine, gentlemen," said the cool Dutchman, "all fine with a hundred men in the house, and the door all bored for balls; and look down to your feet, the board you stand upon is the only thing between you and perdition; ha! ha! thinner than the bottom of a ship."

The two men, confounded, looked in each other's faces, and began seriously to think of taking revenge on the fellow that had so entrapped them, as they thought; but after a close scrutiny of his conduct, other light came into their minds. He could not possibly have known all the circumstances.

"Let us sell our lives as dearly as we can," said the one to the other, "and send a ball through that fool's head."

"Knave's heart, you mean," said Clarence; "for fool or knave, he deserves it alike."

Before he had time to say another word, Petrus was gliding through a side door, behind where he had stood eating their last morsel. He left his

two companions looking in each other's faces, in the utmost consternation, and for the first time they obtained a glance at themselves in daylight. They would have laughed outright had they not remembered that one, if not each, of them had on the clothes of a dead man. With feelings too bitter for mirth, and in a condition too critical for hasty action, they sat down to deliberate, first barricading their temporary fortress. There being but one board between them and the room below, they readily heard what was said; and, as their own fate was on the tapis, it was proper and honorable enough in them to listen.

"Petrus Smith, stand up and tell whae the men be up in de geliedden. Put a guard on the window."

This was said at the very moment the thought had entered into the minds of the prisoners—for they were now prisoners—of escape to the hills, when, to their exceeding vexation, the order was given to watch them; and six men marched out in front of the window where they stood. It would have been folly to attempt a sortie in the face of such a force.

"Petrus," continued the same voice that had given the command to watch, and the prisoners above recognized it as that of the Dominie, "give an account of thyself and of the company thee keeps. Who are these men thou hast brought with thee into this house, and where are they going?"

The sly hypocrite saw that he was in a tight place himself, and that his character was suspected; so he concluded that the best plan for him was to go back and take up what he could substantiate. So going through a long story, he came at last to say, that being like others at Sopus, through the past dismal night, he was returning home just at cock-crowing, when standing at the northwest corner of the graveyard, he found these two men inquiring the way to Albany, as they had business with General Schnyler; and as they offered him a price to show them the way, "was I to refuse the men who were going to see such a good man, and a friend to his country?" He came with them so far, but beginning to suspect that all was not right, he had brought them in here, and now he left them to the care of the Dominie and of the Consistory.

This story was far from making an impression on the assembly, especially when one of Petrus's

neighbors stated that he had called at his door at the time of the alarm, and the answer was that he could not leave, and he doubted whether he was out of his bed at cock-crowing.

At this point, the Dominie said that "a brother cannot be condemned but by the mouth of two or three witnesses: Petrus, thee was, though sayest, at the northwest corner of the graveyard, at cock-crowing. What cock nearest? What didst thou see at the time the cock crew, in heaven and on earth? Answer all three questions at once."

"It was the Dominie's red cock that crew; the red morn rose just over the top of the red flame, and the Dominie himself was standing beside the tombstone of old Yaakob Elmendorf."

"Enough, enough!" said the honest Dominie. "I saw the three men turn around the corner, and go north, but did not know that Petrus was there; I thought it must be some vagabond, some offscouring, but did not think that Petrus was among them."

"Dominie, I am not vagabond nor offscouring, but an honest man, and a peacemaker in these wicked times."

"Well, we can but suspect you, not prove you guilty, and as to your being a peacemaker, let me tell you they are the best peacemakers that are pure in heart; for you must rememehr, my children all, that the wisdom from above is first pure, then peaceable. I thought, when I saw the three men, that they were some lewd fellows of the baser sort."

"Who calls me a lewd fellow or one of the baser sort?" said Petrus, with mock passion.

"Nay, nay," said another voice here, "but tell us once, Petrus, why thou gavest Dym this silver milledoler?"

This was a poser; but the ready sinner asked immediately if he had not told Dym to waker him whenever Tobias came home.

"Sartain sure," said the honest creature; "and not to tell de ole man that Petrus was up stair." Here she sniggered out a true African giggle o triumph as she drew the bright piece out of her capacious bosom, and threw it down on the table before the Dominie, with a clear jingle that harmonized with her words. "Dere, Domilie, tal it, my fingers burn," and she spit upon them before she wiped them on her greasy side.

The careful pastor saw that trouble was brewing and that at a time when other thoughts than

revenge should rise in their hearts; so taking down the large Bible, he opened it at the fifteenth Psalm, and commanding silence, he read and commented. The breathless young Englishman heard every word; the Dominie read from a German Bible, though his comments contained enough English to afford them a clue to what he said.

"The parson suspects the villain," said Bertram. "There is hope yet. Don't you remember what the fellow Gabriel said, 'Trust the Dominie before any one else with your secret.' Light breaks upon us."

By this time the good man was in earnest prayer; though he prayed in the vernacular of the neighborhood, the hearts of the young men went upward as they listened to the tones of his voice amidst the deep silence below, except as it was broken by a sigh or a sob from the afflicted father's and mother's heart. By the time the prayer was over, all were melted into another spirit.

"Whoever dreams in London," said Clarence, "of such scenes being enacted among these Dutch boors, in this wild country? There is more refinement and real power in that service than in the Bishop of Exeter's. It is like a chant on an old organ."

"And in an older cathedral too, one might

say, looking out on these fine old trees; on that noble mountain, where, to tell the truth, my mind was running in search of liberty all the time the prayer went forward, which, for aught I know, might be for vengeance on our heads. I had always heard that the Yankees were a canting set, and put the curses of the Psalmist on their tongues when they spoke of the king and of his navy and army."

The door opened soon afterwards at the call of Petrus, who came to it, telling them that he was alone, and had brought a message to them from the Consistory.

"Consistory!" exclaimed the two prisoners, in a breath; "we have heard of the consistory of the Romish Church, but we took this to be a Protestant country; and what right have they to demand our presence? Is it a civil or a spiritual court?" To all of this the wily Petrus was silent, afraid lest he should be heard by the people below stairs, and not sure but that he might have a ball sent through his pate by the enraged men he stood before. He merely winked and whispered "patience," as he put his fingers to his lips, turning to lead the way as a cat turns and steps when an enemy is about to dart upon her.

"No help for it," said Bertram. "We will know the worst all the sooner."

## WOODED AND MARRIED.

### CHAPTER XXIII. AMONGST THE FIR TREES.

THE spring sunshine was flooding the low meadows beside the Nidd when Guy Chichester brought his mother back to Ingleside, and Honor went home to the Cottage to gladden her brother's heart for a few days before her bright smile and kindly presence vanished from his hearth forever.

Who can imagine the joy with which honest Humphrey welcomed back his Duchess? His pleasure was outspoken, very different from the shy greeting Dym bestowed on her friends.

"I have enjoyed my visit, but it is pleasant to be home again," observed Mrs. Chichester, in the cosy confidential half-hour before dinner, when she and Dym were alone together. The

little dainty tea equipage was beside them; Dym sat on a low chair, leaning forward till her face almost touched Mrs. Chichester's lap; she wore her white dress, with a little breast-knot of violets and ferns; the porch window stood open, and the lowing of cattle came over the dewy meadows. Nature was undergoing its annual revival, trees were bursting into new life, tender green shoots were unfolding, little wayside flowers struggled into existence; everywhere there were buds, brightness, a sense of growing vigor and strength, white lambs, uncouth calves, yellow ducklings; the earth was full of young things; every nest was crowded with bright-eyed clamorous creatures, with open beaks and downy breasts, and unfledged fluttering wings.

With spring comes restlessness. Why is it, I wonder? The blood courses more quickly through the veins as the new sap stirs under the woody heart of elms and beeches. Do we throw out new shoots too? Do we unfold fresh leaves, and quiver into new life? Whence proceed those strange stirrings, those vague yearnings, those odd pulsations, moods of feelings?

This restlessness had come to Dym—a great quaver of discontent and longing. The beautiful ideal life, where was it? Beyond those golden-edged clouds perhaps, folded away somewhere in those dim blue skies. She listens with an odd pathos of silence as Mrs. Chichester weaves a gay little web of talk. How bright, how incongruous it sounds to Dym! Picture galleries, theatres, and bales of velvet and silks. "It was the prettiest shopping in the world; and then Guy used to take us to the parks—people turned around to look at him and Honor as they walked; but I don't think Honor noticed it," prattled on Mrs. Chichester, innocently. Then and afterwards she was never weary of descanting on Honor's rare beauty, her merits and loveliness. Did Dym secretly take herself to task for that secret sting of pain with which she listened to these descriptions? She brooded over them sadly, and with a little envy, afterwards. How she had hated those green parks, when she had walked in them with only Edith as her companion! The glittering Serpentine, the long Row, the dazzling line of carriages and equestrians. What a shifting phantasmagoria it had seemed, of faces and sunshine, and horses and dusty chariots! How different it must have looked to those two! Honor's serene eyes would have a pleasant puzzled expression in them; now and then she would send out curious flashes of inquiry and amusement into the unknown world before her, all the while she moved so stately and erect beside her lover. Dym could fancy the sarcasm with which Guy would hail some odd study of character, as he lounged indolently under the green trees; his quibs and jests, his half-serious raillery against *Vanity Fair*, its foibles and weaknesses, and his secret pride as men looked at the beautiful woman beside him.

With all his sarcastic speeches, Honor wearied of it sooner than he did. She used to be glad when, in the cool of the evening, they drove back to the old Kensington house. The half studio, half drawing-room, would be very restful after the

day's bustle and sunshine. Dym could imagine her coming down in her white gown, with calm satisfied eyes, to talk and sing to them. I suppose the lovers had most of it to themselves after all. Mrs. Chichester dozed a great deal. Honor would go out and walk with Guy on the lawn under the cedar tree; the bell from some neighboring church would ring out for evening service; on the other side of the ivied walls another pair of lovers would be whispering; a tall poplar waved; now and then a few sleepy bird notes came from under the red eaves; a few stars peeped out. What wonderful low-toned talks they had in that old garden, talks whose sweetness healed the pain of years and lit the future with radiance.

Dym's face still wore its odd wistful expression, when Guy came and laughingly scolded them for unsociability. As he took his mother down the low broad stairs, he gave his other hand to Dym. Happiness was making him more than usually beneficent; the keen eyes looked at her with grave kindness as they took their places at the table.

"When do you mean to be your old self again, Miss Elliott?" he asked; but there was something reproachful in his tone.

Dym flushed up a little—perhaps she wondered what he meant. She was well enough and strong—quite strong, she assured him. But Guy thought the unsmiling dark eyes had a strange heaviness in them.

"Illuminations are always prepared for illustrious visitors; you have not lit up yours, Miss Elliott; you are too much like your name." It was the old kind quizzing, but Dym winced under it. By-and-by his tone changed, as he bade her fetch some parcel from the library. "You must send her out more, mother; she is getting too grave and quiet. This illness has quite altered her," he said, when Dym had disappeared on her errand.

Dym was not a bit grave when she came back; she was in a rosy flush to her fingers' ends. They had not forgotten her, then, these kind friends; from their own overflowing feast of happiness they had spared a few crumbs to the young dependent. Dym's eyes could sparkle now. Something very nearly approaching to tears shone in them as the knots gave way and revealed the soft folds of silk, with a little satin-lined morocco box reposing on it.

Dym had hardly patience to look at the beautiful violet dress Mrs. Chichester had so thoughtfully provided for her, with the fine embroidered handkerchief and dainty lace ruffles, so great was her eagerness to explore the contents of the tiny box. She knew almost before she opened it who was the unknown giver. If Guy had wished to give pleasure, he had fully succeeded. Dym gave a little gasp of surprise and admiration as the dead-gold locket, with its delicate filigree chain, came to view. "From her friends, Honor Nethecote and Guy Chichester," was the pencilled inscription. There were Honor's eyes smiling at her inside, and a plait of the ruddy brown hair.

"Honor thought you would like it best. Is it your taste? is it pretty enough, eh?" Dym gave him her hand, almost too overwhelmed to speak; but her eyes must have thanked him. "We shall have the illumination after all; you have mounted two red flags already," said Guy comically, as he smiled at her.

What a little it had cost him! Honor and he had selected it from a host of shining toys at the end of a day's shopping. "Better take the one with the diamond star, sir," the civil shopman had said to him; "it is dearer, but it is more worth the money, and the lady will like it better." "My good fellow," responded Guy drolly, "there are ladies and ladies. Some have to do without diamond stars, and be content with plain chasing; we will take the larger one of dead gold, please."

"I suppose you will want to thank Honor for this. Get your hat and something warm, and I will take you over to the Cottage."

Dym flew to get ready. How long was it since she had walked with him! She kissed the locket as she put it on. How it glittered and shone in the twilight! She ran down the terrace, led by the tiny red glow of a cigar in the distance. Kelpie bounded towards her, barking with delight.

"How cool these spring evenings are! Do you mind my cigar? How have you and old Humphrey been getting on, Miss Elliott?"

Dym did not want to talk about Humphrey Nethecote; she dismissed the subject with a hasty word. There was the moonlight streaming on the field path, and the old trysting-stile. "So-ho, my little lady, Humphrey is not good enough for you, eh?" thought Guy; and his keen eyes scrutinized the little figure at his side in the dainty white

dress, with the scarlet hood drawn coquettishly over the bright hair.

Dym's face grew wistful again as they walked on silently. There was the stone fence where she had met with her accident. Was it years or months ago since she had lain there, with Cerberus browsing on the scanty herbage on the other side of the wall? Involuntarily she shivered, as though she felt the cold slush and snow again, the sweeping night winds, and the sickening crushing pain of her poor foot.

"Are you cold?—ah, now I remember. Don't you know, my child, we should never recall sad things? Give me your hand; here are the steps in the wall."

Did Guy's kind heart detect the trembling and coldness, that he kept it in his own for so long, and then placed it quietly within his arm as he talked to her cheerfully about the happy days he trusted would be in store for all of them?

"I shall leave my mother in your care. It is a sacred charge, Miss Elliott, and I know it will be faithfully fulfilled. When the autumn brings us back again I shall find you here?"

His tone was interrogative.

"Yes—that is if you and Miss Nethecote wish it, Mr. Chichester."

"Honor would wish to keep you altogether, but it appears your brother has settled it otherwise."

"Will thinks I ought to go."

"Will Clericus has a few stubborn notions of his own, on which I should like to set my heel. I am not quite sure his views are sound; he is too strongly impregnated with the doctrine of works. When people go in for being saints, I always mistrust them."

"Mr. Chichester," broke in the little sister indignantly.

"Don't disturb yourself; he has not taken to shaving his head or wearing sandals yet, only the air of St. Luke's is getting too rarefied for me. I breathe better in a more murky atmosphere."

But Dym would not see the joke.

"I wish there were more like him," she returned, rather soberly.

"Well, I believe you are right," was the candid answer. "But to return to our vexed question. I shall be heartily sorry if you have to leave us, Miss Elliott."

"Thank you. You do not know how much

good it does me to hear you say so, Mr. Chichester," faltered poor Dym.

"Why, you knew that before, didn't you?" in a tone of surprise. "Well, I suppose it is only in human nature that I should feel grateful to Honor for wishing to take this work on herself. She knows what I think of it."

"She has wished it all along. I think she is right," said Dym, honestly.

"It is like her goodness," his voice breaking a little with earnestness; "you and I know what that is, Miss Elliott. I am only afraid whether this attention to my mother will not tie her too much;" and under his breath, "I shall want my wife to myself."

"I do not think she will feel it so," replied Dym, eagerly. As usual, she had thrown herself heart and soul into her friends' interests. "We have talked it over. Honor is so fond of reading; she says it will be quite a delight for her to go through her favorite authors again."

"Jeremy Taylor, to wit. I fancy Honor is a little bitten with him too." Then with a touch of his old drollery, "It is a bore when one's future wife has High-Church proclivities. Well, the Thousand and One tales are right enough; but how about the thousand and one letters?"

"We thought," returned Dym, modestly—"that is, I thought, and Honor approved—that Phillis writes so well, has so pretty a handwriting, that I am sure she would satisfy Mrs. Chichester. Phillis is so neat-handed, and has such pleasant ways with her," finished Dym, in the quiet, old-fashioned manner that had grown on her lately; but there was a possible hint of heartbreak in her voice all the same. It is hard for all of us to delegate a dearly-loved duty to another.

"Somebody else has pleasant ways with her," thought Guy. Did he understand the girl's grief and despair at the thought of leaving them? The little hand that lay like a feather's weight on his arm trembled still. Perhaps he longed to quiet it; perhaps, in the heaven of his own content, he desired to drop another crumb of comfort into the lap of the little creature whom Fate had brought into the storehouse of his bounty. Anyhow, as he looked at her, there came into Guy Chichester's eyes—generally so keen and quizzical—a certain warm luminous light, a look that none but those whom he loved and trusted ever won from him.

"I must have a talk with Phillis; she is a faith-

ful satellite of your own, Miss Elliott. Well, it is a kind thought, and I thank you for it. One of these days I hope you will ask me to do something for you in return."

"I am too deeply grateful already. I would not make the burden heavier," stammered Dym.

"Pooh!—nonsense," he returned hastily; and then relapsing again into his kind tone, "remember, if you are in any trouble or any perplexity you have given me the right to help you."

"I—how do you mean, Mr. Chichester?"

"Are you not my good little friend? shall I not always hold you as such? and do not friends help each other? It is not my nature to be fickle, Miss Elliott; and I know wherever you are you will always be faithful to me and mine."

"Faithful to him and his;" in the years to come Dymphna Elliott nobly fulfilled those words; when Guy Chichester reaped a rich harvest of the few kindly words and deeds that the man in his generosity had scattered broadcast into the furrows of a simple girl's heart.

Guy dropped Dym's hand hastily from his arm as they came to the patch of moonlight road before the cottage. There was Honor waiting for him, with her lace shawl drawn over her head, and Humphrey in his straw hat beside her.

There was a warm embrace between her and Dym, and a few whispered words of thanks and greetings, and then Guy eagerly claimed her.

How tranquil and still the little garden looked this evening!—a shimmer of pink and white apple-blossoms, of moonlight and white paths together; the orchard was a glittering bridal bouquet of blossom; the trickling of the little beck in the dell was plainly audible; there was a sweet scent of hawthorn and lilac in the air; now and then came a distant bleat from a stray sheep on the common.

"How peaceful it all is! there is quite a story-book feeling about it, isn't there?" says Humphrey with a grotesque glimmering after something undefinable and poetical; if he could have expressed it, there would have been a whole idyl of tender sentiment in his heart to-night—to see Dym in her white dress walking down those shining paths beside him, to put back the low branches and overhanging hedgerows that not a fold of her dainty raiment might be disturbed, to blunder out his honest confidence about the loneliness of his home when his Duchess left it, and his

unselfish delight in her happiness;—all this was bliss to Humphrey.

I wonder whether Dym heard it all, and with what sort of feverish impatience she listened now and then. She returned half-comprehending answers; she was a little *distracte* and absent. Before her there were two figures; their heads seemed touched with glory. Presently they crossed into a belt of shadow; Guy's face was in shade, but Honor's was still touched with light. By and by there was a sudden turn in the path, and they passed out of her sight.

The afternoon after her return to Nidderdale Cottage Honor went over to Woodside. There only wanted three days to the wedding, and womanly hands and brains were full of a hundred arrangements. Dym was installed at the cottage with orders to make herself useful in every possible way, so there she and Honor had been all the morning, sorting and labelling gifts for the school-children. Honor was going down in state to the school the next day to deliver them in person and take leave of her scholars; and afterwards there were her poor people to visit, and humble friends dwelling in outlying cottages on the edges of the moor; and this with Guy claiming every minute of her time, and proposing impossible rides and drives to all kinds of improbable places.

Dym could not help admiring the gentle tact with which she managed to evade his demands. "Give me these three days, dear Guy, I owe them to my friends; afterwards my time will belong to you," she said, with so charming a smile that Mr. Chichester forgot to grumble for full five minutes afterwards.

So Honor went down to Woodside, leaving Dym hard at work in the little room looking over the orchard and trout stream; and there Mr. Chichester spent a long afternoon, walking up and down under the sunny walls, chewing the cud of discontent and anticipation together, and occasionally stopping to address some railing observation on the contrary ways of women through the open window, for Dym's benefit.

At the garden-gate Honor came upon Dr. Grey himself.

"The very person I was wanting to see," he exclaimed as they shook hands. Dr. Grey was looking thin and careworn; there were fresh lines on the forehead that Dym had once pronounced noble-looking; the hair had worn off it still more; he was an anxious middle-aged man now.

Rupert came down the garden-path, shouting at the sight of his friend; his father however quietly told him to go back, and the little fellow slunk sorrowfully away; but Honor noticed the sad gentleness with which he spoke to his boy, so different from his old irritable manner.

"I sent Rupert in because I wanted to speak to you, Miss Nethecote; Esther is asleep. Shall we take a turn in the fir-wood?" and as Honor signified her assent, they climbed up the steep little lawn and went through the gate into the scented dusk that lay behind it.

How fragrant those pines were that afternoon! how crisply the dead bracken of last year, with its fresh young spikes shooting through, yielded to their footsteps! what a delicious green gloom pervaded the little wooded hill! Dr. Grey walked up the ascent with his hands behind him, and his eyes fixed thoughtfully on the ground. He aroused himself by and by to make a few professional inquiries after Honor's health, and when these were satisfied, and a congratulatory word or two had been spoken, he came to the subject he had on his mind.

"Do you remember a few words you spoke to me last summer, Miss Nethecote, when you told me to find out what was the matter with Esther?"

"I am afraid I took a great liberty with you, Dr. Grey," she rejoined, with her frank blush. "I am very outspoken with my friends."

"I am glad you count us among them. My poor wife, as you know, is devoted to you. You have cured me of my skepticism on the subject of women's friendship," he went on, with a faint smile. "Do you remember our long arguments last summer?"

"We shall have a great many more, I hope," returned Honor, heartily.

Dr. Grey shook his head. "I never look far into the future; that was the kindest word you ever spoke to me; it opened my eyes to the state Esther was in."

"Well?" interrupted Honor, breathlessly.

"I had grown so used to her invalid ways, it was so sore a truth to me that Esther could never be the active woman that I longed to see her, that I believe I closed my eyes wilfully to the discomfort of her position."

"I am afraid you did," replied Honor, very gravely.

"One grows callous and unfeeling sometimes. Doctors have a hard life of it; and it is sad work

when there is always an invalid at their own hearth. There were times, I grant it, when I pitied myself more than her, when I believed her capable of greater effort, when I grew impatient at the weakness of her will."

"But you own now you were wrong, Dr. Grey."

"I own it with the deepest grief and remorse. You are Esther's friend; you judged her more generously. I see she has no longer the power to make these efforts."

"Not for the last few months; she has grown worse lately."

"True; your words opened my eyes to the extent of the mischief—I wish I could say it had not then begun—a week or two earlier; but no, it would not have helped us."

"You frighten me, Dr. Grey. I hope there is nothing radically wrong with Esther."

"You must not blame me entirely if there is," he returned, with a smile so sad that she could not but choose to forgive him. "Esther did not complain, and I was desperately hard worked just then. Typhoid fever had broken out in the cottages lower down, and for some nights I could scarcely snatch a minute's sleep; it was just then that you took alarm."

"I thought she looked very ill, and that there was something wrong; she always seemed to me the sort of woman who might go into a decline if she were not watched; is it that?" looking anxiously up into his sorrowful face.

"I wish it were. I wish my poor Esther could be saved in that way from even a portion of the suffering I fear for her;" he paused, as though from emotion, and then hurried on. "I was a little taken aback by what you said to me, and I resolved on watching her narrowly. Soon I had an uneasy conviction that things were even worse than I thought; in a few weeks these fears were verified."

Honor gave a low exclamation, but he went on without heeding her.

"I was desirous of having my treatment confirmed, and it was impossible to call in further advice without alarming Esther. She was very nervous about herself already. This difficulty was solved by an old friend, a London physician, coming to see me on his way to Scotland."

"What a relief it must have been to you!"

"To have my treatment confirmed—you are

right; there is not another man's opinion I could rely on more fully; it was Dr. Guthrie who ventured on breaking the truth to Esther. I had grown cowardly over it all, and was for deferring it;" and then in a few brief words he explained to Honor the exact nature of the cruel malady that had already fixed its fangs so deeply in the poor invalid.

William Elliott was not wrong when he read Honor's great pitying heart so truly. Honor covered up her face and wept the bitterest tears when she heard her friend's doom pronounced by her husband's lips; the sunshine seemed to have died out among the green gloom; the golden notes ceased to play between the mastlike stems of the firs. Good God, what a pitiful thing is this life, after all! what strange inequalities of fate! what unanswered questions of lives! what meek martyrdoms! what cloudy skies for some! what great dazzling noontides for others!

Here was one woman looking half-dazzled into a vista of happiness, watching the days go by with a certain sweet dizziness, knowing she will spend them beside the man she loves. Here is another, scarcely older than she, whose suns have already faded, whose life has been lived; who knows that slow decay, and secret anguish, and increasing torture await her; to whom death will come as a relief, the grave as her only rest.

Those tears fall refreshingly on the dry bitter pain that was in the man's heart. After all, has he been so much to blame? A little thoughtlessness, a little neglect, a secret mischief working without sign; suffering bravely borne without complaint; a woman's color fading; a fragile body unconscious of its own decay.

"How did she bear it?" asked Honor, drying her eyes.

"Like an angel," answered the poor husband with a groan. "You will hardly believe how much she is changed, Miss Nethcote. No fretfulness, no worrying now; only anxiety for me and the children. She will be awake and expecting you now. I ought not to detain you any longer."

Honor gave him her hand without speaking. What was there to say? Our friends go down into the furnace, but the flames, scorching as they are, do not consume us as they did the Chaldean officers. The man had his bitter portion allotted to him, and he knew it. Long ago his wife had ceased to be to him the wife of which he had

dreamed in his earlier years. She was beautiful and amiable, but she had wearied his soul with a daily weariness; she had dragged him down, till his vexation had well-nigh destroyed the harmony of their lives. Why had he not borne more patiently with her? He loved her—he knew it now—in spite of all her faults; why had she not seen the burden of her work was too heavy for her? A hundred times lately he had recalled instances of her gentleness and wish to please him. With all her fretfulness, had she ever spoken an angry word to him? Was she not the tenderest mother, the most loving, in spite of her helplessness?

These were the questions Dr. Grey was ever asking himself as he went to and fro on his errands of healing. They kept him for a long time pacing the fir-woods after Honor had left him in search of her friend.

"Has Edward told you?" was Esther's first question, as Honor entered the shady little parlor. The poor face was thinner and more faded since she had seen it last; the brown eyes had a dull, heavy look in them; there were silver threads running through the soft hair.

Honor's face must have answered her, for the poor thing shivered as she hid her face on Honor's arm. The baby lay asleep in its old-fashioned cradle, the other children were shouting and playing in the sunny front garden. Harry's solemn face and curls were seen through a vista of lilacs; there was the basket heaped up with little shirts and socks; the small table strewn with account books, and other articles of housewifery. These things had an unconscious pathos in them. The mother would not lay down her work till she was obliged. Do some women work on the rack, I wonder?

"Harry wants new socks," says Esther, pointing to them with tears in her eyes. Was there inconsistency in her speech—suffering and baby's socks—living wants blending with the shadow of approaching death? A mother working contentedly in her pain, and listening to the children outside, and wondering how soon they would put on their little black frocks, and if Hannah would be kind to them, and what Edward would do without her.

Esther's patient eyes filled up with tears whenever she spoke of her husband and children. Little things had made her fretful, but in the hour of

her trial there was no lack of fortitude. The poor weak creature had fallen back on her Christianity in her trouble, and found it all-powerful to help her. Her sadness was too deeply rooted for mere surface comfort. She was full of pity for her husband, but she put by all Honor's well-meant efforts of consolation.

"Of course it is very dreadful—the pain I mean—but I have to bear it; he is so good and kind, I try not to make it worse for him; it is so bad when it comes on in the night, and he can get no rest."

Honor ventured on a suggestion. Humphrey liked children; in a few days Nidderdale Cottage would be almost empty. Could not Rupert and Edgar, and perhaps Amy, go there for a little while? She was almost sorry she proposed it when she saw a cloud of sadness come over the poor mother's face.

"You are very kind, but I can hardly spare Amy, she is so useful, and is quite a little mother to the others; and Rupert—oh, no," and here Esther's voice grew sharp with pain, "do not take away my children; they are so good, and I shall only have them for a little while longer."

"I only thought Hannah might be more at liberty to attend to you. Do not trouble yourself about it; we must think of some other way of helping you."

"Dear Honor, it is not necessary. I will not have you sadden your happiness with thoughts of me. Look here, what I have worked for the bride," and she drew from her pillow a little quilted satin glove-case. "It is a poor gift, dear, but I know you will value it for my sake." And then, as though the contrast between them saddened her, in spite of her efforts to smile, she burst into tears and threw her arms around Honor's neck, and whispered that her poor Esther would love her and pray for her, and that she was not to fret when the news came, for if it were not for Edward she would be glad to go and have done with it all.

How sadly Honor walked back to the Cottage! Guy was sitting on a sunny bench on the edge of the common, and sprang up with a half-jesting reproval on his lips as she came towards him. It died away as he caught sight of her tired face.

"My darling, what have you been doing with yourself?" he exclaimed, drawing her down beside him.

"O, Guy, if I were ever to leave you as poor Esther is leaving her husband!" and Honor leant her face wearily against his shoulder as though her rest were there.

"Are things so bad at Woodside as all that?" he replied, in a shocked voice. "Poor woman! I am sorry they have told you. Why, love, this is a poor welcome!" as Honor, spent with excitement, shed a few more nervous tears. "You must not let even a passing sadness come between us now. I cannot bear to see your bright face dimmed for a moment."

"Talk to me then, and help me to forget it," she replied, with the saddest, sweetest smile. "Sometimes my happiness makes me afraid; it seems almost too perfect for earth."

"Do you know what that tells me?" he returned, with one of his brightest looks. A secret thrill crossed him as this proud, beautiful creature crept closer to him for protection from her own loving doubts.

The sunshine streamed down on the yellow gorse and broom, only the bracken at their feet lay in shadow; the birds were singing from a clump of firs lower down the road; the white geese came waddling over the common; up in the sky a lark was carolling; in the west a mass of white clouds, tinged with gold and crimson, struggled in the blue like a phantom ship on fire; nearer home the flecks of foam and whiteness resembled flocks of strange birds; the evening air was sweet with the breath of May. How could any sadness long resist such influences?

"Is the cloud gone?" he inquired, presently. Need he have asked? was he not beside her? was not his voice in her ears?

"Now we will go home," she said, reaching out her hand. No wonder, as she smiled at him, that Guy was dazzled at the brightness of her answer.

#### CHAPTER XXIV. "WOODED AND MARRIED AND A'."

THERE is no sight prettier than a village wedding—I mean a wedding in a village.

We all know the conventional St. George's, Hanover square, sort of wedding; the great empty church filled with gaping spectators, three-fourths of them strangers to the bride and bridegroom; the usual crowd collected outside; the fortunate policeman whose beat it is; the nursemaids; the barefooted arabs, the London *gamin* of the streets;

there is the everlasting yellow chariot, the gray horses, the postillions in their red satin waistcoats; the favors; the fuss; the pretty smiling bridesmaids; the never-to-be-done-with pomp and pageantry of a nineteenth century English wedding.

Inside the crowd is larger; the sun streams through the great painted windows on a motley of shifting colors; the sacred places are invested by well dressed people, who on another day in the week would have remained penned up in their luxurious pews, but who now crowd the chancel. There are hand-shakings and introductions, whispered jests, fluttering fans. By and by the ceremony goes on—that most awful ceremony except one—speaking of responsibilities, of duties, of vows, that are lifelong. Who among them listens? The mother and sisters shed a few tears, perhaps; the bridesmaids are more ready to titter—most of them have been brought up in devout habits, yet few kneel; presently the benediction is spoken; the man and wife go out together hand-in-hand, the bride's head a little bowed perhaps; the baskets of favors go around; the horses paw the ground; the carriages roll away one by one; the bystanders criticise the dresses, the bride's looks, the red hair of the bridegroom; the younger ones huzza a little. It is all over; it has been a goodly show. But who is there among all those spectators who prayed that He who blessed the marriage in Cana of Galilee may strengthen the hands of the pair who are going out to fight the battle of life together?

It is not that people are more devout in the country, but that the accessories are brighter. In lieu of London streets we have green fields and deep hanging lanes. The bells peal out or trinkle merrily from the little church; the young people of the village assemble in the porch, or line the churchyard; the babies are tumbling over the graves, and come up with their hands full of daisies. One or two old men, in their white smocks, lean on the low lichen-covered wall. There comes the modest procession: there is the bride, God bless her! Off go the poor old hats; the school-children curtsy; the straw bonnets are full of homely flowers. By and by, when the young wife reappears on her husband's arm, she will tread lightly on gillyflowers and pinks, and old-fashioned stocks—how sweet the air is with them! The organ is playing out the "Wedding March;" the bridesmaids come down in their crisp

muslins; there are fresh curtsies; the babies coo and clap their dimpled hands; Giles Stodge's bleared eyes clear a little. Blue skies, green fields, a little crispness and freshness, a few flowers, a few kindly prayers and words, greater loving-kindness, and gratitude for a great happiness—these are all that are needed for wedding-garments.

It was this sort of wedding that Guy and Honor had planned for themselves. Birstwith was a very primitive place; the lord of the manor had rights that were almost feudal; the squire's harvest must be carried, let who will suffer; in the sheep-shearing seasons the farmers must wait till the Chichester sheep were denuded of their wool and crowded the home-fields with shining white bodies.

Between the great house and the village there was a hearty reciprocity of interest and good-will. The masters of Ingleside came of a wealthy stock, but the love of home was deeply bred in them. Guy Chichester was the only rover; his father and his father's father had dwelt as patriarchs among patriarchs—fattening up calves, breeding colts, very great in the hunting-fields, stern as to the preservation of game, and merciful in their capacity of magistrates to all offenders except poachers. Guy, in spite of his roving propensities, was a greater favorite than his father had been. Mr. Fortescue complained that the kitchens of Ingleside were turning his people into paupers: in the winter, bales of flannel and hundreds of quarts of soup found their way into the laborers' cottages.

Guy was forever bringing in people—tramps and worn-out gleaners, hungry mothers and children—to enjoy a plentiful meal. Sometimes, after church on Sunday, there would be a row of the old people of the village—aged men and women from the parish union—sitting around one of the clean-scoured tables in the servants' hall, waiting for the invariable beef and plum-pudding.

That the Squire should do something handsome on his wedding-day was as fully expected as that the bells should ring on Sunday. Long beforehand it was settled no work should be done in the village. The people were all dressed in their best and standing at their doors, as though sowing and ploughing and delving were unheard-of things. A few of the able-bodied men were away on necessary work, but even they would be back in time for the feast. In the long green field beside the church the white tents were up, and the red and

blue flags were straining and flapping in the breeze. There was to be roast beef and plum-pudding for young and old, a cask of cider had been provided, and some of the rare Yorkshire ale too; and the miller was to take the chair; and Guy meant to leave his guests and come down for a parting cheer, before the travelling carriage took him and Honor away.

But in spite of the festivity of the village, the cloudless day, and the bridegroom's radiant face, Beatrix Delaire declared the whole wedding a very poor affair, and decidedly rustic.

Guy had plentifully provided for his poorer neighbors, but he had bidden very few of his richer ones to the wedding. Both he and Honor were painfully unconventional in their notions, as Beatrix phrased it. Neither of them wished to mar the sacredness of the day with admitting all kind of nondescript outsiders. Beatrix and her husband, Mrs. Tressilian and Edith, and the Fortescues and the Trevors, were the only guests. William Elliott married them—drawn away again reluctantly from St. Luke's by their urgent entreaties; Cousin Latimer assisted, but it was Will who pronounced the nuptial blessing, who placed Honor's hand within her husband's, whose cordial congratulations were the first that greeted the newly-wedded pair.

One thing grievously offended Mrs. Delaire. Honor had no bridesmaids; she walked up the aisle leaning on her brother's arm, and, as she came into sight, Guy left his place to meet her; and when they reached the altar, the two knelt down together, hand-in-hand, till the officiating priest was ready.

There was not one among the guests who did not long remember that day, and the grave, beautiful face of the bride, as her clear voice repeated the solemn words, "till death us do part." Was it fancy, or did she turn pale and tremble slightly? Dym did not notice it, for suddenly the sun broke dazzlingly from behind a cloud, and streamed down over the chancel pavement, tinging Honor's dress with crimson and violet; and looking up, she saw Will's head surrounded by its golden glory, and his face "was as the face of an angel."

What a dream and unreality that day was to Dym! The great glittering table, where, through a vista of *épergues* and pyramids of flowers, she caught sight of Honor's queenly head, and Mr. Chichester's bearded face beside it. She held fast

by Will's side, with a very humble child's face, all that day; she was feeling dimly after some great beautiful truth that she only half understood. How improbable—how altogether impossible—it seemed that any one should love her as Guy loved Honor! She was peeping—poor little soul!—into some wonderful woman's paradise, full of all manner of golden fruit and dazzling things. Would she ever be permitted to enter? Were there only a few privileged to know such happiness? Were there others outside, lonely, and forgotten as she was?

Poor, ignorant little Dym, crying out for the moon, conscious of strange wants, wishing to be something to somebody, and all the while Humphrey was longing to take her to his great honest heart, and show her all its treasures—heavy gold that did not glitter, priceless jewels in rugged settings, stainless honor and integrity, and a wealth of love that would give of its substance, asking for little in return!

Dym shrank away from Humphrey, and placed herself under Will's wing—Will who took such care of her, though he ate nothing himself—Will whose manly speech, when they pledged him afterwards, touched every heart, and even drew tears from the bride's happy eyes. Honor did not wait for any more speeches after that; when Will had finished, she took her mother-in-law's hand and led her from the room. Guy and she were with her for a long time. When the others thought Honor was changing her dress, Dym, coming in to hurry them, found her, still kneeling in her bride's dress, with her hand clasped in Mrs. Chichester's, and Guy standing beside them.

"Do not be long, my wife," whispered Guy, leading Honor to the door. But there was no need to hasten her; in a marvellously short time she returned, before Guy had got back from the field that was still ringing with the cheers.

He came in, looking pleased and excited.

"Good-by, Dym," were Honor's parting words as she pressed the girl fervently to her. "This day has linked us together more than ever. One day, dear, may you be as happy as I am!"

"I leave you a precious legacy, Miss Elliott," said Mr. Chichester as he came up to shake hands with her. "Take care of my mother, and God bless you! You know I shall never forget my little friend."

But it was at Mrs. Chichester's side that Honor tarried longest.

"Good-by, mother; you are mine as well as Guy's now. Do not be lonely without us;" and people marvelled at the long silent embrace that followed.

The guests and servants were all on the terrace, and some of the younger ones threw garlands into the carriage as it rolled off. Will stooped down and picked up one that lay at his feet—it was a green rowan spray.

Will took the night mail up to London that same evening; not even Dym's entreaties could induce him to defer his departure to the next day.

"My dear child, I must go," he returned, quite gently; but when Will spoke in that tone she knew he meant to keep his word. Dym went back to the great brilliant drawing-room where Beatrix was playing on the grand piano, and Mrs. Chichester, with tired face and unsteady lips, was listening to her sister's dreary platitudes. Mrs. Fortescue, in an elegant pose, was talking London gossip with Colonel Delaire, and her husband was playing spillikins with Edith.

How empty the room seemed; what vacuum; what dreariness! How she missed the tall restless figure that always perambulated it at this time in the evening, or harangued them from the rug! How mercilessly he used to quiz her! what drollery, what covert sarcasms spoke in every tone of his voice! He could make them laugh, but he could be eloquent too.

There were times when Mrs. Chichester and she would hush their very breath as they listened to him. What grand thoughts, what a vast comprehensive grasp of mind he had; sometimes his voice would change and tremble with the very greatness of his subject; then all at once he would be silent; Dym wandering in the corridors afterwards would hear weird music, suffering, passionate, drawn into strange chords and thrills of sound, reverberating through the room till Kelpie howled a protest, and came up fawning to his master, to coax him to a midnight ramble through the sleeping village.

But Kelpie had gone with his master, and it would be long before Ingleside would welcome their return. We all know the vacuum after a great excitement; the lights have gone out at the feast, our friends have departed; far away they may be thinking of us, but we are sitting lonely and sad without them; this morning they were with us, we pressed their hands and bade God speed them, and now they are gone.

Life is full of these wearinesses, these disgusts; when our days lose their flavor, and are nothing but minutes and hours; with some of us it is like Mariana in her moated grange—

"Old faces glimmered through the doors,  
Old footsteps trod the upper floors,  
Old voices called her from without."

The very silence has a voice within it; we hear our friends though not a word is spoken.

Humphrey looked across the room very longingly for some time before he ventured to approach the corner where Dym had ensconced herself.

It was by the open window, for the evening was mild. Dym had a book before her, but her eyes were looking out on the moonlighted terraces; her face had a sorrowful, wistful expression. Humphrey thought evidently his presence disturbed her, for a gleam of impatience crossed her face.

"Are you going, Mr. Nethecote?"

"Not just yet," he replied, sitting down beside her. Humphrey was short-sighted, and his chair got entangled with the violet silk. Dym reproved him with a little sharpness as she freed herself.

"I am afraid I am very clumsy," said poor Humphrey, apologetically. It was almost painful to see how humble he would be with this girl; the more capricious and uncertain she was, the gentler he would be with her. Humphrey was always being punished for her unsatisfactory moods, though the truth must be owned he often stumbled upon them with a singular want of tact. Humphrey would not see when he was not wanted; he would come up with his honest face and jest just at the wrong moment. At times Dym would behave herself very sweetly to him; with all her humors she had an odd confidence and faith in this simple kindly friend of hers. For days together Humphrey would nourish the hope that his suit was not looked upon unfavorably. The mistake lay in Dym's perfect unconsciousness and his ignorance of it; it had never entered her head to recognize Humphrey as a lover, and Humphrey had not as yet ventured to address her.

As he sat down beside her, hardly repulsed by her ungraciousness, though a little rueful over it, a faint suspicion came into his mind that he was too rough and uncouth to be the husband of such a dainty little creature. In spite of her sullenness Dym looked wonderfully well to-night; the rich

silk and lace ruffles and the dead-gold locket became her marvellously, as she sat there with her smooth dark hair tucked behind her ears, and the troubled light shining in her eyes. She looked certainly very graceful and attractive, and other men beside Humphrey Nethecote might have felt inclined to lose their hearts to her.

"I suppose I shall have to go now," continued Humphrey. "I am putting off the evil moment as long as I can, for though I wouldn't wish it, it is hard to go home and miss the Duchess."

Dym felt a little visiting of remorse. Here she was luxuriating in her sad thoughts, while all this time Humphrey was bravely striving after cheerfulness, and hiding deep down in his heart that he sorely felt the loss of his only sister, the sweet woman face that had made the brightness of his hearth for so many years.

There is something especially sad when a middle-aged brother or sister loses the companion of life. Now and then one hears of such cases, but it is death oftener than marriage that robs them of their domestic treasure. Humphrey was years enough older than Honor to feel a sort of fatherly love for her; he had been a boy when she was an infant in her cradle, and a youth when she was a little maiden tottering after him, and calling out to Humphie to lift her over the stepping-stone. But Honor had been his wise and cheerful companion for many years now. Without weakness, Humphrey had learned to trust her judgment and respect her decision. "Ask the Duchess; she knows more about it than I," was a frequent speech on his lips. I believe if Honor had understood such things he would have farmed his lands on her method in preference to his own. It was pleasant to see the mutual love and reverence of the brother and sister, and yet he had given her up to his friend without a selfish sigh, and was bravely setting himself to do without her.

Perhaps Humphrey's quiet manly bearing won her respect at last; perhaps, as I said before, Dym felt some visitings of remorse, for her manner changed and softened.

"It must be very dull for you. I am afraid you will miss her dreadfully," she said, trying to infuse a little interest into her tone.

Humphrey brightened up.

"These things come a little hard at first," he returned, sturdily. "Once I should have thought of doing without my right hand sooner than I'd

have done without the Duchess. You see, a man grows to lean upon his womankind; with me it was 'Duchess do this, and Duchess do that,' all day long."

"Poor Mr. Nethecote!" it was all Dym said, but her eyes beamed on him full of kindliness; something seemed to tug at Humphrey's heart-strings and to take away his breath for a moment; her voice was sweet to him, and so was her pity; but if he could only make her understand that she could comfort him.

"It is not so bad as it might be," he broke out

in a gruff, unsteady voice. "I shall not be quite lonely when I smoke my pipe in the evening; I shall have heaps of queer thoughts to keep me company. I wonder what you would say if you knew some of them."

Dym shook her head. She was not quite sure that she cared to know many of Humphrey's thoughts. She yawned a little as Humphrey prosed on in his slow way; he noticed it at last.

"I must go away. I see I am tiring you," he said, very sadly. "Good-by, dear," he added, patting her hand kindly.

## THE LITTLE BUSINESS WOMAN.

BY ANNA MORRIS.

ON the steps of a wretched tenement house in New York, sat a slender, pale girl, sorting out some bits of ribbon which had been given her by a neighboring milliner, in return for doing some errands.

Kate's father, Mr. Reed, was an industrious carpenter, who had always had a comfortable home for his family until a few months before, when he received a severe injury by falling from a building on which he was at work. Still, the physician spoke hopefully of his soon being out again, and all seemed going well, when the news that the man in whose hands he had deposited all his little savings had absconded, and left him helpless and penniless, caused a most dangerous relapse. Mrs. Reed sold article after article of furniture and wearing-apparel, and struggled on till at last, everything being gone, they were obliged to take refuge in one room of a wretched tenement house. There they had been for some weeks, when our story opens.

Kate, always rather a delicate child, had grown thin and pale, and complained so much of headache that the doctor advised that she be taken from school. Time now hung rather heavily on her hands. She shrank from much intercourse with the rough, vulgar children in the house, and passed most of the day in their own room; but occasionally, as when we now see her, she would take advantage of their absence at school, and steal down to the doorstep for a short time.

"I wish I could help mother," she thought, sorrowfully. "I wonder if there is nothing that a little girl can do."

Just then the milkman drove into the yard. He was an honest, pleasant-looking man, who always spoke kindly to the pale, gentle girl, so different from the noisy crowd that clamorously demanded a ride. He drove a fine gray horse, with which Kate had formed a great friendship, and she always stroked and patted him, or gave him a handful of grass if she could find any in the dusty street.

So when the milkman had passed into the house with his cans, she commenced patting her dumb friend, and talking to him as usual, when a bright idea struck her, and deftly knotting some of her ribbons together, she fastened them near the horse's ears. Just then the milkman came out.

"Ah, Miss Kate," he said, "have you been trimming up my horse?"

"Yes, sir," answered the child, rather timidly, "do you mind?"

"Mind! Oh, no; I am much obliged to you, and so, I dare say, is Billy! See how proudly he holds up his head! He will have to come some afternoon, and take you out to ride, in return for your kindness." And with a friendly good-morning he drove rapidly away.

She had sat perhaps half an hour longer, when an ice-cart came lumbering by. Somewhat to Kate's surprise, it stopped, for in that wretched house no one could indulge in such a luxury as ice.

The driver, a good-humored looking lad, jumped out, and coming up to Kate asked, with a mixture of frankness and bashfulness, "Was it you, miss, who made some rosettes for Mr. Gray's horse?"

"The milkman?" answered Kate, wonderingly. "Oh, yes, I put some ribbons on him just now."

"I met him down the street, and asked him how he came to be so gay; for you see," he continued, "it just happened to take my fancy, as I've got a new set of harness for my horses, and want them to look as nice as anybody's. I think a heap of my horses, and so I says to Mr. Gray, 'do you suppose she would make me some?' And he said I'd better come up here and ask you."

"I'd be very much obliged to you, if you would, miss," he added, "and will pay whatever you like."

"I should be very glad to make them," said the child, "but," blushing deeply, "I have no more ribbon."

"Oh, buy whatever you want, and I'll make it all right," said the lad, carelessly.

"Yes—but—I have no money," said poor Kate, stammering, as if her poverty were something to be ashamed of.

"Oh, yes, I understand," with a look at the miserable building. "Well, let me give you the money—if you will be kind enough to buy the ribbons," he added, with natural politeness, and he produced his pocket-book and handed Kate a bill.

"What colors will you have?" she asked, as if in a dream. Was it possible that after all she could be going to earn some money, and help her poor mother a little!

"Whatever you like; only be sure they are bright. When can I have them?" he asked, preparing to resume his seat.

"I will have them ready to-morrow."

"All right," he answered, and drove off.

The rosettes were quite ready when the iceman called the next day; and he paid liberally for them and promised to send other customers.

He was as good as his word, and for a few days Kate was almost constantly engaged in making rosettes of different hues, to fill the various orders brought her by her iceman and Mr. Gray.

With the proceeds of her work Mrs. Reed had bought more nourishing food for her husband, who was now gaining rapidly, and declared that he should soon be able to earn almost as much as Kate.

One day, when she was finishing the last set which had been ordered, and was thinking how much she hoped to be able to sell more, the doctor entered.

Kate was an especial favorite of his, and after examining his patient, he turned as usual to chat with her.

"What are you so busy about this fine morning, Miss Kate," he asked, "when you ought to be out in the bright sunshine?"

Kate readily explained her new business, to which the doctor listened attentively.

"And so that is your last order?" he said, musingly. "Well, well, I hope you will soon have more;" and he hurried off.

A few days passed, and only one more application for rosettes had come in. Kate began to fear that all her work was done, and felt quite discouraged.

One morning, however, the doctor rushed in, somewhat to Mr. Reed's surprise, as it was sooner than he had expected another visit.

"Ah, good morning, Mr. Reed," cried the doctor, cheerfully. "Getting along nicely?" And he hastily felt his pulse, and asked some few questions.

"Famous! We shall have you out soon! But where is my little friend?" he asked, looking about. "I came to see her to-day."

"She will be back in a moment, doctor," said Mrs. Reed. "I sent her on an errand. Here she is now," she added, as the door opened, and Katie came in.

"Well, Kate, how's the rosette business? Flourishing as ever? The color don't rub off your ribbons on to your cheeks, any way," he said, with a pitying glance at the child's pale face. "I wish I could turn you and your father out to grass. It would be the best thing for both of you."

"Well, never mind that now," he added, hastily, as he saw the wistful look in Kate's eyes at the thought of the country. "I am in a tremendous hurry, but ran in to tell you that I mentioned your rosette-making to a friend of mine, who is the captain of a company of soldiers. There is to be a grand parade in a few weeks, and he wants all the horses in his company decorated for the occasion. See, he has sent you the materials;" and the doctor, opening a package, displayed rolls of ribbons, which to Kate's eyes seemed enough to stock the shop of her friend, the milliner.

"Oh, doctor, I thank you so much!" she began, with glittering eyes, but the doctor cut her short with:

"There, there, never mind that; I am in a

hurry, and so are you," and was leaving the room, when he suddenly pulled something from his pocket. "Oh, I forgot, there is a pattern of what he wants;" and he disappeared.

Great was the rejoicing in that poor room, and busily Kate worked. All was completed by the time her kind friend returned, bringing with him the Captain Stearns of whom he had spoken.

The captain was entirely satisfied with the work, and much pleased with the little girl who so modestly answered his many questions.

"I've little girls of my own," he said, "but should not like to see them as pale and thin as you are, little one. When you grow stronger, you must try to find country quarters," he continued, turning to Mr. Reed.

But the doctor's time was too precious to admit of a long visit, and after a few more kind words, the two gentlemen departed, leaving Kate in ecstasies over the amount of money the kind-hearted captain had paid her.

"Now, mother, let me take one dollar and go and buy father a real splendid dinner, and you shall lay away all the rest, and," she said beseechingly, "wouldn't you please give up working for to-day, and take a nice walk as you used to? Then, perhaps, you would not look so very tired."

"Yes, Mary, do," urged Mr. Reed. "I'll tell you what we will do," he added, in a more cheerful tone than his wife had heard for many weeks. "The doctor said I might go out a little. The day is very fine, and we might celebrate Katie's having earned such a fortune, by getting into the horse-cars after dinner and riding out of town a short distance."

With a scream of delight, Kate caught the dollar from her mother's hand, and rushed off for dinner.

A happier party was seldom seen than that poor family on their unwonted holiday. The fresh air seemed greatly to revive Mr. Reed, and they ventured quite into the country, where Kate could gather wild flowers, and a faint color came into her cheeks.

"Oh, father, if we could only live in the country," she exclaimed that evening, as she sat arranging her flowers over and over again.

Not many days after Captain Stearns's visit, the doctor appeared again.

"Well, really, Kate you are becoming quite the rage," he said, gayly. "Captain Stearns was so much pleased with you and your rosettes, that he has persuaded the colonel of his regiment to have every company decorated in the same way; and the captain will be here to-day with an order, and materials for I don't know how many rosettes."

"But what has brightened you up so, Mr. Reed?" he asked, turning to the invalid.

"Having such a good child, I fancy," answered Mr. Reed, smiling fondly on Kate.

"O no, doctor! going into the country," cried the child, and seizing her precious flowers, she continued, "did you ever see anything so lovely, doctor? And we went where such lots of them grew! away to the end of the car route, where there was such a lovely little house, all buried in vines, and no one living there. I don't see how any one who had ever been there could bear to leave it! Do you know where it is?" as the doctor looked up with a strange expression.

"I should think I did," he answered, slowly, and as if thinking aloud. "The very thing! What a fool not to think of it before."

"Yes, Kate," he continued, "that is the house where I was born, and lived many years. Since my mother died it has been shut up, and sadly needs some one to take care of it. I don't like to have it go to ruin, and have often wished I could find some good tenant—some one I could trust. Suppose I let it to you, Kate?" he added, playfully. "You are getting so rich, you can well afford to to rent it. I have got to go out that way now, and if you will put on your hat you may go too, and see if it suits you."

"May I, mother?" and seeing the answer in her mother's eyes, the hat was on, and Kate in the chaise in a twinkling.

A few hours later she came home radiant.

The house was lovely—perfect, and furnished, too! And the doctor said there were to be a great many buildings erected near there that fall; and there would be a fine chance for her father to get work as soon as he was strong enough."

The doctor confirmed her statements; and amid the heartfelt thanks of Katie and her parents, produced a formal lease of the place, made out in Katie's name, which she with the most intense gravity signed; and the next week saw her as happy a girl as any in the land, in her new home.

## NOTES AND QUERIES.

**The Key of the Bastile.**—In his paper on "Thomas Paine," in this number of the MONTHLY, Mr. At Lee says (page 99): "Paine was in Paris when the Bastile was destroyed, and received the key of it from General Lafayette, as a gift to Washington, and it is still exhibited at Mount Vernon." This key, enclosed in a glass case, hangs

KEY OF THE BASTILE.

in the main hall of the mansion. Accompanying the key, when sent to Washington, was a neat pencil-drawing of the Bastille, showing its destruction, and a letter from the sender, in which he says: "Give me leave, my dear General, to present you with a picture of the Bastille, just as it looked a few days after I ordered its demolition, with the main key of the fortress of despotism. It is a tribute which I owe as a son to my adopted father—as an aid-de-camp to my general—as a missionary of liberty to its patriarch." Dr. Loring gives a copy of the drawing and a picture of the key in his capital book, "The Home of Washington," and he says: "The drawing was carried away from Mount Vernon, when the late John A. Washington left that seat."

Among the curiosities in the collection of the Pennsylvania Historical Society there is another interesting key that we may well allude to here. In his article on "Then and Now," etc., in this number of the MONTHLY, Mr. Cony-  
more favors us with two sketches of Mud Island, showing

SAFE-KEY OF THE AUGUSTA.

the weeks before the British attack upon its fortifications, and after the brave American garrison had been forced to retreat to Red Bank. Fort Mifflin, as the fort on the Island was called, was first attacked by a British fleet October 22d, 1777, at the same time that a land force assailed Fort Mifflin, at Red Bank; both assaults were successfully repulsed and for a time both forts remained in possession of the Americans—indeed, it was not until midnight of the 15th of November that the Americans evacuated the ruins on Mud Island, and the 20th Fort Mercer was left to the British. It is the fact that made the first attempt upon Fort Mifflin, the largest vessel was the Augusta, of sixty-four guns; when the fort was driven off, they attempted to drop down the river; a hot shot struck the Augusta, and set her on fire, and burning on a mud bank she blew up. The key we have given is that of the purser's safe of this ship.

VOL. VIII.—10

**Interesting Letters from Generals Mercer and Putnam.**—We are indebted to Robert Coulton Davis, Ph.G., for the loan of the original letters which we copy below. The letter of General Mercer is interesting as showing his zeal and close care for the patriot cause, while that of General Putnam is strikingly characteristic of "Old Put." We regret that in illustrating Mr. Carlyle's paper in the January MONTHLY we mistook a portrait of his son for one of the brave General Mercer—that given upon page 6 is an exact fac-simile of a drawing made by the famous soldier-artist, Colonel Trumbull, and, though the face appears rather youthful for a man of fifty-six years, it was doubtless a correct portrait; the one on page 7, however, is from a daguerreotype of the General's youngest son, bearing his father's name, Hugh Mercer, who was long a respected citizen of Fredericksburg, Virginia, where he died in 1853.

Perth Amboy 26 July

1776

Sir,

It is generally believed that such of the Inhabitants of this Town as have relations on Staten Island as hold principles inimical to the American cause—have it in their Power to give Intelligence to the Enemy by private Signals, such as may prove detrimental to the Service—It is therefore submitted to the consideration of your honourable House whether the removal of such Persons at a distance from hence would not be a salutary measure—If it is judged to be so, the authority for adopting and carrying it into execution will most naturally arise from a Civil Power—

I have the honour to be

Sir

Your most obed<sup>t</sup> Serv<sup>t</sup>

HUGH MERCER

Trenton 7<sup>th</sup> Janu<sup>y</sup> 1777

Sir

I am happy to tell you that by a Letter just received from his Excellency I am informed that the Loss of the Enemy in the Attack at Prince Town amounts in kill'd Wounded & Prisoners to near 600

The letter is dated at Plackamin 5<sup>th</sup> In<sup>t</sup> where he intends remaining for a few Days to refresh his Army which as well as the Enemy's has had hard Duty—He is in great Hopes with the Assistance of Heaven to drive them entirely out of the Jerseys—

I am ordered to take Post at Crosswix to which Place I shall march to morrow morning—

It will be Policy to make our Strength at least three times as great as it is Nevertheless encouraging the Militia to march on as fast as possible & join me at Crosswix—His Excellency has ordered all the Baggage Waggons to be sent from Burlington to him—

You will please to show this to the Committee of Congress as Scarcity of Paper obliges me to omit writing this being the only Piece I could procure—

I am Sir

Your hb<sup>t</sup> Serv<sup>t</sup>

ISRAEL PUTNAM. M G

The first letter is written on one leaf of an old-fashioned sheet of letter paper, the sheet having been 12½ by 16 inches; the other leaf, with the address, being lost, Mr. Davis has replaced it with one perfectly matching the old leaf, but without the address; it was no doubt addressed to the President of the Congress. General Putnam's letter is written on a leaf of similar paper, but the "scarcity of paper" forbade a fly-leaf, and the address is upon the back of the single leaf, as follows:

On Public Service  
Thomas Wharton Esq<sup>r</sup>  
President of the Council of  
Safety for the State of Pennsylvania

at  
Express Philadelphia

Then upon the other fold, just above the seal, is written,  
Permit the Bearer to pass to Philad<sup>a</sup>

W<sup>th</sup> order Gen<sup>l</sup> Putnam

Jona<sup>s</sup> Mifflin

D Q M G

Jan<sup>y</sup> 7. 1777

The letter is endorsed,

From General Putnam

Trenton January 7<sup>th</sup> 1777

And in this connection, the following lines, first published we believe shortly after the great events noticed, can scarcely be out of place; we are indebted for the copy to a contributor who does not send his or her name:

#### THE BATTLE OF TRENTON.

On Christmas day in '76  
Our ragged troops, with bayonets fixed,  
For Trenton marched away.  
The Delaware see the boats below,  
The light obscured by hail and snow,  
But no signs of dismay.  
Our object was the Hessian band  
That dared invade fair Freedom's land,  
And quarter in that place.  
Great Washington he led us on,  
Whose streaming flag in storm or sun  
Had never known disgrace.  
In silent march we passed the night,  
Each soldier panting for the fight,  
Though quite benumbed with frost.  
Greene on the left at six began,  
The right was with brave Sullivan,  
Who ne'er a moment lost.  
Their pickets stormed, the alarm was spread,  
The rebels risen from the dead  
Were marching into town.  
Some scampered here, some scampered there,  
And some for action did prepare,  
But soon their arms laid down.  
Twelve hundred servile miscreants,  
With all their colours, guns and tents,  
Were trophies of the day.  
The frolic o'er, the bright canteen,  
In centre, front and rear was seen  
Driving fatigue away.

Now, brothers of the patriot bands,  
Let's sing deliverance from the hands  
Of arbitrary sway.  
And as our life is but a span,  
Let's touch the tankard while we can,  
In memory of that day.

**Corrections.**—The portrait of Hugh Mercer on page 7 of the MONTHLY for January, 1877, is not a portrait of General Hugh Mercer, alluded to as such by the editor; nor is the sketch of Hugh Mercer (so kindly mentioned by a correspondent as having been given by me in the *American Historical Record*) a notice of General Mercer. It may be perceived by reference to the *Record* for November, 1874, that the portrait (engraved for that work) and the accompanying sketch, delineate the features and allude to the life of Mr. Hugh Mercer, a son of General Hugh Mercer. I visited him at his residence near Fredericksburg, Virginia, twenty-eight years ago, when I was presented with a *daguerreotyp* likeness of him (not a *photograph*, as stated under the engraving in the MONTHLY, for the photograph was then unknown), from which the picture in question was originally engraved, on a somewhat smaller scale, for my "Pictorial Field-Book of the Revolution."

I take the liberty of pointing out two errors in Mr. Carlyle's communication. In column 1, page 2, he writes of the defeat of the Americans on Long Island, "August 27, and the fall of Fort Washington the ensuing day." According to the best authorities, Fort Washington was surrendered on the 16th of November next ensuing. In column 1, page 4, he writes of "Knyphausen's regiment." It should be "Colonel Rall's regiment," a part of General Knyphausen's command.

I think the writer on the American Drama, page 23 of the MONTHLY, must be mistaken in saying that "about the year 1791 an article appeared in the *American Quarterly* (2<sup>d</sup>), written by the celebrated James Kirke Paulding," etc., for Paulding was only *twelve* years of age at that time. He also attributes the authorship of a play called "Pocahontas" to G. W. Curtis. George Washington Parke Custis, grandson of Mrs. Washington, wrote a play which he called "Pocahontas." I was not aware that G. W. Curtis had ever attempted to write a play. By the author's allusion to other plays by the same writer, I think he refers to Mr. Custis. But that gentleman did not "give up a considerable portion of his time to dramatic composition." He wrote a few plays, at the request of others, to be used on special occasions, which he threw off with great facility. In a letter written to his wife (then visiting Bishop Meade) on the 12th of September, 1833, he said, in a postscript:

"I have made a great mental effort to-day. I am sure you and the bishop will think my energies might have been better employed. I had promised the poor rogues of actors a play for the 12th of September, the anniversary of the battle of North Point; but, finding myself not *in the vein*, I wrote to them to defer it. On Monday, 9th, the manager came on from Baltimore, and entreated me to prepare something for the 12th, as it would put six or seven hundred dollars in his pocket. On Monday, not a line was finished. At five o'clock I commenced and wrote till twelve; rose the

next morning at five, and by seven sent off by the stage a two-act piece, with two songs and a finale, called *North Point, or Baltimore Defended*; the whole completed in nine hours. It is to be played to-night. To-morrow I shall hear of its success."

Mr. Lancaster says: "Very little is known of this gentleman's personal history." If he means Mr. Custis, it is a mistake, for much has been published concerning his "personal history."

BENSON J. LOSSING.

Extracts from "A New Catechism," published in 1777:

Q.—Who is the best man living?

A.—HIS EXCELLENCY GENERAL WASHINGTON, to whom the title of *Excellency* is applied with the greatest propriety. He has left a peaceful habitation and an affluent fortune to encounter all the dangers and hardships of war, nobly stepping forth in defence of truth, justice and his country. In private life he wins the hearts and wins the love of all who are so happy as to live within the sphere of his action. In his public character, he commands universal respect and admiration; conscious that the principles on which he acts are indeed founded in virtue, he steadily and coolly pursues these principles with a mind neither depressed by disappointments nor elated by success; he gives full exercise to that discretion and wisdom which he so eminently possesses. He retreats like a general and attacks like a hero. If there are spots in his character, they are like the spots in the sun, not discernible by the magnifying powers of a telescope. And he lived in the days of idolatry, he had been worshipped as a god. One age cannot do justice to his merits, but the united voices of a grateful posterity shall pay a cheerful tribute of undissembled praise to the great assertor of their country's freedom.

Q.—Who is the *smuggest* man in the world?

A.—Lord Howe.

Q.—Who is the weakest?

A.—General Howe.

Q.—Who is the greatest liar upon earth?

A.—Hugh Gaine of New York, printer.

Q.—Who is the most *ungrateful* man in the world?

A.—Governor Skinner.

Q.—Why do you call him *governor*?

A.—Because when Lord and General Howe thought they had conquered the Jerseys, they appointed him Lieutenant-Governor of that State. Skinner assumed that title over a great part of that State, and continued his usurpation for six weeks, five days, thirty six minutes, ten seconds, and every hundred parts of a second, and then was deposed.

Q.—Why do you call him *ungrateful*?

A.—Because he joined the enemies of his country, and called men to fight against his neighbors, his friends and his benefactors; because he has endeavored to transfer the soil and gave him burial from the rightful possessors to a foreign land; because he is doing all he can to defraud the fruit of his body of their just inheritance; and because, to gain present fame and transitory honors, he would fasten the chains of slavery on three millions of people and their offspring forever.

The Catechism from which I have copied is too long,

perhaps, for your space in the MONTHLY. I have copied a part only. It was first published in February, 1777, and as it is an hundred years old, it will be well to reproduce it in the MONTHLY for February, 1877. On page 188 of the MONTHLY for September last, your contributor, Mrs. Nellie Hess Morris, mentions Hugh Gaine, editor of the New York Gazette, as at one time a warm advocate of the colonial cause, but later bought or frightened into the support of the royal claims and purposes. Will the lady write some more about Hugh Gaine, and give us also a biographical sketch of Governor Skinner?

W. T. R. SAFFELL.

#### Journalism More than Twenty Centuries Ago.—

The first Roman journal, published over two thousand years ago, appeared only once a year. This paper, intended to be read by the public, was known by the title *Annales Maximi*. The editor of this paper was the "Pontifex Maximus," whose duty it was to chronicle all the important events of the year. The news was written on white wooden tablets and attached to the residences of citizens. It must have been a curious sight to see the old Romans crowding around these tablets to get a look at the latest news. But the thirst after knowledge and the curiosity of the people grew rapidly, and in such a measure that the government, the only issuer of a journal, found itself obliged to issue a daily. It is interesting to know that some of these journals, having reached the age of 2,044 years, are still in existence. The name of the first daily journal was *Acta Populi Romani Diurni*; it appeared daily either as "Album," i.e., the tablet hung out in public, or the contents were written with red chalk on the walls of the houses. The contents of the journal comprised what would be classed as daily news in our modern papers. From the want of the necessary material, political articles were not to be had. Nevertheless, according to the views of the Roman government, it was a true journal, and intended as reading matter for the public.

Doubtless it will interest some of our readers to peruse a verbal translation from the oldest journal extant, issued one hundred and sixty-eight years before the birth of Christ. "Consul Sicinius was the acting Judge to-day. There was a heavy thunder-storm, and the lightning split an oak at the foot of the hills of Velii. In a hostelry at the foot of the hills of James there was a fight, in which the landlord was badly wounded. Titinius punished some butchers on account of their selling meat which had not been inspected; the money thus paid was used to erect a chapel to the Goddess Laverrea. The broker Ausidius fled from town to-day, taking money with him belonging to other people. He was caught, and had to refund the money. The brigand Demiphon, who was captured by officer Nerva, has been crucified to-day. The flotilla from Asia arrived to-day."

We see from this that it was in olden times pretty much the same as in our days; we only wish that our officials would attend to the butchers as well as Titinius did. It must be of interest to journalists to know that Julius Caesar, the greatest of all Romans, paid special attention to journalism. He saw the necessity of instructing the people in everything occurring in the State, and we find this quotation in Suetonius:

"Julius Caesar, as soon as he had entered his public office,

caused not only to be written, but also spread among the people, the proceedings of the Senate."

This was the first political paper, and as it contained news about buildings, births, deaths, executions and anecdotes, it can be likened very much to our modern papers. It seems incredible, but it can be proved that already in the olden times there were stenographers who took down the speeches made in the Senate or in public. They were called "Notarii," and we find a place in Suetonius where Augustus is angry because the stenographers reported the speech of Cæsar for Metellus in a very imperfect manner. There must have been reporters, judging from a letter of Cicero to Cælius; also private reporters, who gathered the news, and sent them by the "cursus publicus," an institute similar to our mail, throughout the provinces. P. A.

THE OLD BARRACKS AT LANCASTER, PENNSYLVANIA.

**The Old Barracks at Lancaster, Pennsylvania.**—Can the MONTHLY or any of its readers furnish any information as to the old military barracks at Lancaster, Pennsylvania, of which I send herewith what purports to be a picture, and in which, it is said, the Americans confined British prisoners of war during the Revolution. The building shown in the picture looks very insecure for such a purpose. Whereabouts in the town did it stand, and when was it removed?

WILLIAM T. WALLACE.

**Hundreds, Townships and Towns.**—In Delaware, the subdivisions of the counties are called *Hundreds*, in Pennsylvania and other States, *Townships*, and in New England, *Towns*. The original meaning of these terms is probably known to every reader of history; but how came the Colonists to adopt these various designations for corresponding territorial divisions in the different Colonies? Delaware, I believe, is the only State where the term *Hundred* is thus used.

J. S. F.

The origin of these terms would afford an interesting subject for an article in the MONTHLY, and we trust some one of our readers will favor us with one.

#### The Presidential Election of 1800 in Pennsylvania.

—The following article is from a late Harrisburg newspaper: In the year 1800 this State, Pennsylvania, was pretty much in the condition the Union is at present. The State was entitled to 15 votes in the electoral college. In 1799 an attempt was made to pass a law to enable the people or the Legislature to choose electors. As the Senate stood 14 Federalists to 10 Democrats, and the House 56 Democrats to 24 Federalists, it was found to be impossible to accomplish the passage of any law. The October election of 1800 passed over without the choice of electors. Governor McKean, October 18, 1800, issued a proclamation reciting that fact, showing the certainty of the loss of the vote of the State, and "impressed with a just sense of the importance of the object," summoned the Legislature to meet at Lancaster, on the 5th of November ensuing. The Legislature convened,

and as soon as the Governor had delivered his special message—a pretty long one, by the way—the tables of both Houses were crowded with petitions signed by thousands of citizens asking the Legislature to choose electors. This was not so easily done. The Senate had one view of how it should be done—the House another. It was a period of intense excitement—the partisans of Jefferson on the one side, and of Adams, the incumbent, on the other, were violent in the Legislature, and out of it the people were also in great agitation. Mr. Nathaniel B. Boileau, afterwards Secretary of the Commonwealth to Governor Snyder, a Democrat, arose in the House and submitted a plan for choosing electors. The House amended and passed his proposition on the 10th of November. On the 11th it was transmitted to the Senate. On the 13th it passed that body amended, by a party vote—13 to 11. The amendment in brief was that the Senate should name 8 electors and the House 8. The

House refused to agree to this. The usual conferences took place without agreement. At length a compromise was agreed upon that the electors should be chosen by "joint ballot." The Senate to name 8 and the House 8, and from these 16 nominations 15 should be chosen. This was agreed to by both Houses, December 1, 1800, and the act at once was signed by the Governor. December 4, both branches met in joint convention, having previously made their nominations. Each branch kept faith in convention with the previous understanding between them, as the following vote exhibits:

#### FOR ADAMS—FEDERALISTS BY THE SENATE.

Dr. Frederick Kuhn, Lancaster, 95; Dr. James Armstrong, Carlisle, 95; George Ege, Berks County, 95; Robert Coleman, Lancaster, 95; Major John Rubley, Lancaster 95; William Hall, Philadelphia, 95; Samuel W. Fisher, Philadelphia, 94; James Crawford, Sr., Lancaster, 95.

#### FOR JEFFERSON—DEMOCRATS BY THE HOUSE.

Robert Whitehill, Cumberland, 95; John Kean, Dauphin, 95; Jonas Hartzell, Northampton, 95; Gabriel Hiester, Berks, 95; Presley Lane, Fayette, 94; Nathaniel B. Boileau, Bucks, 95; Isaac Van Horn, Bucks, 95; Samuel Wetherill, Philadelphia, 94.

All these gentlemen were members of the Senate and House of Representatives. Mr. Coleman being defeated, the Democrats had 8 votes, which were cast for Jefferson and Burr; the Federalists 7, cast for Adams and Pinckney. D.

## CURRENT MEMORANDA.

**The Two Neighbor Republics—Mexico and the United States.**—Revolution and disorganization and anarchy are so frequent in the Mexican "Republic" that the reports of such a state of affairs in that unhappy country have almost ceased to possess the interest of news; peace and submission to the laws and the lawful government may be said to be exceptional; the names of the proper officials and of the revolutionists change from time to time, but the occurrences are but a repetition of others just like them, or a little different that even the participants can scarcely define the difference. The "nation," if the term can be applied to such a disorganized country, is once more confounded; the "President" is so only in name, the Governors of the States either fugitives or upon precarious tenure of their office. We cannot but sympathize with the citizens of Mexico who are honestly republicans, and disposed to obey the constitution and laws of their country, and censure the revolutionists, disorganizers and defiers of the constitution and laws, and are wont to congratulate ourselves as citizens of the United States that we are not sinners as other men (the Mexicans especially)—but let us not be extravagant in these self-congratulations without, by honest comparison, examining in what, and just in what degree, we are better. Mere contrast will not suffice; we must have comparison. Are we not *as* the Mexicans—that we are different, is undeniable; but *are we better*? Of course, the question is not of individuals, it is of *the people*—the aggregate people, not individual citizens.

The fact that a large proportion of our citizens are of a calmer, quieter, more phlegmatic race, is not of our seeking or making—it is our good fortune, not our good doing. Some of our newspapers have been quoting with much commendation and national "brag" an article recently published in the *London Times*, highly favorable to the United States and her people—lauding our national "law-abiding" disposition and action in the present "complications." But the editor of the *London Times* is an Englishman, and knows that the controlling proportion of our people are of English descent, with much of the English "good" in their inherited temperament, mingled, let us confess, with some of the English "bad." We do not mean to imply that the editor sees "the bad," for no Englishman likes to see that. Of course, however the *Times* can find of "good" in our people is of our own blood, and to praise them is indirectly to laud ourselves. There is justice, too, in the good things the *Times* says of us, and we cannot but feel thankful and proud that the able editor has been impressed with, and declared in such kindly and well-uttered terms, the praiseworthy qualities of the citizens of this great Republic; and we are as lawfully pleased that the editor does not essay the needless task of showing up our shortcomings, but leaves that to Americans. And now, while gratefully acknowledging the generous verdict of the *London Times*, and truly declaring that it is just, as well as generous, we propose to add the *gratum satis* which it requires to season and make it more palatable to the candid American.

We are a "law-abiding people," but are we not more? Do we not "abide" under the name and color of law, the constructions put upon our laws by unauthorized and grossly incompetent expounders? The law says thus and so; Mr. Demagogue tells us the law means this or that, and Mr. Noodle assures us it means that or this. And we, the intelligent people, do not ask to see the law, or read it if produced—but, according to the party which *owns* us, we accept the interpretation of Mr. Demagogue or Mr. Noodle, the one or the other that favors "our side." Of course, there are a few exceptional individuals who will think, and who refuse to follow the party leaders when they lead wrongly—but ninety-nine per cent., and perhaps three-fourths of the hundredth, of the people can see, or care to see, but one side of every question, the side that is presented or represented by the party to which they respectively belong. In short, American citizens permit themselves to become not merely party men, but the mere puppets of party leaders.

Let us see how this works, and take the National Congress for our text: composed of two branches, one supposed to represent the several States as organized entities, the other to represent the individual citizens of the several districts of each State. This is the great law-making body of the great Republic, and of course to the Senate each State sends two of its best and ablest and purest citizens, while the citizens of each district select the very best and ablest and purest man in the district to represent them in the House. This should be the rule, and the exceptions should be the result of pardonable mistakes to be corrected as soon as discovered—but is there a boy in the land so stupid as to imagine that excellence, ability and purity have *generally* any place among the qualifications of Senators or Representatives? Is there a boy in the land so stupid as to fail to see that the one qualification, to the ignoring, not necessarily the exclusion, of all others, for a Senator or Representative is devotion to party? Hence, each Senator and each Representative is and must be an unquestioned and unquestioning and unquestionable party man; if he be an honest, able, pure man, well; but he *must* be a party man. If his honesty, ability or purity are so pronounced that he but dares patriotically to act independently of his party in deciding any one so-called "party" question, he does so with the absolute certainty that his patriotism will cost him his seat—that he will be denounced by his party papers and party leaders as a *traitor* to his party, and that when his term expires he will not be returned to the Senate or the House. Even if he be a Charles Sumner, whose whole life has attested his fidelity to principle, and who has dared to be a Republican when the being one required high moral courage—that will not save him if at last he refuse to obey the self-constituted leaders of his party; and a life-long Democrat, fearless and steadfast, if at last he assert his manhood and refuse to obey his party leaders, he dies politically forthwith.

Now, what is the necessary consequence of all this? Just what we see in our present Congress. The Washington

correspondent of *The Independent*, December 14th, thus strongly and truly describes the state of affairs:

"This, then, is the situation here. The House is firmly bent on electing and inaugurating Tilden; the Senate is as firmly determined to declare Hayes next President.

The plan of the House is to object to the electoral vote of two or three Southern States, declare no election to have taken place, and then proceed to elect Mr. Tilden.

The plan of the Senate is to have its presiding officer open and count the electoral votes, and declare Mr. Hayes elected; and then, through the army, to inaugurate him on the 4th of March. It will be seen that on both sides it is proposed to stretch the Constitution a little. That document is silent in regard to the counting of the electoral vote; nor is there any provision in case of rival electors. When two sets of certificates come up, who is to decide upon them? During the first fifty years of the Republic the President of the Senate counted the votes; but during the last fifty Congress has done it, through tellers. And since the Republicans have had control of Congress they not only insisted upon the right of the body to reject votes, but they actually exercised it. They rejected electoral votes in 1869 and 1873. Let us be candid and truthful. The situation is more embarrassing than it would otherwise be for the very reason that the Republican Senate now objects to the very thing it did four and eight years ago. Nor does it help the matter very much that it is now clearly right and was then clearly wrong. The inconsistency injures it in the eyes of the country."

There would be no difficulty in the case, if the Senators and Representatives were generally otherwise than devotees of party; who does not know that if a Republican or Democrat in either branch shall dare to rise above party and prove himself a patriot, he will be a traitor to his party, a renegade, and it will be accepted as an evidence that he has been bought?

The people are directly responsible for the present state of affairs—if they would but cease for a time to be partisans, and would make the members of both Houses of the Congress understand that they, too, must cease to be partisans, the entire difficulty would pass by, the "crisis" we read and hear so much of would dissolve as a vapor, and peace and prosperity would return to bless our land under the administration of either Hayes or Tilden. None but the blindest partisan conceives for a moment that either of the two late candidates, if declared elected and duly inaugurated, would imperil our institutions by intentional maladministration. Though personally a Republican, we have no fear but that if Mr. Tilden were justly inducted into the Presidency, the country at the expiration of his term would be in no worse condition than it is to day; neither he, nor any other man, even in the office of Chief Magistrate of our Republic, could seriously jeopardize the institutions of our nation—we have too much faith and confidence in the people's intelligence and integrity, and in Republican institutions themselves, to apprehend positive injury to the country from any President. We must not be understood as expressing an opinion that Mr. Tilden has been elected and should be inaugurated—we have an opinion, but *it is ours*, and we do not deem it our duty or prerogative to pronounce judgment in the premises. We simply declare our conviction that the country *would be safe* even if competent authority should declare Mr. Tilden elected and he were thereupon installed.

Among the plans proposed in the Congress for adjusting

the present "complications," there is one which we deem eminently wise: it is that proposing to create a Court of Appeal to decide upon the election of President and Vice-President when the candidate declared not elected shall contest the decision of the President of the Senate (or of the Houses of Congress, if the position of the House be right); with such a court, carefully constituted, it would become comparatively unimportant who should count and determine the result, as the decision would then be subject to revision by a non-partisan tribunal. In the case of all other officers, down to a ward constable, there are provisions for contesting the election, and it could only work well to have the President's and Vice-President's election subject to contest before a proper tribunal.

But, the one grandest and best guard against the recurrence of the present difficulty hereafter, is to be found in the people's asserting and maintaining the rights of manhood and citizenship, abiding by and sustaining the laws of the land, but refusing to abide by or sustain the constructions put upon them by partisans or by either party. Until we have, as a people, recovered our rights at the polls and in our representative bodies, State and National, let us not be extravagant in self-glorification upon our superiority to the citizens of Mexico. Revolution and disorganization are had enough, but even they are better than too much submission to party and party leaders. Revolution and disorganization are not, however, the necessary alternative to excessive submission—let us assert our rights as citizens, and the parties and party leaders will succumb; they only ride over us because we lie down supinely and all but invite the indignity.

[Communication.]

**The Outlook.**—The commencement of a new year is an appropriate season for retrospect. Business men are accustomed to strike a balance-sheet about this time, and thoughtful persons take note of the errors of the past and form resolves for the future. Alas! the new leaf turned over is often worse than the old. Men and nations resolve and resolve, and move on pretty much in the same old ruts. But there would seem to be peculiar propriety in a new departure at the present epoch. We are commencing a new century of national life under exceptional circumstances. We have had a great national festival; the lights are extinguished; the guests from all nations have departed, and we tread alone the "banquet-hall deserted." Have we learned from the thousands from foreign parts who have visited us nothing on the subject of private or political economy? nothing in the science of government? Have we learned no lessons of humility?

The present year opens under such peculiar complications financial and political, as demand grave consideration. Our vast resources and industries and wealth lie dormant, and our skilled laborers find no field in which to work. Our system of government, which we have been accustomed to regard as almost perfect, is found to possess serious defects. The people are losing confidence in the ballot as an exponent of the popular will, and many thinking men begin to despair of the Republic.

It is useless to speculate upon the causes of this state of affairs. Individual extravagance, public extravagance, offi-

mal corruption, and the dishonesty of party organizations, have doubtless combined to produce almost general demoralization. A return to private economy, public economy, official honesty, and party honesty—or perhaps a cutting loose from party bondage—would seem to be the lesson of the hour. A return to the primitive interpretations and practices of the fathers of the Republic and a return to rigid honesty and economy, private and public, will doubtless render the future of our great country as prosperous and glorious as the past.

J. B. M.

REMARKS.—The foregoing timely note is conceived in the right spirit, and beyond question the writer's suggestions are correct. We do not believe, however, that matters are quite so much awry as to justify thinking men in "despairing of the Republic;" nor do we believe that any considerable number do so despair. That the charges of fraud and evil practices brought by each party against its opponents are far too often well authenticated and entirely true, we are free to admit, but a vast majority of the citizens of our great Republic are thoroughly honest, and we have an abiding confidence that in due time these good and true Americans will arouse and act in their might, drive corruptionists and evil-doers generally to the wall, and thus rescue our country from its trials and perils. The Republic cannot be positively endangered until the people generally become corrupt and vile, or criminally blind to evil-doing.

THE TIME HAS COME! The people must arouse and correct the abuses that have arisen, developed and assume threatening proportions in our politics, North and South. Those who longer sleep or shut their eyes to these abuses from this time become *participes criminis*, absolute accessories of the bad men who make politics their business and manage that business solely for selfish and wicked ends, wholly regardless of the interests of the country, as well as of every principle of law and justice and right. It will not longer do to trust matters to the worst elements of either of the great parties—the people must take the *parties themselves* in hand, and reform them, or crush them and reform the *abuses* of the country, at the polls above all, as the fountain-head, and then in every department of National, State, County, City, Town and Village government we shall see the workings of a true Republican system.

#### Bad Features in the Methods of Selecting the President and Vice-President, with Proposed Remedies.

—We presume there are few thinking Americans who are not dissatisfied with the methods of selecting the President and Vice-President of the United States. The present "complications" have clearly demonstrated that these methods are not merely far from perfect, but are seriously bad in some of their parts. The "Electoral College" is a positive absurdity, and the provision which makes it possible for the election to devolve upon a House of Representatives chosen two years before and without the least reference to such a contingency, is simply wicked. Of course, before such a series of "complications" as those growing out of the recent election all the defects and faults of the system were not pointed as they now are.

Of what possible use is the Electoral College as now

constituted? some of the representative men of each State are chosen to cast the three or thirty-five votes which their respective States are entitled to cast according to their population and consequent representation in the Congress; but they are mere automatons, without any discretionary power—wooden men would answer as well as men of flesh and blood and mind; the same object, that of securing to each State its proper voice according to its voting population, could be readily attained without a so-called *Electoral College*. But, if the *Electors* fail to elect, from any cause, the selection of the President, for four years, devolves upon the House of Representatives—not the one elected at the time when the people are indicating their will, but one elected two years before, when neither the Congressmen nor the people could have had any thought of such a vast responsibility being assigned the House-elect; the downright wickedness of this is unquestionable in the light of the possibility that our next President may be chosen for us by the present House, a large proportion of the members of which have just been repudiated by their constituents—still more glaring is the enormity of this provision of our organic law, when we note that, were the present House to choose our President, New York State would be made to vote for a Republican, while Pennsylvania would be made to vote for a Democrat, notwithstanding the fact that, as every schoolboy of twelve years knows, in the late election, the former declared for Tilden and the latter for Hayes; and to add a feather at least to the weight of the iniquity of this feature of our system, we note that, as the vote is by States, irrespective of numbers, a State having one representative would have equal voice with a State having thirty-three—making each voter in Delaware, for example, equal to say thirty-three voters in New York.

REMEDIES.—Our object in speaking of the defects or faults in the present methods of selecting the President is to propose remedies which, so far as we know, have not before been suggested, and which we believe would give the people a fair chance to select the President and Vice-President. We hope that our views will at least receive calm and fair consideration from political economists, and, in so far as they are found to be right and feasible, we hope to see our remedies tried.

Let the present "Electoral College" be dispensed with, and in its stead let there be an "Electoral Congress" composed of two "Electors at large" from each State, and one "District Elector" from each Congressional District—the former elected just as the Governors and other State officers are elected, and the latter just as members of the regular Congress are elected. Let these "Electors" constitute one House, to meet in Washington, on or about the 1st of January next succeeding their election. Let the Chief-Justice of the United States, or in case of his sickness or other disability, the senior Associate Justice, be ex-officio President of the Electoral Congress. Let this body elect by open vote, written or oral, first a President and then a Vice-President of the United States; if they fail to elect upon the first vote, let them proceed to a second, and failing in the second to a third, and so on until an election is effected, or, until the 15th of the same month, when, if their failure to elect shall be because there are more than two candidates,

let all but the two highest be dropped, and let them proceed again to vote; in case of an even vote resulting in failure to elect, let them repeat the voting until the 30th of the month, when let the Chief-Justice or other Justice presiding vote, and thus determine the result. In the case of any Elector whose election or eligibility is questioned, let the question be submitted to the Supreme Court of the United States, and if the Elector returned as elected be found not truly elected, let the Court grant a certificate to the one elected, but if the question be as to eligibility and the Elector-elect be decided ineligible, let the Court fill the vacancy by selecting one of the same party.

We expect that objections will be advanced and modifications suggested; we have not done with the subject, but shall consider such objections and modifications, doubtless yielding to some and combating others, as our sole purpose is to serve our loved country whether by maintaining our own theories or accepting and endorsing those of others.

**The Poor.**—A cold winter pleads earnestly for the poor. There are always and in all communities many who will be poor under any circumstances, even the best; some of these are worthy of the heartfelt sympathy and judicious assistance of the benevolent, while to others it would be an absolute kindness to place them in a house of correction where they should be compelled to earn their shelter and food, in Scriptural manner, "by the sweat of their brows." There are times when depression in business and "hard times" largely augment the number of the unfortunate hungry, naked and homeless, by reducing many industrious persons to these unhappy straits; they are more than willing to work, they are anxious to do anything for a livelihood, but they seek even menial employment in vain. This class of poor persons especially claim prompt relief, because their need is not in any degree the fruit of laziness; true, in some instances, many perhaps, even these are censurable for poverty because when they have work they lay nothing by "for a rainy day"—be their wages small or ample, every cent must be spent, as though they deemed it criminal to permit their income to exceed their outgo. But one cannot be harsh in judging the industrious, though they be improvident, and when they cannot obtain work, we cannot refuse relief. Some of the most deserving of the most needy are never beggars, and when we seek them out it is not a rare case that they refuse to be helped with "alms"—in such cases, one must urge and oftentimes appear almost to seek rather than tender a favor in assisting the proud poor.

We have alluded above to one class of the poor who are best relieved by placing them in the houses of correction and compelling them to work. Of these, there are two classes: the simply lazy and the more criminal who add indulgence in "fire water" to their laziness, squandering the few pennies they chance to earn and the pennies given by injudicious charity, and even at times filching pennies, to procure the poisonous compound for their vile appetites; the simply lazy we pity while we blame, because if laziness be not nature it is second nature to them and they can't help it—the second class we pity, too, but in a different way, and if we are wise as well as truly benevolent we refuse them any money or other gifts that can be converted into drink. This class is

the most difficult to deal with in the way of relief—often there are innocent ones dependent upon them and suffering worse than poverty, and we can scarcely discover a method of relieving these without affording encouragement and means for the gratification of the drunkard's wretched appetite; the house of correction for the drunken father or mother, and watchful care over the innocent sufferers, are the usual and doubtless the only present means of reaching such cases.

But, cannot some arrangement in a house of correction be effected by which the enforced labor therein of the drunken and idle can be made to provide means of subsistence and shelter for their dependents?

**Banking Extraordinary.**—Professor Youmans, in *The Popular Science Monthly*, states that "a woman has opened a bank in Madrid for deposits in sums of a hundred dollars and upward, on which she pays interest as follows: twenty per cent. on receiving the deposit, twenty per cent. at the end of the first, second and third months, and then at the expiration of the fourth month, when eighty per cent. has been already paid, she reimburses the entire sum lent. The payments thus far have been regularly made, and the public are flocking in crowds with their money, the deposits now amounting to several millions of francs. The bankers and savings banks are being drained of their deposits by this extraordinary traffic. Hours before the bank opens in the morning hundreds of depositors collect, and the presence of the police is necessary to preserve order. In this case 'nobody is to know' how the money is employed, and on that point contrary rumors prevail; some assert that the capital is used in working mines of fabulous wealth; others, that the woman is an agent of the Government, adding that it is thus procuring money on more advantageous terms than with its regular bankers! The true explanation will not be long withheld, unless the police interfere to prevent her running off with her plunder. This is almost a precise repetition of a case which took place in enlightened Germany four years ago—the Spitzeder affair of Munich. In this case enormous sums were confided to a woman banker, who lived in opulence, squandering the money of her depositors, and, as she could not repay them, she was sentenced to three years' imprisonment. Her time expired some months ago, and the likeness of the transactions at Madrid to the operations at Munich is strong enough to suggest a common origin."

**The Post-Office and Telegraph.**—At almost any other time and under any other circumstances than those now prevalent, we doubt if a dozen average Senators or Representatives in the National Congress could be found who would consent to have correspondence by telegraph tampered with by a House Committee or any other body, and we believe that some of those who have lately put themselves on record as favoring the principle or unprinciple (if we may coin the word) that telegraphic correspondence is not entitled to protection, but is subject to being pried into by a Committee, or by *any body* whatever, at the mere caprice, or worse, of the House, will live to regret their record. But this question as to the privacy of telegraphic correspondence suggests some thoughts as to the often proposed plan of

taking the telegraph into government care and control. Were the telegraph a government institution, of course its managers, its superintendents, and even its operators to a considerable extent, would be partisans of the Administration, whether Republican or Democratic. This would manifestly tend to exclude "the opposition" from the advantages of the "rapid transit" of information, counsel, etc.; except to a limited extent, and in cipher alone, could "the opposition" send important messages, for it would not require Congressional "bull-dozing" to lay their secrets bare before their enemies of the Administration.

**The Turkey Question** is still in a most unsettled condition. One day, the news is warlike, very, the next peaceful enough to suit the most uncompromising anti-war folk, and then the next we have war-clouds reappearing—and so it goes from warlike to peaceful, to warlike, to peaceful, until all is uncertainty. Though not interested in the same way or degree as the European nations, we Americans are decidedly interested in the great question, and that not only as distant spectators; it requires no business eye to see that war in Europe would sensibly benefit us as a manufacturing, agricultural and commercial people, but, as a Christian people, we do not wish to be benefited by such a deplorable means; on the other hand, as a Christian people and lovers of civil and religious liberty, we should prefer even war to a continuance of the oppression of Christians subject to the Turkish sway. We hope, however, that this oppression will be effectually stopped without war. We have no confidence in the professed disinterested motives of Russia, nor do we feel that Russia will yet possess Constantinople—and furthermore, we cannot say that we should regret to see the Mohammedan domination in European Turkey overthrown, even if Russia were to be thereby extended and enriched and strengthened; but, taking Russia at her word, accepting her assurances that she does not at present seek conquest, especially as her hour has not come to seek it successfully, we cannot but hope that the other powers, including even England, will steadily coöperate with Russia in pressing upon a more humane, tolerant rule on the part of the Turkish government over its Christian subjects. The age of bigotry and intolerance has gone by, we trust forever, and Turkey must be made to comprehend that even she must yield to the spirit of the age in this particular.

**Germany**—Is Turkey worse than Spain in its bigotry, intolerance and religious tyranny

**A Colorado paper** hopes that the Legislature of that State will pass a bill for the protection of game and insectivorous birds, and not follow the older States in delaying precautionary measures until there is little game to protect. It is regretted that steps should also be taken for the preservation of trout on account of their efficiency in destroying the grasshopper. Game is one of the charms of Colorado to the sporting tourist, and a diminution in the supply will injure the reputation of the Switzerland of America.

**Hamburg Butler.**—The "hero" of Hamburg, South Carolina, has been "elected" to represent that State in the United States Senate. His friendship for the colored voters can no longer be questioned.

**"Empress of India."**—On Monday, January 1st, according to the programme long since announced, occurred at Delhi, India, the ceremony of proclaiming Queen Victoria Empress of India, and it was one of magnificent and dazzling display. Lord Lytton occupied, in an amphitheatre erected for the ceremony, a dais, above which, sustained by gilded columns, was a canopy of crimson and gold, with white panels, on which were displayed, alternately, the royal arms and the imperial crown, with the initials "V. I." An enormous crown surmounted the highest point of the canopy. Facing the Viceroy were eighty ruling princes of Hindostan, gorgeously attired, blazing with jewels. Silken banners of various hues, emblazoned with rare and quaint heraldic devices, fluttered over all. Each prince was surrounded by his retainers. Outside the amphitheatre 13,000 mixed troops were in line, and the British scarlet shone beside the mediæval chain mail.

On either hand the dais was flanked by a guard of honor, and the background was formed by a majestic line of magnificently caparisoned elephants and camels, with quaint vehicles, a tremendous dust and a gaudily attired multitude in gala costumes. There was a formal flourish of trumpets, the heralds came forward, the proclamation of the Empress was read in English and Hindostani, and the trumpets blared again triumph and defiance; the royal banner was given to the breeze; the troops saluted it; the artillery fired thirty-four salvos of three guns each; the infantry, a *feu de joie* thrice repeated, and the massed bands played the national anthem, while all stood up. Lord Lytton then read a speech and a congratulatory address from the Empress. The anthem was played again, the troops cheered, and the Viceroy declared the ceremonies concluded.

**Alabama Fund.**—It seems that the Alabama Claims Commission have concluded their labors without disposing of one-half of the money paid this country by England on account of damages inflicted upon American commerce by certain rebel cruisers sailing from British ports during the late war—and now, the question is what shall be done with the surplus? We do not quite understand the difficulty in deciding; the disposition of the balance in hand should depend solely upon the terms of the award—if the money was awarded solely to make good specific losses, and those have been made good, the remainder belongs to England, but if it was to include in general all damages to our commerce wrought by those cruisers, the remainder multiplied by two or by four could not compensate us for the utter banishing of our shipping from the seas.

**The Cotton Crop.**—The cotton crop just gathered is somewhat smaller than that of last year. The fibre is represented as being very clean and of good quality. Worms and other enemies have not been so troublesome as usual, and the season is represented to have been remarkably favorable. Although prices have declined, the crop will bring a large amount of money into the South, and open the way to more prosperous times. Indeed, if the South could be induced to abate in its wild devotion to partisan politics, a possibility of unparalleled prosperity is open to her. Too much "party politics" is peculiarly an evil in the Southern States, when they need concentrated effort in business pursuits.

## LITERATURE AND ART.

**Rizpah.**—Our readers are more or less familiar with the large, bold, glaring painting called "Rizpah," which formed a conspicuous exhibit in the Art Gallery of the late Centennial; we have already spoken of it in the MONTHLY, page 398, November, and here simply allude to it in giving a copy of an engraving which we find in a volume, "Lays of the Holy Land," published by James Nisbet & Company, London, England, with the "Lay" which it illustrates therein; we do not know the name of either the artist or the poet. The Scripture narrative, II. Samuel 21: 8-10, is as follows: "But the king took the two sons of Rizpah the daughter of Aiah, whom she bare unto Saul, Armoni and Mephibosheth; and the five sons of Michal the daughter of Saul, whom she brought up for [margin, "bare to"] Adriel the son of Barzillai the Meholathite: And he delivered them into the hands of the Gibeonites, and they hanged them in the hill before the LORD; and they fell all seven together, and were put to death in the days of harvest, in the first days, in the beginning of barley harvest. And Rizpah the daughter of Aiah took sackcloth, and spread it for her upon the rock, from the beginning of harvest until water dropped upon them out of heaven, and suffered neither the birds of the air to rest on them by day, nor the beast of the field by night." That is to say, for five weary months did this heart-broken mother maintain her steadfast watch. We have not seen the painting from which this engraving is made, but the latter seems to indicate that the artist had a better conception of the Bible story than had the painter of the Centennial exhibit picture; possibly, some reader of the MONTHLY can furnish the artist's name. The "Lay" is as follows:

O! moments to others, but ages to me,  
I have sat with the brow of the dead at my knee;  
In the purple of night, at the flushing of noon,  
I have bent o'er the cherish'd, that left me: how soon!  
And I look'd on the dimness that froze on the eye  
So bright in its burning,—its glances so high!  
And I watch'd the consumer, as over he crept,  
And feasted where beauty and manhood still slept.

I loved the dark eye, though its kindling was dead,  
And the pride of that lip, though its blushing was shed.  
O, sons of the kingly! how lovely in death!  
Though your frown, when ye died, fitted not with your  
breath;

RIZPAH.

As ye lay in your strength, so unmoving and chill,  
There was daring, calm daring, that death could not kill;  
So mighty to conquer, and never to fly,  
And life in its fulness,—O, how did ye die!

The eagle, at dawning, stoop'd down in his pride,  
With the blood-drops of princes his pinions were dyed;  
But he look'd on that eye, and he shrouded his own;  
In your sternness of sleeping he left you alone.  
The leopard, at evening, leap'd onward in play,  
And he plunged where I knelt, as he scented his prey;  
But he knew the strong arm he had met in his mood,  
And he crept to his lair like a fawn of the wood.

O, yon moon, with her cold light, had madden'd my brain?  
In the wildness of midnight they waken again;  
In their softness and wrath, in their sadness and glee,  
With their fierce scowl in battle, their bright smile to me;

The town when they struck mid the carnage begun,  
The smile as we met when the conflict was done;  
And there is not in Judah a mother so blest  
As I, with my dead, in their desolate rest.

**Hiram Powers's Family.**—It has been said that the beautiful face of his eldest daughter was Hiram Powers's model in shaping the face of his "Greek Slave." A son of his is achieving an enviable fame in plastic art. The wife of the elder and mother of the younger sculptor, we are assured, was preëminently an American wife and mother, pure and warm hearted. She never forgot the customs of her early New England life; in her Florence home she baked mince- and pumpkin-pies in season and dispensed them with a generous hand, and Americans were ever gladly welcome guests in her genial, wholesome home.

MICHAEL-ANGELO BUONAROTTI.

**Michael-Angelo**, rightly spoken of as "a king among artists," was destined for the law; but he so early manifested a genius for art that, at the age of thirteen, he was apprenticed to the painter Ghirlandajo. He was a little over twenty-one when he carved the colossal statue of David, and twenty-eight when he competed with Leonardo, who was twenty-five years his senior, for the commission to paint the Sistine Hall at Florence. He was thirty-nine years of age when he painted the ceiling of the Sistine Chapel, and about forty when he began painting the "Day of Judgment."

**Peter Moran** was the only etcher awarded a medal at the Centennial. He is etching the illustrations in India-ink of his brother Thomas, for Longfellow's "Hiawatha."

**W. W. Story** has been assigned the first place among the competitors who are to try their skill again upon the Centennial statue.

**Goethe's "Faust."**—Among recent issues from the press, an almost unrivaled marvel in beauty is a new illustrated edition of "Faust," published simultaneously in the German and English languages by Frederick Bruckmann, Southampton street, Strand, London.

This lyrical drama and philosophical allegory, composed by Goethe at intervals during his long life-experience of wide and various studies and of social intercourse with the world, is still but imperfectly understood by many general readers. The Faust of Goethe is only represented as a brain-wearied and heart-despairing student or professor of science, practically a highly refined atheist and the miserable victim of infidelity, in the first part of this drama, perhaps its most valuable part. Next arises, from the ground of incidents which have but slight and general connection with that first idea of the character, a deeply pathetic story of the seduction of Margaret, an innocent girl, by a selfish villain, also called Faust, though bearing no resemblance whatever to the original Faust, who was spoiled by the faithless and godless pursuit of knowledge for the mere sake of intellectual power. The new Faust is an idle, vain, incontinent voluptuary, the slave of base passions and of carnal appetites, who has nothing but his egotism in common with the original Faust. His attendant spirit, a temporary servant, becomes, by their sealed bargain, his eternal master—this is simply the true Devil of mankind in all ages, personifying the temptation to employ cunning intelligence, in diverse, though not unlike unprincipled, ways for the gratification of Self. This is Mephistopheles, who contrives the means by which Faust overcomes the maiden virtue of poor Margaret. Genius could not draw a more truthful, heart-rending picture of humanity in its fall—the primary moral wrong and its consequences—the ruined life and its remorse—the unequal worldly penalty on the weaker sex and the worse torments of avenging conscience in the other. Margaret has a fit of insanity in the hour of childbirth, kills her new-born babe, and is condemned to death for the crime.

The singularly complex work of Goethe then passes into quite a different phase. It leaves abruptly the story of Margaret, and plunges onward, ranging through a boundless dance of allegorical and mythological figures, antique and classical, mediæval and romantic, to finish with the "Ewig-Weibliche," or deification of pure moral grace in womanhood—Goethe's ultimate object of worship.

The grand effect is fascinating and delightful to sentiment and taste, rather than satisfactory to the reason and the higher moral affections.

Above twenty English versions of "Faust," at least of the first part ending with Margaret's penalty, have been published. The one which is now published by Mr. Bruckmann is that of Theodore Martin, and as a marvel of the publishing art in all its parts this has seldom been equalled. The paper is double crown folio, of the very finest, the printing cannot possibly be excelled, the binding is unique in splendor, in full morocco, with medallions in oxydized silver, displaying six character-portraits and superb devices of Gothic ornamentation; there are eighty capital wood-engravings, and fourteen full-page permanent photographs, from oil-paintings by the late Professor A. von Kreling, who was a pupil of Kaulbach, and was Director of the Nuremberg Academy of Arts until his death early in 1876.

**Jean Leon Gerome.**—*The Press* (Philada.) says of this artist: "Gerome is about forty-five years old, and looks like a student as well as an artist. His studio is simply magnificent in size, decoration, and furniture. The walls are ornamented with a costly and rare collection of the armor and weapons of the ancient conquering races. Among them are shields, swords, and pikes of various periods, together with helmets actually used by the gladiators of Rome, and marked by the blows which they received. This collection was made with considerable trouble and at great expense. Gerome says that he passed two years in studying the details of his picture of the 'Gladiator' before he put a mark upon the canvas, and the same careful study characterized the preliminary steps toward the production of the 'Chariot

Race.'" We believe Gerome was born in 1824, and is therefore fifty-two years old.

**Berthold Auerbach**, the German novelist, is a Jew, sixty-four years old. He is short and stout, has a close-cropped gray beard, and a face of a thoroughly Hebrew type. His manner has gained for him the title of "the Tyrolese of the salon," it is so frank and unreserved.

The Sultan has given orders for the classification and formation of a catalogue of all the MSS., in the library of the old Seraglio Palace. He has also commanded translations to be made of the most interesting writings and works in Arabic and Persian which are to be found in that collection.

## SCIENCE AND MECHANICS.

**Adulterated Coffee.**—Professor C. H. Eddy, of Michigan University, has been making a series of tests of the "ground coffee" of our city stores, and he finds that they are adulterated to the extent of from 22 to 39 per cent. with "chicory." Among the specimens examined were five packages, labeled respectively "Pure Mocha and Java," 23 per cent.; "Pure Java," 22 per cent.; "Royal Java," 31 per cent.; "Pure Rio," 25 per cent.; "Warranted Pure Government Java," 39 per cent. He has found that prepared coffees consisted chiefly of chicory, peas, oats, carrots, starch, etc.

**Plumbago in Berks County, Pennsylvania.**—According to *The American Manufacturer*, an extensive deposit of plumbago has been found in Longswamp Township, which "is between seven and eight feet in depth, and is of the best quality. Similar deposits are supposed to exist elsewhere in the same region, and persons are now engaged in prospecting, but as yet no farther discoveries have been made."

**Coal Tar as a Wood Preserver.**—A writer in *The Cultivator and Country Gentleman* notices the frequent mention of coal tar as a preserver of wood, and says that to make it have that effect the acid in it must be first destroyed by combining with it some fresh quicklime, in the proportion of half a bushel freshly dissolved, to a barrel of tar.

**A Gas Problem.**—"If the German Continental Gas-Light Company is able to declare 13 per cent. dividends on its capital of nearly \$3,000,000, when paying \$5.75 per ton for its coal, and charging \$1.01 and \$1.35 per thousand feet for its 15 9 candle gas, what are the profits of the New York Gas Companies, which pay \$6 per ton for their coal and charge \$2.50 per thousand feet for a poorer gas?"—*The Engineering and Mining Journal*. Other American Gas Companies, besides those of New York, may find the problem somewhat knotty (or naughty).

**Domesticating the Buffalo.**—A correspondent of the *Turf, Field, and Farm*, sends some interesting facts re-

garding the domestication of the buffalo in Nebraska. He began with two cows and a bull, which he kept with his tame stock. In the spring the cows calved, and in three years the calves became mothers, yielding an average of fourteen quarts of the richest milk daily, for an average of five months. The buffalo strain now extends through a large part of Howard county, in the above State, and the half and and quarter breed animals are found to be very hardy. Experiments in crossing the buffalo with native and grade short horn cattle, have been attended with such successful results that the most skeptical people cannot fail to be satisfied as to the advantages and value of the intermingling of breeds.

**Captain Shaw**, of the London Fire Brigade, is the author of a new work on "Fire Protection." "The object," says the author, "of the following pages is to convey to those interested in the business of extinguishing fires the necessary information concerning the organization, training, and duties of firemen and all the appliances which they have or ought to have in use; comprising in a condensed and methodized form the principal portions of the course of instruction which I have employed for many years."

*The Scientific American* gives the following simple method for electrotyping insects, ferns, etc.: "Immerse the object in a solution of nitrate of silver in wood naphtha. When partially dried, the object should be treated with ammonia, the result being a double salt easily reduced. After thorough drying, expose the article to the vapor of mercury, when the surface becomes completely metallized in a few minutes. It may then be placed in the bath and metal deposited in the usual way."

A commission appointed by the Government of Prussia to ascertain sundry anthropological data, has reported that of 4,127,776 pupils in schools, 42.97 per cent. had blue eyes, and 24.31 per cent. brown; 72 per cent. had blonde hair, 26 per cent. brown, and 1.21 per cent. black. With regard to the color of the skin, only 6.53 had brunette complexion.

**Extinct Animals of North America.**—In a lecture recently delivered before the Leeds (England) Philosophical and Literary Society, Professor W. H. Flower, F.R.S., described some late discoveries in certain districts of North America—the district chiefly noticed is that between the Mississippi River and the Pacific, a wide region but lately opened to scientific exploration. The Professor states that, though only three or four scientists have labored there, and they only for from five to six years, they have already brought to light almost as many strange kinds of fossil animals as all those put together which had previously been found in every other part of the world. The discoveries thus made included some which dated so far back as the eocene epoch of the tertiary period. At one place the deposits were found fully a mile in depth, upon what must have been in some remote age the bottom of a great fresh-water lake. Common as we thought the horse, donkey, or zebra, this species was remarkably specialized—unlike all other animals now existing and wonderfully adapted for its own particular functions. Amongst these North American remains there were found remains which seem to represent an animal not much larger than a fox, and possessing the principal anatomical characteristics of the horse, but with some differences in teeth and hoofs. Later remains of succeeding epochs appeared to show the same animal of larger size, first the size of a sheep, and then as large as a donkey, whilst at the same time the minor distinctions which differentiated it from the horse of our own period gradually disappeared. The same explorations had shown that once upon a time there were in North America many curious kinds of rhinoceros, similar to those of Africa and Asia, where alone these animals are now found.

There had also been found there the remains of some creatures apparently intermediate in their character between the sheep and the pig. The elephant was an extremely generalized animal, which seemed to have no relations now amongst existing creatures. These investigations into past life disclosed, however, that the elephant was not so isolated as we supposed, in illustration of which Professor Flower described the singular resemblances discovered in the now extinct *mastatherium*. Generally, there was scarcely any group of animals now existing of which some representatives had not been found in these North American excavations, whilst there were likewise found many which we could not classify with any existing order. Of all birds at present existing, none were known to have teeth; but there had now been found, amongst the remains in the chalk formation, distinct traces of two or three kinds of large water birds which had long rows of true teeth. There had also been found, in the same productive field an enormous and interesting fossil vegetation, opening up to the botanist as well as the naturalist a world like a new world of past life.

**Mysterious or Magic Clocks.**—Doubtless many of our readers have seen in store windows in our larger cities clocks which appear to go by magic, having no works visible and no apparent connection with works. All that is seen is a glass disc with the hours indicated near the edge and the hour and minute hand moving on a pivot in the centre; the mystery is the greater when we move either hand from the

figure where it should be, and see it return apparently of itself to its place. Some (and we confess we were at first of this number) hastily conclude that the clock is run by electricity, though no connection with any electric motor is seen. A close inspection, however, shows that the explanation is scarcely less strange than the mystery: the whole secret is in the counterpoise of the hands, each of which has a heavy arrow point at the long end, and at the short end a hollow round box. In this box are the works of a watch, which are so placed as to leave an annular space between them and the circumference of the box; and in this space is a counterpoise which is connected with the works so as to revolve once in twelve hours for the hour hand, and once in an hour for the minute hand; the revolution of the counterpoise inside the box shifts the centre of gravity of the hand, so as to give the hand, successively, the necessary direction. Thus, when the counterpoise is the farthest from the axis, it brings the centre of gravity opposite the arrow point, and the hand will point upward to 12; when, on the contrary, the counterpoise is between the axis and the arrow point, the centre of gravity will be there, and the arrow will point downward to 6. In the intermediate sideward position of this revolving counterpoise, the centre of gravity of the whole will be displaced sideways, and the hand point at 8, 9, 10, or 2, 3, 4, according to the shifting.

The *Scientific American* informs us that this clock was patented in this country on September 1, 1874, by Henry Robert, a clockmaker of Paris, France. Lately, Mr. Robert has considerably improved on the plan, especially by using very light and very heavy metals in combination, so as to have a sufficient contrast in weight for obtaining the right effect. The hidden counterpoise, moving in the hollow box, is of platinum, so as to take up as little room as possible, and the hand with its arrow point is of aluminum, the lightest known metal.

**Nature of Electricity.**—We learn that a new hypothesis as to the nature of electricity has been offered by Professor Rénard of Nancy. He considers an electric current to be produced by longitudinal motion of the ether particles, which at the same time have a general forward motion. When the molecules of a body are surrounded by a greater ether atmosphere than the normal, the body is in the condition which we call positively electric; when the ether atmosphere about each molecule is less than the normal, the body is negatively electric. He has sought to explain various electrical phenomena thus: for example, the magnetization of steel needles by electrical discharges; regarding which Savary has shown that, according to the position of the needle, it acts in one direction or the other.

**Charles Sainte-Claire Deville**, the eminent French geologist, is dead. A native of the island of St. Thomas, he studied at the Paris School of Mines; he investigated the geology of the Antilles and published the result of his researches in 1856. Subsequently, he was Professor of Geology in the College of France. He was also an earnest student of meteorology, and is credited with a leading influence in the establishment of the Mont-Souris Meteorological Observatory.

## GOSSIP AND NOTE BOOK.

**Abraham Lincoln Swapping Horses.**—When Abraham Lincoln was a lawyer in Illinois, he and the Judge once got to bantering one another about trading horses; and it was agreed that the next morning at 9 o'clock they should make a trade, the horses to be unseen up to that hour, and no backing out, under a forfeiture of \$25. At the hour appointed the Judge came up, leading the sorriest-looking specimen of a horse ever seen in those parts. In a few minutes Mr. Lincoln was seen approaching with a wooden saw-horse upon his shoulders. Great were the shouts and the laughter of the crowd, and both were greatly increased when Mr. Lincoln, on surveying the Judge's animal, set down his saw-horse, exclaiming: "Well, Judge, this is the first time I ever got the worst of it in a horse trade."

It has been stated that Colonel John Winthrop is the only living descendant of the first Governor of Massachusetts; but he is merely the sole living descendant of the Governor by his third wife, Margaret Tyndall. The Hon. Robert C. Winthrop is a descendant by the Governor's first wife, Mary Forth.

**A Happy Woman.**—What spectacle more pleasing does the earth afford than a happy woman contented in her sphere, ready at all times to benefit her special world by her exertions, and ever transforming the briars and thorns of life into roses of Paradise by the magic of her touch? There are those who are thus happy because they cannot help it—no misfortunes check their sweet smiles, and they diffuse a cheerful glow about them, as they pursue the even tenor of their way. They have the secret of contentment, whose value is above the philosopher's stone; for without seeking the baser exchange of gold, which may buy some sorts of pleasure, they convert everything they touch into joy. What their condition is makes no difference. They may be rich or poor, admired or forsaken by the fickle world; but the sparkling fountain of happiness bubbles up in their hearts, and makes them radiantly beautiful. Though they live in a log cabin, they make it shine with a lustre that kings and queens may covet, and they make wealth a fountain of blessings to the children of poverty.

**Women Students.**—President Angell, of Michigan University, said of women students, in his recent annual report: "These are distributed as follows: medicine, thirty-seven; law, two; homoeopathy, two; literature, sixty. The experience of the last year confirms the opinion we have been led to form by the experience of previous years, that women who come here in good health are able to complete our collegiate or professional courses of study without detriment to their health."

**Trying Again.**—San Francisco papers chronicle the recent remarriage of Mr. Alvinza Hayward, of that city, to his former wife. They were divorced in January last, after

twenty-five years' union, the application only alleging desertion by him. The cause is understood to have been incompatibility, originating in his moroseness, occasioned by long-continued ill health. There was an equitable division of property, the wife receiving an unincumbered aggregate of \$2,500,000, and Mr. Hayward retaining mining and other property worth in all not far from \$4,000,000. He is one of the mining kings of California.

**General Sherman must anticipate a long life, if it be true,** as stated in some of the newspapers, that, in a letter to the New England Society of New York, he hoped that the dinners of the Society might be repeated for hundreds of years, and that he should have the pleasure of sharing them.

**Columbia College Graduates.**—The first class, in Columbia College graduated in 1758 and contained seven men, the first class in the Medical School graduated in 1769, the first in the Law in 1860, and the first in the School of Mines in 1867. The whole number of graduates is as follows: in Art, 2,242; in Medicine, 1,437; in Law, 1,546; in the School of Mines, 115; recipients of honorary degrees, 336; total, 5,706.

**Rather Severe.**—In a late number *The Independent* makes the following sharp criticism, which is not unjust:

M. D. Conway says, in a recent letter to the *Cincinnati Commercial*: "At a hotel table in Munich once a haughty English lord asked me what was the best paper in America of the order of the *Saturday Review*, of London. '*The Nation*,' I said. 'Yes,' he replied; 'but you have forty millions of people and England only forty, and you have but one paper of this class.' " But one of the kind is quite enough, and rather more than is needed. It would be sufficient if we were eighty millions, instead of forty. We do not quite understand why Mr. Conway should compare *The Nation* to the *Saturday Review*, the only point of resemblance between them being that one is thoroughly English and the other tries to be.

If heaviness of style were evidence of a profound intellect well stocked with information, the editor of *The Nation* would be recognized by readers capable of appreciating such profundity and vast attainments as a journalistic prodigy.

**Valuable Gossip for Housekeepers.**—Sometimes one may learn useful things from one's "hired help;" a lady has noted the following that she has learned:

The other day Mary was ironing and asked for a piece of sand-paper to rub her irons on. I was astonished that I never heard of it before; it is so nice, removes every bit of starch or anything else, and makes them so smooth.

One girl taught me that old corsets made the best store-cloths. Just one-half at a time is a convenient size. They are ready made and much better, when folded, to take hold of anything with than a made holder, and much easier to wash. Just throw them in with the brown towels, as many as you happen to get during the week, and they come out clean and ready to use again.

Another girl poured hot water on the blades only of steel knives and they wipe easily, and do not need drying.

Another one told me the best way to keep hams and dried beef was to pack in dry salt. I have tried it several years with perfect success. An old salt-barrel is convenient. Set it in some cool, dry place; put quite a thick layer of salt in the bottom; then pack in the hams, using the dried beef, if you have any, for chinking; cover with salt again until the barrel is full. There is not the least danger from insects, if the hams are smoked and the beef dried and put away early, before the flies come around; and they are much nicer to handle than when put in ashes or oats, or anything of that kind.

A professor was expostulating with a student for idleness; "It is no use," said the latter, "I was cut out for a knifer." The professor surveyed him deliberately for a moment, and replied quietly, "Whoever cut you out understood his business."

**Smiles**—Nothing on earth can smile but human beings. Gems may flash reflected light, but what is a diamond flash compared with an eye flash and mirth flash? A face that cannot smile is like a bud that cannot blossom, and dries up on the stalk. Laughter is day and sobriety is night, and a smile is the twilight that hovers gently between both, and more bewitching than either.

**James Kelly**, an old soldier under Wellington, died lately in St. Louis, at the great age of almost 101. Kelly was an Irishman. He enlisted in the celebrated regiment of Fennagh Rangers, and participated with them in nearly all the battles in the Peninsular campaign under Wellington against Napoleon. He was in twelve pitched battles, and as sergeant of his regiment led a number of forlorn hopes, and was almost being at Waterloo by being ordered with a part of his regiment to Canada. He was temperate in his habits, and was never known to take a glass of liquor.

The records of the Arctic expedition show that the total abstinence were stronger and more capable than the drinkers; were less liable to scurvy; suffered less from cold, and could do more work.

I could not tell the cutler's name  
Who sold the blade that murdered Cæsar,  
Or fix the hour when Egypt's queen  
First thought that Antony might please her.  
I could not say how many teeth  
King Rufus had when Tyrrell shot him;  
Or, after hapless Wolsey's death,  
How soon or late King Hal forgot him.  
I could not tell how many miles  
Within a score rolled Thames or Tiber,  
Or count the centuries of a tree  
By close inspection of its fibre.  
So I was plucked and lost my chance,  
And plodding Cram passed proudly o'er me.  
Who cares for Cram? I've common sense  
And health, and all the world before me!

**Vagaries of a Mind Diseased.**—The following is copied literally from a letter recently received by an acquaintance of ours; doubtless some of our readers will smile, it may be audibly, at the writer's strange conceits, while sympathizing with him in his mental condition:

"Perhaps, right here, under the present existing condition of circumstances, it would be well indeed to give a small and disinterested, but at the same time elevated, history of myself. I was born in the year of our Lord 1840. At the early age of five, I mastered the Latin language, and gave great promise of a distinguished scholar. History, spelling, geography, and even languages, I made myself complete master of. In 1850 I had obtained my degree from — or words to that effect, and was a brilliant young man. In 1860, while preparing for a tour through Europe, Asia, Africa, Australia, United States of America, and the Centennial, I was carried by mere force to our — Lunatic Asylum, commonly called Retreat for the Insane. Why put there I never knew. Five long, weary years I was cooped up in that hole, and came out pronounced by the head physician, Dr. —, a complete cure. But, under the present existing condition of circumstances, it might be well to state that I always was in my right mind. And at the present time my mind is as clear and active as the average mind of all great men is. I am poor—my house is mortgaged of \$15,000 in the —. I keep a horse, and two pigs—have fifteen small children, all of them orphans, and one widow.

"I fought, bled and almost died for my country during the late rebellion. Carry on my person thirteen scars, results from different wounds, one of which I believe to have been fired by Jeff. Davis himself, another by the devil, and a third by —, the perjurer, thief," etc., etc.

The last-named, for whose name we give only a —, is an individual who never went near enough to a battle-field to hear the report of the largest cannon, and if he ever wounded any one it was with some weapon unknown on the battle-field.

**The Mormon Schism.**—Joseph Smith, Jr., son of the founder of the Mormon Church, is preaching in California. He denies the headship of Brigham Young. He says that he has from twelve thousand to fifteen thousand personal followers, and that the headquarters of the reformed church are at Plano, Illinois. He repudiates polygamy and also "blood atonement."

**An Alpine Romance in Real Life.**—Miss Grattan, the adventurous Englishwoman who ascended Mont Blanc on the 31st of last January, has married the Swiss guide who accompanied her. She made the acquaintance of the hardy mountaineer when—only fifteen years old—she first clambered up the Alps. She is now about thirty.

**The musical celebrities** at last accounts were distributed as follows: Liszt was in Pesth, Wachtel in Berlin, Rubinstein and Marie Heilbrone in St. Petersburg, Clara Schumann and Pauline Lucca in Baden Baden, Wagner and Flotow in Italy, Vieuxtemps in Paris, Anna Mehtlig in Stuttgart, and Patti in Russia.

A maiden lady said to her little nephew: "Now, Johnny, you go to bed early, and always do so, and you'll be rosy-cheeked and handsome when you grow up." Johnny thought over this a few minutes, and then observed: "Well, Aunt, you must have set up a good deal when you were young."

**Governor Lafayette Grover**, of Oregon, is a native of Bethel, Maine, and over fifty years old. General Cuvier Grover, of the regular army, is his brother. He is a graduate of Bowdoin College, and has lived in Oregon since 1850. He has held all sorts of Territorial and State offices, and was the first representative of the State in Congress.

The President has nominated Mr. Oliver C. Bosbyshell, of Pennsylvania, to be coiner of the Mint, vice Snowden, appointed a postmaster of Philadelphia. What a name Bosbyshell would have been for a Dickens romance.—*Independent*.

An inventor of a patent nostrum advertises: "Cough while you can, for when you have a few doses of my mixture you can't."

**Brown**, poor as a church mouse, married a rich widow. Soon, stretched upon his deathbed, he made the following codicil to his will: "I bequeath to my loving wife all her property, provided she forever remains a widow."

**A Reporter**.—An eminent runner after news in Paris was named Mathieu Donzelot, afterwards called the "Pavement Sinker." In the morning, before leaving his room, the wide-awake Donzelot consulted the skies and a barometer which adorned his mansard; then he took his cane and writing case, saying: "Rain! Some will slip to-day under carriage wheels and be crushed to death;" or else: "Stormy weather! We shall have to record some cases of mental alienation or of hydrophobia." Or, finally: "Gloomy! cloudy! Fine weather for spleen. Let us make war on suicides!"

There was a riot one day on Pantheon Place. Donzelot sat down amid a hail of stones, pen in hand, to note down the events. One of his friends happened to be present, said, "What are you doing here? Run! fly!"

Donzelot, without looking at him, drew his watch and continued to write down minute for minute the phases and evolutions of the riot.

"Are you not going to run?" cried out anew his friend.

"God forbid; but since you are going yourself, oblige me by handing this to my journal; you will tell them that I remain on the spot to send the continuation."

An hour after the disorder was at its height. The authorities and insurgents had come to blows. The national guard fired, and our reporter was struck with a ball. A surgeon hastened to him.

"You are wounded?" said he.

"Yes," said Donzelot, "and sorely too, for I cannot write."

"Write!" said the surgeon, abruptly; think of your wound!"

"Don't be in a hurry," replied Donzelot. "Each one to his own business; mine is to relate events, you will

replace me. Here, write at the bottom this postscript: "Twenty minutes past 3 P.M. In consequence of the discharge of musketry by the troops, three men were wounded and one killed."

"Where is the dead man?" asked the surgeon.

"Myself," replied Donzelot; and he expired.

**Royal Needlewomen**.—The Empress Eugenie is said to be an accomplished artiste in needlework and embroidery. During the last few years she has beguiled the hours of her tedium by working a set of "vestments" for the little chapel where she worships, and also a stool and cushion for the use of the priest. So jealous was the fair devotee of sharing the pious task with another, that she would not allow a stitch to be set by any hand but her own. The gentle craft of needlework has been practiced by many royal ladies before the time of Eugenie. Matilda of Flanders, the spouse of William the Conqueror, was particularly famous for her skill in embroidery; and the Bayeux tapestry, still preserved in the Bayeux collection, attests her ingenuity and industry with the needle. Into a piece of canvas nineteen inches wide and sixty-seven yards in length, the royal lady with the assistance of her ladies, stitched the history of the conquest of England by her martial consort, commencing with the visit of Harold to the Norman Court, and ending with his death at the battle of Hastings. "The leading transactions of these eventful years, the death of Edward the Confessor, and the coronation of Harold in the chamber of the royal dead, are represented in the clearest and most regular order in this piece of needlework, which contains many hundred figures of men, horses, birds, beasts, trees, houses, castles, and churches—all executed in their proper colors, with names and inscriptions over them to elucidate the story."

We may hope the beautiful but hapless Mary, Queen of Scots, was able to cheat the hours, during her long and wearisome imprisonment, of a part of their misery, by her close application to the needle. She wrought several curious and elaborate works in embroidery, while a captive in her haughty cousin's toils, which are noted in history. In a letter to his friend, "rare Ben Jonson," Sir William Drummond describes a bed of state which Queen Mary covered with emblems and devices embroidered in gold and silk. She was considered to possess great talent for composing these pictorial allegories. Thirty rebusses and punning devices, besides much heraldic blazonry, were stitched into this bed of state. "The workmanship," concludes Sir William, "is curiously done, and truly it may be said of the execution surpassed the material." We read also that Mary spent many months embroidering a rich scarf for her only son, whom she parted from when he was an infant and longed hopelessly to see again during her long eighteen years of imprisonment. How many sad thoughts and bitter tears must have been sowed into that garment by the unhappy mother who mourned, with much else, the loss of her liberty, her crown, and her child!

A new set of claimants to a share in the estate of A. T. Stewart has appeared. They live in Ireland, and claim to be first cousins.

## EDWIN FORREST, THE GREAT TRAGEDIAN.\*

By A. E. LANCASTER.

EDWIN FORREST.

The anniversary of the birth of Edwin Forrest is commemorated in these pages as worthy, no doubt, as that of any of America's celebrated men. No name is better known to our people, no character more highly esteemed, no man more deeply admired, than those of Forrest. During his long and brilliant career, the great

tragic actor created a reputation that may safely defy the destroying influences of time, although little else than memory is now left to tell the tale. Such fame and genius as Forrest's are not soon forgotten, notwithstanding the sorrowful fact that an actor's glory is altogether a thing of the living present, and that future generations can only reverence, without understanding it.

Edwin Forrest was born in Philadelphia, March 9th, 1806. His birthplace, the residence of his

\*The last of the series of articles on the "American Actors" will appear this month to the present paper, but will appear in the April number.

parents, was a little house in George street, the traces of which have since disappeared. His father was a Scotchman, and his mother was of German extraction. The young man may be said, therefore, to have combined in himself a variety of nationalities. At a very early age he showed great powers of memory, and his talents at mimicry were also unusual. He was at first destined for the ministry, for which his natural acquirements seemed to fit him, but the death of his father put an end to this prospect. Indeed, it is doubtful if the good man's intentions would ever have had any satisfactory result, for young Forrest was apparently born for a single object: to distinguish himself as an actor. Taken from school between the ages of ten and eleven, it will be divined that his education was extremely neglected. His father being poor, and the family large, it was necessary that each should contribute to the general support. In consequence, Edwin was placed in the store of Mr. Tiers, a ship chandler, a situation which scarcely suited the taste of the ambitious youth, and which he quickly resigned. His next employer was a Mr. Baker, an importer, who frequently took occasion to remonstrate with his clerk for his *unnatural* love of the stage. But Forrest was obstinate. He was little over eleven years of age when he made his first appearance as an actor. Determined to put his talents to the proof, he succeeded after various rebuffs in forming a Thespian Club. The first performance of this club was given in Jacob Zelin's tavern, situated on Chestnut street, below Fifth; we need scarcely add that its success was dubious, although the young leader's ardor was unbounded. The second attempt, however, was better. The place selected this time was the second story of an old house, which may still be seen on the northwest corner of Harmony court and Hudson's alley. At a later period, an amateur dramatic association known as "The Mortonians," which had been established in 1812, after the success of Master John Howard Payne, was merged into the "Thespian," and the new society gave theatrical representations in the South Street Theatre. These attempts at dramatic organization may strike the reader as somewhat puerile; but Forrest never regarded them in such a light; on the contrary, he was fully in earnest, and his whole heart was in his work. At the same time he was undergoing an experience that was to serve him well in after years.

About one year before his first appearance on the legitimate stage, Forrest began to take lessons in elocution from Professor Daniel Maginnis, well-known teacher of the art. By dint of his study he rapidly perfected his natural gifts, and was soon ready to make his *début*. At this time fortunately, he possessed a warm friend in Colonel John Swift, who was warmly attached to him, and who visited in person Mr. W. B. Wood, the acting manager of the Walnut Street Theatre, and was able to secure a single night for his first attempt before a regular public. Forrest was then of fourteen years of age. From a description given of him by Mr. Wood, we learn that he was a well-grown young man, with a noble and well-developed figure, his features powerfully expressive, and his character full of strength and determination. On Monday evening, November 27, 1820, Henry's tragedy of "Douglas" was presented, with Forrest as Young Norval. In the programme his name was not mentioned, the simple statement—*Young Gentleman of this City*—being deemed sufficient under the circumstances. To give the result briefly, his first appearance was a decided success, and the play was repeated on the following evening. Then he acted successively Frederick in "Lover's Vows," and Octavian, in "The Mountaineers." On the whole, he was very fortunate; for, not only was his *début* a triumph, but he had the advantage of a fine training in an excellent school. He was surrounded by the best actors of the day, and the art which he was thus enabled to observe in the acting of his associates left an impression upon his young mind that was highly favorable to his future career. Not very long after his success in Philadelphia, he departed for Cincinnati, where he appeared for the first time in 1822 at the Cincinnati Theatre. The opening play was the "Soldier's Daughter," in which Forrest sustained the rôle of Young Malfort. Some time later he played Othello at the Globe Theatre and astonished everybody by the qualities of his precocious talent. His success in this great character actor was due, however, to his appearance and general capabilities alone, for his knowledge of Shakspeare's text was very limited. He afterwards performed "Richard III.," and a critic, alluding to his acting in this tragedy, declared "that he would in time become a great actor." For the following season he was enrolled in the company of the New Orleans Theatre, the proprietor

which was the celebrated James H. Caldwell; in this new capacity the amount of his salary was eighteen dollars a week. While awaiting the beginning of the season, he appeared at the Globe, playing the part of a *negro* in an original comedy, and was not less successful as a comedian than as an exponent of tragedy. In fact, it is well known that, for a long time, Forrest hesitated between the two extremes of the drama, not knowing which to choose. Luckily, circumstances led him to make a decision which, eventually, was to crown him with glory.

In the meantime Forrest passed through a variety of doleful experiences. When his friend, Sol. Smith, the actor, organized a company, he applied for a situation. Mr. Smith rejected this application on the ground that he was already under an engagement to Caldwell. The young actor, however, insisted upon staying with his friend. To repeat his own words, "I would rather remain with you for ten dollars a week, than engage with a stranger for eighteen." Nevertheless Mr. Smith refused to change his determination, in consequence of which Forrest went to the manager of a circus company, and immediately engaged himself as a tumbler and a rider for one year. This freak will give an idea of the youth's obstinate disposition. Fortunately, we are happy to add, he was induced, after much difficulty, to repent and reform; he agreed to fulfill his contract with Caldwell, and this time kept his word.

On Wednesday evening, February 4th, 1823, Forrest appeared for the first time in New Orleans. He was then nearly seventeen years of age. On the first of January, the following year, Caldwell opened a new theatre with the drama of "Town and Country," Forrest acting Captain Glenroy. He afterwards played Icilius to Pelby's Brutus, and made a very favorable impression. Such success to a youth of his age is almost unprecedented. The most audacious circumstance of his early career was his portrayal, when only nineteen years old, of the *role* of King Lear, a part that had not been even essayed since the triumph of George Frederick Cooke. But Forrest declared, "I determined to make Lear my great character," and, while his first performance was only respectable, the years amply fulfilled his prediction. To the character of Othello, Forrest likewise gave earnest study. He had enjoyed the advantage of witnessing Conway in the part, and his words, "I'll mas-

ter it yet," show to what degree he was affected by this representation.

A short time later Forrest and Caldwell quarrelled, whereupon the former left for the North and arrived in New York, where he had the good fortune to meet Edmund Kean, who was then acting in that city. The two actors—one great, and the other destined to greatness—soon appeared together, Forrest playing Richmond and Iago to Kean's Richard and Othello. A period of five years had, by this time, gone by since the youthful Edwin had quitted the scenes of his early life to tempt fortune in worlds beyond. Then he was full of obstinate determination, mingled with fear and uncertainty; now he was brimming with hope that had been strengthened by repeated successes.

It would be impossible for us, considering how limited is our space, to follow the career of Edwin Forrest through all its manifold details. Up to this point we have given a concise account of his early experiences. We can now only dwell upon the various characters in which he attained a great reputation, and which are, in a great measure, identified with his name.

On the 15th of November, 1829, Forrest appeared for the first time in a new drama written expressly for him by John Augustus Stone, namely, "Metamora," which was introduced by a clever prologue, and closed with a pleasant epilogue. The play was a decided success, and it has since held the stage. Although, as an artistically written tragedy, it contains numerous faults, it also possesses incontestable merits; the part of the hero was excellently adapted to Forrest's abilities. He made it his own, and whenever he played it he was rewarded with unstinted approbation. After this performance, Forrest brought out successively four American plays, most of which have attained considerable celebrity. These were "The Gladiator," "Oraloosa," "The Broker of Bogota," and, last but not least, "Jack Cade."

"Oraloosa" was produced on October 10th, 1832, but proved a failure. Dr. Bird's tragedy of "The Gladiator" was first performed at the Arch Street Theatre, Philadelphia, October 24th, 1831. Speaking of this play a competent critic observes: "Mr. Forrest's Spartacus, from the first night of 'The Gladiator' until the day of his death, was considered the perfection of the art histrionic, and it will long be remembered as one of the gems that shone upon the stage from the brilliant mind

of Edwin Forrest. Mr. John R. Scott played Phaisarius, for which he secured a compliment both from Mr. Forrest and the author. There are many passages in 'The Gladiator' of extreme poetic beauty; the language generally is bold and impressive, and at times soars far above the general standard of dramatic literature. The house on the occasion was crowded; in fact, it was a perfect ovation to native talent as displayed by author and actor."

"The Broker of Bogota" is considered by many one of the finest of American plays, and in it Forrest repeated his former success.

But of the celebrated "Jack Cade" we wish to make special mention. Although this play was not originally written for Forrest, he was the first to introduce it triumphantly to the public, and on frequent occasions thereafter he assumed the part of the hero. The character of Cade was perfectly suited to the great actor's powers, and all save he have failed in its portrayal. As a drama "Jack Cade" has always ranked high among the products of our language. When brought out by Forrest at the Arch Street Theatre on the evening of June 16th, 1841, every one agreed in pronouncing it an astonishing success. As to Forrest himself, words could scarcely do justice to the breadth and elevation of his acting in this new rôle. The beauties of the play were rendered by him in a superbly heroic manner. Present admirers of the drama may well regret that there is no second Forrest, no second Jack Cade.

By 1833, Forrest had amassed a slight fortune, and he then contemplated a European tour. In the month of April of that year he played a farewell engagement in Philadelphia, after which he went to New York. During the summer of 1834 he was honored by a public dinner tendered him by some of the most distinguished citizens of the great city. On this occasion Chancellor McCoun presided, and it was he who introduced the toast: "Edwin Forrest: estimable for his virtues, admirable for his talents. Good wishes attend his departure; warm hearts will greet his return." Preceding these remarks, the president had placed in the hands of the distinguished guest a beautiful gold medal, which represented a profile of the actor, and upon which the following inscription was engraved: "HISTRIONI OPTIMO, EDWINO FORREST, VIRO PRÆSTANTI." On the reverse side of the medal were these words: "GREAT IN

MOUTHS OF WISEST CENSURE," and a figure bolic of the Genius of Tragedy. After this Forrest made a short speech and then proposed this toast: "The Citizens of New York: Distinguished not more by intelligence, enterprise, integrity, than by that generous and noble spirit which welcomes the stranger and succors the friendless."

Shortly after these events Forrest departed for Europe. He visited Germany and the Rhine, Italy, Russia, and other countries, even extending his observations into Asia. Many anecdotes related of him in connection with his travels, some of these we will transcribe, as it shows how sympathetic he was to the Church of Rome.

One day, while examining a noted work of art in a picture gallery of the Vatican, he turned to a priest and asked if any price was attached to it. With some show of indignation, the priest replied: "Your State, Pennsylvania, is a rich State; it has inexhaustible coal and iron mines; it has canals, railroads, and large cities; numerous towns, villages, public buildings, colleges, and other institutions of learning; rich in all that industry and munificence can furnish."

"Well," returned Forrest, "Pennsylvania is a rich State. But what of that?"

"It does not contain wealth enough," answered the priest, "to purchase that picture."

"Indeed!" exclaimed the actor. "Then, dear sir, if Rome should ever become impoverished we will try to arrange with the State of Pennsylvania for its purchase."

While abroad, Forrest met some of the most gifted men of the day. His principal object in visiting England was to see the tomb of Shakespeare, whom he revered with all his soul. In Verona he stood beside the tomb of Juliet, the love of Romeo. The birthplace of Othello, and Shylock also had great charms for him. Indeed, it is indisputable that these travels effected a real change in Forrest's character. The sight of so many relics of romance and history broadened his intellect and fortified his genius. When he returned to his native land, it was with renewed strength and higher resolves.

Forrest made his reappearance on the stage in Philadelphia, September 5th, 1836. He opened with "Damon and Pythias," and the wish to see him was immense. During this engagement the pit of the theatre was extended, so as to ad-

the room for the public, and the orchestra was open entirely open. Every day, two and three days before the opening of the theatre, the streets in the vicinity were crowded with people anxious to obtain admission. When Forrest, as Damon, appeared upon the stage, the whole house rose to feet and a mighty cheer of applause welcomed the great actor. Forrest's playing was superb. At the close of the performance he was called before the curtain and forced to make a speech.

We have no doubt of his triumphant success in London as the first tragedian of the age."

Mr. Forrest made his first appearance before an English public on the 16th of October, 1836. According to an excellent critic, he elicited those enthusiastic testimonials of success which had stamped him as one of the greatest actors that had ever graced an English theatre. On his making his appearance, the whole house arose and cheered him repeatedly. The applause lasted three or four

THE FORREST MANSION.

During his engagement he appeared, besides Damon, as Othello and Spartacus, and night after night he was applauded by an overflowing audience. At the conclusion of his stay in Philadelphia, he sailed for New York, where the same scenes were repeated. His success was phenomenal. In an article treating of his genius, the *New York Spirit of the Times* said: "A raft of tickets was bought by a speculator for the few last performances, and sold at auction at fifty per cent. profit. Mr. Forrest has appeared as Damon, Othello, Spartacus, and Lear, and never to such manifest advantage.

minutes, and, in short, his reception was more flattering than his most sanguine friends could have anticipated. On being called for at the close of the play, the applause was truly deafening. "Victory sits perched upon his beaver, and he must and will support her without losing a single feather." The remainder of his engagement in England served to increase this favorable impression. The London critics considered his Othello the finest thing ever witnessed on the British stage. The *Athenaeum* placed it far above Kean's. The *Atlas*, one of the best authorities on dramatic

questions, declared its approval in these unmistakable terms: "If we observe that, since the days of Kean, we have had no actor capable of approaching his excellence, and that in many parts Mr. Forrest was equal, and in some few superior, to that great tragedian, we shall have discharged all that we desire to say on that point."

During this visit to England, in 1837, Forrest was married to Miss Catharine Sinclair, a daughter of John Sinclair, the vocalist. Little did he foresee what this marriage was to bring forth. He arrived home with his wife in 1837. On his return he began an engagement at the Park Theatre, New York, where his former triumphs were repeated to a still greater degree. In the fall of the same year he appeared at the Old Drury, in Philadelphia, assuming, among several characters, that of Othello. Never before had he characterized Shakspeare's hero with such clearness and intensity. His Moor was of a "mixed breed," and a living portraiture both physically and intellectually. As a mere conception Forrest's Othello has never been surpassed. The chief power of this great actor's genius lay in his realistic delineations of the higher passions of the soul, and in Othello full scope was afforded him to illustrate this power in the most striking manner. His exhibition of the beautiful and the majestic in relation to the deepest influences exercised by the feelings and emotions, was often spoken of as something unequalled and impossible to equal. Undoubtedly there are people still living whose admiration for Forrest was never so unbounded as that of his most ardent supporters; people who look upon the intellectual supremacy of his genius as being inferior to the physical, and who find in the Othello of our own Booth subtle traits that were not apparent in that of Forrest; but the expressed opinion of the majority still remains an almost infallible test of his genius, and the magnetic qualities of Forrest's Othello are still remembered with keen enjoyment. It is doubtful if such qualities will ever be surpassed. Many persons will remember with a shudder the manner in which Forrest delivered that terrible passage:

"I had rather be a toad,  
And live upon the vapor of a dungeon," etc.

Alluding to this performance an English writer observed: "When a conviction of the guilt of Desdemona first came full upon him, and he exclaims, 'I had rather be a toad!' his emotion

and gesticulation were absolutely terrific, though neither coarse nor overacted. Here (and we are aware of the hazardous assertion) Mr. Forrest really appeared to leave behind him the best Othello of them all." Undoubtedly, we may justly add the two finest Othellos the world has yet seen were those of Forrest and Salvini. That of Salvini most of us recall. The best critics are often at a loss to choose between the two, for both seem to tower upon the same transcendent eminence.

Forrest's career was now an unbroken succession of triumphs. He essayed a vast number of characters, but in the choice of them all he rarely failed to consult his best judgment. Many parts there were for which he was not fitted, notwithstanding his predilection for them, and he was too wise to risk his hard-bought fame by any failure. Yet it is a remarkable fact that the scope of his genius was unusually broad. He triumphed in rôles that seemed least suited to him, and in which great triumph seemed a result impossible to attain.

One of the great actor's most finished characterizations was that of King Lear, which, as has often been said, he *re-created*. Of his acting in this tragedy, it was generally conceded that he was not merely superior to other representatives of Lear, but that in portraying the passions, sufferings, and insanity of the heartbroken old monarch he surpassed the wonderful efforts of George Frederic Cooke. This was certainly high praise, but, that it was deserved, the best critics were unanimous. Leigh Hunt, the celebrated English poet, gave as his decided opinion that Forrest's Lear was the best impersonation of the character that had ever, within his recollection, been given on the English stage. Of its special beauties, we might single out the fact that Forrest was the only actor who ever sought to depict the physical infirmity, as well as the irritability, of Lear, acting upon old age from the beginning to the end. As a piece of acting, also, it was entirely harmonious, and in this respect it differed from Cooke's. In certain points he perhaps displayed too much violence, and his rage was apt to fall into rant, but these faults were due in part to the tragedy itself. In the scene where Lear gives voice to that most pathetic utterance,

"My wits began to fail,"

Forrest's genius seemed to rise above itself; his every movement was watched with the utmost in-

tensity; the house was spellbound, and in the midst of almost tomb-like silence these words were delivered:

"Come on, boy! how dost my boy? Art cold?  
I am cold myself."

Five of Edwin Forrest's most popular characterizations were Damon, Virginius, Coriolanus, and Richelieu, and Brutus in John Howard Payne's well-known tragedy. As Brutus, his delivery of the lines

"Nature must have her way;  
I will perform all that a Roman should;  
I cannot feel less than a father ought,"

was always highly effective, never failing to draw tears. As Damon, Forrest was equally great: his delicious fury, his desperation, his horror, his generosity, his self sacrifice, all were portrayed in the grandest manner. As Virginius the actor's massive figure and majestic bearing were shown to the fullest advantage; his picture of the Roman father was replete with powerful grace and freedom of style; the delicate touches of the parent were blended with the martial roughness of the warrior in the most exquisite manner. Few pieces of acting will be remembered with more genuine pleasure than this. In Coriolanus his Roman manhood was displayed, perhaps, to an even greater degree. Finally, as Richelieu some of the finest points of his genius were brought out in strong relief. There was magnetic grandeur in Forrest's assumption of the part that most actors have lacked.

A very amusing story is told of Forrest's power of acting, which may not be out of place here. On one occasion he was to personate a Roman warrior, and, at the rehearsals, he complained that the *supers*, who, in the drama, were supposed to attack him in a body, acted tamely. He forced the men to promise that they would fight lustily when the play was performed. On the evening of the first representation, the theatre was crowded, and everything went along smoothly until the arrival of the fighting-scene. Then, when the cue was given for the attack, the *supers* rushed upon Forrest in a body; one of them assumed a pugilistic attitude, and struck the Roman hero squarely upon the nose; another almost knocked him over by a blow from his boot; and the others were making ready to follow up this advantage. For a moment Forrest was too astounded to act. His eyes flashed, his breast heaved with rage. Sud-

denly he rushed upon his assailants. A few moments later, one *super* was seen sticking head-foremost in the base drum in the orchestra, four were having their wounds dressed in the green-room, and one, finding himself in the flies, rushed out upon the roof of the theatre, and shouted "Fire." We will not vouch for the truth of all of the story, although the London *Era* related it as a real occurrence. Our readers may exercise their judgment in the matter.

In "Hamlet," Forrest was not such a complete success as in some of his other rôles. His reading of the part was considered by many the best ever attempted in this country, but he did not *look* the melancholy Dane. Edwin Booth is, in all probability, the finest Hamlet that our country has produced. Yet this fact should not blind us to the many excellences of Forrest's portrayal. In many respects, his rendition and conception showed both the student and the artist. It is wrong to designate him as a mere physical actor. His appearance certainly gave rise to this assumption but his acting displayed intellectual supremacy. At the same time he could not be called an intellectual actor, as we now apply that term. He had studied Hamlet carefully at a very early age, and the conclusions he came to in regard to it were the results of long and serious reflection. He rejected the current notion which represents Hamlet's madness as pretended; but he showed that those very pretensions to insanity were a symptom of the disease. For him the young prince was a real man, and this conception was perfectly satisfactory to his audiences. In the scenes where Hamlet's madness seemed most apparent, Forrest rose to a pitch of ineffable grandeur; yet the general tone of his acting was partially devoid of the philosophical melancholy which has since charmed us in other renditions.

Forrest made his second appearance in England in February, 1845. On this occasion he was greeted with hisses and groans. His enemies, among others Macready and John Forster, had done their best to prejudice the English public against him, and they were successful. Yet he still had friends, not least of whom was the eminent critic, Douglas Jerrold, whose praise was as hearty as it was sincere.

In Richard III., and Macbeth, Forrest found two more characters with which he could enter into sympathy. His idea of the crooked-backed Richard

differed, in many points, from the traditional one; but his characterization was towering and bold. While he lessened the physical defects of Richard, he presented a conception that was eminently realistic. As Macbeth he was still more successful; this was one of his greatest parts. The English spoke of it as a masterly portraiture of the irresolute, ambitious, and guilty Thane, distinguished by those exquisite touches which mediocrity can never reach. The delivery of his portion of the dialogue in a whisper, after the murder was committed, was a bold and original thought, skillfully carried into execution.

The most lamentable period in Edwin Forrest's career was the month of May, 1849, when the riot in which he held, unfortunately, a prominent part, took place. We need not again go over this sad event, with which all Americans are familiar. Suffice it to say that it originated in the quarrel between Forrest and Macready, each actor being sustained by opposing factions. On the night of the 10th of May, 1849, a riot ended the performance at the Astor Place Opera House, which resulted in the death of thirty men. Neither actor had looked forward to this terrible slaughter and certainly Forrest could not be held in any way accountable. Macready had behaved injudiciously, but for more he was not responsible. In the words of another, let us add: "Peace to the memory of those who fell; let us not judge harshly of the dead."

We will pass over in silence that painful episode in Forrest's career known as "The Forrest Divorce Case." In this case both husband and wife accused each other of misconduct. A verdict, however, was given in favor of Mrs. Forrest, and, besides receiving an alimony of three thousand dollars a year, she was declared innocent by the jury. The trial ended in January, 1852, but its consequences remained with the principal sufferer until the end of his life.

In the month of September, 1855, Forrest appeared for the first time as Claude Melnotte, in Bulwer's "Lady of Lyons." The occasion was memorable, for the cast composed another great name which is now held in as high esteem as that of Forrest: Charlotte Cushman. The performance was an admirable one, although no one dreamed that Forrest could play Claude Melnotte. Speaking of this performance, a critic says: "We have witnessed the representation of this play in almost

every city of the Union, . . . but never saw any one to approach the Claude of Mr. Forrest."

In the year 1860 Forrest accepted a very liberal offer from Mr. J. M. Nixon, to perform one hundred nights in the principal cities of the Union. In 1861 and 1863 he played two engagements in Philadelphia. All of these engagements were immensely successful, and greatly enhanced the actor's reputation throughout the world. Later on he visited California and different States of the West, and at every point won the most flattering triumphs. His last great engagement began in Philadelphia, at the Walnut Street Theatre, October 2d, 1871. From this date until the 18th of March, 1872, he acted in fifty-one different towns and cities, playing five nights out of the week. An enormous amount of energy was required in order not to break down under such a strain. Forrest himself once laughingly remarked: "Why, I part with more vitality in one performance of Lear than would keep an alderman alive for a lustrum." On another occasion these suggestive words, at once grave and touching: "I have wept more over the wrongs of Lear and Othello, within the last ten years, than I have ever wept before in my life." The last appearance of Edwin Forrest before the public was as a reader, and took place in Boston, Saturday, December 7th, 1872.

The writer of the present article bears in pleasant remembrance a visit he once paid to Mr. Forrest, many years ago, in company with an intimate friend of that gentleman, Mr. John Russell Young, the eminent journalist. It was a Sunday evening in autumn, and the old mansion, which is now the Forrest Home, stood drear and still in the moonlight and the mist. The stalwart tragedian himself opened the door, and conducted his visitors into the long, wide drawing-room. Owing to some reason the gas was not lit and the large apartment remained but dimly illumined by a solitary lamp. Standing as it did, however, upon an antique carved desk near to Mr. Forrest, it served to project his massive features upon the gloom, until they glowed there like a vast rich cameo. Here, beneath the inspiration of a bottle of champagne enshrined in cobwebs, Mr. Forrest gave the results of his memory full flow, and poured the rich music of his voice through the silence of our young and enthusiastic attention. Much that he then said has of course passed from his visitors' memory,

obliterated by the thousands of other records made by the furrowing years. Yet there was one criticism made by him which sank indelibly. It was with reference to Miss Bateman, who at that time was creating her first great mature success as Leah. While not denying that the young actress possessed talent he thought that the good phases were spoiled by the bad. He disliked her interpretation of the scene where she is accused of receiving money. He declared that her intonations where she exclaimed, "Money? What money!" were the furthest possible removed from tragic intensity, and reminded him of nothing so much as a fishmonger haggling over a price. This was the only remark approaching severity that passed his lips. Much of his discourse had reference to his ideals of a play based on the character of Cromwell, a theme admirably suited to furnish a powerful drama. No satisfactory drama on that subject had ever been constructed for him, and he expressed himself anxious to possess one.

The concluding events of Mr. Forrest's life are so recent and so well known that they need scarcely be dwelt upon here. He had hosts of admirers, but very few bosom friends, and these clung to him with pertinacity. Among the most faithful, the most unwaveringly enthusiastic of them, was Mr. John W. Forney, who never ignored any proper occasion to do public or private homage

to the great actor's genius and personal worth. Still, the last years of the American tragedian's life were as lonely as they were sad. The love of the stage flowed through his soul as passionately as the red river of his life surged through his body; yet, as the years rolled by he was compelled to witness his popularity depart, like some mocking phantom, and he whose mere name was once sufficient to crowd the precincts of a ticket office till thoroughfares became impassable, played night after night to a new generation that did not know how to appreciate him. Finally he took up readings, feeling heavily, perhaps, that the rostrum is to the stage but as "moonlight unto sunlight, and as water unto wine." But the paralysis which had crept into his popularity crept also into his physique, and in his final months nothing was left of those robust and virile methods of interpretation which had been so eminently his own save that wondrous instrument, his voice, which was a genius in itself. His sudden and solitary death took place December 12, 1872, and four days after his remains were deposited in a vault of the old graveyard attached to St. Paul's Church. A New York critic said that he was a giant encumbered with an atom of genius. This was a mistake. His genius was a giant which his wonderful physique asserted into superb, adequate, and picturesque expressions.

## SOME FORGOTTEN ARCTIC EXPLORERS.

BY THOMAS A. JANVIER.

If the old chroniclers are to be believed—and as a rule they are not—King Arthur was the first Englishman who sailed any great distance into the Northern seas; and although it must be confessed that the testimony borne to his travels is scant in quantity and far from unexceptionable in quality, yet what there is is of the most decidedly thoroughgoing character cannot be denied. Take for instance the comparatively mild asseveration of the learned Doctor Galsfridus Monumetensis, who, in his "History of the Kings of England," Heidelberg edition of 1587, calmly writes: "In the year of Christ 817, King Arthur, in the second year of his reign, having subdued all parts of Ireland, sailed with his fleet into Iceland, and brought it, and the people thereof, under his sub-

jection. . . . The winter being spent, he returned to England, and, establishing his kingdom in perfect peace, he continued there for the space of twelve years." This is certainly assured, but Master Lombard, in his "Testimonie of the Right and Appendances of the Crowne of the Kingdome of Britaine," goes further, for, after stating that "Arthur, which was sometime the most renowned King of the Britaines, was a mightie and valiant man and a famous warriour," he most unblushingly affirms that "his Kingdome was too little for him, and his mind was not contented with it. He therefore valiantly subdued all Scantia, which is now called Norway, and all the Islands beyond Norway, to wit: Island [Iceland] and Greenland (which are appertaining unto Norway), Sweueland,

Ireland, Gotland, Denmarke, Semeland, Windland, Curland, Roe, Femeland, Wireland, Flanders, Cherrilland, Lapland, and all the other lands and Islands of the East sea, even unto Russia (in which Lapland he placed the Easterly bounds of his Brittish Empire), and many other Islands beyond Norway, even under the North Pole!" This is coming it rather strong, even for an old chronicler, and modern skepticism leads one to include the account thus given of Arthur's Alexandrian progress toward and "even under the North Pole" in the same category with those other accounts in which the new King figures in company with Excalibar and the Knights of the Round Table. Mr. Tennyson might make an idyl out of it, but it wouldn't do to put in anybody's history of England. In like manner must we refuse credit to the voyage of Malgo, "who succeeded Vortiporius, which was the goodliest man in person of all Britaine, a prince that expelled many tyrants," and who, according to the veracious Monumetensis, "also obtained the government of the whole Island of Britaine, and by most sharp batailles recovered to his Empire the five Islands of the Ocean sea which before had bene made tributaries by King Arthur, namely: Ireland, Iceland, Gotland, Orkney, Norway and Denmarke."

Relegating Arthur and Malgo to mendacious shades, with a long step up through the centuries we come to the first genuine Arctic exploring expedition, which set forth from England in the year 1360, under the command of Nicholas de Lynna, a Franciscan monk, and "an excellent Mathematician of Oxford." That this voyage really took place, and was made purely in the interest of science, there can be no doubt, for it is vouched for by excellent authorities. Mercator, in a note to his General Map, states that "the description of the Northern parts" has been obtained from one, James Cnoyen, who, while in Norway in the year 1364, received full information concerning the Northern lands and seas from an English priest, resident at the Norwegian court, who, in turn, had derived his knowledge direct from de Lynna, "a Franciscan monk who had transported himself towards the pole by his magical art, described all those places that he saw and took the height of them with his astrolabe!" Master John Dee, in his "Discourse of the Brittish Monarchie," writes: "Anno 1360 (that is to wit in the 34 yeere of the reigne of the triumphant

King Edward the third) a frier of Oxford, being a good Astronomer went in company with others to the most Northern islands of the world: and there leaving his company together, he travelled alone, and purposely described all the Northern islands, with the indrawing seas: and the record thereof at his return he delivered to the King of England." There is something very wierd in this description of how the Franciscan, amidst the awful solitude of the icy North, endeavored "alone" to penetrate the then as now mysterious region surrounding the pole, and it is greatly to be regretted that no record—save that adapted into Mercator's map—has survived of the discoveries made by this most remarkable man.

Whoever may first have thought that a northerly passage existed between the Atlantic and Pacific, Robert Thorne, a merchant of London, was the first Englishman, according to Hackluyt, to put that thought plainly into writing and endeavor to have such passage surveyed and laid out as a regular channel of trade. In the year 1527, being then resident in Lisbon, he addressed a memorial to Henry VIII., in which, after descanting upon the natural and praiseworthy desire felt by every good sovereign to extend the boundaries of his realm, he continued: "Now, I considering this your noble courage and desire, and also perceiving that your Grace may at your pleasure to your greater glory, by a godly meane, with little cost, perill or labour to your Grace or any of your subjects, amplifie and inrich this your said Realme, I know it is my bounden duetie to manifest this secret unto your Grace, which hitherto, as I suppose, hath been hid—which is that with a small number of ships there may be discovered divers New landes and Kingdomes, in the which without doubt your Grace shall winne perpetuall glory, and your subjects infinite profite. To which places there is left one way to discover, which is into the North: for that of the foure parts of the world, it seemeth that three parts are discovered by other Princes. . . . And now to declare something of the commoditie and utilitie of this Navigation and discoverie, it is very cleere and certaine that the Seas that commonly men say, without great danger, difficultie and perill, yet rather it is impossible to passe, that those same seas be navigable and without any such danger but that shippes may passe and have in them perpetuall cleernesse of the day without any darknesse of the night: which thing is a great commo-

ditie for the navigants, to see at all times round about them, as well the safegardes as dangers, and how great difference it is between the commodities and perills of others which leese the most part of every foure and twenty houres the said light, and goe in darknesse groping their way. I think there is none so ignorant but perceiveth this more plainly than it can be expressed." Then, after referring to the manner in which the "Spaniards and Portugals" had dared all dangers, that of darkness included, in pushing their discoveries over the southern portions of the earth, he continues: "Which considered it will seeme your Grace's subjects be without activitie or courage in leaving to do this glorious and noble enterprise. For they being past this little way which they named so dangerous (which maybe two or three leagues before they come to the Pole, and as much more after they passe the Pole) it is cleere that from thenceforth the seas and landes are as temperate as in these partes<sup>1</sup> and that there it may be at the will and pleasure of the mariners to choose whether they will saile by the coastes that be cold, temperate or hot. For they being past the Pole, it is plaine they may decline to what part they list." The memorial then gives a glowing account of the great pfofit and honor which will accrue to the British nation if the theme in it suggested is carried into effect: by reason of the time which will be saved in going to and returning from the countries upon the other side of the globe, and by reason of the new lands which will be discovered "situated betweene the Tropiques and under the Equinoctiall," wherein, without doubt, will be found "golde, precious stones, balmes, spices, and other things that we much esteeme most," and concludes: "By this it appeareth your Grace hath not onely a great advantage of the riches, but also your subjectes shall save travel halfe of the way which other doe, which is much about as aforesaid."

<sup>1</sup>It is not unworthy of note that the belief here stated concerning the mildness of the climate in summer at a short distance from the pole, resulting from the constant presence of the sun, found other advocates. The same theory is contained in Borne's "Regiment of the Sea" (published about 1577), and also by George Best—who sailed with Hakluyt and ought to have known better—in a work published about 1578 to prove all parts of the world habitable. It was not until the publication of Blandeville's "Treatise of Universal Maps" that the absurdity of the proposition was demonstrated.

At the same time that Thorne sent his memorial to Henry, he addressed a letter to Doctour Ley, or Leigh, the "Kings Lord ambassadour" at the Court of Charles V. of Spain, in which at great length he set forth the details of his plan of operations. So very long, indeed, was this epistle that he felt constrained to conclude it in these words: "In other men's letters that they write they crave pardon that at this present they write no larger; but I must finish asking pardon that at this present I write so largely." His earnestness of purpose is well shown by the following extract: "So I judge there is no lande uninhabitable nor Sea innavigable. If I should write the reason that presenteth this unto me, I should be too prolix, and it seemeth not requisite for this present matter. God knoweth that though by it I shoulde have no great interest, yet I have had, and still have no little mind of this businesse. So that if I had facultie to my will it shoulde be the first thing that I woulde understande, even to attempte, if our Seas Northwarde be navigable to the Pole or no."

Henry seems to have been much impressed with Master Thorne's suggestion, and acting in accordance with it, an exploring expedition was almost immediately sent into the north. Unfortunately but the barest mention of this voyage is made by contemporary chroniclers. Hall and Graston—both historians of the time—merely state that an expedition composed of "two shippes wherein were divers cunning men" set forth from out the Thames on the 20th day of May, 1527, but whether anything by it was discovered, or even whether it ever came back again, they omit to mention. Hackluyt, writing sixty years later, states that he "made great inquirie of such as by their yeeres and delight in navigation" might give him "any light to know who those cunning men should be which were the directors of the aforesaid voyage," but all that he could discover was that the expedition was commanded by a "canon of St. Paul's in London;" that one of the ships was called the "Dominus Vobiscum, which is a name likely to be given by a religious man of those days;" that "sailing very farre northwestward one of the ships was cast away as it entered into a dangerous gulphe, . . . whereupon the other ship shaping her course towards Cape Britton and the coast of Norumbega, and oftentimes putting their men on land to search the state of those unknown regions, returned home about the beginning of October, of

the yeere aforesaid." Hackluyt is very naturally and very justly angered because of the paucity of information to be had concerning this voyage, and he inveighs strongly against the negligence of the writers of those times, "who should have used more care in preserving the memories of the worthie acts of our nation."

It is very certain that no important discovery was made by the clerical navigator, and his failure to light upon the short cut to the Indies seems for a while to have dampened the national spirit of enterprise; at least to have put a temporary stopper upon voyages to the North. Some twenty years passed by before another fleet sailed away from England towards the pole, and this time the expedition was not a national but a private enterprise, being undertaken by "the Myserie and Companie of the Marchants adventurers for the discoverie of Regions, Dominions and Islands, and places Unknownen." Of this comprehensive corporation Sebastian Cabot was chairman—or, as they then styled that kind of thing, "Gouverneur"—and by him exceedingly minute instructions were drawn up for the guidance of the admiral of the fleet; instructions covering not only the matter of navigation, but also the matter of trading with any friendly nations that might be discovered, and of stealing from the ships—if any such they were lucky enough to encounter—belonging to a foe. The general course was to be northeast until the Pacific was reached, and all persons skilled in writing on the several vessels, were to record very exactly the incidents and discoveries made during the voyage, and the cosmographers were directed to draw careful maps of the various coasts by which they passed. It was also charged that morning and evening prayer should be held daily in each ship; that no "blaspheming of God, or detestable swearing be used; nor communication of ribaldrie, filthie tales or ungodlie talke be suffered;" that "neither diceing, carding, tabling nor other devilish games be frequented;" all this to avoid "provoking God's most just wrath and sworde of vengeance." It was further ordered that the "sicke, diseased, weake and visited persons"—if any there should be—should be carefully tended and nursed, and in case of one of the party dying his effects were to be taken in charge by the "chief Marchant" and held subject to the claim of his family on the return of the fleet to England. In short, the expedition was to be conducted on truly Christian principles, even down to following out St.

Paul's injunction to be "all things to all men." One of the clauses commanded: "Item: disclose to any nation the state of our voyage, but to passe it over in silence, without any mention of it, seeming to beare with such lazarous rites as the place hath where you shall be." In other words: If a good trade can be got by going in and bowing down in the house of idols, by all means go and bow!

On the 10th of May, 1553, the fleet, consisting of the Admiral ship *Bona Speranza*, the *Bonaventure*, and the *Confidentia*, under command of Sir Hugh Willoughby, Knt., sailed from Ratcliffe, and after sailing slowly along the coast, stopping at a half dozen havens to take advantage of favorable winds, finally got away to sea on the 2d of June. All went well until the 2d of July, when, being then off Finmarke, certain "whirlwinds" struck the squadron, driving them apart and separating the *Edward Bonaventura* from the fleet. The *Bona Speranza* and the *Confidentia* however, held together, and on the 23d of July a "Lowe land" was descried along which they coasted for several days, and finally, on the 2d of September—"the *Confidentia* being so full with bilge water and stocked"—they came to anchor in a haven running in from the sea about two leagues. In his journal Sir Hugh Willoughby writes: "Thus, remaining in this haven the space of three weekes, seeing the yeere farre spent, and the weather evill wether, as frost, snow and haile as it had beene the deepe of winter, we thought it best to winter there," and the journal concludes with a statement that three parties were sent ashore in different directions into the land, and each and all returned without discovering any people or any similitude of habitation." "Thus, from all of their kind, far away in the bleakness of the cold and darkness of an Arctic winter, came down upon the brave Sir Hugh Willoughby and his gallant men."

Three years passed by before anything was heard in England touching the fate of this poor expedition, and then the news came that the *Confidentia* of the Mocovie Companie had received intelligence that certain fishermen in Lapland had discovered two great ships, of which the crews were all dead, in a haven within their coasts. The ships were the *Bona Speranza* and *Confidentia*—every man on board them had perished with cold. In the journal of the sadly misnamed *Bona Speranza*, written in Sir Hugh's own hand,

the foregoing extracts are taken; the last being September 18, 1553.

Henrie Lane, writing to the worshipfull William Sanderson in 1586, says: "This [1553] the two shippes with the deade of Sir Hugh Willoughby and his people unto by Master Killingworth," and he is evident satisfaction that "much of the victuals were saved!" The ships themselves, with their entire crews, were lost on the new voyage.

With the main body of the expedition thus perished, "the Myserie and Companie of Merchants adventurers" did not lose money or investment, for the remaining ship of the *the Edward Bonaventure*, commanded by Chanceler, Pilot-Major of the Fleet, was a very considerable success, brought in victuals, and opened a new and very satisfactory line of trade. After the storm which the ships had subsided, Chanceler and his crew were not a little troubled with cogitations and perturbations of minde in respect of the future course," but they finally settled the matter by agreeing to continue onward towards the unknown part of the world" for which they had originally set out from England. On this voyage they sailed so far as to come at last to a place where they "founde no night at all, but a continual light and brightnesse of the Sunne shined clearly upon the huge and mightie Sea. By the benefit of this perpetuall light for many dayes, at the length it pleased God to bring them in a certaine great Bay, which was of many hundred miles, or thereabouts, over. Wherein they landed, and somewhat farre within it cast anchor. From fishermen who came out to the shore they learned that the country which they had discovered was called "Russia or Moscovie, and that Vasilwich (which was at that time their name) ruled and governed farre and wide places."

The remainder of Master Chanceler's discovery was enterprised on land, he having entered the country and visited "Mosco, the chiefe Citie of the Ingdom, and of the Emperor thereof," but his journeyings did not trend towards the north of the arctic circle, any account of which could here be out of place. In fact Master Chanceler's journal is somewhat prolix, and his observations were made not wholly with judgment: as

may be inferred from the fact that he devotes considerable space to explaining that the Moscovits "use to ride with short styrrups;" that their "women paint their faces;" that "theyr moonks are marchants;" that they have "no lawyers, but every man is his owne lawyer," and describes at length "theyr ridiculous manner of marriage."

The result of the discovery of this rich country was of course an ample reward for the expense incurred by the merchants who had fitted out the expedition, and immediately upon Chanceler's return to England (1554) bringing with him the goods obtained in exchange for those which he had carried with him for barter, the Moscovie Companie was founded for the purpose of establishing a regular trade with Russia, and thenceforth there was a constant departure of ships to the north. The Pilot-Major had certainly missed his fire on a Northeast passage, but everybody seems to have been too well pleased with the result of his voyaging to twit him with having failed to achieve what he set out to accomplish. It was pretty well understood in those days among gentlemen adventurers that, while it was well enough to have some definite objective point advertised for each expedition that sailed away to sea, the real objective point was simply any place where money could be made: and if a fleet came home with plenty of treasure, no questions were asked as to whether said treasure had been obtained by the exercise of prudent premeditation, or whether it had been hit upon by mere blind luck: to ask whether it had been gained in lawful trade or unlawful thievings, never so much as crossed anybody's mind!

Satisfied with what had been attained, it was not until 1556 that any attempt was made toward fresh discoveries in the north. On the 23d of April in that year the pinnace *Serchethrift*, Stephen Burrough master, dropped down with the tide from Ratcliffe to Blackewall and after floating about from one port to another—as seems to have been the established custom among these ancient navigants—finally, on the 30th, got away to sea. The voyage to Norway was uneventful, and on the 7th of June the *Serchethrift* sailed out from Corpus Christi bay, and stood to the northward in search of new lands.

On Thursday the 10th, being then well up along the Russian coast, Captain Burrough sent one of his boats ashore, "she being leake and weake," to

be repaired by "the carpenter and three men more to helpe him," rough weather came on and it was not until Sunday that the party could get back to the ship. Their experience, meanwhile, was far from pleasing, for "all that time they were without provisions or victuals, but onely a little bread, which they spent by Thursday at night, thinking to have come aboard when they had listed, but wind and weather denied them: insomuch that they were faine to eate grasse and such weedes as they could finde then above ground, but fresh water they had plentie, but the meate with some of them could scant frame by reason of their queazie stomackes!" The storm also endangered the ship, for "from Thursday at afternoone untill Sunday in the morning, the barke did ride such a roade sted that it was to be marvelled, without the helpe of God, howe she was able to abide it."

This peril passed, the Serchethrift bore to the north during the remainder of June, being accompanied during the greater part of the time by a friendly Russian named Gabriel, who—leading with his own vessel—acted the part of coast pilot. On the 21st of July, having then reached the 68th degree of north latitude, heavy ice was encountered, which rapidly closed around the ship and rendered navigation extremely dangerous. "Within a little more than half an hour after we first saw this yce," writes Burrough, "we were inclosed within it before we were aware of it, which was a fearefull sight to see: for, for the space of five houres, it was as much as we could do to keep our shippe aloofe from one heape of yce and bear roomer from another, with as much winde as we might beare a coarse." For several days this unpleasant state of affairs continued, and then the ice broke up and drifted to the southward. But scarcely had the ice disappeared when another trouble came upon them, for "on St. James his day the shippes companie was thrown into a state of mortal terror by reason of a monstrous whale, so near to our side that we might have thrust a sword or any other weapon into him." Thrusting weapons into him seems to have been about the last thing that they thought of at the time, for after much "musing" as to what manner of attack would be most like to free them from the danger, Burrough struck upon the original plan of assailing the enemy with the proverbial three hearty British cheers! Says he: "I called my companie to gether and all of us showted, and with the cry that we made he de-

parted from us. . . . God be thanked, quietly delivered of him!"

Off Nova Zembla, on the 28th, the Serchethrift fell in with a Russian vessel commanded by a gentleman bearing the pleasing name of I. Loshake came aboard, and—with other information—acquainted Burrough with the fact that "in this Nova Zembla is the highest mountain in the world." The Englishman evidently thought that his Russian friend was rather pushing for he gravely adds: "but I saw it not,"—in vision which is scarcely, under the circumstances, to be wondered at. The day before this encounter took place the expedition reached its northern limit, having on that day, July 28th, attained to 70° 42" of north latitude. There was nothing at this time to prevent them from continuing their northerly course, but Master Burrough was a prudent man, and reflecting that the season being far advanced, while there was still trouble in getting in, there might be a worse deal in getting out, he gave the order to put about and from this time the prow of the Serchethrift pointed southwards. The wisdom of this was soon rendered manifest, for on the night of the 1st of August there was a "cruell storme" of wind and rain which continued throughout the day, and during the remainder of the month storms were frequent.

On Monday, the 3d, Burrough again encountered his quondam acquaintance, Loshake, and that worthy accompanied him ashore "to the heape of the Samoyds," and there pointed out to him the heape of the Samoyds' idols, which were in number above 300, the worst, and the most unworkmanlike that ever I saw; the eyes and mouths of sundry of them were bloody, they had the faces of men, women and children very grossly painted, and that which they had made for other purposes was also sprinkled with blood. Some of them were an olde sticke with two or three blades made with a knife in it." With heathenish blindness was so profound as to permit him to look down to such extremely mean specimens of art and stone as these, good Master Burrough showed patience, and he therefore departed from the coast with all possible expedition; his departure being somewhat hastened by extraneous circumstances, for he states that "on Wednesday a terrible heape of yce approach neere us, therefore we thought good with all speed

to depart from thence: and so I returned to the "westwards againe" On the 7th another "cruell storme" was encountered, which continued for two days, and on the 19th they got into a regular hurricane, "the like of which we have not seen since we came out of England." So fierce was the gale that it seems to have been about an even thing whether the poor Serchethrift would ever get into port again, for Burrough writes: "It was wonderful that our barke was able to brooke such monstrous and terrible seas," and he adds that "without the great helpe of God, who never faileth them at need that put their sure trust in him, we would never againe have seen the lande."

And now, the 23d of August, as "the nightes waxed darke, and the winter began to draw on with his stormes," the course was shaped for Colangro—where the vessel was to winter<sup>1</sup>—and "the Lord sending a little gale of winde at South," good way was made toward that port, where on the 11th of September the stout little pinnace dropped her anchor, and her crew were at rest!

<sup>1</sup> The next spring—May 23, 1557—the Serchethrift was despatched in search of the missing ships belonging to Sir Hugh Willoughby's ill-fated expedition that left England in 1553; but, as has been previously stated, these vessels were discovered in 1556, and were sent home by Master Killingworth, agent of the Moscovie Companie at Mosco; so the voyage of the Serchethrift was abortive.

There is no lack of material to continue this article indefinitely, but prudence bids me cease; for in these latter days when the world has so many live heroes that it does not know what to do with them all, it is perhaps indiscreet to unearth those of a bygone age and demand for them fresh homage; and it is certainly indiscreet to unduly, or at intemperate length urge forward their claims. God rest them, those brave old sailors who so well wrought out their allotted tasks three centuries ago; who so fearlessly voyaged to the very ends of the earth in cockle-shell boats that a modern navigator would be afraid to cross a mill pond in; who dared dangers and overcame difficulties from which the bravest and stoutest might well have shrunk back in fear, and who, in almost every scheme in which they engaged finally conquered by that sheer main strength and indomitable pluck which seem to be every Englishman's inalienable birthright. In our day it is all but impossible to appreciate their daring. Faithful below they did their duty to their country, their king, and their God, and if there is such a thing as justification by works, surely they, at least, will

—find pleasant weather  
When He, who all commands,  
Shall give, to call Life's crew together,  
The word to pipe all hands!

## LAVENDER.

How prone we are to hide and hoard  
Each little token love has stored,  
To tell of happy hours:  
We lay aside with tender care  
A tattered book, a curl of hair,  
A bunch of faded flowers.

When Death has led with pulseless hand  
Our darlings to the silent land,  
Awhile we sit bereft.  
But time goes on; anon we rise,  
Our dead being buried from our eyes,  
We gather what is left.

The books they loved, the songs they sang,  
The little flute whose music rang  
So cheerily of old:  
The pictures we have watched them paint,  
The last plucked flower, with odor faint,  
That fell from fingers cold.

We smooth, and fold with reverent care  
The robes they, living, used to wear;  
And painful pulses stir,  
As over the relics of our dead,  
With bitter rain of tears, we spread  
Pale purple lavender.

And when we come in after years,  
With only tender April tears  
On cheeks once white with care,  
To look at treasures put away  
Despairing on that far-off day,  
A subtle scent is there.

Dew-wet and fresh we gathered them,  
These fragrant flowers,—now every stem  
Is bare of all its bloom.  
Tear-wet and sweet we strewed them here,  
To lend our relics sacred, dear,  
Their beautiful perfume.

That scent abides on book and lute,  
On curl, and flower, and, with its mute  
But eloquent appeal,  
It wins from us a deeper sob  
For our lost dead—a sharper throb  
Than we are wont to feel.

It whispers of the long ago,  
Its love, its loss, its aching woe,  
And buried sorrows stir;  
And tears like those we shed of old  
Roll down our cheeks as we behold  
Our faded lavender.

## ARCHITECTURAL PROGRESS, AS SEEN IN THE RELIGIOUS EDIFICES OF THE WORLD.

BY REV. WILLIAM BLACKWOOD, D.D., LL.D.

### II. GREEK ARCHITECTURE.

A TRAVELLER who would suddenly pass from a court or an inner cloister of an Egyptian, to the front of a Greek temple, would find that he had

ANCIENT GREEK MASONRY.

left sombre gloom, heavy massive members and quaint strange figures behind him, to gaze on a structure which was complete in the unity of its design, harmonious in the arrangement of its details, while the whole appealed to the spectator as an ideal of purity and beauty. The architecture of Greece, which reached its perfection in her temples, has extended over every land that was affected by Greek civilization, and it has continued to influence society in modern times wherever taste and culture prevail.

Before entering on a detailed description of the several styles which prevailed in Greece, it may be observed that as the darkness and mystery of Egyptian art have found their prototype in the cavern, and the forms of Chinese buildings can be traced to the tent of the Tartar, so Greek art has been traced to its origin in the rude and simple hut.

Among the cultivators of the soil a shelter from the elements was needed, and the process was as easy as it was obvious to drive stakes or the boles of trees into the ground to sustain the roof, and thus the origin of the column is determined; the beam resting on the heads of the columns became the architrave, while the capital was introduced in the form of a flat surface on the heads of the columns to form a bed for the crossbeam to rest on.

The base would naturally be introduced as a means of elevating the column so as to save it from the dampness of the soil. The joist of the roof rested on the architrave, the frieze being the space which they occupied in height; and as taste prevailed the ends of the joists were ornamented and called triglyphs or channels. For a considerable time the spaces between the rafters were left open, but afterwards they were filled up. The inclination of the rafters made the pediment or apex of the

LATER, THOUGH ANCIENT, GREEK MASONRY.

gable, and the elevation of the pediment was determined by the slope of the roof, which was usually low in consequence of the infrequency of rain in the fine climate of Greece.

It is difficult to fix the exact period when architecture in Greece may be said to have reached the condition of art. In fact it is impossible to do so now, as it is evident that every department of art is perfected by slow degrees; and many must have toiled in Greece as builders before the minds of

workmen began to recognize the forms and members of edifices which were worthy of adoption, and which in time became stereotyped into a particular style. Even in the time of Homer, the builders of his age had not adopted a uniformity of style. With Homer, style is not so much a matter of importance as material and magnitude, for he attaches far more importance to the polished stones of the palace of Alcibiades than he does to its style or form. Little is known of the buildings of this early period, the principal remains being circular walls round the sites of primitive towns and houses, showing a regular arrangement of stones known as Cyclopean. These remains may still be seen in Greece, in Southern Italy and

in Sicily, as the Greeks carried their habits with them into their different colonies. In these buildings the stones are not laid in courses, but in their natural shapes they are piled on each other, and by means of smaller stones the interstices are filled up so that the wall presents a regularly composed external surface. A later style may be seen in which courses have been adopted, but in both

these periods there is an absence of mortar, and the antiquity of both is obvious to all spectators, as their rudeness indicates the work of an early age. The Doric order was doubtless the earliest of the Greek styles, but no reliable testimony can be found that will settle the period of its adoption.

THE ACROPOLIS OF ATHENS.

It has been held that at an early age an influence from Mesopotamia had reached Greece, and as a result, an Eastern mode of ornamentation began to extend; but on the settlement of the Dorians, who brought with them a refined and critical taste, the elaboration of the East gave way to the chaste simplicity and grandeur subsequently developed in the Doric style. The name has led some to enter-

tain the belief that it was invented by Dorus, the son of Helen and king of Achaia and Peloponnesus, but the coincidence of the names does not settle the matter. It has been traced to the temple which this prince built at Argos to the goddess Juno, but it is probable that the example of the Dorians in holding to this style affected other parts of Greece, and that in consequence of its great simplicity and the striking harmony of its parts it rapidly spread among the founders of the temples which were erected in other parts of Greece. The earliest remains in this style are at Corinth, and the only difference between the structures of the primitive and the later builders is to be found in the proportion of the members, the columns in the older edifices being only four times their diameter in height.

It is almost certain that the Doric attained to the condition of a style before the Ionic was perfected. It has never been settled, and cannot now be determined whether the Ionic style originated in Greece and was carried over the Aegean into Asia, or among the Ionians themselves. At any rate it is certain that in Ionia it assumed a form of delicacy and beauty which formed a marked contrast with the heavier and sterner Doric; and it is no wonder that among the Greeks, to whom beauty of form

A DORIC CAPITAL.

adopted in Greece. The third style, that Corinthian, is traced to Callimachus, who to have introduced the leaves of the acanthus into the capital, and thus produced the luxurious of that order. The tale is well known which records the adoption of this florid style by Callimachus. A nurse who mourned over the death of a young girl, had carried a number of tiles to her grave in a basket which she covered with a tile. The basket had been placed on an acanthus plant which grew up, the leaves expanding fully, and those at the corners of the tile entered it in the form of "volutes," thus presenting an object of rare beauty. The appearance of the basket and the leaves suggested to Callimachus the idea of a graceful capital, which he adopted as it was at Corinth that the incident occurred, and the style thus completed took its name from the city. Unfortunately this somewhat graceful capital has no foundation in fact.

AN EARLIER CORINTHIAN CAPITAL.

HALVES OF IONIC CAPITALS.

and grace appealed with great power, this style of it, originated in Ionia, should have speedily been

the idea of a graceful capital, which he adopted as it was at Corinth that the incident occurred, and the style thus completed took its name from the city. Unfortunately this somewhat graceful capital has no foundation in fact.

Before proceeding farther it may be well to draw the attention of the non-architectural reader to an accompanying ground plan (page 180) which will show the usual forms of Greek temple and the position of the columns in the different styles, and the scientific terms by which they were known.

A temple in *Antis* had two columns at each entrance end, while the ends of the flanking colonnade terminated on a line with the columns, and the pediment or apex of the gable was supported on them. The *Monopteral* building had

chamber, and but one row of columns, whether the building was circular or not. In the *Prostyle*

life, and the monuments which aggrandized the State, were evidences of the greatness of the individual. On the other hand, in modern times, society aims at the welfare of the individual and the family. In Egypt and in Greece families and individuals lived for the State, and

A FLORID CORINTHIAN CAPITAL.

form, the columns of the portico stood in advance of the building, while the *Amphi-Prostyle* had columns at each end, but not at the sides. In the *Dipteral* form a double row of columns ran across each end and along the sides, while the *Pseudo-Dipteral* wanted the inner row of columns. The *Peripteral* had an inner cell and a range of columns all around, while the *Hypæthral* was *Dipteral* as to the columns, but there was no roof over the cell or inner chamber.

The beginning of the sixth century before Christ has been recognized as the period when the Doric and Ionic orders were fully developed, and many buildings were erected about this time, among the most important being the temples of Olympic Zeus or Jupiter at Athens, of Apollo at Delphi, both being of the Doric order, and the temple of Diana at Ephesus, in the Ionic style. Temples were raised in the different States of Greece in great numbers during this period, and the little republics vied with each other in their efforts to display their culture and their wealth. No efforts were spared to provide adequate means for erecting these costly monuments, for the condition of society then was such that all the people lived for the support and glory of the national

hence it has come to pass that the national monuments of both lands yet remain, though in ruin, to attest their former magnificence; while of the habitations of the citizen not even a fragment remains. Rulers, artists and priests combined to extend the enthusiasm of the people, which spread to the islands in the Ægean sea, and extended to all the towns and cities in Asia, as well as to the Greek colonies in lower Italy and Sicily.

CORINTHIAN COLUMNS, STILL STANDING AT EPHEBUS.

In these lands some of the most famous of all the structures of that age still remain. Pæstum in Southern Italy was founded five hundred years B.C., and shortly after the building of the city the vast temples were commenced which still remain, though considerably dilapidated, and which attest the boldness of design, the command of enormous resources, and the advanced culture

of the people who erected these great structures. At Pæstum (originally Posidonia, now Pesto), which lies in a plain adjoining the Gulf of Salerno, on the west coast, the remains of the great Doric temples still form the chief attraction to the educated traveller, after leaving Naples and Vesuvius. One of these, dedicated to Neptune, is a *hypæthral* building about two hundred feet long by eighty feet broad. Architecturally it is described as *hexastyle* and *peripteral*, having fourteen columns on each side, and six on each end. In the thickness of the wall which separates the inner portico from the body of the temple are steps which lead to the roof. The roof extends along two sides of the building, the centre being open or *hypæthral*, and the roofs on either side form a gallery and a roof. Thus,

at the height of the level of the walls is a gallery running along the two sides of the building, and supported by columns placed eight feet from the walls. Above this gallery is another set of columns reaching up to the highest point of the sloping roof. Another temple remains, which is *hexastyle* and *peripteral*, having thirteen columns on each flank. It is over one hundred feet long by about fifty feet wide, the columns being somewhat more than four feet in diameter and about twenty feet high. Another structure remains, the walls being gone; but a basement of one hundred and eighty feet long by eighty feet broad, showing that Doric columns ran along the

front, and that eighteen stood on each side, has led to the conclusion that that the edifice was a colonnade, roofed over, but open on either side. The greatness of Pæstum may be judged by these ruins. While, as Eustace, in his "Classical Tour," has said, in allusion to the city, its walls, and the scene around, "within these walls that once encircled a populous and splendid city, now rise one cot-

tage, two farm-houses, a villa and a church. The remaining space is covered with thick matted grass, overgrown with brambles spreading over the ruins or buried under yellow undulating corn. A few rose-bushes flourish neglected here and there and still blossom twice a year, in May and December, as if to support their ancient fame, and justify the descriptions of the poets. Amid these objects and scenes, rural and ordinary, rise the three temples, like the mausoleum of the ruined city, dark, silent and majestic." That the Greek colony in southern Italy had erected such edifices as these is an ample demonstration of the fact that their civilization had attained a wonderful degree of culture, of wealth, and of public spirit; and yet, imposing as these temples were, they yield to others that the Greeks in

PLANS OF GREEK TEMPLES.

Sicily had raised in several of their settlements. At Agrigentum, on the Southern coast, the fragments of walls and works in the basement remain of a temple which was undoubtedly one of the most imposing that even the magnificence and energy of antiquity had aimed at founding. Descriptions of the temple exist, and from these and from the researches of modern architects it is known that this building was about three hundred and seventy feet in length, a hundred and eight in breadth, and a hundred and twenty in height to the top of the portico, while the columns were upwards of sixty feet high. It was a Doric *after* temple; that is, the columns on the flank had the

spaces between them filled in with walls, and this was done, no doubt, because the spaces between the columns being thirty feet, no stones could be found long enough to reach from column to column to form an architrave. The columns were of the enormous diameter of thirteen feet, and about half of their thickness projected out of the wall. The stones used for the capitals were twenty tons in weight, and on the inside of the walls were

TEMPLE OF MINERVA, AT CORINTH.

pillars or pilasters twelve feet broad, corresponding in place with the pillars outside. Internally the area was divided into three parallel longitudinal divisions, resembling the nave and aisles of a Gothic church, the central division being loftier than the nave of St. Paul's Cathedral

TEMPLE OF JUPITER (RESTORED) AT AEGINA.

In London. Right and left on the walls of this temple were sculptured figures twenty-five feet high,

and they supported another massive entablature at the height of a hundred and ten feet from the

ground. Such were the leading features of this temple erected by a people who were said to have "built as if they were to live forever, and who feasted as if they were to die on the morrow." Elsewhere in Sicily a similar loftiness of conception and affluence of means enabled the Greeks to vie with the inhabitants of Agrigentum. Thus, at Selinus, on the south coast, the remains of a temple supposed to have been dedicated to Jupiter Olympus, are of gigantic proportions. Three temples appear to have been erected on the hill on which this vast structure stood. The length was about three hundred and thirty feet, the breadth about one hundred and sixty-five feet, and it had seventeen columns on each flank, the style being Doric and hypæthral or open to the air in the roof.

Turning to Greece proper, it is well known that art attained the summit of its perfection after the close of the Persian war. When peace had been established, the necessity of rebuilding Athens became obvious, and thus moral and social causes combined to produce the number of splendid temples and other edifices which at Athens and elsewhere were erected. Liberty, love of country, and ambition, had raised Athens to be an acknow-

ledged centre of art, and thus after the repulse of Xerxes and the victory of Themistocles a general restoration of destroyed monuments began, which was continued until architecture, sculpture, and

the size of this memorable temple, the noblest monument of Greek art, and which has ever been accepted as the most perfect in this style. During this period the Ionian

TEMPLE OF NEPTUNE, PÆSTUM.

painting reached a perfection of form and beauty which had never been attained in any former age. To Pericles the Athenians were indebted for the temple of Pallas, on the Acropolis, and a gate called the Propylæa, which led to the Citadel. Much as had been done to reduce the Doric to perfection, it has been universally acknowledged that the Parthenon which, under Pericles, was erected by Ictinus and Callicrates, and adorned by the sculptures of Phidias, excels all former efforts of Greek art. It was about 228 feet long by 102 feet broad, and sixty-six feet high, having eight columns on the peristyle, and seventeen on each flank, the columns being six feet two inches at the base, and thirty-four feet high. Such was

found only in the interior of the Parthenon temple on the Ilyssus, and in the Erechtheion structure which is a union of the styles, in one of which caryatids were introduced instead of columns.

From the time of Alexander the Great until the subjugation of Greece, the three styles of Greek art continued to prevail, but the Corinthian was usually adopted in small edifices. In the Doric style, the proportions of the columns often varied. In the Ionic, the height of the shaft rose to six diameters at the base. In the Corinthian, the entire column, including the base, shaft, and capital, was about nine diameters in height. In the Corinthian column, the base taking up

PERICLES.

of a diameter, the capital a diameter and a third, thus leaving the shaft to be rather more than eight diameters in height. The volutes and the slender columns of the Ionic with its graceful entablature made the style much lighter than the Doric, while the leafy capital and lofty shaft of the Corinthian produced a richness of effect that, in after ages, was much sought after on the structures of the

were the Thesion, the Parthenon, and the Propylæum, in the Doric style; the Erechtheion, Panops, and Nike Apteros, in the Ionic order, and the temple of Jupiter Olympus, in the Corinthian style; at Eleusis, the Ceres and Propylæum, both Doric, another temple in the same style at Thoricus, and two, also dedicated to Nemesis, at Rhamnus. Olympia, Bassæ, Tegea, and Nemea had each a

THE PARTHENON AT ATHENS.

Roman period. In Greece proper, the edifices in the Corinthian order were usually smaller than those in the Doric and Ionic forms, but in monumental structures and buildings where great delicacy of the parts was required, such as the monument of Lysicrates at Athens, the Corinthian was adopted.

Our space forbids an attempt to enter on details in describing even the most important temples which adorned the lands affected by the spirit of Greece. An enumeration of the leading structures and an intimation of their localities and their styles must suffice. In Greece proper, and at Athens,

splendid Doric structure. Doric prevailed in Italy and Sicily in the great edifices erected at Pæstum, Agrigentum, Segeste, Selinus, and Syracuse. In Asia Minor the Ionic was adopted in the temples of Diana at Ephesus, Apollo at Miletus, Diana at Magnesia, Minerva Polias at Priene, Bacchus at Teos, and Juno at Samos.

Greek temples require an elevated site to bring out the peculiar effect of their style. Placed on an eminence, their peculiar beauty stands out as the spectator contemplates the columns having the obvious purpose of sustaining the architrave and the roof, while all the parts combine to make up a

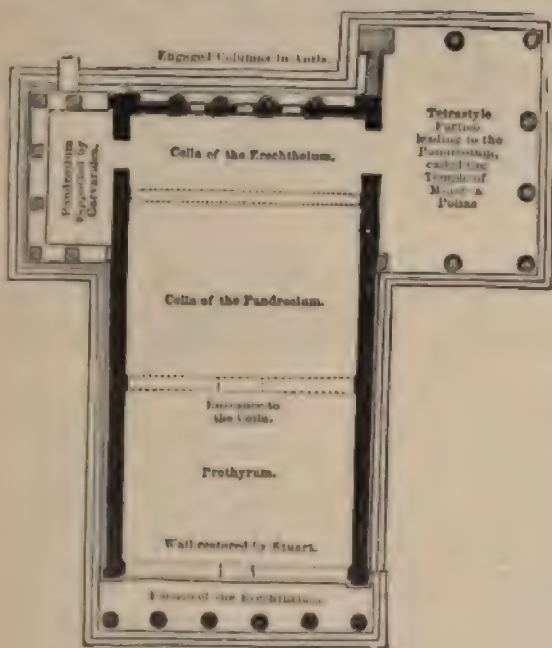

unit. Horizontalism, low pediments, columns near to each other, and a heavy entablature are Grecian characteristics which require elevation to bring out the effect of the edifice. In Greek temples the columns must be near each other because the size of stones to form the entablature can never be very long, and in this respect the Greek can never reach the width between columns that the arch enabled the Gothic architects to display. Simplicity of form and unity of the parts of Greek structures have always appealed to the cultivated mind as an ideal of beauty; while elevation, the upward range of the members, magnitude to any extent, solemnity and reverential awe, combined with great diversity, constitute the peculiar characteristics of the medieval style which yet remains to be described.

It is not to be overlooked if the reader would form a correct idea of Greek art, that foreign conceptions and ideas derived from external sources were never permitted to influence their great architects. The relation and harmony of the parts, size, ornaments, all were essentially Greek, and thus there was a blending together of details which

Scale of Feet.

PLAN OF THE ERECHTHEION AT ATHENS.

produced a unity that secured a perfect plan. In Greek buildings construction was of stone for all the parts. Great magnitude was not so much aimed at as beauty of form and harmony of proportion. Much of the effectiveness of the Greek temple was produced by carrying out a principle which was directly the reverse of that which gives character and power to the Pointed Architecture of the Christian ages. The Greek temple had no windows, and the spectators looked on a dead wall behind the range of the columns which bore up the architrave and the low sloping roof. Behind the capitals, and underneath the architrave, there was an incipient shade, caused by the distance between the columns and the cella or temple house; and thus there was an idea of seclusion and separation, and a feeling of sanctity produced touching the

THE ERECHTHEIUM (RESTORED) AT ATHENS.

value of the god or the goddess that might be enshrined within. The introduction of windows into the walls would have marred the effect of the structure, and, although there was a door under the pediment, yet the size of the opening when contrasted with the mass of the edifice attracted little regard. As the entrances of Egyptian buildings were conspicuous by their form, so in any Greek buildings when openings were introduced for light, the lintels of the windows were shorter than the sills, thus causing the side lines to lean inwards from the perpendicular, a principle which also prevailed in the forms of doors. Then, again, in consequence of the range of the low pediment, and the fact that even the most imposing temples were not lofty, the full effect of the Greek idea could only be realized when the edifice crowned a lofty summit, and the spectator beheld it from below. Much of the power of the Parthenon on the Acropolis, at Athens, and of the great temple at Corinth, placed on a similar elevation, was owing to their peculiar site. Placed in a hollow, and looked at from above, the Greek temple, though never presenting the appearance of meanness, would have failed to elevate the conceptions of the multitude.

Columnar architecture affected all classes of Grecian building. Of course, such structures as the Stadium, the Theatre, the Odeum, and others required for public uses by the community, were affected in their forms by the objects for which they were designed. The Stadium for gymnastic exercises was oblong in form, and the Hippodrome for chariot races was similar, but on a more extended scale. The Theatre was usually semicircular, the seats of the audience rising behind each other and facing the stage on which the performers were placed. The Odeum was smaller than the Theatre, and, as it was intended for music, it was covered with a

roof for acoustic purposes. Usually the slope of a hill was chosen for their site, the object being to save in the construction of the seats, and to secure a pleasing view in the distance beyond the stage. Even tombs had columnar adornments, while the basilicas or the halls of justice, the gymnasia for bodily training and mental exercises were all supplied with porticos under which the people might rest and enjoy the shade.

CORINTHIAN ORNAMENTATION.  
From the Monument to Lysicrates at Athens.

## BOB CHERIOT, ESQ.; OR, THE TRAGEDY AT CHELMSFORD.

BY WARREN WALTERS.

I INVITED Robert Cheriote, Esq., to Chelmsford to pass Christmastide. Chelmsford was my father's home in Lancashire. Emma and Angelica were the reigning deities of the place. My dear mother was sleeping in the quiet kirkyard, and my father was one of those quiet old gentlemen whose peculiarities are indigenous to the English nation. Mrs. Rulison, governess to Frank and Gertie, was the only other person beside myself who dined at the family table. It was two years since my mother's death, and my sire wished to celebrate the holidays after the old fashion, and had invited a great number of people to the manor—old friends and schoolmates with their full complement of wives and daughters. I, of course, had my friends and my sisters theirs. A goodly crowd there was, too. I was glad of this change, for at times I detected a little morbidness in the genial composition of my father. Bob Cheriote was the one of all others I desired to see, as I had not met him for four or five years, and he had just returned from a tour in America. Bob was quite the best style of a fellow one would wish to meet with. He and I were of the same class in college, inseparable "in the cups," on the race-course, at the battle, and over the precious little intellectual oil we consumed. It makes me glow when I think of those by-gone days, and it seems as if every character made upon this paper ought to dance at the mere recollection. Bob had saved me from "the Jews," carried me home when wine had caused my walk and conversation to be anything but correct. Bob had saved me from an almost certain death. God bless him! Bob had proved the best-hearted, loyal friend I ever had or expect to have among men. I do not think he was particularly brilliant in the way of studies, but his high spirits and bright manner gave him an *entree* into all men's confidence and regard, and made him a favorite with all of the opposite sex. I had, therefore, the liveliest anticipations of a thoroughly enjoyable time, and had unconsciously risen to a high pitch of excitement, and awaited his coming with feverish impatience. Bob Cheriote coming! What a thrill of emotion pervaded my thoughts. Father, Em, Angelica, Frank, and Gertie were thoroughly

impressed with accounts of Bob Cheriote, the best fellow in the world. The servants were incited to a proper reverence for Mr. Cheriote, the best horseman, hunter, and swordsman in the United Kingdom; and down to Tom, the rascally little stable boy, the most unbounded expectations were aroused. Bob coming! how his mellow voice would troll forth the rattling college choruses. What exploits and mishaps would mingle with the smoke of pipes and the fragrance of wine. How we would laugh and quote doubtful Latin and ragged Greek.

I drove to meet him at the Station with my best horses, and was about to turn away disappointed, as the passengers emerged from the coaches and he was not there, when a hand was placed on my shoulder, another extended to meet mine, and a subdued voice said: "Gus, my dear chum, I'm very, very glad to see your face again." I was amazed to hear that sentence, when I had arranged in my mind that I would be greeted with "Well, old fellow, I'm deucedly glad to lay fingers on you again," or "By Jove, Gus, its better than gold to see you." Bob Cheriote, *that* delicate, wasted, white-faced figure, robed in plain black clothing, without a single bit of jewelry, or one bit of color to relieve the pallid face! The blue veins were distinctly outlined on his small hands; his eyes were sunken and melancholy, while around them were sickly blue rings; the mouth once so expressive of all that was happy and cheery, was moulded in gentle, weary lines; his hair was brushed close to his head, where once it was wont to curl in profusion; the absence of a moustache, together with his attenuated frame, whose proportions seemed to have been chiseled down one-half, took away all semblance of my schoolmate. A morbid expression masked a once smiling face, and about the mouth were nervous twitchings. Was it opium or liquor, I thought; but I was too much bewildered to ask the reason of it all. I drove rapidly up the road to the house. As I thought of the impression I had created at home, I was quite embarrassed when I gave a sidelong glance at the figure by my side, whose whole appearance betokened a country curate. The youngsters came

shouting down the lane, evidently prepared to see quite the best of lively people. I explained to them that Mr. Cheriot was greatly fatigued, and they turned away disappointed. In the house the reception was much more cordial, as grown-up people are not so ready to undo previous anticipations. We had dinner, and yet this strange spell remained. After dinner and our allotted stay in the parlor he and I went to our bed-room. He touched neither wine nor tobacco I amazedly noticed, although I procured the finest brands of both in view of my friend's visit. I at once commenced to rehearse college anecdotes, and speak of old associates and associations, and for a time he appeared to brighten out of his sombre manner, but in such a different way from his old-time style. Instead of merry remarks, he coolly reviewed the past, pointed out errors in the system of education with the precision of a Dean, and turned every escapade and frivolous pastime into a subject for a homily; this, too, with a refined and forcible method so completely saturated with melancholy, that I was in doubt if the person before me was Bob Cheriot. It began to oppress me and wrought so upon my nerves, that I exclaimed:

"Bob, tell me, what have you been doing of late?"

He looked at me from his glittering black eyes, shook his head sadly, and replied:

"My life has been a dark stream, full of unsatisfied hopes and emptiness."

"Bob," I again exclaimed, "in the name of heaven what has changed you—are you suffering, and from what?"

Again those eyes turned towards me and seemed to search for a clue to the question, as he answered:

"Saul was possessed of an evil spirit—he had a David, and I—I have mine. Let us go to rest."

I was dreaming of a Mandarin dance in a joss-house, where the pig-tailed gentry, in the twinkling of an eye, were transformed into a host of kangaroos whose uncouth antics caused me much amusement. I was startled out of this comic sight by hearing Bob shriek:

"My God! Gus, what is that?"

He was seated upright in the bed, and by the dim night lamp I could see his eyes wild with terror. The palms of his hands were placed convulsively over his ears; his face was agonized and his whole body in a tremor.

"Do you hear it? Is it singing yet," he demanded before I had yet been quite clear it was not all a dream. Then I caught him by the arms and endeavored to move his hands, but he shouted, "listen." I did listen, while he kept his burning eyes fastened upon me. The night was quiet, and upon its bosom was borne a sad, wailing song, that quivered with lute-like clearness, and seemed now and then to moan like a distant surf. It was difficult to distinguish the words, but one verse, caught by reason of the greater energy of the singer, ran thus:

"Out, out are lights—out all!

And over each quivering form

The curtain, a funeral pall,

Comes down with the rush of a storm,

And the angels all pallid and wan,

Uprising, unveiling, affirm

This play is the tragedy Man,

And its hero, the conqueror worm."

I own to a sombre feeling, for the voice was charged with such intense passion that it was beyond the power of my nerves at once to allay it. I was not alarmed at the nocturnal music, but its melancholy close added no little to the excitement created by my friend's actions. I pulled the bell-rope, jumped from bed and turned up the light, and then again listened. It had ceased, and when I faced Bob I found him in a swoon, his face ghastly white, and bearing marks of intense pain. The servants by this time made their appearance, and were hastily despatched for medical assistance. The night passed on and morning found Bob able to walk about. I did not question him, as he had grown so sensitive that if you came upon him suddenly he started and gave signs of great excitement. A few days after this occurred I had occasion to drive to a neighboring town. As I expected to arrive home after midnight I left Bob to himself. He was in much better spirits than he had been since the memorable night. I drove off gaily, and shortly after midnight returned, had my "trap" stabled, and stole softly to my room. I glanced at my companion, turned to my bed, hastily undressed, and was soon soundly sleeping. It was broad daylight when I awoke, and called to my sleeping friend, "I say, Bob, it must be ten o'clock. Get up and let us take a stroll." No answer. I continued dressing, and again called. I stepped to the bed and shook the sleeper, all to no purpose. Pulling the bed clothing from around his neck, and shaking him more vigorously, I was

amazed to see how inert and rigid his limbs were composed. Looking closer, I discovered a narrow, red ring around his neck, and it flashed upon me then—Bob was dead! I shouted, rang the bell furiously, and in a moment had nearly all the male inhabitants of Chelmsford about me. They were astonished to see me half-dressed, leaning over poor Bob, hoarsely whispering: "Dead—Murdered!" Again the doctor was summoned, and his arrival established my fears. Yet it seemed too horrible. The doctor examined closely the red band around Bob's neck, and pronounced his death the result of strangulation. From the width and regularity of the mark it was surmised that some peculiar instrument had been used. Search was made throughout the premises, but nothing could be found by which such a mark could have been produced. When I sat down to think it all over I was overwhelmed. Robert Cheriot was dead and had come to his death by foul play under my own roof—it was too horrible.

The police and detectives made nothing out of the case, but asserted that some one in the house was guilty, either as principal or abettor. I could not bring myself to this conclusion for I could find no motive, but irresistibly the nocturnal singing was in some way connected with the tragedy. I tried to argue myself into the belief that poor Bob had himself committed the deed, but I could in no way then account for the red band around his neck. With what appliances could this have been made, and if Bob had wrought the work where was the instrument with which this mark had been made? No, it was not suicide but murder, I was thoroughly convinced, although Bob's melancholia favored the former theory.

Mathematics were my delight; in them I imagined I found the centre and basis of everything. Music, painting, sculpture, and everyday life found in my theory their groundwork in that exact science. Form, fancy and fact, were all but different shapes for figures—they were the *motif* of all things, and by them all things were solved. In them I found study and recreation, oftentimes amusing myself by forecasting from accident and life-tables the births, deaths and mishaps in my neighborhood. With this study in my thoughts it came across me one day that with the aid of figures I might find a solution to the dire tragedy at Chelmsford. Given a secret, the answer strongly desired, would my favorite study give me an in-

sight into its closed chamber? I was staggered at the thought, but rather than relinquish my pet hobby, I began to make a statement in algebraical symbols, somewhat in this form:

Let  $x$  represent the murderer.

Thus far I proceeded and came to a dead stop. Where was I to obtain the other parts of my theorem? I bethought myself of trying to enumerate those who were in the house liable to the slightest suspicion. Our guests and the family, after a most careful study of the probabilities, were not to be thought of for a moment. I then remembered the men-servants, and, although I could find no just reason to suspect them, for they had long been in my father's service, I put them down thus:

Let  $M$  represent Martin, the butler.

$A$  represent Andrew, the footman.

$a$  represent Alec., the driver.

$T$  represent Tim, half-grown stable-boy.

$R$  represent Robert, the gardener.

Tearing a card into pieces, I placed on each one of the initials as given above, and upon others plus, minus and equality signs. Before I was aware I became much enamored of my problem, and not at all listlessly arranged and re-arranged them on the table. After several changes, it flashed across me how foolish all this was, and, leaning back in my chair, I closed my eyes and inwardly laughed at my folly. For some moments I remained with my eyes closed, and when I unclosed them, I furtively glanced toward the cards lying on the table in the shape of an equation. I jumped from the chair as I read an answer to my problem which I never dreamed of, and before all other ideas came the thought that the cards told the truth. Here is what I read:

$$T + A + M + a + R = x.$$

Tamar was the given name of the governess!

Mrs. Rulison had attracted me not a little from the day I met her—a quiet, self-contained, intellectual woman, whose beauty was undeniable, notwithstanding a cruel mouth and eyes that seemed seethed in bitterness. In her society and conversation I found rare pleasure, for she was a fine conversationalist, and a woman with ideas. Her knowledge of books, and the doings of the present age, were not shallow.

With the revelations of the cards, as I before said, came the thought that she was indeed the guilty one; and reason with myself as I would I

could not rid myself of the idea. She and Robert Cheriote, as far as I knew, had never met, and I could find no motive for her participation in the crime. The suspicion was very distasteful to me, and utterly groundless, and I determined to throw it off. I belabored my mathematical whim with *sermon* and satire alike, but it was only mock passion, for under it all burned the feeling that she and she alone held the key to the mystery. Fight as I would against it, I found myself recalling her actions before and after the dread event. I questioned the maid who brought her the news, and learned nothing, since the maid herself was so agitated she had paid no heed to the emotions of the governess. I, too, had given her little attention at the time, nor indeed since, but irresistibly I found myself possessed of a strong desire to probe her heart, my reason at the same time asserting the absurdity of the suspicion. I would haunt her leisure moments and prove the falsity and folly of the premises. Unconsciously, the woman had interested me; with a little effort on her part, had she been so inclined, I would have taken a lover's place by her side.

The afternoon of the day following I found Mrs. Rulison in the library, and, seating myself by her side, engaged her in conversation, the latter part of which, however, being the only one with which I have here to do:

"May I ask, Mrs. Rulison, what you have been doing lately?"

"I have been re-reading some of De Quincey's *Essays*," she calmly answered.

"Then, indeed, have you been enjoying the felicities of well-chosen English." While speaking, I moved directly in front of the beautiful woman I was addressing, and resolutely looking into her eyes, asked between shut teeth, "What think you of 'Murder as a Fine Art?'" Something within urged me to utter this in a cold, pointed manner—a tigerish instinct—although my reason and the half-acknowledged *tenderness* I bore the woman strove to choke down the brutal question. Before the interrogatory was half uttered, I was ashamed of myself, and conflicting emotions robbed my eyes of the acuteness with which I had resolved to watch the victim. My eyelids half-drooped, and instead of meeting her eyes, they caught naught but a little quiver of the lips. I was again urged from within to seek her eyes, which I involuntarily did, and whatever emotion

they had shown, if any, had nearly passed away as she quietly answered:

"I have no desire to cultivate the knowledge of such a study, 'fine art' though it be styled. Then, too, there is much truth in Pope's oft-quoted lines of the vice, first abhorred, pitied, and finally embraced."

"You do not think, I presume, Mrs. Rulison, that you would permit an operation of the mind such as he describes to lead you into the commission of a grave crime; say, for instance, would familiarity with the study of evil, lead you into the doing of a tragedy like that written within these walls not long since?"

"Oh, Mr. Augustus, you will oblige me by forever adjuring *that* dreadful topic," shudderingly gasped the governess, while in the study of her eyes I read a new-born hate and the knowledge of the fact that she felt that I connected her with the foul play.

Shortly after, Mrs. Rulison retired. When next I met her, I thought I discovered a new bearing towards me, and ere long I was so enraptured with it, that the hate I once imagined shone in her eyes was cast aside as easily as the old suspicion was driven to the wall. Each day found me more and more ashamed of my evil thoughts, and gentler feelings began to obliterate them from my mind. She discovered to me great taste in dress, and heretofore unknown capabilities for fine raiment. Her society was charming, and as a convert to my mathematical hobby she sought out and presented to me new arguments for my theory in musical structure that before I dreamed not of, for she was a thorough and ardent musician. I found her adapting herself to my every mood; her range of reading traversed fields unknown to me, and almost as a child I followed her through new ranges of thought. After the tragedy, my sisters fled to London, and their absence afforded me unlimited *tele-a-teles*. "Tamar" came to my lips instead of Mrs. Rulison as the intimacy thickened. I laughed at my evil surmisings, and wondered how I had dared suspect so perfect and intellectual a woman. It was not, however, until the return of my sisters that I awoke to the true state of my feelings towards the wronged woman. They began to rail, half jestingly, at my preference and *tenderness* for Mrs. Rulison, and not until this did the scales fall from my eyes, and I found myself, as the result of three months' dangling about this beautiful and

accomplished woman, deeply in love with her. Yet there was something within me—some undefined and yet uncompromising mentor, that forbade the banns. Should I declare my intention to espouse Tamar, I well knew my father's opposition would follow, but that he would ultimately relent I had no manner of doubt, since my own mother was not the equal of my father in point of family. I allowed myself to drift on, not committing myself, but by association strengthening the bond between myself and Tamar. The presence of my sisters to some degree abridged the time we spent together, and I noticed Tamar applied herself diligently to gaining their affection and confidence. She went out of her way to draw them closer. I observed also, that in the matter of costume she must have expended every cent, if not more, and although she was as one of the family, I could not help thinking it would have been more becoming did she not outvie that of my sisters. Her toilettes were most charming, my sisters laughingly asserting that she was a disguised princess who had stolen into the family to carry off the heir.

I was surprised one day while walking in the grounds, to see Tamar in close converse with a tall, uncouth specimen of humanity. The man was no gentleman, I plainly saw, and Tamar's furtive glances around told me plainly that she desired no one to witness the interview. How long the interview lasted I did not find out, as I walked away, consoling myself with the thought that she would enlighten me in the evening. In this I was disappointed, and although the incident was susceptible of a hundred explanations, I could not repress my suspicious curiosity. I once thought to ask her, but with that suggestion came the thought that Tamar would not tell me the truth. I was startled to find the ease with which this disgraceful thought entered my mind—it took me unawares. I saw, too, that something about Tamar herself suggested it, notwithstanding the love I had for her. The next instant I scouted it, but what lover was ever so prone to evil thoughts as those? Not many days after this Tamar sought and obtained leave to visit London. I asked to accompany her, but she resolutely forbade it, up to the time I handed her into the coach. On her return, a few days later, she excused herself to me for some evenings on the plea of fatigue and headache. When she *did* quit her privacy, I was much surprised to see her in plain costume—just verging on

the precipice of shabbiness. Evening after evening she appeared in the same plain black dress. What had become of those marvelous combinations of color in which she was wont to array herself? I saw she still wore the neck-chain I had presented her upon her birthday, but with that exception she displayed no other jewelry. I alluded as delicately as possible to the change of plumage, but seeing the subject annoyed her, did not again refer to it. I longed to see her once more in "brave apparel," and dressed in becoming colors and unique jewelry. I began to blame myself for it, and argued that she had plunged herself in debt to dress in elegance; the man with whom she held an interview in the garden was probably sent out from a London house to collect a bill for her unpaid or partially unpaid for wardrobe; her visit to the city had resulted in the sale of everything to satisfy the claim. Another ugly suspicion here obtruded itself; she had calculated upon marriage before the debt fell due, and before I remembered I was her suitor, and such a thought was dishonorable, I found myself glad of possessing that birthright of every Briton—extreme caution and repression. I indignantly flouted this thought; but what manner of woman was this that constantly suggested such ideas!

Tamar's half year's salary as governess was due shortly, and I suggested to my father that so faithful and capable a lady should receive a larger salary, and it accordingly was increased, my father generously insisting that the increase should date from the last payment. My original intention had been to have taken her from such drudgery to my arms, but some fatality held me back. In the meanwhile her society grew to be more and more fascinating, and yet the impulse it gave me to at once claim her as my wife was as surely repulsed when I retired to the quiet of my own room. I deferred again and again the eventful question, although greatly enamored with her.

Once again I came upon her in conversation with the strange man, and this time I was so near that I heard him address her as "Mrs. Cheriot." My heart stood still at the revelation. Mrs. Cheriot! Could Tamar be the wife of my murdered schoolmate? If she were, then her complicity with the awful tragedy was almost a fact. Bob had never mentioned the fact of his marriage, and there *could* be other Cheriot's in the world, but argue as I would with myself, something impelled me to the conclusion that she was in some way

connected with the mystery. The revelation of my mathematical problem came more than ever distinctly before me. My manner to Tamar from this date began to change, and whereas once I was restless and unhappy out of her society, I now began to haunt my room and feel very much at ease, saving when my mind would revert to the tragedy of a few months ago.

Spring, with its balmy baths of air perfumed with the odors of many flowers, was heralded by the thrush and goldfinch from every bough, but my thoughts turned not to love. I still felt bound in honor to marry Tamar, and yet how could I give her my name while this dread suspicion hung over her—a suspicion I was not brave enough to give to another's keeping, or put to the test by asking the object of it to explain. I quoted to myself Carlyle's sentence, "How little do they see what it is, who frame their judgments upon that which seems."

I began to be a haunted man, and found my old spirits deserting me. My sisters rallied me upon the early indications I manifested of turning tedious and cynic, while Tamar battled with my seclusion and amiably received my *brusqueries*, although at times I imagined a depth of restrained seriousness in her eye which betokened smothered anger. I observed, too, that she grew pale and thin, was often distraught and easily startled. I thought, too, her gaits and efforts to arouse and amuse me were strained and unnatural. I, as well as the whole household, was startled one day near the close of her half year by the announcement that she was obliged to resign her charge from its effects upon her health, a statement borne out by her looks. The work was not fatiguing in an ordinary sense, and Tamar was treated more as one of us than a governess, but with all her freedom and comparatively short hours of duty, she looked "fagged out" and worthy of rest. She determinedly resisted my father's invitation to remain at an increased salary and shortened hours of labor, and even the pressing invitation to make our house her home. She required "change of place and new scenes," she averred. I began to reproach myself for her failing health and lassitude, and forced myself to propose correspondence during her vacation, my father having stipulated that she should resume her position as soon as she could regain her health; but I was scarcely surprised when she haughtily refused, and listless

scamp that I felt myself to be, I rather indulged the hope that she broke the engagement by this action, had I not been seized with remorse as I looked into her eyes and saw with pity the beautiful being before me. I clasped her in my arms, vowing to love her forevermore, to follow her with letters, and ending all by asking her to be my wife the following month. Her overwrought nature broke into tears, as she clasped her arms about my neck and I pressed burning kisses upon her beautiful lips. But she persisted in refusing me her address until such a time as she would write to me. In the glow of the moment and before recollections of Bob or her clandestine meetings could crowd upon me, I made known my betrothal to my father, whose startled ejaculation, "Thank God she's going," brought me to my senses again.

The day of her going came, and after privately bidding her adieu, she went out of the house with my kisses on her lips to bid me a formal farewell at the Station. Returning home with a feeling of relief, I must confess, Tom brought me a curious brass instrument, which he had found hidden under some shrubbery near the steps that led down from the front door. It appeared Mrs. Rulison's trunk had been clumsily handled, had fallen down the steps, breaking open and spilling the contents. The awkward men gathered up the articles as best they could, sprang the lock, and fearful of blame, had neglected to mention the matter. Tom was certain the strange instrument had fallen from her trunk—the supposition was entirely plausible. Before I placed my hands upon it I felt sure that fate had again interfered and placed another clue within my grasp. It was unlike any instrument I ever saw before, was elegantly made, resembling nothing so much as a pair of very strong calliper compasses, having at the pivot a curious combination of multiplying wheels, which caused the arms to close with terrible force. It was some time before I understood the use of the lever at the top, since the wheels, springs, and screw leverage were enclosed in a box. At first I imagined it was some new method of holding travelling wraps, and applied it to a large cushion from my lounge. After several turns of the lever, the arms leaped together with such force that it seemed as if the cushion must have been cut in two. At the exhibition of its marvelous contraction, drops of moisture stood upon my forehead; with a yell I started up and shouted, "This devilish contriv-

ance made the mark around Bob Cheriot's neck and caused his death." With this connecting link in my possession, it only remained for me to prove that it was the property of Tamar Cheriot.

Calling my servant I bade him drive me at once to the Station, and I followed Tamar by the next train to London, having previously telegraphed a detective to watch the train ahead for Tamar. Arriving in London some hours later, I was assured that I could be at once taken to her lodging. I was hurried on by a species of frenzy which would never be satisfied until I confronted the murderess, for such I felt certain Tamar Cheriot was. I resolved to meet her face to face, and being directed to the house to which she had been driven from the Station, I went straightway to it. I told the porter to announce me as "a gentleman friend." I entered the room, concealing with a smile, as best I could, my vengeful feelings. She gave a little joyous shriek and her face was irradiated with triumph. She was apparently almost beside herself that love for her had brought me so soon and so far to seek her. She was jubilant that I was so completely in her toils. Her conversation was wonderfully bright and blithe, her whole being seemingly thrilled with new-born hope. I fostered this gaiety as much as possible, and when at its height, I rose to my feet, drew the dreadful garrote from my pocket, saying:

"Tamar, murder is 'Fine Art,' indeed, but I did not dream you were its high-priestess."

With a piercing shriek she fell to the floor, the muscles of her face telling her secret, as they chased the radiant smiles and heightened color from her face.

A few words more close my story. She died before she was brought to trial. She confessed that she was once the wife of my friend, who had deserted her for an infidelity, of which, she averred, she was innocent, although appearances were much against her. I knew what complete desolation this caused Bob Cheriot, whose elo-

quent words were ever chanting the praises of true union, and whose chivalric soul entered into such an existence with bright anticipations of earth's completest happiness. I could conceive what ardor and æsthetic rapture he would bestow on the woman whose mind and person combined such graces as those of Tamar Cheriot. I knew what devotion he would lavish upon a noble woman, and how, like a goddess, he would hedge her life about with every luxury and comfort at his command. In my thoughts I traced the growing worship he gave his wife and the terrible reaction when his idol would fall from the pedestal on which he placed her. His proud nature touched to the quick, ever carried with him the gnawing secret, and when he heard of the birth of a son and its death within a few months, the once light-hearted man was changed into a misanthrope. In cool malignity Tamar followed Bob Cheriot to England, had the terrible instrument made in Paris, not despairing of using it on her victim some day. She it was, who sang Poe's ghastly poem in the stillness of the night, not dreaming that the requiem would reach our ears. She it was as well who stole into his room and applied the instrument, and with a few turns of the screw sent Bob Cheriot to his death. She also confessed that she was well-nigh persuaded to use it upon me before resigning her charge, believing me to have been trifling with her, had it not been for my proposal the day previous to her departure from the house. The man whom she met in the lawn was an American, who, in some way, had obtained power over her to extort money, which she paid him to hold his peace concerning some of her disreputable deeds in America. I never after saw her face, and her body lies in a desolate graveyard with a stone at its head, upon which the single word "Tamar" is graven. Locked in my cabinet is the death instrument, and whenever I feel tempted to marry I take it out, and, thinking on the tragedy at Chelmsford, all thoughts of marriage are put to flight.

## LAFAYETTE'S LAST VISIT TO AMERICA.

BY REV. WILLIAM HALL.

THE beautiful ceremony and pageant of unveiling Bartholdi's fine statue of this illustrious friend of America, recently (September 6th) presented by French residents to the city of New York, was one of the most fitting and appropriate acts of the Centennial year. And it was one, also, that revives very forcibly in the breasts of old citizens the memory of his presence among us in 1824-25, as "the nation's guest." Many there are in every part of the land who then, as children or young persons, saw him and partook of the joy and enthusiasm of the grand ovation paid to the venerable hero as he returned to behold once more the scene of his sacrifices for liberty, in the great struggle of fifty years before. And how changed the scene that after such a lapse of time met his wondering view! The contrast was as great as that of the child and the man. "He left us," says a New York paper of that day, "weak, unorganized and tottering with infancy; he returns to us and finds our shores smiling with cultivation, our waters white with the sails of every nation, our cities enlarged, flourishing, and wealthy, and our free government, for whose establishment he himself suffered, perfected in beauty, unity, and experience." That happily-invited and lovingly-accepted visit to our shores was an historical event of lasting interest, and, viewed in its motives and national and moral aspects, was truly a sublime and most remarkable one. The sight of a great people, moved as by one impulse to tributes of love and gracious and grateful welcome to such a personage, coming from a distant land, after nearly a half a century's absence, to embrace them as it were with a father's heart, receiving the salutations of his ancient Revolutionary companions and of their children and children's children in every part of the land—where in the world's records do we find a similar event that can be at all compared to it in moral beauty and grandeur? His receptions in New York, Boston, Philadelphia, Washington and many other cities, during his stay in this country were a succession of joyous scenes, incidents, reunions, and recognitions to which neither pen nor pencil could do justice. The Marquis embarked for America about the middle of July, 1824, in the

ship *Cadmus*, belonging to the late William Whitlock, Jr., a well-known New York shipping merchant. He had declined the honor of a United States frigate, tendered by Congress to convey him to our shores, and had also received several invitations from captains of American packets to take passage with them, but had at length arranged for coming over in the vessel above mentioned, commanded by Captain Allyn. In France his doors had ever been as open to Americans as his heart. Quite illustrative of this is a little anecdote, found in a letter from Paris dated June 14th, 1824, and published in the New York *Commercial Advertiser* of that year. It was written to a gentleman in that city by an American, who with a party of fifteen or twenty of his countrymen, had just called on the veteran General, then in his 67th year. After stating that he was in company with the celebrated General Fucy, was very plain in manners, etc., the writer adds, that General Fucy, pointing to his American visitors, said to Lafayette: "Your children are the most affectionate in the world." "Indeed, you are my children," replied the noble old man, as he rose from his seat and took us all by the hand, the tears trembling in his eyes." And it was with such a spirit that he came to see us all and receive the tokens of a true Republic's gratitude fifty years ago. He arrived at the Narrows Sunday morning, August 15th, after a pleasant passage of thirty-one days from Havre, accompanied by his son, George Washington Lafayette, Mr. Auguste Le Vasseur, a companion, and one servant. Landing on Staten Island, he was conducted to the seat of Vice-President Tompkins, where he remained during the day, and passed the night. The next morning a most imposing squadron of steamboats, having on board the chief civil and military functionaries, and about six thousand citizens, escorted him to the city of New York.

Of the splendor of his debarkation there, and of subsequent ceremonies there; of Mayor Paulding's tasteful and feeling address and the General's modest and impressive response, at the Governor's room in the City Hall; of his taking quarters at the famous Old City Hotel, with the scarcely less famous Jennings at the head; of his

dining there with public officials and distinguished friends as his guests, and of his visit to the Navy Yard, Brooklyn, etc., we are not here to speak. But several other scenes and facts of interest in the same connection there were which deserve more notice than they have yet received, or are likely ever to receive, but from the present writer. One was the meeting of the New York Historical Society, of which Lafayette and his son were elected honorary members. This institution was then located in a public building which stood in the rear of the City Hall. On that occasion the eminent Dr. Hosack, of all old New Yorkers perhaps the most majestic in stature, figure, and presence, who was President of the Society, made a felicitous address, in which he brilliantly associated the names of Lafayette and Washington as stars destined to shine forever in the same firmament of fame. And this suggests to us to say, *en passant*, that Bartholdi's admirable statue of the former has, with excellent taste, been erected near the grand equestrian statue of the latter, in Union Square. Over the chair assigned to the aged Marquis in the Historical Room hung his portrait, a fine picture, painted in 1784 for General Ebenezer Stevens, a Revolutionary officer and prominent shipping merchant of the City of New York, who died in 1823. It is said to have been executed by a French officer-artist, was taken in France when Lafayette was twenty-seven years old, and was presented to the Historical Society by General Stevens, soon after its formation in 1806. The contrasts of youth and old age, thus brought to view by the canvas above and the living original beneath, were striking to the eye. That unique picture still hangs in the Society's portrait gallery, in its present beautiful building in the Second avenue. And by its side hangs another of Lafayette, taken by Ingham from life, 1825, being the *original* head from which was made the full-length

portrait for the State, now in Albany. The picture was also a gift from the artist, and doubtless the best extant of the noble old man in the epoch of his final visit to America. In connection we add that the Common Council of the City of New York, during the General's visit there passed a resolution requesting him to sit for his portrait, to be placed in the Picture Room in the City Hall. This portrait was painted by Professor Morse, and it has lately been in the National Exhibition collection at Philadelphia. George Washington Lafayette was also made a freeman of the city, and a certificate thereto, handsomely engraved, was presented to him in a gift box. In his toast at one of the then public dinners, Captain Allyn of the *Cadmus*, pays this handsome compliment to this son and *compagnon d'age* of his illustrious passenger. "May they both equal the father in devotion to the progress of liberty, as he does in amiableness of character." That of the General at the City Hotel dinner was the following: "The City of New York. Let all the nations who resort to this flourishing metropolis reflect on the blessings of a free constitution and the dignity of a self-governed people!" Captain Aaron Ogden, ex-Governor of the State of New Jersey, and one of his old companions in arms, gave this sentiment: "General Marquis Lafayette. His sun rose in glory, its meridian sheen and its setting orb now falls with splendour and gratitude on the hearts of ten millions of people beneath these Western skies!" As for this justly honored guest, he well knew how to turn, as well as gracefully to receive, compliments. In replying to the Mayor's welcome at the City Hall, he handsomely says that such demonstrations of regard "excite sentiments to which no human language can be adequate." For the reminiscence of the interesting event in our nation's record has been here recalled we crave a future opportunity

## PHANTOM FACES.

BY GUSSIE DE BURNA.

As oft one catches in a child's pure face  
Some faint resemblance to one loved and dear,  
And feels a strange desire to draw more near,  
And touch caressing in a close embrace  
That other which we see within its eyes;  
Or hears, perchance, in ringing, happy voice,  
Some tender note which makes the heart rejoice

In echoes, lingering through sweet memories;  
So I behold in the fair face of youth,  
And hear in her bright gladsome laugh and tone  
A phantom girlish face and voice—my own!  
And seeing this resemblance clear, in truth  
It is this foolish fancy which to me  
Makes loved and dear each girlish face I see.

## ST. PAUL'S EPISCOPAL CHURCH, NORFOLK, VIRGINIA.

BY JOSEPH B. NORTH.

STRANGERS coming to this time-honored city, which was incorporated in the year 1736, do not leave without examining the grand old citadel of Episcopalianism (known as St. Paul's), erected in the year 1739.

Thus this venerable building has been standing the storms of one hundred and thirty-seven winters, and it bids fair to stand as many more, unless the rapid march of improvement, or a desire to erect a more modern and beautiful place of worship, compels its removal.

The first Mayor of the town, Samuel Boush, Esq., made the parish a present of the grounds, embracing about two acres, situated on the corner of Cove and Church streets. This is about the heart of the city. Upon the southern end of the building may be seen the initials of the donor's name in large capitals, and the date, 1739. These letters and figures are formed of projecting bricks, and, to make them more conspicuous, they are painted white.

There is really nothing attractive about it. You would not take it to be a place of worship without observing it very minutely. Though not in the least imposing, yet you would be forced to admire it. It is in the shape of a Roman cross. The four corners point respectively to the North, South, East and West. The windows and doors are arched, and there is a large circular window above the entrance in the northern end and also in the southern. The walls of this venerable building, as well as the enclosure of the cemetery attached, were built of brick brought from England. Every other brick in the building has a bluish caste, produced by extra heat in the kiln. The interior of the building is very plain. There are four galleries situated severally in the four corners of the church. The eastern gallery is occupied by the choir. On the northern side of the eastern wing to the left of the northern wing, is the chancel. There are two aisles, one running through the centre of the building from the western to the eastern wing. I should have stated that there is an entrance in the western wing, making three entrances. The other aisle runs from the northern to the southern wing, being on the left, entering

by the way of the southern entrance. The pews are plain, and grained to imitate oak, with walnut trimmings.

In the early part of the Revolution, Dunmore fled to the British fleet anchored in the harbor. A few days after the British were so signally routed in the battle of the Great Bridge, Colonel Woodford arrived in Norfolk. When Dunmore was informed by a boy of the defeat he swore that he would hang him. The soldiers opened fire upon the fleet. Dunmore sent word if they did not stop firing and send them provisions he would bombard the town. This they sternly refused to do.

Accordingly, on the 1st of January, 1776, between the hours of three and four in the afternoon, they opened fire on the town. A few dwellings escaped being totally destroyed. Old St. Paul's was one among the few. All the combustible parts of it were consumed, but the walls received but little injury. A cannon ball struck with great force about three feet from the eaves of the building, about one foot from the southeastern corner of the east end. If the ball had struck a few inches farther to the left it would not have ranged with the eastern wall. Hence it would have gone entirely through the building.

A good number of years elapsed before the lost ball was found. Captain Seabury conceived the idea that it might be buried in the ground near the southeastern corner. A man was set to work to find it, and he was successful. It corresponded with the cavity, and was believed to be the identical ball. It weighs about twenty pounds and a half, and measures about five and a half inches in diameter. Doubtless its original weight was twenty-four pounds, and its diameter six inches. This ball may be seen where it fell over one hundred years ago.

"On it Time his mark has hung;  
On it hostile balls have rung;  
On it green old moss has clung;  
On it winds their dirge have sung:  
Let us still adorn thy walls,  
Sacred temple, Old St. Paul's!"

On the 22d of February, in the year 1800, the city of Norfolk was filled with people gathered to-

gether to pay funeral honors to our departed Washington. It was in this church that the services were held. The *Herald* of the 25th inst. says:

"On Saturday last, the 22d inst., agreeably to the notification of Major Ford, the different troops stationed at the forts and Navy Yard paraded in this borough, in order to form a procession to pay funeral honors to the memory of George Washington. At twelve o'clock they were joined by the different volunteer corps, in full uniform. In the Main street the whole formed in battalion, and received the word of command from the Major. The bier passed them, attended by the principal gentlemen of the town as chief mourners; then followed the Lodges of the Masons in their orders; then the officers of the Navy; the different artificers from the Navy Yard, and the citizens of Norfolk and Portsmouth in general.

The troops then reversed their arms and marched, the drums being muffled, and the music playing the Dead March, until they arrived at the church wall, when the ranks faced each other, and resting on their arms reversed; the bier, etc., passed between into the church (old St. Paul's), the troops following; but the church not being sufficiently spacious, a great portion of the citizens were prevented from seeing that part of the ceremony.

After prayers were given by the Rev. James Whitehead, Dr. Read, Mayor of the town, pronounced a handsome oration, well adapted to the occasion, and was followed by Mr. Blanchard, who delivered a beautiful monody."

We consider this ode to be part of the history of this church, having been delivered therein over seventy-six years ago. We have only part of it in our possession, and because of its great worth, we will place it in this article.

"TO THE MEMORY OF GEORGE WASHINGTON, GENERAL OF THE ARMIES AND PRESIDENT OF THE UNITED STATES OF AMERICA.

PROFUS, O PROFUS! ESTE PROFANI.

Let no obtrusive, no unhallowed eye,  
On which the rays of virtue dimly beam,  
Let no cold mind, fashioned by common themes,  
No breast, that glows with patriot zeal,  
Presume to violate the peaceful verse,  
The pious offering to a Hero's shade.  
I dare (since some must dare) to send abroad,  
On every saddened breeze that sweeps the earth,  
The plaintive accents of a general grief.  
Then rising upwards from the vale of tears,  
Essay, with rapid step, to mount on high  
To the raised summit of the hill of praise.  
But e'er the task begins, I lowly bow—

Not to some storied Muse or fabled god—  
But with raised mind, fixed eye, and eager thought, I bow  
to Him

Who from the mountains of omniscient light  
Drew a strong ray, and lent it to the earth.  
I ask some pitying spirit of the sky  
To bend in silence o'er the honored theme,  
To guide the pencil and direct the strain.  
For thee, lost Washington, the new-born Babe  
Wears on its tender form the dress of woe;  
For thee the Infant shows its feeble arm,  
Bearing for thee, the emblem of the tomb;  
The Child, spurning the sports of early life,  
Weeps, while its mother reads the tale of death;  
For thee the Virgin rends her sunny robe,  
And veils from day the radiance of her eye;  
Pensive along the pebbled beach, the Youth  
Muses in thought profound on deeds of thine;  
For thee the Matrons pour the piercing strain,  
And tell the stranger their great Son is dead;  
For thee the Warrior piles his useless arms,  
And waits in silence for the word—Depart!  
For thee, great Chief, the Fathers of the land  
Suspend their labors, and their minds unstring;  
And sad Columbia sits, her bow unbent,  
Her darts all scattered and her quiver broke,  
And sends incessant on the passing winds  
The sorrowing tidings on to distant worlds.  
Ye blest companions of his early years,  
Who saw the youth fast ripening into man,  
Lend your glad praises to his spotless morn.  
Virgins and youths, if e'er you hope to lay  
Your hearts, high beating, to the breast of love,  
Join in the chorus of my grateful verse!  
Ye veteran hands, brave partners of his toil!  
Who drove through frost and fire at his command,  
Through all the changes of eventful war,  
Sound the loud clarions to your General's praise,  
The great "conductor" of your lightning arms.  
Ye Sires! who frame the law, and ye who judge,  
Rise from your seats, and on the Hero's tomb,  
Plant with your reverend hands the honored wreath,  
Rich decked and woven by a Virgin train;  
And let the land, from all its mountains, send  
A general echo to the great applause,  
Till the long peal of praise, America,  
Rolls o'er thy cloud-topped hills—sounds through thy woods—  
Floats onward with thy streams—surrounds thy shores—  
And, sweeping o'er the wide Atlantic waves,  
Resounds the plaudit through the Eastern World!  
Whether thy spirit, Washington, sits high  
In the full centre of a dazzling orb,  
Or risen far beyond the roll of stars,  
Rests in the radiance of eternal light;  
Whether it wanders through celestial space,  
Or sits with seraphs on the hills of heaven,  
Deign, with propitious eye, to view the land  
That bears with reverence every mark of thee,  
And from the 'unknown regions of the sky,'  
With wonted kindness, shield Columbia's son."

On the southwestern corner of the western wing there is a very old tomb-stone fastened. The words are perfectly legible: "Here lyeth y<sup>e</sup> body of William Harris who departed this life y<sup>e</sup> 8 day of March 1687 $\frac{1}{2}$ —Aged 35 years."

There is a brass plate attached to it with the words on it: "On the 1st July, 1875, this stone was brought from 'Wyanoke,' on James River. It was found amid the ruins of an old Colonial church."

## OUT IN THE SNOW.

By SYLVA HESS.

How the snow fell, in myriads of tiny flakes hurrying, tumbling down with bewildering rapidity! That mythical personage, the oldest inhabitant, could not recollect ever having seen such a quantity of snow; the roads were impassable in every direction; trains were detained in snow drifts—travellers found it impossible to proceed; houses were almost buried; indeed, at Lyster Farm, it reached above the windows; yet still it fell steadily. It drifted—the wind by turns moaned and howled around the comfortable farm-house, as though it longed for an entrance.

Nellie Ross and Will Lyster were cousins. Ever since they had attained the height of the table, they had been regarded as lovers by the whole family connection. In truth, they did love each other dearly; but young girls will occasionally be willful, young men will occasionally grow jealous, and love affairs generally have a decided and perverse inclination for the crooked paths, instead of the straight ones.

Nellie was as fair and dainty a little maiden as the heart of a man could desire; but perfect as she was, she had two faults which Will Lyster had just decided are the two very worst faults any woman could possess. She was a coquette, and very high-tempered. Will was also of a haughty, impetuous disposition, quick to resent any fancied slight.

A few days before my story commences, there had been a gathering of the vicinity at a neighboring farmer's, and Nellie, flattered by the universal admiration her pretty face and engaging manner had excited, had tested Will's patience to its utmost limit. He had expressed his displeasure in lordly fashion, and the girl had resented it; a violent dispute had been the consequence. Just before the storm began, Nellie had come to pass a few days with her aunt; and by way of relieving the monotony of country life, the quarrel had been renewed. Will had assured the girl that he did

not love her; that she was a flirt unworthy of any honest man's love; harsh words, which Nellie, accustomed to the softest tenderness, could ill endure. Now she sat with hot, flushed cheeks, vainly trying to restrain her tears, for, after all, she was a soft-hearted little thing.

Presently she sprang up with a pettish exclamation:

"I am going home, aunt," she said; "mother will be wanting me. I have stayed too long already."

"Nonsense, child," quietly replied Mrs. Lyster. "You could not walk a hundred yards, much less two miles, such a day as this. Sit quiet, lassie."

Nellie did not answer, but left the room, and presently returned prepared to start. Will never even looked at his cousin.

"Are you mad, Nellie?" demanded Mrs. Lyster, sternly, "that you should wish to risk your life, by exposing yourself in such a storm. It is tempting Providence. I should not allow a dog to leave my house to-day, much less my own flesh and blood."

Nellie stood at the door; her aunt's words only excited her to opposition.

"He does not care," she thought. "If he asks me to stay, I'll stay; if not, I shall never come back to his house." Then she said aloud: "I can walk home quite easily; it is not snowing much now; besides, I am tired of being here. I must go home. Good-by, aunt."

"Tell her she must not go, Will," implored Mrs. Lyster; "it is certain death to start to walk two miles to-day. Willful as you have been, Nellie, I did not expect this of you. Speak to her, Will. If any harm befalls you, Nellie, your blood be upon your own head!"

"I am not wanted here. I don't care for the storm. I am not afraid," persisted Nellie, defiantly, as she turned to open the door.

O, how icy cold the air was, and the wind gave a great shriek, as though rejoicing that she was to be delivered up to its power; Nellie's heart failed her; she looked back; the fire blazed cheerfully; never had the room appeared so home-like; if he would only give in and ask her to stay!

"Good by, Will," she ventured timidly; and the clear girlish voice trembled. Will never raised his head, and vouchsafed no answer.

Poor Nellie felt she had made a concession which had been very ill received. Piqued by his seeming indifference, she was very deaf to her aunt's entreaties; and, regardless of the friendly warning, she rushed out into the storm. It was drifting, and the cold snow flying in her face almost blinded her. She could not see her way; there was no path, and at every step she sank almost to her waist; and still, with the energy of anger, she went on.

"He drove me out," she said to herself. "I shall never turn back. If he finds me dead in the snow it will serve him right."

She wandered first in one direction, then in another, but at each step sank deeper and deeper into the snow. The short winter day was drawing to a close; it was almost dusk now. A terrible dread took possession of the girl; she trembled convulsively. Would she, indeed, perish in the snow, and be frozen stiff? She thought of her mother, happy at home, unconscious of her child's danger. She thought of Lyster Farm, its warmth and comfort. She could not die, she was so young and beloved. Life was so beautiful, death was so terrible. Surely she could not be doomed to such a death. Then she cried aloud for help; cried with all the strength of one in deadly peril. The wind mockingly repeated her cries. Her strength failed her.

At length she fell against a tree; to it she clung as though it had been a friend. She had a dim idea that relief had come in the hour of dire distress.

She threw her arms around it, kissed it, as she would a living being; she did not feel the cold so painfully now, only a little sleepy and weary. She tried to repeat her prayers like a frightened child, but could not remember the words. Then, with the pure cold snow for a pillow, Nellie Ross sank gently into the sleep of death.

Nellie had not been long gone before Will's stubborn will began to waver, but it was some time ere the evil spirit could be exorcised, and that

time was full of peril for poor willful Nellie. At last, he could resist the pleadings of love no longer, and, casting the book he had been pretending to read impatiently from him, he rushed out, waiting not even for his great-coat, and braving not the intense cold. Though he went direct in the course she should have taken, with the moon shining in all its winter brilliance, he found not his beloved. Reaching her home, he learned that she was lost by the way. He called to help some of Nellie's neighbors, who eagerly joined in the search, and a long search it was, terrible to Will in his anguish of remorse and love. At last she was discovered beside the tree, from which her arms had relaxed. Poor Will, he never through life forgot the sight that he now beheld so beautiful and awful; resting placidly, with face upturned, and hands folded upon her breast, an expression of pain on the marble features.

"Heaven help me, I killed her!" he cried hoarsely.

Then, raising her in his arms, he turned toward home. The rough farm laborers were weeping for the blithe little maiden, who had always a smile and a cheery word; but the man who loved her best of all, the very light of whose eyes had been, was stunned by the sudden blow, and could shed no tears. He carried his unconscious burden into the house, walking like one in a dream, without a word, and laid her upon the bed.

Nellie's mother had hastened to Lyster Farm, and her wail of anguish rang out clear upon the frosty air.

The doctor was soon at hand and earnestly endeavoring to restore life to the beautiful corpse, but alas! was it all too late?

"Oh, Nellie, Nellie," cried Will, "I love you so dearly, and I killed you!"

Then, resting his head on his mother's breast, the strong man sobbed like a child.

But God was merciful, and when all seemed over, a gentle smile stole over the closely-watched features, and the loving watchers saw that there was life yet to strive for. Renewed efforts were at last rewarded; Nellie awoke.

Need I say, the lesson of these terrible hours was never forgotten. Will and Nellie lived happily and usefully, too, for their hearts were ever full of gratitude to Him who had rescued her from death and him from a life of misery and remorse.

## THE ANCIENT CHINESE; THEIR PECULIAR CHARACTERISTICS AND RELIGION.

By ALBERT A. L. TOBOLDT, M.D.

THE early history of the Chinese people will go far to help explain many of their peculiar characteristics. They did not migrate into the country now occupied by them as conquerors, hence did not bring a heroic or poetic spirit with them; they, from the first, had only to struggle for the mere necessities of life, and for them the struggle proved so hard as to annihilate any desire above the gratification of possessing enough to eat, drink and wear.

Higher spiritual striving was universally wanting, the whole Chinese spirit being absorbed by considerations for the material interest of a comfortable, or even meagrely-sustained life.

In the great barrenness of the Chinese mind, their language was a means of repression, since it allowed them but a certain line of thought, compelling their ideas to run in certain grooves; their system of writing is so difficult, consisting of over eighteen thousand intricate characters, that to acquire a knowledge of them commanded so much mental energy as to cause the mind to wither superficially, so that it is extremely rare to find their comprehension and appreciation sufficiently vivid as to rise to symbolism. Development of the mind, therefore, being very slow, partly from the poorness of the original heritage, partly from the absence of outward opportunities, and partly from the monotony produced by a similarity of manners, customs, and modes of life, as agriculture occupied old and young, rich and poor, the sage as well as the common man; the learned man passing from the cares of government to the plow, and even the Emperor descended yearly from his heaven<sup>1</sup> to plow a furrow in the earth.

Division of the people there was none, consequently there were no corporations, no exclusive communities, no tribes, no system of caste, no aristocracy above the common people. From this arose the peaceful social life, the repose, and the absence of wars.

Universal instruction consisted in acquaintance

<sup>1</sup> The land was originally divided so as to give to every eight families nine hundred acres, the centre acre being called heaven's acre, and destined to pay a tribute to the king; hence the word heaven instead of throne.

with the five cardinal virtues and duties towards parents, towards ancestors, the king, elder brothers and sisters, as well as the five elements, fire, wood, water, earth, and metal, which provide food for man; for sustenance is the heaven of the Chinese people, and unity and mutual assistance give prosperity. These rules were not only taught in schools, but were impressed upon the mind of the people by inscriptions, songs, and admonitions; the officials, and even the king, taking the place of teachers.

Their religion, consisting in a pantheistic worship of the elements, rivers and mountains, heavens, stars, and ancestors, merged itself into the affairs of the state; an especial priesthood did not exist. The sky was represented as the father—male; the earth, as the quiescent, impressible female. The sky, as the active, radiant existence being supposed to be so elevated, and the earth so subject, that the offerings brought were imagined as being destined to a celestial spirit, watching over all. In their orthography the symbol for air, breath, spirit (according to Haug), appears to be the fundamental portion of nearly all their ideas connected with religion. They have also especially distinguished spirits (powers)—the SCHIN was supposed to inhabit all natural objects. Schin means, generally, spirit, God, man. They have a specially distinguished spirit for heaven—the lord, or highest, called SCHANG-TI, who was supposed to be able to see without eyes, hear without ears, and who was always waking, guiding the dreams of the sleeping; and continually wandering over the earth, arranging the weather, the seasons, the crops, and presiding over and directing the actions of men as well as animals.

This arrangement was considered as heavenly reason itself, and to acknowledge it was wisdom, to confide in it, *i.e.*, blindly to follow nature, was virtue, which never remained without reward, as rebellion against heaven and its decrees never escaped punishment, for above all was Schang-ti's severe justice. This being so engrafted upon their minds, namely, that punishment immediately followed wrong-doing, that man was supposed to draw everything down upon himself as being the maker

of his own destiny, that all ills of nature and the kingdom, such as floods, malformations, droughts, etc., were supposed to be the direct result of some transgression of men, and per contra, rain and warmth at the proper time, ripening of fruits, peace and prosperity of the kingdom resulted when man kept to the right course, and remained true to nature and the divine germ implanted within him.

By the Chinese, their king was supposed to be monarch over all men and of the whole world. "Since," they argued, "all people are Schang-ti's children, but the king, being the first-born (from his sacred title, Tien-tse—son of heaven), represented the father, hence his dominion must not only be over the Chinese people, but over all men (Schin, 'man,'—Chinese, 'men'); even over spirits, nature, and all ancestors, who had not gone to heaven at the side of Schang-ti by their virtues; even over the earth, although venerated as a mother, the first-born was supposed to have undisputed sway."

The will of Schang-ti, or the Most High, was supposed to reveal itself in dreams, the phenomena of nature, the eclipses and the position of the stars, the oracle of the tortoise, or the Plant Tsché; and the king who microcosmically represented the human race in fortune or misfortune, consulted these, to be guided by them.

Under the reign of Emperor Hwei Ti, A.D. 304, a mystical sect arose in China, calling themselves the teachers of the "emptiness and nothingness of all things;" they pretended to go into a sort of ecstatic state, when they ceased being men, and were dead to all outward influence of the senses, when they meditated on the mysteries of the God-head. This state was called by the mystics of Japan *SAFEN*. The priests of Xaka throw themselves in this state, and Dorma, one of the followers of Xaka, cut off his eyelids, thinking they disturbed his ecstatic meditations. He is one of the saints of Japan. At Siem, in a peguanic temple, a colossal statue of Xaka is worshipped, representing him as sunken in profound meditation. The priests sit daily for a certain time in the same posture, during which they think themselves to have ceased being men.

Lao-tse (A.D. 604), one of the deepest speculative thinkers of his time, taught that "Reason (Tav) is the first eternal, perfect, incomprehensible, without matter or shape—a square without corners; it stands above heaven, and is its measure, as heaven is the measure of the earth and the earth

of man. It has produced the *One*, this the *two*, this the *three*, then the universe, which receives its light and life from the *Three*. From it the soul proceeds, which strives to return to its origin through ever-changing shapes, to which self-government, freedom from passions and want, seclusion from all the outward world is the way." After trying in vain to influence his fellow-men he withdrew into solitude. "Men," he said, "who no longer exist will be called upon in vain; the sage must only care for himself and his age, and if this care not for him he must not trouble himself, but enjoy his treasure in secret and seek within himself the highest good—repose of the soul."

Kong-fu-tse, Confucius, was the next, who by many has been supposed to have determined a perfect system of mythology and heroic tradition for the Chinese; but to think so is to misunderstand the character of the Chinese people, who, according to Haug, have a "heavy, childish, cold, sensual nature, to whom true poetry and heroism have ever been totally wanting. Its heroes are peaceful sages, fathers and benefactors of the people." (Haug, "Universal History").

Kong-fu-tse was of the royal house of Schang (A.D. 552), and born on the peninsula Schangting; he studied the ancient history of his fatherland from his infancy; deploring the degeneracy of his age, he strove with his whole energy to counteract the evil. He was in every respect a Chinese, who does not search for the secret of heaven and earth, but regarded nothing but self-knowledge the advancement of his country founded thereupon; he was convinced that only with the restoration of the ancient principles of simplicity and unity, the dignity and happiness of his native land could be restored; first, and above all, the ancient family relationships were to produce this; that virtue consisted in a childish obedience and in willing subjection to the heavenly decrees, as had originally been the case. The Kings are his works, and are considered sacred by the Chinese; they contain speeches, proverbs, and songs, with a history which has been continued. His writings are the essence of the ancient traditions. He teaches that "above all things the celestial nature implanted in the heart, the inner light, is to be followed; that man must maintain a just medium in all things, and subject his inclinations and passions, a difficult task, only to be performed by unremitting endeavors—the fruit borne being peace and cheerfulness."

## THE FAIR PATRIOT OF THE REVOLUTION.

BY DAVID MURDOCH.

## CHAPTER XXI. THE TRIAL AND ITS RESULT.

THEY entered on this new stage with anything but feelings of confidence. Already disgraced, at least degraded, they were from their real position in society. Young officers accustomed to walk in Britannia's livery, were in American homespun, worn yesterday by the youth whose corpse was now laid out in Holland sheets. This was the first object which met their eyes, and went further to their hearts than a hundred balls would on the battle-field. The room was crowded with men, who looked daggers at the prisoners; but all were under restraint, for in the centre of the room stood a round table, at which sat nine men, who had the authority, and who, from their gravity and honest faces, seemed worthy of it. This was after the manner of the kirke of Holland. The Dominie sat as president, and could not be mistaken from the rest, who were all dressed in the common garb of the country, while he wore a large black coat that came to his heels, and over his capacious chest hung the true Geneva bands. He was a dignified man, and would have commanded respect anywhere. The young men were prepared, after what they had both heard from Gabriel, to yield him reverence. The men near him were his counsellors, though he seldom asked counsel. His word was law with all, except with one Geordie Cockburn, a shrewd Scotchman, who had found his way hither, first as a teacher, and then as a surveyor; and had, by degrees, climbed well up towards the top of the heap. Possessed naturally of the controversial spirit, he ever asserted his right to speak his mind.

"The criminals have entered," said some one, addressing the president.

"No one can be criminal," said that worthy, "till he is found guilty. Doth our law condemn any man before it hears him and knows what he doeth?"

This was said with great tartness, and to gain time, for the president saw at a glance that the young men were of a superior class, though in disguise, so he asked in a dignified manner:

"Has any one here charges to table against any person or persons for burning Sopus, and

killing Ik and his brother Benjæ Snyder? It is a case of Fama Clamosa."

"Wouldna it be as weel," said the Elder Cockburn, who took speech in hand here, "that we speered the names o' the twa youngsters, before we gang any further in this business? In my kintra they aye put down the name with three or four aliases to the tail o't."

"Take down the names of the prisoners," said the president, at this suggestion, as he turned sharply on Cockburn, saying, "thee always art careful to instruct the Dominie in his duty."

"In many counsellors there is safety, you ken," said the Elder, "as Solomon the wise man said langsyne. What is your name, callants?"

"May we inquire," said Bertram, being the elder of the two, "by whose authority we are here placed as prisoners?"

"At the instance of Dominie Doll, Præses of the Consistory of the Protestant Reformed Dutch Church of Sopus," said the chief man, with some dignity; "and if you be not ready to tell, we will try you under the names of John Doe and Richard Roe, of London. Be you ready for trial?"

"We decline pleading before this court, if court it be," said Bertram, "and claim our privilege as subjects of the king of Great Britain."

"I told you so," said the president to the others who sat near him. "British subjects in disguise, and within the line. Make out the charge against spies and murderers, art and part."

"You will surely grant us time," said Bertram, who saw that he had made a grievous mistake, and who wanted leisure to consider their future course. "We may be able after a day to bring exculpatory proof in our defence."

"Proof!" said a little short, dumpy man, who rose as he spoke. "What need of more proof that this here patch on the knee of these tubbs, that I put on with my own fingers on Benjæ Snyder, the day before he left with his gun on his shoulder. That's as true as I learned the tailor trade with Gideon Noble, of New Milford, Connecticut. That's my say."

"Sit down, Eph Sly; you are one good witness and here is another," said a rollicking, red-faced

man, with a sinister twinkle in his eye. "These are witnesses enough," and he opened a bundle which contained the two coats of the young officers, which Petrus had hidden away. It was impossible to see this and remain unmoved. The prisoners felt all the shame of their present disguise, and the company broke out in a perfect storm of indignation, which was stopped only by the Dominie, who rose and pointed to the body of the dead man, saying solemnly, "We are in the presence of Death, a greater King than George III. Do the prisoners want any more proof?" he added, looking toward them in some pity for their condition.

It is impossible to say what would have been the effect of following up the disposition of the company, had not Cockburn, whose clear mind saw the difficulty, and who determined upon unravelling it by cutting the knots asunder, and by making a set speech of some length, which he was rather fond of doing. The sum of his speech was, that "we shall be in danger of violating the place of the Safety Committee, by taking this business in hand. I doubt if the matter comes under our jurisdiction, for if thae men be spies, what have we to do with them?"

While this speech was making, there was a little by-play going on that interested some of the parties. The man who had brought in the coats of the prisoners went off into a corner, and began rifling the pockets, which was observed by the Dominie. When he had got all out, the Dominie called to the searcher just to hand all the things over for safe keeping. As they lay upon the table before the company, the eyes of the two officers were scanning their property which they had inadvertently left behind. There was the locket which contained a miniature of Clarence's mother, Bertram remembered that on changing the coat he had slipped the ribbon which held the portrait of Margaret, and now it lay before his eyes, and he could not obtain a glance at it. Clarence was fixing his eyes upon the note which his mother had thrust into his hand just at parting, along with a small parcel which lay there with the rest, and marvelling much in his mind what effect it would have on this reverend man. It was addressed to "Governor George Clinton, of what was now called by many, the State of New York." He remembered looking over his mother's shoulder and laughingly asking if she supposed he was

going to present that as a letter of introduction to the rebel governor; but she continued to go on, saying: "Dear cousin, this is my son's presence, and here is the amulet you sent to Margaret as an evidence." At that instant his father came to the cabin, and hastily signing her name, thrust the whole into the hand of Clarence, with equal haste put them into his breast pocket where they were now found. A tear trickled down the cheek of the youth as he saw Dominie read the note and examine the amulet. A change came over his face, and by the time Cockburn was done with his speech the president was prepared to accede to his motion; for he was something which demanded time and reflection. So saying something to himself, he called out: "The Consistory is adjourned till to-morrow, in the Consistory room, at ten o'clock. Take the prisoners where they came from, and prepare for the funeral."

The large barn-floor had been cleared out for the company. Pipes and tobacco lay around trays which were soon reeking, so that the descent out "smoke like a kiln loggie," Cockburn said. Then came in bottles of cider, brandy, baskets of bread and cheese, followed by slices of ham and pieces of sausage; sour kroust and choice rum, with corresponding edibles, of which all partook with a hearty good will. Prayer and exhortations were the accompaniment, not the main part of the occasion. It was a regular fight and almost a fight in one corner, and a frolic in another. Liquor will bring out human nature whether at a marriage or at a burial.

After prayers, funeral address and singing, following themselves in a row, men, women and children, the pastor in front of the coffin, the father and mother of the young man immediately after it, they went to the grave, where a prayer was offered, and then the people scattered.

#### CHAPTER XXII. DARKNESS, DEATH AND DELIVERANCE.

THE two young Englishmen during the time of the burial feast, had a portion sent them of which they stood in need. Hunger made it savory and good to the taste. Old Dyann had taken a great fancy to the prisoners, especially to Clarence. Her heart melted for him when she saw a tear trickling down his cheek at the sight of his mother's picture.

Petrus came in telling them to prepare for walking. It seemed that the Dominie had taken Cockburn's words to heart, for he had left orders to have the prisoners removed to the care of Captain Languendyck, whose company was garrisoned at Catsbaan church; and to that point the two disconsolate young men were moving by sundown. It was not the fact of their being prisoners, nor yet the fear of what might result from their separation, but the hindrance which this delay threw in the way of their overtaking Kiskataam with the one whom they both loved with equal though different love. They must give her up as lost, for as things appeared they were lost themselves, and that without the power of resistance or defence.

"I will fulfill my part of the bargain, for all that has happened," said Petrus in the ear of Bertram, as they came down stairs; "keep a quiet tongue in your head and don't be blabbing of your loyalty everywhere, lest you get a lead pill through your belly, before you have time to return the compliment."

Bertram scowled a dark frown, that said plainly enough, "I will fulfill my part of the bargain with you at least, you hypocrite, the first chance that comes up." As they passed through the door-yard, they saw little knots of men and heard the jabbering of Dutch, loud and confused. As they could perceive, their own case was the subject of discussion, and, however anxious they might be to find out public opinion, there was no way of ascertaining it except through the medium of their guard, and with him, in their present mood of mind, they were not inclined to hold any communication. Their road lay along the base of the mountain, on one of those steppes which run nearly due north, and which are called Vlatts, extending from half a mile to two miles in breadth, rich and deep in soil; having beautiful trout streams running from different points toward the main river. The mountain seemed close at hand, and the two prisoners, rested and in the open air, felt all the fire of youth as they saw how near they were to the region of their hope. But they were guarded too closely to think of escaping. After marching about four miles, they came to a stone building, which they were told was a church, now turned into a fort and garrisoned by the Ulster militia. Here they were to be kept till further orders arrived from the governor. As they were

gentlemen, Captain Languendyck said he would take their word of honor, and let them range at liberty. Both Bertram and Clarence were averse to so pledging themselves, and set down like men determined to make the most of their conditions by taking a survey of this singular outpost of defence. Surrounding the building were tents, and wagons with oxen and a few horses. Smoke was rising among the trees at different places where cooking and chatting were going on. Two old cannons were fastened to logs by an ox chain, while about fifty muskets were stacked before the door. An endless collection of pots and pans, casks and benches, with other trumpery, were scattered in indescribable confusion everywhere, and yet the eye of the soldier could perceive that with at most ten minutes' notice the men would be on the lookout, north or south according as the alarm might be given. The inside of the venerable building was the scene of similar confusion. All around the sides of the walls were settles for beds, on which were spread the heavy blankets and coverlets that the good wives and mothers had furnished them in abundance from their heaped piles at home. In the walls were driven hooks on which hung armor and harness; with clothes and skins from different animals, tanned and used for riding, or covering out of doors. The gallery overhead held the ammunition and the more precious stuff, watched by a sentinel separate from the rest; and the very desk in which the good man had stood on the Sabbath, during many years, dispensing the bread of life, was now changed into a pantry where the choice bits sent from home were kept from the rats and mice that had followed in their wake.

The two prisoners had the belfry allotted to them. The orders were that no communication should be held with them. Everything seemed to bear the aspect of great caution and watchfulness on the part of their guard. A loud laugh would have been grateful to their ears, had it only betokened carelessness on the part of their guard; but there was just enough of motion heard to keep them aware that all were on the *qui vive*, and would do their duty to the death.

As night went on, the silence grew more heavy, the scene which they had passed through during the last twenty-four hours became more confused to their vision; at last sleep stole softly over them, and the two anxious men were, a moment after-

ward, calm and peaceful, and would doubtless have remained so till the morning had not a voice, which they had come to know well by this time, said, "Young men, get up; you have other business than sleep before you;" and a hand shook them both by the shoulder, while a small lamp showed them the face of the Dominie, that they had met so often of late, whom they had come to regard both as their good and their evil genius.

Surprise was pictured on both their faces; but they were too well trained to lose possession of themselves by a sudden wakening; so starting to their feet, they waited further development; for already they perceived that something new was on the tapis. There was not a sleeping nerve in their body by the time they stood upright.

"Sit down there," said the good man, "and give me an honest account of your condition; and let me have nothing but the truth."

Bertram saw that kindness and severity were struggling in the face of their inquisitor, and he began by telling what was true, but what to a more experienced courtier than the Dominie was would have sounded like flattery.

"We were told," said Bertram, "to put ourselves on your mercy, should we get into trouble; and to tell you all, and if you will listen to me, I am willing to trust a man whom I am now certain will not take advantage of our condition by turning the information we give him against us."

"Young man," said the Dominie, "those who advised you to trust yourself to me, did me no more than justice, for God forbid that I should hurt one innocent hair of your head: nevertheless, had I seen you about this time last night, near to Sopus, a ball would have gone through your pate, as sure as there is one in that thing there at this moment;" and with that he fingered a horse pistol in a very carnal manner.

"There is an armistice between us now, young men; so speak;" and the clerical soldier put his piece up, and Bertram proceeded to give a full and detailed account of the cause and the consequence of their apparently mad adventure.

"I find that you have spoken truth, and I am now," said the Dominie, "about to take upon me what must subject me to much misapprehension when it is discovered, and perhaps to the getting of my own skull cracked, but I must run the risk, so follow me."

The astonished prisoners were about to say a great deal about honor, and gratitude, and reward, but were stopped by a motion to silence and quiet, as he led them down a way he could tread himself in the dark; for, after blowing out the light, he took hold of Bertram's hand behind him; telling Clarence to do the same by his companion, he led them out to the north of the church, where stood a man holding a horse, who seemed to be expecting their coming.

"Here is your guide," said the Dominie, "and he will tell you the rest. Be sure that you keep silent forever about this night and whom you have seen, and God Almighty bless you, and make you successful in your race after that scoundrel Kiskataam." With these words he had vanished, and they found themselves standing face to face with their old friend Gabriel.

They almost forgot themselves in their surprise at the meeting, but he being prepared for their astonishment, immediately whispered, "let us be off, out of earshot, lest we have a ball sent after us." Gabriel mounted the horse and told them to keep one on each side by the stirrup-irons, as he knew the way. On they went in silence, increasing in their speed as they passed out of the sentinels' hearing; their hearts beating with joy both at their escape and at the prospect which they felt must now be opening for them towards attaining the end of their journey. It was now an hour before midnight; and in the morning they hoped to be on the side of the mountain, out of danger from the rebel Whigs.

Under the charge of their former guide they now were moving along through the darkness. The relation in which he now stood to them was more of guardian than guide. The two young Englishmen, in that easy way by which those accustomed to command become subject to superior law, or to circumstances beyond control, gave themselves up at once into the hands of their servant. They perceived he had some authority and a deep interest in them; but they were anxious to know all before they yielded up all. On their way he intimated his desire to reveal to them the exact relations in which he stood toward them. He was in the employ of Lady Clinton. He held from her a secret message to the provincial governor, who had retired with the Congress after the sack of Sopus to Hurley, which was said to be defended by the Dominie and the old vrows of

the place. Thither Gabriel hastened; sent in the sign which he knew would call the governor out; and his own words will best tell the rest:

"When he saw me he lowered his voice to a whisper, looking this way and that way; and when he saw there was no man, he said, 'Are you the man who sent me in this ring?' And I said, 'Yes, your Excellency, a noble lady committed it to my care.'

"And for what purpose have you brought it to me?"

"A case of distress, sir, in which your help is demanded,' I said, promptly, looking up in his face.

"What distress can there possibly be with them at this moment, when they have all their own way? I am sure they burned and harried the town, and got off with clean heels to their ship without one life being lost or a prisoner left behind. The distress is all on our side.'

"Not so sure of that, your Excellency. Two prisoners are in the hands of the people of Vlatt Bosh, and their lives are in danger at this moment.'

"They must be some persons of note when Lady Clinton interests herself so much as to send this token, which was only to be sent on the last extremity.'

"They are none else, your Excellency, than young men of the family.'

"Good God! and what can I do in their case? How could they be so foolish as to allow themselves to be taken by our people?"

"I then gave a full and fair account of the whole matter, beginning at the stealing of the young lady, with your pursuit after the robber, and ended at the place where you were lying yesterday. Never did I see a man thrown into such distress of mind. 'Come this way,' said he, and he walked in the greatest agitation around the house, till he got me into a patch of wood, where he gave vent to his feelings in bursts of exclamation that would have sounded well in Ireland.

"Enthusiastic little fool! She wrote me that I might look out for her some fine fall morning; and how can I help these young madcaps after what has taken place? Blood is thicker than water. I wonder if the knight of the garter would help plain George, were he now in the hands of his Majesty's bulldogs. I rather think I might

not be known as belonging to any other family than Adam's. Ha! things change in this world. Let them take their course. That basket of deer meat and turkeys was well enough; and the basket filled with those bottles of cognac back again were all well; but this is a new matter. It would be as much as my head is worth were Washington to hear of my interfering. No, young man, take the ring back where you got it.'

"Here he held it out to me, looking at it all the time. Then asking me, 'who knows of these young men!' With that I told the whole story, and mentioned the name of Dominie Doll. The countenance of the governor brightened up at this; a lucky thought was evidently finding its way through his mind. Taking a leaf from his note-book, he proceeded to write, all the time swearing at the insolence of these British Tories, who threw out their requests upon us colonists, as if we were bound to listen and satisfy them, because we belonged once to the same national family.

"Wait till I put my seal to this,' said he; for he evidently was not inclined to trust me. 'Now take that, and see that these young fellows keep out of my road, for I will shoot them as truly as my name is Clinton.'

"I took the letter to the Dominie, and you are here. What next, gentlemen?"

The question now, what should be done? was one not easily solved, where there were different means of reaching the end sought after. Brandt, the faithful ally of the king, was in their immediate neighborhood, and by his help Kiskataam might be overtaken and punished; but, as there was unquestionably an abler mind in the plot of abducting Margaret, it would be dangerous to let matters be known in that camp immediately. Caution was necessary to obtain the ear of the great Mohawk, who certainly would listen more favorably to an officer bearing the commission of his Majesty than to men who had the appearance of stragglers. By the time his mind might be assured the dense forest would hide the abducted lady. Doubts gathered so thick upon the minds of both Bertram and Clarence that they voluntarily gave themselves into the hands of Gabriel as captain.

"If you promote me to that place, then," said that worthy, "I command you, Mr. Clarence, to be off to Kaatskill, taking this letter with you, to

secure the assistance of the Dominie of that place. If the mountains must be scoured, help is necessary, so that the retreat to the west side may be cut off. You see that fire burning on the face of the hill; there lie Brandt and his men. Let Kiskataam be prevented from escaping, and we can boldly go to the Mohawk and demand his aid in behalf of the king. We must trust to the current of events, and as good Dominie Doll said, 'leave the rest to Providence.'"

"True," said Bertram, "for I am more adrift here than I would be in an open boat at sea. My sailanship is all useless on these mountains. Some wisdom higher than my own is needed, and a power above King George must control this rash adventure. Breakers are ahead, and we on an enemy's coast."

"A stout heart will climb the steepest hill," said Clarence. "Give the most difficult part to me; I am ready for it. I go with a better conscience than I did to that dastardly burning, where we did not deserve to succeed. The people are better than their betters. What are our captain's orders?"

"Mount you this nag," was the word given. "He will carry you at least seven miles an hour. He belongs to old Cornelius Wynkoop, as stiff a Whig as ever smoked a pipe. He loves his horses next to his wife; she says he thinks more of them than he does of her or the kinderen. If he supposed at this hour that a king's man was putting his leg across his back, he would rise out of his bed, dearly as he loves it; and I believe out of his grave, if he were in it, with a thick stone slab over it; so look out, sir. You will ride along full twelve miles, till you come to another stone church, not unlike the one you have just been in. Ask for the Dominie's house, and give him that missive. Whatever he asks, tell him freely, and follow his advice."

By this time, the young soldier was on Charlie's back, a stout animal, with a small head and a long tail, that he whisked around night and day, as a warning to the flies.

Gabriel, holding the impatient horse by the bit, gave Clarence his last advice, saying, "You must not linger on the road till sunrise. This is the king's road to Albany that you are now travelling; keep on it till you come to the kerke; stand at the door looking east; you will see among fruit-trees, on a knoll, a stone house, covered with Hol-

land tiles; turn to that, and you will be sure to find the man you seek—a strong built man with keen eye. Bid him a good morning; then, as he answers, turn to the mountain, and ask if the old vrow's nightcap be on yet. He will bid you mind your own business till the old vrow has had her morning meal and said her morning prayers. Follow him in-doors; put the letter in his hand on the way; sit down to the table, as if you were one of the family; wait patiently till his family have worshipped with him. He will let his pleasure be known sooner than if you press him."

"Well, that is plain speaking; I think I can remember that. Let me see—the king's road—right on—sunrise! Oh, yes, I know it all," said the rider.

"One word more, as the Dominie says, and to conclude. Meet us at noon the day after tomorrow at Kauterskill Falls—mind the name, Kauterskill Falls—and there is a whistle that will answer this one that we have."

Here both put their bone whistles to their mouths, and made the midnight air on all sides resound the shrill sound.

"We must be softer than we are now," said Gabriel. "Go."

And away the horseman went at a good round gallop. "At this rate," said Clarence, "I will be at the end of my journey long before sunrise. But in times like these, who can foretell the adventures of a single night, within a short journey of twelve miles, even on the king's road?"

But our story, to be clear, must just now follow the course of the two who were left behind. They having a shorter distance to travel, and a more difficult path to tread, moved slowly along.

"It is but a short hour past midnight," said Gabriel, "and our part in this business is to search all tracks. For that, we require daylight. What say you to a couple of hours' sleep, and then we shall have time enough?"

"You may require it indeed, my friend," was Bertram's answer in words, though his impatient heart said go on. "We have had plenty of time to sleep, in yon garret all day."

"Well, if you are agreed," was the reply of the guide, "we shall turn into Cornelius Wynkoop's barn. To tell the plain truth, I am now-ardly as well as sleepy. There is an enemy in these parts not easily guarded against. Hunter as

I am, the painter and the wildcat, in the dark, are dangerous critters, as the Yankees say."

"Is there much of that kind of game up in these regions?" asked the young Englishman, who had seen some hunting in his day, in his own country, and also in the East Indies. "It would be good sport, to have a chase after these western tigers. The panther of this continent I have been told is a powerful animal. What of these wildcats?"

"Oh, there are swarms of them all through these hills. These mountains have their name from them; so many and so large are they, that a single man finds himself in danger of his life in attacking one of them."

"Ha! a man killed by a cat would make a great story for a picture-book in Christmas time. Since you are so skilled in names, why do they call that church we were at the Catsbaan."

"That means the cats' race-ground," said Gabriel, laughing at his own conceit. "In the holidays the big boys and girls for ten miles round here meet and have a regular hunt. After scaring out fifty or a hundred of the screamers, they set the dogs after them on this flat. And let me tell you it is a scratching time when one of these creatures happens to fasten on a dumpy fat Dutch girl, and the boys come round for her rescue."

"That must be fun in a small way; but these painters, as you call them, must be the very thing to rouse the blood in a man's heart."

"You may meet them soon enough, sir," was Gabriel's answer, "for unless my ears deceive me there must be some wild creature up there now in South Peak; I hope it is far off, but in the dark one cannot tell, and my counsel is that we go at once into this fortress until the enemy be off, or we be in a fitter condition to meet him."

For some time past they had been turning more to the westward, and nearer to the mountain, as the dark shadow against the sky showed. A large building, which looked still larger in the night, rose plainly before the eye of Bertram, who was at this time seized by the hand, and led through the door, which yielded to the touch of his companion, as if he were the owner himself. Gabriel led his fellow-traveller to a ladder, whispering in his ear, "follow me to the yards;" a hint which the young sailor took at once, and mounting, he found a softer hammock than any in the British navy. Gabriel was asleep in a few minutes, but

his companion was too excited to pass easily into the land of dreams; so he lay and mused.

At length the old rooster of true Holland breed, heavy behind and double combed before, gave out his first trumpet sound, becoming louder as Gabriel snored responsively, and deeper at every crow. Bertram became impatient to be away, where the dangerous Whigs would not venture near them. So giving the sleeper a dig with his elbow, he succeeded in making him conscious of where he was, and of what was required of him. A few whispers earnestly blown into his ear, were enough to a man accustomed to lie down in the midst of dangers. So keeping quiet a few moments, just to recover his full balance, he started up, saying, "Remain here till I make a visit to Dame Wynkoop's cellar, where I am sure of getting something good to eat." And before his companion had time to remonstrate with him, he was off, and already down the ladder on his way. Bertram followed so as to watch against surprise. There was no ground for fear. Old Cornelius was in his soundest sleep yet; and even had he been awakened he would not have suspected an intruder, but would have supposed it to be one of his dozen blacks moving along the floor. Besides, Gabriel was as familiar with all as if he were going over his mother's kitchen. All Dutch cellars are the same in size and the same in arrangement. Butter pots and firkins on the floor, a cider barrel in the corner, and a vinegar jug on a shelf. He moved about easily. The pies, the cold meat, and the bread all stood in a pantry on the left hand; it was but the work of a moment for the pirate to clear the whole away. He knew that the old wench who ruled the lower regions would lay it all to that cussed Ebo, who came home hungry after one of his night rackets. However, the cautious Gabriel walked as if on eggs, reaching the barn with his forage, and well pleased with his success.

"There is some of the staff of life," he said to his friend. "You will need it before we get to the top of these hills, where there are no loaves growing on hemlock branches, nor roasting pigs on bare rocks. I only wish that we had some of old Kaarney's Holland gin, now. It makes the staff limber as well as stronger on the hills."

"You are a daring fellow to venture where a hungry wolf would not," said Bertram, under his breath.

"What is that I hear gurgling down your throat?" said Bertram, laughing inwardly; "have you hold of the old farmer's gray-beard after all?"

"Try it yourself," was the answer, and a square bottle about a gallon's size was held to the mouth of the thirsty inquirer, who tasted, and then swallowed with right good will. He found it strong cider brandy mixed with juniper berries; a most agreeable, but a heady drink.

"Hush!" said Gabriel, and he put his head over the loft, for they had both mounted again to their former place of rest. "Some one is coming in at the big gate. I hear the old wooden hinges squeak." The two gourmands rose to their feet to be ready for any emergency; when the stable door was opened with great caution; and some one leading a horse entered, and a second horse followed. The negro, for his voice betrayed him, began to talk to them just as he would to his fellows in the field.

"Ole Black, you'd stop de snuffin; te be' bout Elbo's business; see dat no stories be told but de big trut."

Then coming into the other stall he commenced in the same way.

"Brown, poor Brown, been on de king's business, s'pose; vere's de fellow dat own dis saddle? will see in de mornin sun-light. He be gentleman dat spok dere to us at Phoebe. Me know an English offisher by his neck, might had left a yallow Jeegey wen he ent off to de Squire Burhause himself."

At these sounds Gabriel pricked up his ears. "Something has befallen him, I fear," he whispered in his companion's ear. "The horse he rode has returned with his mate."

"Who do you mean?" said Bertram, suspecting himself that trouble had come to his friend.

"Why, the lieutenant, to be sure, Mr. Clarence—some difficulty. Hear him speak of the Squire Burhause. I have a mind to make the splay-footed vagabond tell. We may be able to remedy the evil."

Bertram saw the folly of this, and put his hand on the other's mouth as a warning, while Gabriel, feeling the influence of the cider-brandy, and knowing the superstition of the negro race, out of pure mischief gave a squeak through the fingers held on his mouth, which made the hostler call out, "Oh, Lorra, have marey on poor nigger," and without stopping a moment, he ran out

slamming the doors after him, and rousing up all the dogs in the house.

"We are long enough here," said the mischievous fellow as soon as he got over his fit of laughter; "let us move before we get a few drops of old Kaarny's gun. There he is lighting a candle now with a coal at his mouth;" and gathering up the fragments of their breakfast for future use, they left their hiding-place with good heart and nimble feet.

Before the heavy half-door of Cornelius Wynkoop was opened to let him and his dog Gates out into the yard, the two adventurers were well away on the road that leads to the Clove. Having no cause to fear immediate danger, they moved on at a moderate rate, discussing, as they went, the events of the last twenty-four hours.

Gabriel had an uncommon flow of spirits for him. He had been taciturn, and dark in his speech and in his looks. He had got a good draught of the inspiriting liquor; but that was not the cause. He had paid a visit to his mother, and now he was beyond the reach of bodily danger, which he had been in ever since he came up with the marauding party. To wile away the time, as well as to gratify his curiosity, Bertram led his guide to the discussion of his own affairs.

"I have no objections to the telling of it all," said the countryman, "though it is a longer story than a stranger would care to listen to, except for amusement. You see, I left old Sopus and my mother's house in a fit of ill-nature. I cared no more for King George than I did for old Mat Van Guisen; but I had taken a heart's hatred to some that called themselves Whigs, and particularly to one purse-proud old Jew, who had a lovely daughter, who loved me but durst not move in the shadow of my shape. To get me out of the way he made up his mind that I should go off with Arnold to Canada. I took the opposite road, and have been in all the places south of this where fighting was to be done; for I found there was more quiet for me in war than in peace. I jumped at the chance of coming on this expedition. My love of adventure, my love of revenge, my love of Nelly Labagh, and I may say it truly, the love of my mother, all urged me on board the Vulture. Standing as sentinel on deck, I soon discovered the aim of Kiskataam. I had long known the fellow to be a villain, and determined first to watch, and then unfold his designs. We

had met before the war broke out, in Stony Clove, where he attempted to steal my good gun Meg, when I chased him and struck him down. So you see there was ill blood between us; our glances of defiance said—another time. When he slid overboard, carrying Miss Clinton with him, I was not there; but of all on the ship I was the man to have headed a party of pursuit; but you know it is not for us to offer advice to our betters. But I did what I could afterwards in an interview with Lady Clinton. I offered my services, and they were accepted on condition that I should await your pleasure after the Sopus business was through. There lies the secret of my knowledge of your intentions, and of my present interest in you. I own that I hate an Indian, and that I would travel any time a thousand miles for the mere pleasure of shooting one. Dirty, abominable wretches! how any young lady can sit and hear their soft cunning tongues close to her ear, I cannot understand. And blood-thirsty devils! how gentlemen, like you, can fight with them, or employ them to fight for you, is amazing. I am ashamed of having ever drawn a trigger under King George when I think that Kiskataam and his like, have fingered the same bounty."

"Have you seen your mother?" said Bertram, anxious to turn the mind of the excited colonist away from a theme which burned on his own tongue. The effect of the question was all that was expected, and more, for the Englishman was almost sorry he had encroached into that sanctum of Gabriel's bosom.

"Seen my mother! Yes, but I all but wish I had not ventured over that holy threshold. Blessed woman, how she gazed on me, drinking in my soul through her old dim eyes, that lighted up with the same love she had always felt for me—prodigal as I have been. I had resolved to stand it through, but how soon all broke down, when she said, 'My own Gaby!' Well, I feel better that I went. Before, I could have killed an army, now I would not hurt a fly."

"Always excepting an Indian," said Bertram, sily. "Where did you meet her? Was it at home, in her own house?"

"You must remember, after I left you at the stile we were standing at, that I walked softly on to the cottage window, where I stood listening for a few minutes, when I heard the well-known voice, low and soothing, as if she was comforting some

one. She spoke as if it were to a child. But that is her way to all sick people; so I did not expect to see a child; and yet I was startled when I saw a man's head rise up from the pillow and scream. I could stand at the door no longer; so rushing in, I flung myself into her arms. She kissed me quietly; but pointing to the bed, said, in a whisper, 'Petrus is sick.' That was my brother, and as I feared, he had been out in the attack, and was hurt in defending the hearthstone. A cruel fellow of ours had struck him on the head with the butt end of his gun, and now he was delirious. He recognized me, and gave a wild shriek that froze the marrow within me. Springing on the floor, he seized me by the stock on my neck, twisting it till I became like a child in his hand. I could not have resisted him had he tried to kill me. My mother's voice, however, served to make him release his grasp, as she came between him and me.

"Is it here," the maniac cried, or rather yelled, 'that the cursed Tory would dare to show his face; and in the colors of the king? Ha! ha! ha! Come to burn the house, and his own mother in it? Look, see here where your bayonet is sticking yet?' and he tore away the bandages from his head, bloody as they were, and flung them at me, they falling on my face, so that the marks of blood were left all over me.

"Then exclaiming, as he looked at me, 'You bloody-faced traitor, you come home in your true colors. Take the bayonet out of the hole he put it in. Take it out, I tell you, till I put it into him.'

"At length, through loss of blood and fatigue, he became weak and quieted down, so that he fainted. This gave me some relief, when the good Dominie came in, to my great shame and mortification. He has always had a power over me more than any other man: not even the General himself could command me as that man of peace can at this hour, when I come near him. His surprise gave way, at seeing me, to great indignation, and even reproaches at first, which cut me to the heart. Then he would mellow down to a kindness, which was worse to bear; so that I stood really between two fires, and durst not resent either side.

"O ye vile boy! Ye Absalom, rebelling against parent and country. O Gaby! Gaby! I am sure you did not find any ground for your sinful conduct in the good Heidelberg that I taught

you. Sit down there, like a good lad, and see if you can say it. What is thy only comfort in life and death?"

"Just as I was beginning to reply, my brother gave a shriek that made us all start to our feet. 'Send him to the gallows, I'll be hangman.'"

"'Hear you that, Gaby?' said the Dominie, when the raving man had quieted down again. 'That's a voice calling upon God for judgment on your head; your brother has spoken his last words, and you hear them yet ringing in your ears.'

"It was true, Petrus had sunk into the arms of death, and I stood there, as I thought, his murderer. I felt that it must be so, while the Dominie continued to pour out maledictions upon my poor head, till I sank on the floor.

"'O Dominie! Dominie! have pity—have mercy on my poor misguided boy,' was the cry of my mother. 'My kind-hearted Petrus, my first-born, the image of his father gone, and none left to me now, but this my poor wanderer;' and here she fell into my arms, and cried only as a mother can.

"'Gaby,' said the Dominie, after a few moments' pause, 'you are too long here, unless you be seeking the gallows. As sure as there is a rope in Mark Snyder's barn, if he catches you within the town of Sopus, you will have to swing for it. Up, and be off with you.'

"After that I met him, and told him all about you, and succeeded in interesting him in your affairs. So that you are here, and your friend away yonder."

"Well," said Bertram, "he must have drunk deep into the spirit of his religion, when he can so help the outcast, and forgive such injuries as we put on his people. God grant that the time may yet arrive, when I may do something that will show I am still a man and a gentleman."

In this way the two went on slowly, till they reached the head of a narrow valley, up which the road ran, when they came suddenly upon Hoogenhuisen, still smoking and in ruins.

"What!" exclaimed they, both at once, "more misery from war."

"O, God!" said Bertram, "this solitary case makes us feel more than if we walked through a sacked city. Domestic happiness in a single family we can understand, and feel a sympathy with. How many happy hours have been spent around that hearthstone!"

"Yes," said Gabriel, who was transfixed with grief. "Happy hours indeed have I spent around the fireside of Martin Schuyler. I could not have believed, had I not seen it, that it could be so cruel as to level this home to the ground. Black ruins! There is the old Anshela kept as bright as a button, but the cellar always so well filled, now a mass of charred barrels and broken pottery, and"

Gabriel's heart was full at the sight; and sitting up on the rock opposite, he sat down on the rock to indulge his grief, mingled as it was with burning tears of remorse—let us hope to find some solace, in some degree. So long did he sit, that Bertram found it necessary to remind him that the day was advancing, and he knew best how far they had to go, and what was to be done.

Gabriel said, "It is time we were gone. These ruins tell us that Brandt and his crew are am ashamed to say our friends, are not far off, and are likely lurking about here. Bertram may now be within cry. Let us then, my guide, 'prepare ourselves for friend or foe.'"

With that they both proceeded up the road, intending to cross at a point opposite the falls of the Kauterskill, and there to lie in wait till the appointed time for action came. However, both the young men had a kind of presentiment that the centre of attraction was there, and doubt it arose from two ideas floating in their minds, Margaret's well-known romantic disposition, next the disposition of the Indian to select a prominent scene in nature, as a mark for his camp. To that celebrated place they now came, and there they stepped. Here an occurrence took place which interrupted their progress, and but for their courage and experience would have put a stop to their expedition forever.

#### CHAPTER XXIII. A PANTHER OR A CAT?

GABRIEL, sunk in reverie over the ruins of Hoogenhuisen, left the responsibility of the journey to his companion, whose senses were becoming keener every moment to the sounds of the objects rising around him. He was sure that a wild animal must be in the neighborhood, and, caring to disturb his guide, he merely remained awake, and continued more watchful. The sounds were becoming louder and louder, till at last a fearful roar roused up Gabriel, who ex-

he started to his feet: "A catamount! run for that rock." And they both sprang to one that was near, and balanced on the hillside so nicely, that two men in earnest, with a stout oaken lever could have turned it over, and sent it rolling down the gorge into the stream. To this they both ran, and on the lower side entrenched themselves, waiting for their enemy, who who being above them on the hillside, came down upon them with tremendous fury. Their case seemed desperate, since all the advantage of superior position was on the side of the animal. Retreat was now impossible, and their fortress was insufficient should he choose to besiege them by merely keeping watch. But they were not men to yield without a struggle. Bertram had seen the real tiger slain, when there was a host against him. Gabriel was a hunter from his youth, but this was the first time he had met the catamount along with a single companion.

On the creature came, leaping from height to height, and evidently bent upon taking his next spring to the top of their defence, which bent over them slightly, and was only about five feet high on the upper side.

"We must fire together," said Bertram, "if we would make sure, and then spring up on the rock just as he leaps from it."

"Then captain, give him your shot in his burning eyes, while I aim for his heart."

"Have your knife ready," was the quick answer of Bertram.

"Tighten your belt, captain," said Gabe, as he drew up his own buckle one hole more, pulling his rough cap tight over his ears, and looking where he might take hold of the stones, in case he must spring to the top of the rock. The sailor was not behind in his preparations, and stood ready.

In the meantime the animal watched his foes, lashing his tail from side to side. When, crouching, he gave his threatened spring, landing fairly on the rock, where he received the contents of two pistols, which only made him more furious with pain. He gave a roar that was heard as high as the Dog's Pool, where Angelica sat smoking her pipe, till she rose in her terror and mewed the wildcat's mew that alarmed Elsie.

The two skillful men had retreated to the two ends of the rock, so that their enemy's attention was divided. Falling down gracefully on his haunches, he seemed to plan carefully his next

attack, and Bertram appeared to be the object of it, for the faces of man and beast were within four feet of each other.

"Keep close to the rock, and more to your right," was the cry of the other man; "he will leap soon; let it be as far down as possible." And the warning was scarcely given, when, with another roar, the spring sent the catamount down so far that by the time he recovered himself, the two men were on the upper side of the defence, waiting for their foe. The advantage was now all on their side, and the discomfited creature, as if ashamed, turned his head away a moment, half inclined to retreat. It was then that the bark of Rover from above attracted his notice, and roused him to his feet, evidently with the determination of renewing the attack, but with more caution, for taking a circuit, he moved up the side of the ravine, as if to regain his former vantage-ground. The two men were debating whether it would be best to allow him to come on to their rear; and like all divided commands, the council might have proved fatal.

"You may stand here if you please," said Gabriel; "but I am for that tree. I hate to have an enemy above me;" and with that he sprang up and sat on a branch which overhung the very rock on which his companion was ensconced. The animal came cautiously, when both fired, and their shots told; but, raging with pain, he sprang upon the rock, over which Bertram slid, but only to encounter his foe, which was in close quarters with him at once. Out came Bertram's sharp knife, which played havoc with the beast; still the result might have been doubtful, had not Gabriel come down and finished the battle by a ball which he planted in the ear, so well given that the catamount turned himself on his side, and gave his last gasp.

The two adventurers, wiping the sweat from their faces, mingled as it was with blood, sat down on the rock, surveying their fallen enemy with gratitude.

"A panther," said Bertram, at length, "and nearly as large as the Bengal tiger we shot at Bombay, in the East, when there were fifty of us in at the death. What powerful limbs he has; and these horrible claws; see where he has torn the flesh from my arm here."

"Not a panther, sir, as you may see by these black rings on his tail. A catamount, if you

please ; but so far as the fierceness and the power of the creature goes, there is but little difference. The painter is sometimes seen in these mountains ; but of the difference, old Frederika Sax could discourse with you a whole day, and not be tired then."

"My poor carcass, Gabriel my boy, would, be quite as sore after the description as it is now. See how these holes bleed ; come, tear off a piece of my shirt here, and act the surgeon on me, lest I bleed to death."

This being done after the most approved hunter's art, the busy Gabriel commenced immediately skinning the dead animal. "Of what use is it ? for you cannot use the skin here, and you would not burden yourself by carrying it away," asked Bertram.

Gabriel replied coolly : "You see, sir, it will serve two purposes, and more besides. It will prove good luck when we show these claws, and obtain bounty when we fetch those ears home. They are good money anywhere while fresh ; and the man who has killed a catamount, as that tail will show, is not to be despised on these mountains. He will respect himself, and others will respect him.

These events took place within a few miles of the Dog Pool, where the three women in whom we are interested had their hiding-place ; but in these wild regions, a thousand men moving singly through the thickets, would be like ships in a dense mist at sea, within hail of each other, but in ignorance of being near any one. A mile more to the westward would have led the two men to the very spot on which their minds were bent.

Weary and worn with the fatigue of their late contest, they sat down on the verge of the ravine, and commenced eating the fragments of their supplies, which Gabriel had carefully gathered up at the close of their morning meal in the barn, draining at the same time the last drop of Hollands from the square bottle.

"Squeeze the sides of it," said the humorous guide, as he saw his companion holding up the vessel, so that the drops fell into his mouth. "There is more where that came from, though we are not likely to taste it till we earn it ; and if my ears don't betray me we shall have more work of of the same kind before an hour passes. Hark !"

The attention of Bertram was called to what his guide was saying, when a roar went up through

the Clove in the mountain, which chilled him and made him start to his feet as if he had been shot.

"The mate of our dead enemy," was the answer to his fears. "She had found him, and the skin is not so warm as it was last night. Well, it sounds mournful, and there is a humanity in that scream."

"I declare," said the other, "I wish I could have found the living body rather than the dead carcass ; sorrow, even in an animal comes one. It is nature."

"Up," said the eager Gabriel, "for the creature comes at full speed ; let us to the top of the mountain here, and have at least the advantage of high ground. Load as you run, and see that your priming be good. We will need all our wits."

Doing as he bade, he put Bertram up first. Walking almost backward himself, he watched the animal shaking among the bushes, looking out for some point which might, in case of need, be a place of defence. The old rock was in his mind, but for lack of that, he was ready to climb the first tree which afforded a favorable harbor ; and had communicated his plan to Bertram, when another roar told them that the creature was upon their wake. She had found their track and was hastening toward them.

"Spring to that pine-tree," was the order of Gabriel, and at the same time he took a step close by. When nearly half way up they turned back with more security to the path up which the animal had come. Listening with great eagerness, late experience told them that something was stirring the animal below them. She was uttering forth low, dull growls. In a moment more the report of a well-loaded gun came up to them in full volume, accompanied by a yell which showed that the ball had entered some vital part, and that life was far from extinct. Before Bertram had time to speak a word, he saw that Gabriel had slipped down from his perch, and was already on his way to the scene of action ; and in duty he must of course follow his captain. To men accustomed to danger, the mere prospect of seeing fair play was enough to entice them to the place.

When Gabriel arrived, he saw at a glance all the matters stood : a single man was in close combat with an enraged animal ; and the beast had already the best of it, for the man lay on his back

as grasping the throat of the catamount, her tongue pressed from her mouth, discharging foam mixed with blood on the prostrate man's face, finding him completely.

"Hold on," cried Gabriel, the moment he came near; "hold on, and I will put my pistol in her ear."

"To her heart, to her heart," shouted the man, "she will choke me with blood."

Quick as thought Bertram took the opposite side of Gabriel, and putting his pistol to her heart, while Gabriel applied his at nearly the same time, the great creature, with a scream almost human, fell over on her side.

"Are you hurt?" was the first question put to the rescued victim. Rising up, he shook himself, as if he were not sure that he was the same man who had been lying under a catamount a minute before.

"I do not feel any way injured," was the answer of the man in the full mock dress of an Indian; "but I think I must be, after such a struggle. I forgot to thank you, gentlemen, for your timely help. My throat would have been in her vicious jaws but for you; for I could not have held out three minutes more."

All this time the stranger was panting for breath, and trying to stand on his feet. Bertram and Gabriel earnestly united in doing all they could to restore the rescued man to calmness and strength. The three sat down to survey their fallen foe and talk over the combat.

"It appears to me," said Gabriel, "that notwithstanding your evident disguise, your voice and eyes are in my memory, like some old tune that I have heard snatches of in my young days. I am prone to asking your name at such a time, but our late battle has put us all three on one side."

"And you might command me just now, since you are two to one."

"Any man," said Bertram, "who can alone fight a catamount is not to be despised even on his back."

"I have recognized you from the first moment you came in sight," said the stranger. "You are Gabriel Smith, and my name is Teunis Roe."

"Ha!" said Gabriel, "who could have thought; and yet I might have known that the son of a father would be on the side of the king; for I see that you are wearing one of his liveries."

This did not sound very agreeable to the other,

but he merely replied, "I have heard that Gabriel Smith had on the king's livery for a year past; how comes it that he has doffed it in these hills which are all under his Majesty's power?"

"Reasons for all things, and you are the very man that can help in this matter, Teunis Roe; and as I knew you before to be honest, and now to be brave, I or we would ask of you a favor."

"You may command as a right, since I am indebted to you for my life."

It is easy to imagine the mutual surprise of all the three when the whole story was communicated. Bertram of course was the most astonished, the most enraptured, and the most affected with fear lest all their labor should be lost.

"So near and we cannot find them! Oh, if we had but a few days to ourselves, we could hunt them. One thing we should be thankful for: she has escaped that villain Kiskataam."

"He is now hunting for them, and perhaps before you are aware of it he will be at your back, aiming his gun at your ear. It is time that we got under cover. I have seen the snake this morning already, and I have not been able to leave the camp once but he has been at my heels. Let us go up nearer to the Kauterskill Falls."

"Have you made up your mind as to the course you will take when the Indians are carrying off the prisoners," said Gabriel to the mock Indian: "for you know we can claim to be on the same side with Brandt and carry off our prize in the teeth of Kiskataam?"

"That is if the man called Colonel Clifford do not succeed in putting in a stronger claim and have a stronger hand in it than two men like you, in the dress of the common colonists, are likely to have with the Mohawk."

"Colonel Clifford!" both called out at once. "He here! then our case is hopeless, unless we can obtain her by force or stratagem; which do you suppose to be the most feasible?"

"When I met that fearful animal," said Teunis, "I was on my way to consult a man of more wisdom than I have myself; though till this morning, I was better able to judge of hunting through these mountains than a stranger possibly could be; but I now am at my wit's end, and am willing to be led by any one in this matter. Perhaps I ought to have gone to him beforehand; still it may not be too late."

"Who is this person, Teunis, that you are now

about to counsel with, if I may ask, for if we are going to take the same work in hand, it will be proper that we act together, intelligently."

"Let me here," said Teunis, "tell you candidly that my life and happiness are alike bound up in the deliverance of Elsie Schuyler, and if the young lady be the same as I have seen, your interests are are mine; and so far you must trust my word. I have a plan which was in my mind before we met. It can be carried out all the better by three. Hear this and tell me your mind. The party on the rock I believe are waiting for more prisoners whom they expect. Some say it is the Dominie of Kaatskill. My own notion is, that it is nobody else but your Lady Margaret; and to-morrow there is to be a regular surrounding of the hills as far west as possible; now if I can get up a party of surprise it will either send Brandt off, when Elsie will come out of her hiding-place, or it may become a rescuing party, should they succeed in discovering the spot where I am quite sure she keeps her charge."

"And what did you wish from the friend below?" said the over-cautious Gabriel.

"I wanted encouragement: for my judgment has become scattered. Between this false dress, my father's wishes and my own likings and

dislikings, I am like a dog that has lost its scent, ready to be whistled off by any straggler on road that will call him master."

"Unless you have confidence in the man, not go near him. Your plan is excellent, and your encouragement let me tell you," said Gabriel, "that one of our party is down at the Dominie at present, soliciting his advice and aid."

"You mean a king's man like yourself, disguise?"

"Yes, the brother of the young lady, and he carries documents with him of such a kind as will insure his reception."

"And a warm reception it will be, as I am a living man. Your friend's neck is not worth a bushel of beans in Dominie Schuneman's hand unless it be on the authority of General Washington himself. It would not surprise me if he were hanging like a scarecrow to the first tree he find outside of the church."

"He would not dare to do such a thing in the king's dominions, and in the face of the authority he carries."

"My dear sir, you are an Englishman, and very loyal, no doubt; but our Dominie has more power in his parish than all the kings in christendom; but come, we have not a moment's time to lose."

## WOODED AND MARRIED.

### CHAPTER XXV.—A FRAGMENT OF THE OLD, OLD STORY.

DYM was not without courage. The day after the wedding she set herself to take up her old duties again with a tolerable amount of determination and steadiness. It was dull; but life was dull, she said to herself, with a stoical shrug of the shoulders. She knew what Ingleside without Mr. Chichester was; and, though she sorely and persistently missed him every hour of the day, she resolutely banished all painful regrets, and bore herself at least with outward cheerfulness.

Perhaps Humphrey's unselfishness had taught her something; but it was certain Mr. Chichester's last words sunk deeply into her heart. "I leave you a precious legacy," he said to her, with one

of his winning smiles; and from that moment there was something sacred to Dym in the trust reposed in her. She would prove herself worthy of it; if possible, she would redouble her loving services to his mother, content if, on his return, he would reward her with one of his approving looks.

Guy Chichester had acted wisely in committing his mother to Dym's care. Dym had always been willing and affectionate, but her work lacked enthusiasm; Guy's words had lent impulse to it. Mrs. Chichester soon felt the change in the young companion. Dym never complained of weariness now; she read, and wrote, and stitched with laborious zeal; she sang little Scotch ballads in the evening, or drew her low chair to Mr. Chichester's side and beguiled a tedious hour

listening to stories of her friend's girlhood; she read Guy's and Honor's letters aloud over and over again, and kissed away the tears that sometimes stole down the mother's cheeks when any of their expressions of affection moved her more deeply than usual.

Now and then her old restless fits would return; but she never spoke of them; when the oppression became too great, she would quietly steal out of the room, and, muffling herself in her old plaid shawl, go out into the garden and shrubberies with Kiddle-a-wink. Dym had begged hard that Kiddle-a-wink might be left with her, and Humphrey had willingly agreed.

"Are you not afraid of taking cold? these spring evenings are very treacherous," Mrs. Chichester said to her once, when the girl came in, fresh and bright, to take up her work again.

"Oh, no; Kiddle-a-wink and I have had such a run," answered Dym, "down to the church porch and back again, and we met Mr. Netheccote."

Dym was always meeting Mr. Netheccote. Humphrey seemed to know intuitively the time for her rambles.

Mrs. Chichester smiled to herself, but she made no observation.

Dym seized every leisure moment for going over to Woodside; there were always two or three afternoons in the week when Mrs. Chichester did not need her; and she began regularly to go over in an hour or two and give Rupert and Edgar their Latin lessons.

The work was partly pleasure; but she had an odd feeling growing on her of late that it was better for her to be employed. A few verses by Carlyle she had read in some book haunted her, and she was ever repeating them:

"So here has been dawning  
Another blue day;  
Think, wilt thou let it  
Slip useless away?  
Out of eternity  
This new day is born;  
Into eternity  
At night will return."

"This 'blue day' will bring nothing to me, but it may to others," she got into the habit of saying when she woke in the morning. Many people would have thought it a beautiful life; plenty of books, plenty of sunshine, a little work, piles of clever letters to read and answer, the great garden blooming with roses and lilies, the sleek

horses coming round every day at the same hour, the luxurious equipage, the dainty five-o'clock tea, Dorothy coming in to warn her mistress it was time to dress, the quiet dinner, the brilliantly-lighted drawing-room. "Now read Guy's letter over again, my dear," Mrs. Chichester would kiss the thin foreign paper, with the well-known characters traced on it; but she was growing more blind every day. It would not be too much to say that she and Dym lived in those letters; Dym could almost hear Mr. Chichester's voice as she read those racy descriptions.

What wonderful glimpses they opened to her of Continental life! Sometimes it was an old Belgian town, with grand churches and grass-grown streets, where they lingered for a day or two; now it was the blue Rhine, or some great city on the banks of the Danube. With the advanced summer Guy meant to make a *détour* into Switzerland, and so into the Italian Tyrol; there their wanderings must cease, Guy said, with some expressions of regret; for, much as Honor wished to see Rome, she thought they ought to be home early in October. "Five months; it is a long time," sighed Mrs. Chichester; "but Guy was so bent on showing her all those places. How happy they seem, my dear! Now let us read Honor's." Honor's were always shorter than Guy's; but they were beautiful womanly letters; a sort of light seemed to reflect from them as Dym read—the pure radiance of a love that felt itself satisfied. Guy was evidently perfect in her eyes: Guy had taken such lovely old rooms, with a wooden balcony, looking over the river. Guy had stopped a day longer, because one day she had been tired, and she had missed the picture-gallery. In every few lines it was, "My wife;" "My husband." "All the artists are raving about my wife's beauty," wrote Guy. "One fellow, with a big yellow beard, has been praying me, with tears in his eyes, to let him paint her; he wants her for a 'Beatrice,' I believe. I suppose I must let him do it. If he manages to make a good thing of it, I shall buy the picture myself. Fancy Honor, in a quaint green-velvet dress, 'and her hair studded with stars.'" "You must take this letter to Humphrey; he will like to see it," said Mrs. Chichester, as Dym folded it up; "you will be sure to see him to-morrow, when you go over to Woodside."

Dym checked a refractory speech that was rising to her lips. See him! was she not weary of see-

ing him? The fields between Ingleside and Nidderdale Cottage were haunted by this big burly figure with the broad-brimmed hat. Dym would have escaped him over and over again, but for Kiddle-a-wink, who never failed to greet his friend with a loud bark. Humphrey caught Dym once trying to scale a hedge, only her white dress gleamed through and betrayed her.

"Were you trying to run away from me?" asked Humphrey, with his sad kind smile; but Dym was confused, and would not answer him. She hung down her head and walked by his side, and never once contradicted him. Humphrey certainly had the best of it that afternoon.

I wonder what Dym would have done if any one had told her Humphrey Nethecoate was to be her fate—whether she would have called out loudly against the injustice, the impossibility of it, and have resigned herself to it after all? Many young creatures have had to put up with rough protectors, without a tithe of Humphrey's goodness, and have ended by becoming devoted wives. What was there about Dym that made this so impossible to her—that caused her to bridle and flush up at the least approach to tenderness on Humphrey's part, and to invest her sweetness with a hundred thorny prickles?

Mrs. Chichester's request was tantamount to a command, and there was therefore no reluctance in Dym's manner the next day, when she saw Humphrey coming down the road to meet her; on the contrary, she hastened her own footsteps.

But as she came up to him, after the first few minutes, her uneasiness returned. What was there about the fashion of the man that looked so altered? Humphrey was in the habit of wearing an old gray suit and leathern gaiters; the straw hat would be the worse for age, and brown with the sun; to-day his clothes were new, and fitted him; he had a white waistcoat and dark felt hat, and a jaunty little rose in his button-hole; he looked less angular; the old rusty air had left him; he looked what he was, a gentleman farmer in good condition. His honest freckled face had quite a bashful glow on it as he came up with Dym.

"I hardly knew you," said Dym, dryly, as she handed him the letter. The new clothes, the rose, the picturesque slouched hat—what did it mean?

"I will read it presently," returned Humphrey, putting it in his pocket. "Mrs. Chichester shall have it back this evening."

"It will not take long. I would rather back," replied Dym, with a touch of her old tradition. It was bad enough to have her companion of all her walks, without his coming to spoil their evening. Dym was turning decidedly restive.

"When do they come home, eh?" he wrinkling his light eyebrows at her, but the letter safely in his pocket all the same. He had not yet found out Humphrey could be so mate too.

"Not for six weeks. Let me see; it is now—the summer seems as though it will end," exclaimed Dym, fractiously, as she pulled out the folds of her light muslin dress, and the discontented air smelt the roses Humphrey brought her.

Humphrey was always bringing her roses—bunches of delicious creamy roses, with a ground of fern and heliotrope. As she smelt their fragrance, she suddenly remembered in the long narrow school-room at Lansdown House, and Edith coming in and heaping her with these same roses.

Humphrey looked a little anxious over the discontent and abrupt answers.

"When they come back you will have away," he said, with a touch of sorrow in his voice, which somehow moved her in spite of her humor.

Yes, she will have to go away, she tells herself sadly enough now. There is no room for her at Ingleside. Honor will take her place and no one will want her—no one—no one. The start to the girl's eyes as Humphrey takes her and makes her sit down on the little bench beside him.

Oddly enough, it is the very bench where Edith and Guy sat that May afternoon. It is August now, the gorse is as yellow as ever, but the heath is out, and the common is full of tender violet-blue. The geese came up waddling as usual, stretching out their long white necks and yellow bills; the sky the lark is singing near a little white cloud.

"My dear," says Humphrey, with a break in his manly voice, for Dym's words are very painful. "Somebody wants you—I want you."

Dym draws her hand away, a little startled.

"You are very good," she answers, with an effort. "I don't deserve it." She is conscious that her words are tame—that she has hardly

answered; but what did he mean by saying that he wanted her?

"Don't go away from me," says Humphrey, humbly, for in her odd confusion she is moving as far away as the bench will allow. "I have been wishing to speak to you all these months, and have never been able to summon up the courage. I want to tell you that you need not go away."

"I must go," returned Dym, hurriedly. She was getting quite nervous now. Somehow her old friend was changed in his aspect this afternoon. It was not this sort of grave serious Humphrey she had teased. "I must go; there is no room for me at Ingleside. You do not know what you are talking about," she went on, trying to pluck up a little spirit with which to answer him; but it was a miserable failure.

"Yes, I do," replied Humphrey, quite gravely, but speaking as gently as though to an infant, for he had no wish to frighten her. "But there are houses besides Ingleside that will be glad to have you. I am all alone, Dym; why should you not come to me?"

"How—why—what do you mean?" she asked, breathlessly; even now she does not understand him, and why—how dare he call her Dym?

"There is only one way in which you can come to me, dear. May I tell you what that is?"

But Dym jumps up from the seat and covers her face with her hands: her cheeks are burning now.

"No, no! Mr. Nethecote, why do you frighten me so? why are you so unlike yourself? You must not call me that. Oh, I am so unhappy!" But Dym was trembling, so that she was obliged to let him draw her again to her seat.

"Does it make you unhappy to know I love you?" asked Humphrey, mournfully. "It seems to me now that I have loved you ever since I raised my eyes and saw you peeping over the paper that day you came to Ingleside. I have gone on loving you every day since then, and it is not in my nature to leave off, I am afraid."

"Oh, please do!" Dym begged him. She was sobbing with agitation now. "It seems so dreadful, when I cannot—when you know I cannot—do it in return."

"Do what—love me?"

Dym nodded.

"I did not expect it—don't misunderstand me—how could you care much at first for such a rough fellow? But you say it makes you unhappy to go

away. Will you"—his voice almost giving way with his earnestness—"won't you trust me? won't you let me take care of you? I would be content if you could only give me a very little, and let me love you."

"Please don't, Mr. Nethecote." The tears were fairly streaming down her face now. The good, generous Humphrey! "Oh, how sad, how dreadful it all seems! I like you so much that it makes it all the harder; but indeed I must go away."

"The Cottage is empty," he went on, in his simple way. "I am almost a rich man now; Providence has been pleased to bless me. Do say you will come to me, dear; you don't half know how lonely it is, and how I am always thinking about you. There is not a hair of your head that is not dear to me—a man's love can be so strong."

But Dym only hid her face and cried.

"Will you not try to like me a little?" There was no help for it: he would have her answer.

Dym gave him a childish pitiful look as she put her hands down.

"Oh, I do like you very much, you are so good to me, Humphrey!" speaking his name for the first time. "I cannot bear to think that this has happened, and that you will cease to be my friend."

"My dear, I could not turn against you, whatever happens. I wish I could," he returned, with a faint smile. Poor Humphrey, how white his face had grown!

"And you will be my friend still?"

"Without doubt."

"Ah, how kind you are! I wish I could have done this, but it would not be right. I would not love you in that way. I am not what you think; I am foolish and vain. I should not have pleased you."

"You would have been good enough for me." How the big faithful heart was laboring with its pain! but not even now could he make pretty speeches. Good enough! Were not her words perfection? was she not pleasant to his eyes, the dearest, the sweetest? Something came up in Humphrey's throat and choked him as Dym made her honest little protest; she had spoken it in all good faith and humility. A few weeks ago she had been wondering if any one would love her; and now this man had come, and was almost overwhelming her with his tenderness. Oh, how good he was! Why could she not love him? How could she make him understand that she was thrill-

ing with gratitude and sorrow, that his friendship was precious to her, and that she prayed never to lose it?

"Forgive me; do not be angry with me; I cannot help myself or you," she said, humbly stretching out her hand to him.

Humphrey pressed it gently, and laid it down. It would never be his—never—never!

"Why should I be angry? A woman's heart is not always to be won. I can't promise to give up loving you, Dym, but at least I will not trouble you with my sadness. By and by, when I have got over this, it shall be as usual, and we will be friends."

"Yes, yes," she replied, eagerly.

He had risen, and seemed waiting for her, and they walked silently on together. How Dym's head ached! how she longed to break the silence! to bid him leave her alone to her own thoughts! but she could not muster courage to address him.

Now and then she stole secret glances at the grave sad face; but Humphrey seemed lost in his sad thoughts. At the trysting-stile he suddenly stopped, and asked if she wished to go on alone.

Dym timidly answered, "Yes."

"Then good-by, dear. I am hardly myself just now, and perhaps it will be better. Try to forget all about this the next time we meet. I shall be your old friend Humphrey. Will you remember that?"

And as Dym looked up in his face with sorrowful assent, he stooped down and kissed her brow as a brother might have done, and then, looking back with another kind smile, went striding home through the fields.

Dym had a very tender heart in spite of her faults, and it was nearly broken by Humphrey's last kind smile.

Mrs. Chichester wondered what ailed the girl that evening.

Dym was quite speechless and distraught.

After dinner Mrs. Chichester beckoned her to take the low chair at her side; her fine woman's instinct guided her to subtle conclusions. Dym's voice had new startled tones in it; a little artful questioning, a few soothing caresses, and then it all came out.

Dym could not keep her pain to herself—she wanted to know if she had been very wicked; she put down her head on Mrs. Chichester's lap, as though she were a veritable child, and told her tale

in agitated whispers. She had wounded the blest heart—she should never be happy again! Humphrey loved her, and she could never be his wife—never—never!

"Is it very wicked of me?" cries poor Dym, laying her cheek against the kind hand; "I cannot make oneself love. I never thought of it before, and I have often been so cross and ill-tempered with him, and he has borne with it all. Oh, what shall I do? I can never look him in the face again—never—I have made him so very, very unhappy."

Mrs. Chichester sighed, as she set herself to comfort the little culprit. Humphrey was an especial favorite, and she thought he deserved better fate. She had set her heart on seeing Dym installed in Nidderdale Cottage; it would be so pleasant to keep her near them; and, to do her justice, she believed that Humphrey would make her an excellent husband.

It cost her something to relinquish her pet scheme. Under these circumstances perhaps it would be better for her *protégée* to leave Birstwith altogether. Humphrey would never be cured of his hopeless attachment while Dym remained at Ingleside. If only Dym was certain of her own mind! Mrs. Chichester was not quite so sure of it. She saw Dym was startled and repulsed by it now; but might she not bring herself to look upon it in a more sensible light? Humphrey's good qualities would make themselves felt after a time. These young girls require management and soothing, so Mrs. Chichester was not altogether sure of her hopelessness.

But Dym must be comforted at any cost, and she hastened to assure her that she had not been very wicked. These things were not always to be helped. On the whole, she had behaved very well, and said all she ought to have said.

"We must leave it now; of course it is a great pity, and I am very grieved for poor Humphrey; but you must not make yourself ill with crying, my child; men have these troubles sometimes, and they always get over them. By and by Humphrey and you will be the best of friends." But in this Mrs. Chichester lied to her own conviction; and Dym sorrowfully shook her head—she, on her part, did not think Humphrey would get over it.

Poor Humphrey! His honest heart would only have cleaved to her the more if he had known the grief with which the girl bewailed her own hard-

ness of heart and his disappointment. To a true woman there can be nothing more sorrowful than to know that she had saddened some brave heart that had failed to win her love. The attachment may cause her some secret pride in the retrospect, but she will never boast of her conquests.

Humphrey was too humble and sweet-tempered to rail over his evil fortune. After a time he bore his trouble with his old stoical fortitude; good and ill had come to him, and he had accepted both with the same pious submission; it was not his way to complain. In his and Honor's veins there was a tinge of Scotch blood. His mother, Elspie Nethecore, was descended from the old Covenanters; among his ancestors were stern red-bearded Highlanders, who had fallen before the sword of Claverhouse, who were massacred in glens and wildernesses for adhering to the simple formulas of their national faith. In spite of his soft-heartedness and slow gentle ways, Humphrey at times proved himself worthy of the noble stock whence he had sprung. Life had taught endurance to both him and Honor. Though his heart was sore within him for many and many a long day, and his cheerless hearth became more cheerless, he would have scorned to be crushed under his misfortune. "Happy or unhappy, we must do our duty," was his and Honor's motto; and nobly did Humphrey fulfill his.

Early and late he worked as heretofore; there were fields to sow and harvests to reap, though the dark-eyed girl he loved would not come to him and make his home pleasant to him. Sometimes, as he looked round his richly-stocked garner, and saw himself adding acre to acre, and knew that he should die wifeless and childless, the sad thought would cross him, Of what good was it all, when none should come after him? True, Honor might have children, but they would not need his wealth. What should he do with the good things that came so freely at his bidding? And the answer seemed vague and distant enough.

Humphrey meant to keep his word when he promised Dym that he should remain her friend. It would have been simply impossible to avoid her, even had such an intention ever formed itself in his mind; he must have come upon her again and again in church, in the village, in the fields that must be crossed and recrossed at morning and evening.

Dym went a long way round the road the next

time she went to Woodside. She started and turned pale at every long shadow thrown over the sunny path. If she missed seeing Humphrey for the next few days, it was not because he intended to avoid her for his own sake—it was only his thoughtfulness that shielded her from a chance meeting till the wound had a little healed over, and he could say the ordinary friendly words that should set her at her ease. "By and by, when I am old, the pain will die away," he thought; "when she is married, perhaps, and has children of her own, she will not be afraid of her old friend then." And then came into his simple mind a score of pleasant pictures, for all their background of sadness: how he would befriend her and them; how the one with the mother's eye should be his favorite, and grow up upon his knee—should inherit the broad acres, perhaps, of Nidderdale Farm; he thought how proud he would be of them, and how he would be called Old Humphrey among them, and how she and her husband—"and, whoever he might be, God bless him!"—thought Humphrey, should find in him the truest friend.

Ah! peace with thee, honest Humphrey; the dream goes on, and the aching sadness goes on, and fresh troubles cloud the horizon, and stormy days are in store for thee and all thou lovest! Oh, when the heavens are black with clouds and darkness, and one gallant vessel founders on the rocks, I can see thee bravely taking thy part, and battling with conflicting elements; and I know that the dream will come true, and that thy battered bark shall come into fair haven at last!

#### CHAPTER XXVI.—"IN THE MIDST OF LIFE."

Dym turned quite white when she saw Humphrey next: he came into the drawing-room at Ingleside one evening when Dym was reading to Mrs. Chichester.

"I have brought the letter back," said Humphrey, quietly. He did not stammer, or blunder over Mrs. Chichester's footstool in his usual luckless fashion. He shook hands with Dym very gravely as he noted the whiteness. If it had been in his power, he would have saved her this awkwardness. "Have you been quite well, Miss Elliott?" he asked presently, with his old kind smile. Humphrey was bearing himself quite bravely, while pale Dym was shrinking into her corner.

"We have had another letter since then," ob-

served Mrs. Chichester, with a sigh: she was very sorry for Humphrey, and Dym too, but her mind was full of other things. "I have had a great disappointment, Humphrey, but—but you must read it for yourself."

"They are not coming home," Humphrey argues shrewdly, as he unfolds the letter; it is written from Salzburg, and is in Guy's handwriting, but, as usual, there is a little note from Honor.

Guy's letters had always been perfect in his mother's eyes, but this one was unusually loving, as though the writer wished to soften some great disappointment he felt he must inflict. "My dearest mother knows we are longing to see her," he wrote, "and that no consideration but one could induce us to defer our return. Honor was dreaming of Ingleside last night; she is always talking of our home and you, and what we are to do when we are together again; we have both decided there is nothing like Old England after all; and I am afraid Honor is just a trifle homesick"—a "For shame, Guy, with you!" scored under, in Honor's large firm handwriting.—"But, darling mother, there is a 'but' to all this. Dr. Guthrie (you may know his name in the London Directory) is staying at our hotel here. Honor has been ailing with a cold lately, and I thought it best to consult him. He gave us his opinion, which coincides exactly with Dr. Grey's—by the by, he speaks very highly of him; they were friends and fellow-students in the 'auld lang syne'—they both say Honor's chest was weakened by that illness of hers, and that an English winter would be very trying to her; however, he recommends us, by all means, to do Rome and Venice *en passant*, and then to winter either at Nice or Mentone. I can assure you, dearest mother, we both looked very grave over this advice. There can be no doubt as to what we ought to do; but it goes so hard with both of us to disappoint you; we had set our hearts on spending Christmas at Ingleside. You will be so dull without your children; and then there is the chance for that operation in February. If we do this, you will not see us till we have celebrated the anniversary of our wedding; for I could not bring my wife home till I knew the cold spring winds had died out of our valley." Honor's letter, too, was full of anxious tenderness; the wife's heart was eviently yearning for her husband's home and the loving duties that awaited her.

"I think this has come to teach us that our hap-

piness is almost too perfect," wrote Honor. "It does us good to have our wishes crossed just now, if only you were not to be included in our disappointment. Guy sighs, and says, 'Poor mother,' and then scolds me because I echo the sigh; he will have it I am homesick, because I dream so often of dear beautiful Ingleside. But it is not my home? Keep our places warm for us, mother; I wish I could put my arms round you, and kiss away the tears which I feel will come when you read our letters and know Guy is not coming back to you yet. Guy sends his love to Dym; tell her we shall both love her better for taking such care of you."

Poor Mrs. Chichester looks at Humphrey for comfort as he reads both letters slowly. "Christmas without them; and I was beginning to get their rooms ready." She sighs, and another heavy wrinkle crosses Humphrey's brow. As he sits there, under the lamplight, Dym can see the light frizzy hair is streaked with gray, and so are the rough whiskers and beard; Dym wonders she has never noticed it before. She reddens as Humphrey raises his eyes and sees her looking at him; and Humphrey draws his hand nervously across his mouth. "It is best as it is," he says, with a blunt attempt at consolation; "The Duchess's chest has not been too strong, of late years, and when two doctors agree we have a chance of getting at the truth. Depend upon it, the squire's right, and it is no good fretting ourselves over what can't be helped." Humphrey's voice was a little husky over his philosophy. Mrs. Chichester shook her head as she detected it.

"You always speak cheerfully, Humphrey; but you know the winter will be long to you as well as to me."

"Madam will have her say," replies poor Humphrey, with a smile at Dym; but somehow Dym is not ready for it, and meets it very gravely. She breathes more freely when Humphrey gives her his hand and goes away. She shuts herself up in her room for a long time afterwards, but Mrs. Chichester wisely forbears all inquiries. Dym cannot look at her friend yet with sorrow; his gray hairs, the coldness of his hand, and those slow gentle smiles of his, are continually before her. Nothing comforted her so much as a long letter from Will, when he heard of her trouble. Will said nothing about his disappointment at the news; he did not even reproach her with her strange blindness, or

say a single word as to Humphrey's virtues. He saw the girl's tender heart was bruised by the pain she had inflicted, and, like Mrs. Chichester, he strove to comfort.

"Be always my honest tender-hearted Dym, and tell me all that troubles you," he wrote. "I liked your letter, dear; it made me feel proud of my sister as I read it. I think it is noble and really womanly to feel as you are feeling; I would not have my child a whit less humble and child-like. All is as it should be; now you must try to forget it. Put away from you every thought, except that you have a very good and faithful friend. I do not like that expression, 'When I think of Humphrey I feel as though I should never be happy again.' My dear, the good God never meant us to bear other people's burdens in that way. Leave Nethcote to do his part and battle through his disappointment; and remember it is a real duty now as heretofore to 'cultivate cheerfulness.'"

Dym used to read out bits of Will's letters to Mrs. Chichester. Mrs. Chichester used to say they were as fine as some of St. Francis de Sales's. Both women had lately elevated the pious Bishop of Geneva to be their favorite saint. "He is so cheerful, my dear," Mrs. Chichester would say. Poor lady! what with her blindness and the long lonely winter that was approaching, she had much to do to preserve her cheerfulness, especially as she had such an unreasonable dread of the operation which every day became more inevitable.

The mischief had been slowly working for years. It was wonderful how long she had contrived to deceive her son. Dorothy used to read to her mistress before Miss Elliott came. Dym's refined voice and clear modulations were a perfect treat after Dorothy's high-pitched rasping tones. Most of the household were conversant with their mistress's misfortune long before it became a subject of conversation at the vicarage. "You know now why Miss Elliott came," observed the vicar, a little reprovingly. Katherine shrugged her shoulders; it was a habit of hers to find fault with most of Aunt Constance's sayings and doings. "I call it lying in the face of Providence, going about alone as she does," she replied, severely. "She actually wanted me not to send Kenneth up to the house with her the other afternoon—was sure she could find her way alone; and when I asked where Miss Elliott was, I found she was over at Woodside, as usual, teaching those boys; as though Guy

gives her a hundred a year to teach Rupert Grey Latin. I call it downright robbery and neglect," finished that lady, in her most virtuous tones.

"I don't think you ever will approve of works of supererogation, Kitty," returned her husband, sleepily: "if any one but Miss Elliott had done it we should have heard a different version. How you two women hate each other!" And the vicar lounged off to his study and his sermon, thinking what a pity it was Katherine had such strong prejudices, and had taken such a dislike to that nice pretty Miss Elliott.

In November Mrs. Chichester took Dym up to London with her; and they stayed for a long time at Lansdowne House. Dym sat in the long narrow school-room again, and made friends with Mrs. Vivian's successor, and once, by special favor, spent an hour alone in her old garret. Anna Freiligrath, the young German governess, found her curled up there among her boxes, and staring with dim eyes over the strip of gray sky and the tall white shining roof, behind which a dull red sun was sinking.

"*Ach Himmel, liebe Freunde*, thou wilt be starved with cold," cried the warm-hearted Anna, as she rubbed Dym's blue little hands. She was an honest, good-natured girl, and was always ready to *tut* and otherwise pet Miss Elliott.

Dym struck up an alliance with the sturdy little German. Anna's flaxen plaits, her round blue eyes, her pale freckled face, were a great contrast to Dym's dark eyes and graceful little figure. Anna's voluble tones, a little guttural, the gray stocking, bristling with needles, always produced from her pocket, her long stories about her brothers Albrecht and Rudolph in the Prussian army, and her anxiety that Dym should know they were Von Freiligrath, were highly amusing to Dym. When Mrs. Chichester could spare her, she always joined Edith and Fräulein von Freiligrath at their tea. To-night a bright little fire burned in the grate, a kettle gossiped on the hob, the round table was dressed with cake and preserves; Caroline, in her blue ribbons, hovered near. "Shall we light the candles, Fräulein? Oh, here is Miss Elliott, dear Miss Elliott!" cried Edith, joyfully, springing to her friend. "Do you know 'Lamentation' has kittens, and I am going to call one of them 'Joy,' and another 'Snowball'? Don't you wish Cousin Guy were here to choose the names?"

"Hush, chatterbox, and come to tea," says

Anna, holding up an admonishing finger. "*Meine gute* Catherine, place the chair for Miss Elliott near the fire; she is starved with cold, and looks as though she had seen ghosts." And Anna pours out tea, and knits and prattles in a cosy fashion; and the flaxen plaits shine in the firelight.

Has she seen ghosts? What kindly spirit looks out of those glowing flames that are leaping and crackling over the logs? Humphrey's sad eyes are looking at her! No, it is years ago; she is sitting in Anna's place; she is a friendless governess, without a creature to love her but Will; some one with broad shoulders is lolling against the fireplace; a brown face, with rough tawny beard, looks round at her. "Ah, are you there, my little friend?"

"I am only spinning in the moonlight," breaks in Dym, quaintly. "What tale is it to be to-night, Edith?" Edith clamors for "*Undine*." *Fräulein* tells it charmingly, and the child listens breathlessly to the pranks of *Kühlehorn*. "Poor *Undine*! it was better to be without one's soul than to suffer as she did," says Dym, with a sort of shudder, when Anna had finished.

"Not so, dear heart," returned the little German, piously; "for so there would be no future for the *Undine* with her beloved after she had wept him to death, and the tale would lose its moral."

"But she is very unhappy in her crystal palaces," says Edith, sighing. "It is a sad story. I like the part about the dwarfs pelting each other with gold-dust best."

Anna promises a more cheerful story next evening, and hums a plaintive little tune, as her needles cast off row after row. Dym knows the words that belong to it; they are Goethe's:

"Kennest Du das Land wo die Citronen blüh'n  
Im dunkeln Laub—die Gold-orangen glüh'n—"

Anna misses the intermediate lines, and finishes with a sort of mellow hum—

"Dahin—dahin,  
Möcht' ich Mit der O mein Geliebter ziehn."

and Dym remembers it as one of the songs Honor used to sing in the old house at Kensington.

Dym saw Colonel Delaire riding in the Park once, and he reined up his horses when he saw the Tressilian liveries; he gave Dym a very cordial smile.

"I am glad you have got over your accident so well, Miss Elliott. Beatrix ought to have been over to Lansdowne House this week, Mrs. Tressilian, but she has been so busy with those tableaux—she

and Adelaide Beauchamp seem to have time for nothing else—though I am bound to say Miss Beauchamp is the more sensible of the two."

"What a pity her wedding is put off on account of Colonel Lintot's death, Frank!" observed Mrs. Tressilian, languidly. "George seems a nice steady fellow, though he has round shoulders and stoops so dreadfully. I think Adelaide might have done better, though she is no beauty, and seems to fancy no one but George. Well, give my love to Trichy; it is a great pity she is always too busy to come and see her mother."

As Mrs. Tressilian delivers herself of this unusually long speech, she sinks back exhausted on the cushion, and Colonel Delaire canters off. As he lifts his hat, Dym sees he is getting very bald, and his face has the same pale harassed look it wore at Ingleside last Christmas. People say the beautiful Mrs. Delaire has a temper, and does not always show herself very submissive to her husband.

Dym had the good fortune to see a great deal of Will. Mrs. Chichester would send her off to spend long days with him. Dym always found him busy and cheerful, but looking thin and with a cough, and not always able to hide from her anxious eyes that his strength was not equal to his work.

That visit to London did her great good, and partly for her sake, and because her blindness made her shrink from the long winter and the emptiness of Ingleside, Mrs. Chichester made her sister promise to spend Christmas with her.

Dym was very glad to have Edith again, and to see more of *Fräulein von Freiligrath*. Mrs. Fortescue always cut off the ridiculous "*Von*;" she called it "such nonsense in a governess who has to earn her bread;" but, on the whole, she was far more gracious to Anna than she had been to Dym.

"*Mein Liebe*, she trains after one like a great white serpent," Anna remarked, confidentially, when they returned one snowy winter's night from the vicarage, where the young people of the neighborhood had been invited to play charades and forfeits. Humphrey had been there, and Anna had distinguished him with a great deal of artless favor; he was like Albrecht, only both Albrecht and Rudolph had great big sandy moustaches. He had a great benevolent heart, Anna was sure; and he had an empty niche in it for some one. "O thou little *Marmorbild*," cries Anna, embracing Dym, "this great distinguished farmer loves thee, and thou carest for him not that

—nothing," snapping her little plump fingers—"forsooth, because he has rough looks and a gruff voice. Go, you are a cold-hearted girl; you do not deserve to be betrothed." Either Anna's eyes were shrewd as well as round, or Humphrey could not quite control his looks.

Dym was very glad to have Anna as companion in her walks to Woodside; it saved her a good deal of awkward embarrassment. Those walks were drawing to an end, however. Before the snow quite died off from the high land about Barstwith, gentle Esther Grey laid down the burden of her sufferings, and Dr. Grey was a widower.

Dr. Grey bore his heavy loss with fortitude, but it aged him. People said the Doctor would never be the man he was again. Friends rallied round him in his trouble, and an unmarried cousin offered to keep house for him and his children: there was nothing for him but to accept it. Dym was there when she arrived. She was of French extraction, Dr. Grey told her; had lived in Rouen most of her life, and was therefore unknown to her English relations; he heard that she was a most exemplary creature, and had tended her mother lovingly to her death. Her name was Bergamotte—Louise Adrienne Bergamotte—and she had a little income of her own, sufficient to maintain herself.

"Louise was a pretty girl once, before she went over, but I do not know what she is like now. I only know she has given up her home and all her little belongings to do me and my children a kindness."

Dym comes away presently, quite contented. She and Mrs. Chichester are to go up to London the next day for the dreaded operation. When she comes again, she finds Cousin Louise ruling the little household very happily. The children love her. Dr. Grey respects and confides in her. She is only a lean little shriveled woman, with prominent teeth, with a shrill voice; yet Dr. Grey blesses the day when Cousin Louise came to his motherless children.

If it had not been for the cause, Dym would not have been sorry to find herself back at Lansdowne House again, and in the society of the friendly Anna. It was the end of February; the worst of the winter was over. Dym carried the first snow-drop in to Mrs. Chichester on the morning they started for London.

It was with intense thankfulness that Dym wrote to Mr. Chichester a few days afterwards, announcing that the dreaded operation had turned out a very simple affair after all; both eyes had been suc-

cessfully couched, and Mrs. Chichester now lay in her darkened room, exhausted and thankful, and dictating all sorts of loving messages to her son and Honor. A heap of soft pink and white wool lay on the couch beside her. Dym was always picking up stitches and rectifying rows now.

"If we work hard, do you think it will be in time?" whispered Mrs. Chichester; she was forever holding endless confidences with her young companion on the comparative merits of fringe or tassels; all the news of the three kingdoms would not have interested the placid woman half as much as the soft ribs of the quilt that were forming under her skillful fingers. And why? Because a wonderful secret was mixed up in those skeins and balls of wool!

The little quilt lay ready and finished in the Blue Room at Ingleside long before the news came, which Mrs. Chichester was able to read for herself.

"Oh, my dear, come here. Is he not happy? Dear, dear Honor!" And as Mrs. Chichester held out her son's letter to Dym, tears of gladness coursed down the mother's cheeks.

"Darling mother, thank God for us!" wrote Guy. "To-day they placed our little girl in my arms—such a tiny girl, with Honor's eyes. I have just kissed both mother and daughter. Honor would not rest till I laid her baby in her arms. I wish you could see my darlings together—they both look so happy. Honor sends her dear love; I will not let her excite herself by delivering a longer message."

"Is he not happy!" exclaimed the poor mother, again. "Neither he nor Honor seems disappointed that it is a girl, Guy's little daughter! Well, fetch me my desk, my dear. I must write to him myself, and to Honor too."

Mrs. Chichester's cup of happiness seemed literally brimming over; the good news fully repaid her for the inevitable delay. It was the middle of April now, and Honor could not travel till the end of May. Guy wrote with some regret, a few days afterwards, that the little one was so frail that they thought it better to have her baptized by the English chaplain there. There was no time to write severally to the sponsors, but Honor wished her brother and Mrs. Chichester and Dym to stand by for the child—Humphrey was to telegraph their answer—and the doctor and his wife had promised to act as proxies. Dym was greatly moved when she heard Guy's message. To stand sponsor to his and Honor's child—to be thought worthy of such a privilege! For a little while she

was almost too overcome to signify her assent. How strange that Humphrey was to stand with her! "Tell him there is nothing I would not do for you and him," she wrote, in the fullness of her heart, to Honor.

Guy had told them that Honor's favorite name was Florence. Florence Honor Chichester was to be the little maiden's name. Guy wrote a touching account of the whole affair. The service was held in the room adjoining Honor's, so that the mother might join in the prayers and thanksgivings. In defiance of all usages, Guy had insisted on holding his little daughter himself, and had only given her up when obliged to do so. She had cried when the clergyman touched her, but had been quite quiet and good when she was in her father's arms again, and lay cooing and opening her eyes, "just like gray flowers when the sun throws a shadow over them," wrote Mr. Chichester.

"I hope they don't let her do too much," sighed Mrs. Chichester; and Dr. Grey, when he heard of it, hoped so too.

A few days after the receipt of the last letter, Dym was sitting one evening reading to Mrs. Chichester. May had set in unusually cold and wet—a compound of March winds and April showers; this day in particular had been cold and gusty. The valley was full of driving rain, a vaporous gloom clung to the hills, the fields were steaming, a wet glistening of sunbeams had alternated for a short time at sunset, but the clouds had closed in heavily again, and the steaminess and the rain prevailed.

Mrs. Chichester shivered as Dym put down the book.

"Ring for lights, my dear, and tell Stewart to bring another log. It makes one dreary to hear nothing but the rain beating on the terrace. Just now I fancied I heard footsteps outside the window; it must have been my fancy."

"Of course it was," replied Dym, cheerfully. "No one but Mr. Chichester ever goes round to the conservatory-door, and we should have heard the great door open if it had been a visitor: the idea of any visitor coming on such a night!"

"Yes, it must have been my fancy," repeated Mrs. Chichester, thoughtfully. "I think the wet weather makes me nervous; everything makes me that to-day. I could almost have believed it was Humphrey coming up the terrace, the footsteps sounded so like his."

"I will ask Stewart to close the shutters, and then we shall lose that dreary patter-patter. Why, I could almost believe I heard it myself," laughed Dym; but she was nevertheless glad when Stewart appeared with the tall silver candlesticks.

"I think Phyllis wants you, miss," said Stewart pointing over his shoulder to the hall. Was Dym getting fanciful too, or was the lad's ruddy face a little pale? "Phyllis wants you particular, miss," stammered Stewart, putting down the candlesticks awkwardly enough.

"Take care; you are dropping the wax. Why can't Phyllis come to me here, if she wants me?"

"You had better go to her, my dear," observed Mrs. Chichester, shivering, and drawing her shawl close round her; "and shut the door; there seems such a draught outside."

Dym found herself in a perfect whirlwind when she left the drawing-room; and no wonder, for the conservatory-door was open, after all. Dym had half a mind to call Stewart, only she was ashamed of her fears.

"Where are you, Phyllis?" she exclaimed. "Why don't you shut that door, somebody?"

"It is only I," returned Humphrey's voice, outside. "Wait in the conservatory a moment, please; I will be with you directly."

It was very mysterious, but Dym did as she was told nevertheless, and a moment afterwards Humphrey made his appearance.

"I was only speaking to Miles," he said; "you were so long in coming, my dear. Did not Stewart tell you?"

"Stewart told me Phyllis wanted me. What—what is the matter, Humphrey?" faltered Dym, growing suddenly pale over her words. Humphrey's clothes were dripping with water, the rain-drops hung on his whiskers and beard, his face had a white ashen look on it, and his lip trembled strangely. "Oh, Humphrey, I see it in your face—something dreadful has happened! Tell me quick, Humphrey, dear Humphrey," catching hold of his arm and speaking in a frightened voice. "You have heard something—Mr. Chichester—Honor—who—"

A shudder seemed to shake Humphrey from head to foot, and for a moment he held the little hands so tightly that Dym could have screamed with agony.

"Give me a moment," he gasped. "It is true. They told me so, for I could not read it for myself—Honor is dead!"

## NOTES AND QUERIES.

INTERIOR OF FANEUIL HALL TWENTY-FIVE YEARS AGO.

**Faneuil Hall.**—In the November number of the MONTHLY, in the twenty-second of his capital papers on "The Historic Buildings of America," Dr. Lossing gave a most readable and valuable sketch of old Faneuil Hall, which was illustrated with an excellent large engraving, and a small one giving different views of the exterior; I enclose a good view of the interior as it appeared a quarter of a century ago, which may prove worth engraving for a place in the department of NOTES AND QUERIES.

THOMAS W. SMALLEY.

**REMARK.**—Our correspondent probably was not aware that the picture here appeared in the *American Historical Record*, December, 1873, accompanied by a brief article on the wonderful Boston Tea Party of a century ago. But the engraving is excellent, and to very many of our readers it will be new; hence, we republish it as a farther illustration of the paper alluded to by Mr. Smalley.—EDITOR.

**George Washington Parke Custis.**—In the February issue of the MONTHLY, Dr. Lossing speaks of Washington's adopted son, in correcting a mistake of Mr. A. E. Lancaster in the preceding number. This called to my mind a short article by the Doctor in the *American Historical Record* of July, 1872, in which he gives a concise sketch of that remarkable man—remarkable not only because of his peculiar relation to Washington, but also by reason of his own peculiar gifts and graces. The writer of this frequently dined and supped with him a few months before his death, and I have a warm recollection of his genial hospitality and no less of his winning conversational manner. The monument over his remains is singularly suggestive in its modest simplicity of one of the most striking characteristics of him whose virtues it commemorates. Cannot the Editor of the MONTHLY induce one of its excellent contributors to furnish a sketch of Mr. Custis? Doubtless it would oblige others besides

JAMES R. HUNTER.

VOL. VIII.—15

**Van Braght's Martyr's Mirror.**

—In the MONTHLY for March, 1876, p. 226, Mr. Turner, whose address we have not at hand, inquired "Where can I procure and what shall I have to pay for a copy of Van Braght's 'Martyr's Mirror?'" In reply, Samuel W. Pennypacker, Esq., of this city writes: "If the inquirer will come or write to me, I can put him in the way of procuring one."—Address 209 South Sixth St., Phila.

MONUMENT TO G. W. P. CUSTIS.

**Archbishop Carroll, and Charles Carroll of Carrollton.**—Our friend, Robert Coulton Davis, Ph.G., of this city, has most remarkable success in finding rare and valuable manuscripts and prints connected with men of note in our country's early days. He has consequently a perfect mine of such treasures, and, as our readers have no doubt judged from the many gems we have given from his collection, he is ever generously willing to afford others opportunities to enjoy any of his good things. We give below two capital specimens, a manuscript and a print, from Mr. Davis's collection.

Some time since Mr. Davis heard that a very old house was about to be demolished, and, from what he knew of its past occupants, he thought there might be some valuable "rubbish" in its attic or some of its huge closets. He went thither, on an exploration intent, and on the stairs met an old-rag-and-paper man with a well filled bag. Accosting him, Mr. D. learned that the bag was full of "old rubbish," which the old "collector" had gathered "lying around upstairs." The bag was forthwith emptied upon the floor of one of the rooms, and Mr. D. was not surprised to find a goodly number of treasures; having secured these, he permitted the old man to rebag the rest and depart. Among these treasures were an old manuscript sketch of Archbishop Carroll and a copy of the *United States Catholic Miscellany*, of November 24, 1832, containing a notice of the death of Charles Carroll of Carrollton, with the action of the mayor and councils of Baltimore. We deem both worthy of a place in these NOTES AND QUERIES.

The manuscript was undoubtedly written for one of our Philadelphia papers, upon the arrival of the news of the Archbishop's death, which occurred in Baltimore on the 3d of December, 1815:

"Arch-Bishop Carroll was born at Upper-Marlborough in the State of Maryland in the year 1735, and was sent at the age of ten or twelve years to a grammar-school at Bohemia. Even at this early period he gave striking presages of his future worth & eminence, by the mildness & innocence of his manners, his docility & assiduity.

From this school he was sent to the College of St. Omers in France, where, after going through the studies of that celebrated institution with the most distinguished success & honors, he was transferred to the College of Liege; & was there ordained a priest: and after surrendering his patrimonial estate to his brother, became a member of the Society of Jesus. Upon the dissolution of that society he acted as the secretary of the dispersed fathers, in their remonstrances with the court of France respecting the temporal interests of the abolished order. For this station he was peculiarly qualified as well by his distinguished learning & talents, as by the remarkable purity & elegance of his style, in the French as well as Latin languages.

He then went to England & was selected by the late Lord Stourton (a Catholic nobleman) to accompany his son, the present Lord Stourton, as his preceptor & governor, on the tour of Europe. During this tour he wrote a concise and interesting history of England, for the use of his pupil—still preserved in manuscript. He also kept a journal of his travels, which strikingly displays that good sense, sound judgment, & enlightened intelligence which ever distinguished him.

Upon his return to England he resided for some time the family of Lord Arundel (another Catholic noble) but upon the approach of the revolutionary war he with the earnest & pressing solicitations of his noble & benevolent patrons, & came back to his native country.

Shortly after his return, at the request of the American Congress, he accompanied Dr. Franklin, Charles Carrollton (his relation & friend), & the late Judge on a political mission to Canada. And through the arduous & hazardous conflict which ensued, he is fervently attached to the cause of his Country.

He did not at any time, however, neglect his clerical duties, the primary object of his care and solicitude. Upon arrival in his native country he lost no time in taking himself the laborious care of the General Catholic congregations, widely separated from each other, where his labors are cherished with the most enthusiastic affection.

He also found time, notwithstanding his numerous occupations, to write an able & masterly vindication of the Catholic faith, in reply to an address of the Rev. C. Wharton, who had abandoned it, & become a member of the Church of England.

Sometime after the establishment of our independent Catholic body in this country (before that time subject to the spiritual hierarchy in England) solicited the pope to erect the United States into an episcopal see; and the subject-memoir was nominated to the Sovereign pontiff as the most proper person. There was no hesitation on the part of the pope,—in testimony of his character and talents were well known,—in connection with the nomination. At a later, and recent period, at the suggestion of the Catholic clergy of his diocese, he was raised to the dignity of Arch-Bishop.

In the exercise of his sacred functions he displayed a spirit of conciliation, mildness, and Christian humility greatly endeared him to those under his charge.

His manners & deportment in private life were a model of the clerical character;—dignified yet simple, pious yet austere. This secured him the affectionate attachment of his friends—and the respect of all.

In him religion assumed its most attractive & reformatory form. And his character conciliated for the body over which he presided respect and consideration from the liberal & enlightened & the virtuous of all ranks & denominations for they saw that his life accorded with the benignant precepts of that religion which he professed.

The members of his own church—to whom he was a truth a guide & a father—who daily witnessed the kindness of his beneficence, and the tenderness of his heart—who saw the purity of his doctrines & precepts saw the purity of his unsullied character—who saw him on his death-bed, with the meekness, the patience, & and the cheerfulness of a saint & a martyr, view the sure & rapid approach of his own dissolution; concerned not for himself, but anxious for the welfare of those whom he was so soon to leave, will long remember him with the most profound, his grief, gratitude, and veneration.

He taught us how to live,—and oh too high

The price for knowledge—taught us how to die

Death, the terrors of which he had so often dispelled

the minds of others, had no power to disturb his serene and tranquil soul.

But long will his bereaved and disconsolate flock mourn the loss of him, who was the succour and support of the wretched;—who when this world could afford them nothing on which to lean, turned to him for consolation, as their spiritual father.

Long will the poor mourn for one who always relieved their wants to the utmost extent of his means,—& even extended his care of them beyond the bounds of his own existence. They will long weep for him who watched, & wept, who prayed, & felt for all.

Those helpless orphan children—to whom he was indeed a father—& who flocked around his dying bed to receive his last advice & blessing, may well weep,—for their loss is irreparable. The church may well weep—for their loss is incalculable."

The *United States Catholic Miscellany* was an eight-page weekly paper, the pages being 8½ by 13 inches each; it was published in Charleston, South Carolina, by Rev. R. S. Barr, and was edited with marked ability, maintaining a conciliatory, kindly tone towards Protestants:

#### "CARROLL IS NO MORE!!!"

The last cypress is at length entwined around the imperishable record of our freedom. The last of the signers is gone.—CHARLES CARROLL OF CARROLLTON sleeps "the sweet sleep of the patriot brave." The genius of liberty at length mourns o'er the urn of the last of the banded host, who in the hour of her despair levelled the lance in her behalf, nor withdrew from the contest, till her own banner rose, and floating on the breeze, told "o'er land and wave" that freedom's battle was fought and won. Yes, CARROLL is in the tomb! But HE "shall not wholly die."—No! The crown of the Monarch—the glittering diadem—the purple of the throne shall moulder as the solemn mockeries of liberty; and their pageants be forgotten. But not so with the Patriot. Whilst gratitude shall swell the bosom of Republics—while the flag of our own confederacy shall wave on the sacred wall of our capitol, Carroll shall live—not alone on the canvas or in marble bust—but in the memory of virtuous men. His name, with that of Hancock, Franklin, and Washington, shall in after ages be hymned to the lyre of the laurel; whilst the Muse of History shall point to the lofty quaternion as the fadeless monument of American wisdom in the cabinet and valour in the field.

The devotion of the venerable patriot to the principles of freedom was only equalled by his adherence to the Altars of his Fathers. The memorable oath of "LIFE—FORTUNE AND ETERNAL HONOR," well attested the one; as a Catholic his practical piety and unsullied morality, well proved the other. The blessed rays of both shed a halo round his name whilst living; sweetly tempered the evening of his virtuous life—while the object of the veneration of twelve millions of freemen, he tranquilly breathes his spirit to his God,—and consigns, for a while his remains to the tomb of his ancestors. Around that tomb the rank grass may wildly wave; but over the future pilgrim shall drop the tear as its record tells him it holds the ashes of THE LAST OF THE SIGNERS.—*May he rest in peace.*"

**Robespierre—Singular Discovery.**—In the February MONTHLY I find an interesting NOTE on "The Key of the Bastille," which calls to my mind the account given not long since, in a French paper, of a singular discovery of a secret chamber occupied by Robespierre some years after the destruction of the Bastille. The account is as follows:

A curious discovery has lately been made, while repairing the house formerly occupied by the Jacobin Club during the great revolution, and known as the Hotel de Londres, in the Rue St. Hyacinthe, St. Honore. The Club, which guided the destinies of the revolution during some few years, had often boasted of allowing the ambition of Robespierre and other leaders to progress so far, and no farther; and the members by vote had passed a law which entitled the majority to exclude from any particular *seance* any particular member whose interests might lead him to sway the opinion of the Club. Robespierre, whose ambition had rendered him an object of suspicion, had often been voted out of the assembly; and it has been a matter of surprise to the historian of the time, that he could so long maintain his influence in spite of the violence of the opposition thus permitted. The secret is now revealed. A small room—a hiding-place in the thickness of the wall—has just been discovered, opening by a trap-door into the very hall where the deliberations were being carried on, and whence he could listen to the measures to be taken against him, and, thus forearmed, have power to defeat them. It is evident that this hiding-place must have been occupied by Robespierre; and when first entered by the workmen the traces of his presence were still visible in the journal which lay upon the table, and the writing-paper, from which had been torn a small portion, as if for the purpose of making a memorandum. The only book which was found in the place was a volume of Florain, open at the second chapter of Claudine. It was covered with snuff, which had evidently been shaken from the reader's shirt-frill, and bore testimony to the truth of history which records the simplicity of the literary tastes of Robespierre. His presence seemed still to hang about that small space, as though he had quitted it but the moment before; and, singular enough, the marks of his feet, as though he had recently trodden through the mud, were still visible on the tiles of which the flooring is composed. JAMES STEELE.

**Nugget.**—I see in a work on Australia the following explanation of a frequently-used word—is it correct?

"The word Nugget originated at Ophir, New South Wales, and is probably a corruption of the word lingot—a little tongue—derived from the word used in Hebrew to designate the wedge of gold, which Achan purloined. See Josh. 7: 18 et seq." E. OAKS.

**Domesday Book.**—In the MONTHLY for last September, page 218, speaking of Domesday Book, you say, "This most remarkable work was formerly kept in the Exchequer under three distinct locks, but was some years since removed to the Chapter House, at Westminster, where it is guarded with jealous care."

At the time of this removal was a fac-simile of the Domesday Book published by the British Government? I remember there used to be a copy of it in the Historical Library in

Portland, Maine, sent thither by authority of the Crown. If I mistake not a similar copy was sent to other historical libraries. Can any of the readers of the MONTHLY verify this, and inform us at what time the copy was published? Was it issued because of the many claimants of property in England by American heirs, and sent here that old families might trace their lineage, or simply in furtherance and aid of history? When in England I saw the original work, and it struck me that the one in Portland looked the same even to the style of binding.

ELIZABETH OAKES SMITH.

**William Cobbett and Robert T. Conrad.**—I write to inquire and make a few suggestions in reference to your articles on "Wilmington" and "The American Drama." In the article on "Wilmington" it is stated "a French teacher of note, William Cobbett, lived on 'Quaker Hill,' now Fourth and West Streets, in 1794, and later went to Philadelphia and founded Peter Porcupine's *Gazette*."

William Cobbett was an Englishman of the most inveterate type, who hated and detested everything French, and I am confident that, as well from that as from his defective education, he was never a French teacher. His biographer gives no account of him in such a character. He commenced in 1794, not later, the publication, in Philadelphia, of *Porcupine's Political Censor*, not Peter Porcupine's *Gazette*, on Second Street opposite Christ church.

In the article on "The American Drama," the writer in speaking of Robert T. Conrad, says he is "the author of two of the finest plays ever produced in this country. We allude to 'Jack Cade' and 'Aylmere.'" Further on he says: "These two plays, 'Jack Cade' and 'Aylmere,' are sufficient to preserve Conrad's name from oblivion, and they will always be considered an honor to our dramatic literature." While I agree with the writer in his estimate of Conrad's writings, I cannot agree with him in the fact that "Jack Cade" and "Aylmere" are two distinct plays, or that he wrote two plays with these names.

There is but one play, called by him "Aylmere, the Bondman of Kent." Aylmere, the leading character, was known as "Jack Cade" also, and was believed to be and called "Lord Mortimer," "The Commons' King," "The Rightful King of England," defrauded of the throne.

What I wish to inquire is, am I right in the view I have taken and the facts I have given, or are the writers of these articles in your February number correct? I write with a copy of *Porcupine's Political Censor* and also a copy of Conrad's Poems before me, and hence am well satisfied that I am correct, but I would like to know the fact if I am in error.

What I have to suggest is this, writers on historical subjects should be very careful of their dates and facts. Popular articles, such as these, are read by many without examination, and the facts stated are believed to be just as stated. Hence errors get abroad and attain a currency that they should not have, and the facts of history become anything but facts. I lay no blame to the writers of these articles, for I believe they wrote what they believed to be the exact truth; but a little more care on their part would have avoided these errors.

STUBEN JENKINS.

**The Old South Church, Boston.**—An enthusiastic meeting of the Old South Preservation Committee was held in Boston recently, President Eliot, of Harvard, in the chair. The treasurer reported that the total cash amount received by him was \$24,649.49; amount of subscription, less cash donations, \$50,382.86; unpaid subscriptions, \$28,496.03; cash and subscriptions due, \$50,476.34. There is also a subscription of \$100,000 contingent upon \$100,000 being raised before the first of April next. Total cash and subscriptions, \$150,476.34. The present condition of affairs of the church, as stated by the treasurer, is as follows: "To avert its immediate downfall, and to give the people, far and near, time to collect and bring in their contributions, a few persons have purchased the meeting-house and the vacant land around it, and have placed it in trust to await for a reasonable time the response of the public. I am able to state that one hundred and fifty thousand dollars have been promised for the preservation of the building, provided the further sum of one hundred thousand dollars is contributed before the first day of April next." It was resolved that each member of the committee should raise \$1000.

F. P.

**The First Book Printed in England—An Interesting Question.**—It has been often stated that the first book printed in England was, "Ye Book of ye Chess." In the History of Westminster Abbey it is so stated as having been printed under the auspices of the Abbot. *The Athenaeum* seems to cast some doubt upon the subject. It states that the first book printed in English was "The Recuyell of the Historie of Troye," which was translated by Caxton in 1471, but was issued without any date of printing. This was followed by "The Game and Playe of the Chess," "Fysshid the last day of marche the yer of our lord god thousand foure hundred and lxxiii." These two books were printed at Bruges, the first book printed in England being believed, the "Dictes and Sayinges of the Philosophre" bearing date November 18, 1477, "emprynted by me, William Caxton, at Westmestre." Mr. William Blades has disposed of the popular belief that the art was introduced into England by Caxton in 1474 very satisfactorily:

"At the end of Caxton's 'Chess-book,'" he says, "is the date of translation, 'Finished the last day of March . . . 1474.' According to modern reckoning, this was really 1475, because, as I have shown in my 'Life of Caxton,' p. 9, the new year in the Low Countries did not begin until Easter day. Now Easter day in 1474 fell upon April 10, and therefore Caxton did not finish his translation at Bruges till March 31, 1475. As the book was printed at that in Bruges, and before Caxton came to England with the new art, we must, I think, arrive at this conclusion: Caxton probably came to England in 1476, but the first independent date we have to stand on is the printing of 'The Dictes' in 1477."

Adopting, therefore, 1477 as the date of the introduction of printing into England, Mr. J. S. Hodson, of the Printing Pension Corporation, which will be fifty years old this year, suggests that the quarter-centenary of the introduction of printing should be celebrated by an exhibition, in London next June, of antiquities and curiosities connected with the art.

J. WILSON KNEEL.

## CURRENT MEMORANDA.

**The Presidency "Crisis" Past.**—The newspapers have sufficiently chronicled the successive phases of the "crisis" that is supposed to have imperilled our land. We have never been much alarmed, because we did not believe that the noisy threateners and blusterers meant fight; it is a well-established aphorism that "barking dogs seldom bite;" we have felt very confident that *the people* of neither the North nor the South, nor the East nor the West would consent to a war merely to gratify the political place-seekers of either party, and we have felt equally confident that these place-seekers were not to be feared in this direction; this *genus* of bipeds is not of the fighting spirit or build, and never indulges in such dangerous sport except by proxy. Indeed, the professional politician, whether you call him Republican or Democrat, knows nothing but *self*, and that self is so precious in his esteem that it must not be placed in jeopardy; nay, for that self he will sacrifice his—soul, we were about to say, but he has so little that the sacrifice would be inappreciable; for that self he will sacrifice his—honor, we cannot say, for he can't sacrifice that which he cannot possess. We will not farther attempt to say what he will sacrifice for that precious self; suffice it to say, self is to him beyond friends, family, home, country and God, and he will scruple at nothing that promises to pander to that self. The place-seeker will not fight unless so effectually cornered that he can't squirm out or crawl away; he believes in the expressive couplet,

"He who fights and runs away  
Shall live to fight another day,"

with amendments—striking out "fights and" in the first line, and substituting "run" for "fight" in the second—he is so used to "running" in one way that it comes natural in the other.

But it seems that the "crisis" has passed and we may breathe once more the balmy air of peace, unapprehensive of Mr. Watterson's one hundred thousand "unarmed" friends, and assured that even *his* feathers have ceased to stand erect like the quills of the proverbial "fretful" quarruped. A happy compromise scheme has been perfected, and doubtless before this article is in print the new Presidential tribunal will have advanced in their labors far enough to make it as clear as mud who has been elected President of the United States.

The "Tripartite Commission," as some of the dailies call the new court, though a non-constitutional, if not an unconstitutional, body, is unquestionably and fortunately a very strong one in its composition, and equally so in the degree of confidence apparently felt by the people generally in its ability, fairness and patriotism—as a whole. As our readers know it is composed of five Justices of the United States Supreme Court, five Senators and five Representatives; these are: Justices Clifford, Miller, Field, Strong and Bradley; Senators Edmunds, Frelinghuysen, Morton, Thurman and Bayard; Representatives Payne, Hunton, Abbott, Garfield and Hoar.

Justice Nathan Clifford was born in Rumney, Grafton

County, N. H., August 18, 1803. After his admission to the bar he removed to Maine in 1827. After serving in the Legislature, in 1834 he was appointed Attorney-General for the State of Maine, and was elected a Representative in Congress from 1839 to 1843. In 1846 he was appointed by President Polk Attorney-General of the United States, and after the Mexican War was sent as Minister to that country. When Judge Curtis resigned his place on the Supreme Bench in 1858 Mr. Clifford was nominated by President Buchanan to fill the vacancy.

Justice Samuel F. Miller was born in Richmond, Kentucky, April 5, 1816. After practicing medicine for a few years, he turned his attention to law. Being in favor of emancipation, he removed to Iowa in 1850, devoting himself to his profession, and becoming a leader of the Republican party in that State. In 1862 he was appointed Associate Justice of the United States Supreme Court by President Lincoln.

Justice Stephen J. Field was born in Haddam, Conn., November 4, 1816; was graduated at Williams College; studied law in New York with his brother, David Dudley Field; went to California in 1849; was a member of the Legislature; in 1857 was elected a Judge of the Supreme Court of California, and afterwards attained the position of Chief-Justice. President Lincoln in 1863 appointed him a Justice of the Supreme Court of the United States. Both parties in California, on account of his ability and character, united in asking his appointment to the vacancy on the Supreme Bench.

Justice William Strong was born in Somers, Tolland County, Conn., May 6, 1808. After graduating at Yale, he was admitted to the bar in Philadelphia in 1832, and began to practice his profession in Reading. He was elected to the Thirtieth and Thirty-first Congresses. In 1857 he was elected a Judge of the Supreme Court of Pennsylvania for fifteen years, but resigned the position in 1868. In 1870 President Grant appointed him Associate Justice of the Supreme Court.

Justice Joseph P. Bradley was born in Berne, Albany County, N. Y., March 14, 1813; was educated at Rutgers College, New Jersey, and began the practice of law in the latter State in 1839. He was engaged in the active duties of his profession at Newark when appointed Associate Justice of the United States Supreme Court by President Grant in 1870.

Senator George F. Edmunds, of Vermont, was born in Richmond, Vt., February 1, 1828; was admitted to the bar in 1849, and was a member of the Vermont Legislature, in each branch for several terms. On the death of Solomon Foot he was appointed to his place in the United States Senate, taking his seat in April, 1866. He was elected to fill the remainder of the term, and reelected for the term ending in 1875, and again for that ending in 1881.

Senator Frederick T. Frelinghuysen, of New Jersey, was born at Millstown, Somerset County, New Jersey, August 4, 1817; was graduated at Rutgers College; was admitted to

Union army as colonel of the 42d Regiment and was promoted successively to be brigadier-major-general of volunteers. He was elective from Ohio to the Thirty-eighth Congress and reelected to the several Congresses since.

Representative George F. Hoar, of Massachusetts, born in Concord, Mass., August 29, 1826; graduated from Harvard College and Harvard Law School; practiced the law in 1849, and settled at Worcester. He was a member of the State Assembly in 1852, of the Senate in 1853 and 1857; was elected in 1868 to the Forty-first Congress, and re-elected to the Forty-second, Forty-third and Forty-fourth Congresses, and was lately chosen by the Massachusetts Legislature to the United States Senate.

At the present writing, it is quite un-  
elusion the "Tripartite Commission" will  
whatever it shall be, it seems beyond a doubt  
accepted by all parties as a just and equitable  
the real or supposed difficulties of the remarkable  
contest of America's Centennial Year. While  
means convinced that the "Commission" plan  
does it *ex post facto* legislation, is really  
otherwise just right, we yet are content to  
and accept the conclusions of the new court.

We sincerely hope that, as soon as may be, amendments will be made to the Constitution, to prevent a recurrence of the late "Crisis."

Oregon looks forward to a prosperous year. A large population dwell in the Willamette Valley, and never suffered from drought, the climate is moist. Wheat is a sure crop, and in quality has passed in the world. The export last year was worth \$11,846,000. Canned salmon, another product for distant markets, was sent away in a number of 480,000 cases. Preparations have been made for a large increase of the business; twelve new mills are to be added this spring to the existing ones, and they will have an aggregate capacity of 12,000 cases, which will require more than 50,000 fish, live weight. The Columbia is the largest fishing river of the world. The Oregonian says: "With a population of 400,000 and an area of wheat equals one-seventh of the total area of the States. Such a State is not a poor State."

**The Spiritualist, Dr. Slade.**  
of Slade, the American Spiritualist, under the vagrant act and sentence of imprisonment at hard labor in the House of Correction, for having been found guilty for argument in London recently quashed on a purely legal technicality. Mr. Edlin, assistant judge, presiding, Slade's attorney, objected that as he was convicted was not within the act, he could not declare or charge that a person was a "palmer" or otherwise," these words being omitted from the charge. His objection was advisedly omitted, the official description being given by saying that

Representative James A. Garfield, of Ohio, was born in  
Cuyahoga County, Ohio, November 19, 1831; was  
at Amherst College, in Massachusetts, in 1859,  
Ohio Senate; entered the

or devices. Judge Edlin said that summary convictions must show on their faces the words of the statute giving magistrates jurisdiction. The conviction, therefore, was bad on its face, and as counsel for the Crown stood by it, and declined to ask the court to amend it, they must quash the conviction, and the appellant was discharged.

**Algeria.**—The French colony of Algeria is slowly but steadily progressing. 2,950,000 hectares of cereals were sown in 1875, the product of which exceeded that of 1874 by 70,000,000 of francs. 20,000 hectares of vines were planted in 1875. The phylloxera has thus far not made its appearance in Algeria. The fever-expelling eucalyptus is being planted in all the malarious districts to the signal benefit of the public health. The colony furnishes every year 3000 horses to the army; the sheep are valued at 10,000,000 of francs. Tobacco of a very superior quality is grown; the annual crop is about 6,000,000 kilograms. Since 1866 the commercial movement has increased every year 10,000,000 of francs. The importations amount to 193,000,000 of francs and the exports to 144,000,000. Roads are in process of construction wherever the country is settled. Of railroads in activity there is the great line from Orleansville to Oran, 420 kilometers, and that from Philippeville to Constantine, 87 kilometers. Several others under construction will be opened in the spring. The Arabs begin to recognize the benefits of French rule in the increased prosperity of the country, the impetus that has been given to agricultural and manufacturing industry, and the efforts making for the planting of waste places, and the procuring of water for irrigation and domestic use in the sinking of artesian wells. With the exception of some of the nomadic and brigand tribes on the frontiers, the natives no longer disturb the peace of the colony.

**Population of Paris.**—*The American Register*, a weekly paper issued in Paris, had an interesting article recently on this subject, from which we learn that at the close of 1876, the census then made up, showed the population of Paris to be 1,986,748, being an increase of 133,956 inhabitants over the official enumeration of 1872. This increase had been in the suburbs of Paris, Passy, Montmartre, Popincourt, Batignolles, and Monceaux. There had been a falling off in the locality of the Louvre. It may be inferred, from the small increase in four years, that the population of Paris may be regarded as numerically stationary. The opening of new boulevards, which increase the beauty and improve the health of the great metropolis, drives the poorer classes, constituting the bulk of the population, more and more out of the city. *The Register* says: "This fact alone is likely to check any great increase in the population of Paris, which is fast becoming a foreign city in the midst of France. Another cause which militates against an increase of population is the octroi system. Paris is at the present moment the dearest city in France, and as it is not a manufacturing and trading centre, like London or New York, wages and salaries do not augment so rapidly as the cost of living. The consequence of this state of things must be a stationary population, which will, unless the octroi system is modified, soon become a decreasing one."

**American Beef in England.**—An English journal recently contained an interesting letter upon this subject. The correspondent says:

"A novel feature at this year's market was the introduction of American cattle, and the American breeders are to be congratulated on the result of their initial effort. Their consignments were none the worse for their long journey, and we doubt not the experiment will be followed up in future years to a far larger extent, and with even greater success. . . . There is a sudden rage for American beef. A little while ago, when the weather was bad, American beef was selling at two cents a pound at Smithfield, and from ten cents to fourteen cents a pound at Birmingham. To-day I hear it has risen to the same price as English beef, and a well-known West End butcher, whose customers are almost exclusively aristocratic, has purchased no beef but American. This looks as if Brother Jonathan were going to beat Brother John out of the field. If it has the effect of lowering the price of English beef I shall not grumble; but if fashion is going to run it up to the price of a luxury, I don't know that we shall be much better off after all."

**Bismarck's Prospective Troubles.**—The new German Parliament promises to be a much-mixed assembly. So far, it seems that many shades of political and religious opinion will be represented therein. Among the members already elected are 105 National Liberals, 95 Clericals, 28 Imperialists, 19 Progressists, 11 Poles, 10 Socialists, 6 Alsatian Autonomists, 3 Alsatian Protectors, 4 Particularists, and 4 gentlemen whose politics cannot be exactly classified. It will require all the tact, skill, and audacity of Bismarck to manage such a miscellaneous legislature in these stormy times.

In its marvellous growth, San Francisco may fairly challenge comparison with Chicago. A village of huts in 1848 has developed to a stately city of palaces and warehouses in 1877. The commerce of Asia floats through the Golden Gate, opening a source of future wealth richer than ever gathered at the wharves of Venice or Amsterdam. In its banks and churches, schools and scientific institutions, social and literary progress, San Francisco already ranks with many of the older cities of the East. It has a debt of only \$3,000,000, which is amply justified in parks, public buildings, and other municipal property. Its splendid harbor and vast mining interests form the basis of an enduring prosperity.

**The Centennial in Court.**—The issue between the United States and the stockholders is soon to be decided in the Supreme Court of the United States. There is little reason to doubt that the decision of the Circuit Court awarding the fund to the stockholders will be affirmed. The able opinion of Justice Strong so thoroughly evolves a plain, common-sense construction of the acts of Congress and meets the equity of the case as to make an affirmance of it a reasonable certainty. Under the rules of the court a case of this nature can be speedily heard and settled, and no doubt this will be done, and the question finally set at rest.

**General Robert E. Lee's monument** seems to be now now a thing assured. The treasurer of the Monument Association reports that he has in hand, in cash and estimated assets, the sum of \$14,993.

**The Indians.**—Again the telegraphic columns of the daily press tell of great victories over the fighting Indians. These Indians appear to bear a great many whippings without being seriously checked in their warfare; indeed, they may one day be named with the Cuban patriots, who are the most marvelous fighters on record—every few weeks or months we read that their Spanish oppressors have achieved a tremendous victory and are just about to crush the rebellion, and yet the patriots survive the victories, fail to get crushed, and fight on. In the case of the Cubans we confess we are too thoroughly American in our sympathies to wish to see them fail in their grand struggle for liberty; in the case of the Indians, however, we can scarcely define to our own satisfaction our views and wishes. We cannot rid ourselves of the conviction that they are more sinned against than sinning, and with this conviction we cannot quite decide that we wish them badly whipped. We believe, as we have long believed, that the Indians would be more easily managed by exercising towards them some little honor and fair-dealing. The peace-Quaker plan would prove far more effective, if our Government could once convince the Indians that we mean to deal honestly by them; as it is, they see or suspect in our peace

plan only a screen for fresh attempts to deceive and over-reach them. It may be we fail to comprehend the facts in the great Indian problem, but we have watched with keen eyes the course and conduct of Indian affairs for many years, in the sincere hope that the supposedly superior race would learn to be just and true in their dealings with the savages, but we cannot say that we have ever been quite satisfied on this point. We want to believe that the Government means rightly to conduct Indian affairs, and do in a measure so believe; but on the other hand we as truly believe that it shows culpable disregard of rascality on the part of those it could and should control.

**Specie Payments.**—We have recently had quite a brisk little breeze on the question of resumption; it seems to be subsiding, however, with nobody hurt. Though not of the paper-money persuasion, we cannot believe it wise to attempt undue haste in resumption; if President Grant and everybody else will be still and let "well enough" alone, financial affairs will doubtless adjust themselves in good time, but these occasional agitations of the matter only retard resumption.

## LITERATURE AND ART.

LAMENT OF THE HEBREW MINSTREL.

**The Hebrew Minstrel and the Hebrew Maidens.**—In its February issue, the MONTHLY gives, under the head of "Literature and Art," an engraving and poem on "Rizpah," the Editor stating that he does not know the name of either the artist or the poet. I cannot supply the latter name, but the original of the engraving is by an excellent painter of Bible themes, John Tenniel, who, though not extensively known, has produced a number of creditable works in his chosen line; he is more remarkable for his common sense and understanding than for brilliance of execution. His "Rizpah" is a good illustration of this characteristic of Mr. Tenniel, and as a farther illustration I would commend his "Lament of the Hebrew Minstrel." The artist is not more suggested than the Bible scholar by his pictures. There is another English painter who deserves notice for the same peculiarities: I allude to F. R. Pickersgill, R.A., whose "Lament of the Jewish Maidens" is an appropriate companion picture to the "Minstrel" in harmony, while eminently different in treatment. Mr. Pickersgill has produced numerous Scriptural pictures, equally striking in their truth to their respective subjects; his "Visit of the Magi" is bolder than any other of his works that I have seen, and yet it does not contradict my comment. Of course, the two "Laments" are illustrative of the one hundred and thirty-seventh Psalm.

NELLIE HESS MORRIS.

REMARKS.—We give herewith engravings from the painting, specially referred to above, and also copy, as appropriate to accompany the engravings, two fine poems, one upon "The Captivity in Babylon," by an anonymous author, the other upon "The Visit of the Wise Men," by Captain David Vedder, who, Allibone tells us, "rose from the post of cabin-boy to the captaincy of a ship; subsequently entered the revenue service, and from 1820 until about two years before his death, at Newington, near Edinburgh, February 11, 1854, was a Tide Surveyor of Customs."

#### THE BABYLONIAN CAPTIVITY.

Along the banks where Babel's current flows,  
Our captive bands in deep despondence  
Sway'd;  
When Zion's fall in sad remembrance  
Rise,—  
Her friends, her children, mingled with  
The dead.  
The tuneful harp that once with joy we  
Strang,  
When praise employ'd and mirth in-  
spired the lay,  
In mournful silence on the willows hung,  
And growing grief prolong'd the tedi-  
ous day.  
Our proud oppressors, to increase our woe,  
With taunting smiles a song of Zion  
Clam;  
And sacred praise in strains melodious  
Flow,  
While they blaspheme the great Jeho-  
vah's name.  
But how, in heathen chains, and lands  
Unknown,  
Shall Israel's sons the sacred anthems  
Raise?  
O hapless Salem! God's terrestrial throne,  
Thou land of glory, sacred mount of  
Peace!  
If ever my memory lose thy lovely name,  
If my cold heart neglect my kindred  
Race,

Let dire destruction seize this guilty frame!  
My hands shall perish, and my voice shall cease!  
Ye shall the Lord, who hears when Zion calls,  
Overtake her foes with terror and dismay;  
I'll arm avenge her desolated walls,  
And raise her children to eternal day.

#### SONG OF THE WISE MEN.

Son of the Highest! we worship Thee,  
Though clothed in the robe of humanity;  
Though mean Thine attire, and low Thine abode,  
We own Thy presence, incarnate God!  
We have left the land of our sires afar,  
Near the blessed beams of Thine own birth-star,—  
Our spicy groves, and balmy bowers,

Perfumed by the sweets of Amra flowers;  
Our seas of pearl, and balmy isles,  
And our crystal lake, which in beauty smiles,  
Our silver streams, and our cloudless skies,  
And the radiant forms, and the starry eyes  
That lit up our earthly paradise!

LAMENT OF THE JEWISH MAIDENS.

We have turn'd us away from the fragrant East  
For the desert-sand and the arid waste,—  
We have forded the torrent, and pass'd the floods,  
And the chilly mountain solitudes,  
And the tiger's lair, and the lion's den,  
And the wilder haunts of savage men,—  
Till Thine advent Star its glories shed  
On the humble roof, and the lowly bed,  
That shelters, Lord, Thy blessed head!  
Son of the Highest! we worship Thee,  
Though Thy glories are veiled in humanity!  
Though mean Thy attire, and low Thine abode,  
We hail Thine advent, eternal God!

**A Valuable Antique Inscription.**—According to the *Contemporary Review*, in the Hippodrome at Constantinople may still be seen the remains of a venerable trophy of the Persian war, the bronze serpent which, with the gold tripod it supported, was dedicated to the Delphian Apollo by the allied Greeks after the victory of Plataea, as a tenth of the Persian spoil. On the bronze serpent, which served as a base for the tripod, the Lacedæmonians inscribed the names of the various Hellenic States which took part in repelling the barbaric invader. The golden tripod perished long ago in the sacrilegious plunder of Delphi by the Phocians, but the bronze serpent remained in its original position till it was removed by Constantine the Great to decorate, with other spoils of Hellas, his new seat of empire at Byzantium. Here it has remained in the Hippodrome till our own time, not unscathed, for the last of the three heads of the serpent has long since disappeared; but the list of Greek States inscribed on the intertwined folds of the body remains perfectly legible to this day, having been fortunately preserved from injury by the accumulation of soil in the Hippodrome. This earth concealed about two-thirds of the serpent till the excavation made in the Hippodrome in 1855, when the inscription was first brought to light. As the date of the battle of Plataea was B.C. 478, it may be assumed that the setting up of the tripod took place shortly afterwards. Thus the inscription would not be later than B.C. 476. Of hardly inferior interest is the bronze helmet found at Olympia early in this century, which, as its inscription tells us, was part of a trophy dedicated by Hiero L., of Syracuse, after his great naval victory over the Tyrrhenians, B.C. 474. If the German excavations now going on at Olympia continue to yield results as promising as the discoveries which have distinguished the first months of this enterprise, we may hope that many similar records of Hellenic triumphs may be found in the rich soil of the Altis.

**Dr. Schliemann.**—According to *The Press* (Philadelphia), the discoverer of the site of Troy and of the tomb of Agamemnon, was formerly a citizen of the United States. After having made \$93,000 in the banking business in Moscow, he resolved to visit California, and towards the close of 1851 sailed for New York in the steamer Atlantic. He arrived in America after a stormy passage of six weeks, bringing with him a draft from Rothschild on August Bel-

mont for the capital he had acquired in Moscow. He established himself as a banker in Sacramento. The miners had confidence in him, and deposited their treasure with him. Four years later he returned to New York with a capital of \$400,000 but in impaired health. In 1857 he was again in business in St. Petersburg. The climate not agreeing with

THE VISIT OF THE MAGI.

(See preceding page.)

him, he made a voyage around the world, and landed in New York in a state of extreme prostration from an attack of Panama fever. By the careful treatment of Dr. Tunkampf he recovered and returned to the Old World, where he has since occupied himself with antiquarian investigations. They are for the most part carried on at his own expense.

Lancaster, Pennsylvania, has an association called the "Schiller Verein," devoted to the critical study of the German classics in the original. They are now engaged in reading Goethe's "Egmont."

## SCIENCE AND MECHANICS.

**Wall Papers—Influence of their Colors on Health.**

—When doctors disagree—men in whom we have had entire confidence—how are we to decide in matters appertaining to our health? If they fail us, on whom are we to rely to settle momentous questions that are brought directly within the range of their observation, but which are still left open for discussion? It has been generally understood, that house-papers stained with certain greens are injurious, in that the greens are neither more nor less than preparations of arsenic; and yet the London *Lancet*, admitting that in some papers arsenic may be found, holds that if such papers are well made and carefully sized, they may be safely used in papering our rooms. But a room so papered, it adds, should not be used for a few days, or until it has been well ventilated; giving as a reason that during the operation of papering, some of the arsenical pigment becomes detached and remains suspended for a time in the atmosphere of the room. This being the case, we not only run the risk of getting a paper that is imperfectly made, but have also to take the chance of inhaling the minute particles of arsenic floating in the air, ready to be drawn into our lungs the moment we open the door of our newly-papered room. Better would it be to eschew paper-hanging altogether, or, at least, to have nothing to do with paper in which we can detect the presence of this pernicious color.

The question does not admit of a doubt, that persons living or sleeping in rooms papered with hangings stained with arsenical preparations, in however minute quantities, suffer in health, even if they do not die from poison, or an aggravated attack of diphtheria. Even birds hung in cages in a room so papered, sicken and die, and children exposed to such an atmosphere drop away at once.

There are all sorts of theories as to the manner in which the poison is set afloat. Many, whilst they admit the presence of the poison, maintain that the arsenic is only freed when the walls are brushed or rubbed. The *Lancet* apparently holds to this view. Admitting it to be true, who is willing to expose himself and family to so subtle a foe? A child, picking at a wall, may set arsenic enough afloat to end its days, even if it does not convey to its mouth bits of the paper it has pulled off in its restless desire to pluck the bright colors that compose the design.

Arsenic has been found in a number of colors, but it is generally confined to a light green. This green is not a natural color, or one that can be used to represent the green of nature; but it is very popular on account of its brilliancy. It is produced from arsenite of copper, and is sometimes known as emerald green; but it is recognized by chemists as Scheele's green, after its discoverer. Its use is not confined to staining house-paper. We find it wrapped around our cake of chocolate, and in the fancy boxes that contain dried fruits and confectionery. It also has a conspicuous place in the manufacture of artificial flowers, and to many light gauzes this color is imparted. The safest, or, in fact, the only way is to reject all papers stained with it either in large or small

splashes. But if one would use paper of this color, let him at least test it before hanging it on his walls. This can be done by placing a piece of the paper in a saucer, and pouring over it half a teaspoonful of the solution of ammonia. If arsenical green be present, the solution will become of a rich blue color; and if, on placing a bit of nitrate of silver, the size of a pea, in the solution, a yellow ring or crust of yellow arsenite of silver forms around the caustic, it will show unmistakably the presence of the poison. Dark green is composed of wholly different materials, and is in no way injurious.

Great care should be had in putting on house-paper, whatever the quality of the paper may be. If put on carelessly or hurriedly the effect will be injured and much of the beauty of the design lost; and if bad or lumpy paste is used, we run the risk of impairing our health. Paste, to be good, should be clear and thin; if well made, even though thin, it will be perfectly adhesive; but coarse or lumpy paste will mould and become offensive when it is exposed to dampness from the external air. This is objectionable at all times, and it is particularly so when, through carelessness or a desire to hurry the work, the new paper is put on without removing the old. Sometimes a part of the old is torn off—all that will yield readily—and then the new is put on, but the edge of the old will show through, and with this annoyance we have a double quantity of paste to scour and become offensive whenever the weather is damp and lowering. Better do without the paper altogether, and paint our walls instead, than to employ it in this way. But a good paper hanger can, if he will, put on our paper-hangings in a way that will give us no trouble.

GEORGE C. MASON.

**A New Wall Paper.**—It is proposed in Germany to make wall paper which will adapt itself to the degree of illumination of the room, becoming darker as the room is more lit up, and *vice versa*. The *Papier Zeitung* suggests to this end paper printed or coated with oxalate of copper, which acts in the manner above described. It is believed that very curious and novel effects of color and shade may in this way be produced on wall papers, and possibly on other materials.

**Testing Iron and Steel.—Government Experiments which should be Continued.**—Colonel Laidley, of the Ordnance Department; General Gilmore, of the Engineers; Chief Engineer Smith and Commander Bairdsley, of the navy; General W. S. Smith, Mr. A. L. Hall, and Professor Charles Thurston, compose the Commission appointed by the President under an act of Congress to conduct experimental tests of iron and steel. By the last Sundry Civil Bill the Commission was discontinued at the end of the present fiscal year. The Commission have just gotten ready for operations at Watervliet Arsenal one of the most complete testing-machines in existence, and are anxious to carry out the provisions of the act under which they were appointed, as it would be impossible for any private enterprise to make adequate tests, and they have asked Congress for an appro-

priation of thirty thousand dollars to carry on the experiments through the next fiscal year. The President has sent a special message to Congress embodying the views of the Commission on this subject, and urging that the appropriation asked for be granted. These experiments are of great importance to the coal and steel trade. They not only propose to determine the amount of strain which iron and steel will bear, but make a thorough test of the theory of crystallization in iron, as set forth in the opinion of the engineers who investigated the breaking of the Ashtabula bridge. A large number of iron bridges are now used on the railways, and thousands of human beings whose lives are hourly risked upon them render these experiments of vital importance.

*The Message.*—The President's capital message is as follows:

I desire to call the attention of Congress to the importance of providing for the continuance of the board for testing iron, steel, and other metals, which by the sundry civil appropriation act of last year was ordered to be discontinued at the end of the present fiscal year. This board, consisting of engineers and other experts from the army, the navy, and from civil life (all of whom, except the secretary, give their time and labors to this object without compensation), was organized by authority of Congress in the spring of 1875, and immediately drafted a comprehensive plan for its investigations, and contracted for a testing machine of 400 tons capacity, which would enable it to properly conduct the experiment. Meanwhile, the sub-committee of the board have devoted their time to such experiments as could be made with the smaller testing machines already available. This large machine is just now completed and ready for erection at the Watertown Arsenal, and the real labors of the board are therefore just about to be commenced. If the board is to be discontinued at the end of the present fiscal year, the money already appropriated and the services of the gentlemen who have given so much time to the subject will be unproductive of any results. The importance of these experiments can hardly be overestimated when we consider the almost endless variety of purposes for which iron and steel are employed in this country, and the many thousands of lives which daily depend on the soundness of iron structures. I need hardly refer to the recent disaster at the Ashtabula bridge in Ohio and the conflicting theories of experts as to the cause of it, as an instance of what might have been averted by a more thorough knowledge of the properties of iron and the best modes of construction. These experiments cannot properly be conducted by private firms, not only on account of the expense, but because the results must rest upon the authority of disinterested persons. They must, therefore, be undertaken under the sanction of the Government. Compared with their great value to the industrial interests of the country the expense is very slight. The board recommend an appropriation of \$40,000 for the next fiscal year, and I earnestly commend their request to the favorable consideration of Congress. I also recommend that the board be required to conduct their investigations under the direction of the Secretary of War, and to make full report of their progress to that officer in time to be incorporated in his annual report.

C. S. GRANT.

EXECUTIVE MANSION, January 30, 1877.

**The Sea-Serpent.**—The London *Spectator* gives full credit to the last reported observation of the sea-serpent:

"In the Straits of Malacca the sea-monster, so repeatedly seen and so repeatedly declared to be mythical, appears at last to have been carefully observed by competent witnesses. The creature was seen by the passengers and crew of the ship *Nestor*, on her voyage to Shanghai; and on her arrival at Shanghai the master of the ship, Mr. John Keiller Webster, and the surgeon, Mr. James Anderson, made a statutory declaration of what they had seen before a magistrate, as a mode, we suppose, of formally attesting that they spoke in good faith. The creature (which resembled a huge salamander, only that, instead of being about six or eight inches long, these dimensions must be multiplied by at least 75 or 100, the body being from 45 feet to 50 feet in length, the head 12 feet, and the tail, it is said, no less than 150 feet) was first seen at half-past ten o'clock on the 11th of September, fifteen miles northwest of the North Sand Lighthouse, in the Straits of Malacca. The weather was fine, the sea smooth, and the air perfectly clear. The Chinese on deck were terribly alarmed and set up a howl. The whole watch and three saloon passengers saw the creature clearly and observed its movements. It travelled for a long time about as fast as the steamer, appearing to paddle itself by the help of 'an undulatory motion of its tail in a vertical plane.' The body and tail were marked as those of the salamander are marked—with alternate bands, black and pale yellow in color. 'The head was immediately connected with the body, without any indication of a neck.' Both witnesses state positively that the only resemblance was to some creature of the frog or newt kind, while one of them (the surgeon) says that the longer he observed it the more he was struck with its resemblance to a gigantic salamander. Its back was oval in form. No eyes or fins were seen and it did not blow or spout in the manner of a whale. The greater part of its head was never seen, being beneath the surface. Probably the creature is of a race which survives from that very different world in which creatures of gigantic size seem to have been so much commoner than now. There appears to be no manner of reason for doubting the very express evidence so succinctly and soberly given."

**Poisoned Arrows.**—There has been some difference of opinion whether the North American Indians use poisoned arrows or not; but it seems to be pretty conclusively shown that they do not. According to Major Powell, who has carefully examined the subject, in connection with various tribes of the Rocky Mountain region, there is a very weighty reason why such should not be their practice. The Indians do not understand diseases to be bodily ailments, but to be entities, evil spirits, which take possession of the body, or parts of the body, and all their therapeutics is sorcery. Their Shamanistic ceremonies are well known. Hence, they would not arrive at the notion of inoculating disease by means of poisonous substance—in fact, have no idea of material poison, as such. They do not seem to know, for instance, that the sac of venom on a rattlesnake's jaw furnishes the substance which produces the effect of the reptile's bite. When the Indians use what are called in jargon "medicine arrows," they indicate weapons which have been charmed with fatal power by means of

surgery. These supposed "deadly" arrows are prepared in various ways: by being made with a charmed tooth, or with a piece of stone found by revelation in a dream; by the use of certain magical preparations, which latter are often made in rattlesnake skins. It is quite possible that white men may have taught some Indians the power of the rattlesnake venom, which may have occasionally been used for poisoning arrows; but, so far from such being a custom, Major Powell has never known of an instance.

**Petroleum.—Important Facts.**—In a careful article on the production of Petroleum, the *Titusville Herald* says:

"One of the most remarkable features of the Petroleum situation to-day is the decrease in the average of new wells. The average of wells completed in November last was ten and four tenths barrels, and in December nine barrels, against thirteen and five-tenths barrels in January last, and twenty-four and one-half barrels in July, 1875. In January, 1876, we had 142 wells drilling, against 618 in November, and 493 in December, and to-day we have fewer wells drilling than during the past four months. But, looking still further back, in January, 1875, with a production of 27,489 barrels per day, there were forty wells drilling, and in January, 1874, with a production of 37,648 barrels per day, there were only thirty-seven wells drilling. Thus it would seem that, notwithstanding the present apparently large number of wells completed, they are, taken altogether, by no means equal to those completed in previous years. The area of territory over which new developments are now scattered is also greatly in excess of that of any previous period of our history. The falling off in the yield of producing wells is no less extraordinary. While 3300 wells produced in January, one year ago, 23,000 barrels per day, it now takes 6000 wells to produce 25,000 barrels. Whereas it took last year an average number of 190 wells to be completed each month to maintain the production to an average of 24,500 barrels per day, it will at the present ratio of decrease require a very much larger number of wells to be completed each month than ever was known before, and a proportionate and constant increase in the number of drilling wells. In regard to the yield of the entire wells of the region, we find a falling off during the year 1876 from an average of seven barrels to the well in January to five and six-tenths to each well in December. This decline in the average yield of drilling and producing wells and proportionate advance in the price of the article was fully predicted in our columns in January, 1876. If we look at the past it is for the purpose of learning the lessons of the future, and the question coming closely home for consideration is whether, in view of the above facts, the price of our great staple will not in the year 1877 advance in a like proportion to what it did in 1876.

**New Remedy for Baldness.**—We find the following in the *Full Mail Gazette*:

"Persons afflicted with baldness will be glad to hear that a certain growth of hair may be produced by a very simple process, described by British Consul Stevens, in his commercial report on Nicolai for the past year. In the summer of 1875 Consul Stevens's attention was drawn to several cases of baldness among bullocks, cows, and oxen and the loss of manes and tails among horses. A former servant of the Consul's, prematurely bald, whose duty it was to trim

lamps, had a habit of wiping his petroleum-besmeared hands in the scanty locks which remained to him; and, after three months of lamp-trimming experience, his dirty habit procured for him a much finer head of glossy black hair than he ever possessed before, in his recollection. Struck by this remarkable occurrence, Consul Stevens tried the remedy on two retriever spaniels, that had become suddenly bald, with wonderful success. His experience, therefore, induced him to suggest it to the owner of several black cattle and horses, affected as above stated; and, while it stayed the spread of the disease among animals in the same sheds and stables, it effected a quick and radical cure on the animals attacked. The petroleum should be of the most refined American quality, rubbed in vigorously and quickly with the palm of the hand, and applied at intervals of three days, six or seven times in all, except in the cases of horses' tails and manes, when more applications may be requisite. This news will create a profound sensation in hair-dressing circles, particularly among wig and chignon makers.

**A Prepared Codfish Patent Litigation.**—The *Scientific American* says:—The patent of Mr. Elisha Crowell, under which he claims a royalty on all cod and other fish deprived of skin and bones and packed in boxes, etc., for transportation, is to be contested by the wholesale fish dealers of this city. Mr. Crowell has heretofore issued stamps, which the trade purchased and affixed to the boxes of fish, at the rate of  $\frac{1}{4}$  cent per pound. The dealers now claim that this tax inflicts injury on their business, and that Mr. Crowell has no legal right to exact it. As a large number of merchants are associated in these legal proceedings, and as it is reported that other fish dealers throughout the country will coöperate with them, it is probable that Mr. Crowell's claims will be vigorously fought in the courts.

**Open Polar Sea.**—A veteran Arctic explorer, James Lament, writes to the *London Times* on the subject of an open Polar sea. He ridicules the idea of a vast, illimitable open ocean reaching to the Pole, and says: "Now, surely, it is time that all this nonsense about an open Polar sea was knocked on the head. I have been deceived twenty times myself by what looked like an open sea when in reality it was only a pond of water a few miles broad. We are all liable to be deluded in like manner, because, in our eagerness to see what we wish to see we are apt to lose sight of three very simple facts: First, that ice lies very low in the water; secondly, that it is only a very small horizon that one sees from the masthead of a vessel; and, thirdly, that only half a mile beyond our horizon may lie not 'a vast, illimitable ocean,' but a vast illimitable ice-field reaching to the Pole."

Up to the 24th of December last, of the 44,700 feet of the entire tunnel through Mt. Gothard, in Switzerland, 22,188 feet had been excavated. Such progress having been made in four years, it is fair to infer that the whole work will be finished in 1880.

**A Sinking Island.**—The Island of Heligoland is reported to be gradually disappearing. It is now, says *Iron*, less than a mile in superficial extent; but in 1649 it was four miles in circumference, in 1300, forty-five miles, and, in 800, a hundred and twenty miles. The encroachment of the sea is effected almost entirely from the northeast, owing to the set of the currents and the direction of the prevailing winds.

## GOSSIP AND NOTE BOOK.

Noise is the arch-enemy of the overworked brain, and one of the effects of culture is to subdue social noise and all clamorous expression. But noise is by no means the universal evil modern ultra-refinement would have it. There are conditions of life where silence is so prevailing that the ear craves sound, and the spirit becomes sluggish for want of it. Sound is often a stimulus, and is absolutely necessary to a full sense of existence. In country life, the craving for noise often leads the rustic to turbulent scenes. We may imagine the charm of market-day to dwellers in rural solitudes. The confusion of sound brings a new sense of life and brotherhood; the crack and crash, the rattle and grinding of wheels, the multitudinous cries, the snatches of talk and laughter, the tread of numbers, and, over all, clocks and chimes and bells, each sound demanding, insinuating, clamoring to be heard, and diverting the thought for the moment to itself, and yet all harmonizing into a busy-bee like unity of purpose. The idea of religion, even, in the unlearned mass who pass their lives in silent, solitary occupations, is so inseparably associated with noise that it is almost impossible to instill the one without some aid from the other. But noise, in the progress of civilization, is losing its mission. Modern nerves recoil from the rude charm of mingled discords. We cannot now discover the spirit-stirring quality of the *ear-piercing life*, as described by Shakspeare. We are amazed that the word *shrill* should have been used by old poets as complimentary. We are puzzled that Sir Walter Scott should have enjoyed "the frenzied rivalry of contending bag-pipes." The riot and din of revelry in ancient times confound us. All that clatter which once was inseparable from high spirits seems to us now simply savage, and what was once to us a sympathy has become an antipathy. But, where there is great vitality there is sure to be noise. Mirth is always outspoken. In houses where noise is an offence, the children grow up losing a tonic. We miss a flash in the eye, a spring in the step, a ring in the laugh, which a little noise, indulged in at odd times, might have instilled into the system. Noise, therefore, is a part of education. Too much silence makes us morbid and sluggish; the ear has its necessities, like other organs, and the brain, if often oppressed and wearied with noise, is as frequently stimulated and invigorated by it. Lawful, recognized noise, is one of the most important elements of healthful life, along with fresh air and pure water.

"Auntie Thtomach."—A little three-year-old had heard that it was inelegant to say "legs," "limbs" being the fashionable substitute, and had learned other like lessons; a little playmate had an Aunt Isabella, whom she called "Auntie Bellie;" little Miss Primp one day rebuked her thus: "You muthn't thay 'Auntie Bellie;' you mutht thay 'Auntie Thtomach.'"

Tree-Love.—A Remarkable and Curious Case.—No one who has ever shared the hospitality of the late Gerritt Smith will ever cease to remember the simplicity and order that prevailed in the fine household; the genial hospitality of

the noble host, or the many acts of beneficence that sweetened his every day life. My object, however, is not to eulogize my friend, whose excellence is known to an extent commensurate with his world-wide philanthropy, but to preserve a singular display of fraternal woodland growth, that would seem to realize the classical belief in the Hamdyodes of old, and which Mr. Smith was at considerable pains to bring to my observation.

It was one of those beautiful mornings of our Indian summer, so marvellously soft and tender, a sleepy haze toning down the gorgeous hues of the October landscape into a spiritual holiness. Mr. Smith appeared at the door with his fine barouche and splendid horses and proposed a ride. "I will show you," he said, "what we consider a great curiosity, and see if you can account for it."

It was a pleasant drive over roads made smooth by the supervision of a man who, while intent upon the great interests of our humanity, was not the less mindful of the arts that were to make the wilderness to blossom like the rose. A luxurious pleasure it was that genial morning, under the soft sky, with a well-trained team faultlessly mounted, and a gentle companion full of wise utterances, and having also that fine quality that fitly estimates the grace of silence. Some miles of rare scenery in that upland country was passed over, when our horses stopped by the wayside and Mr. Smith pointed out two fine trees of similar size, shape, and general appearance.

"What do you think is the cause of that?" he said. "One is a maple, the other an elm, and any way, how did it happen?" pointing with his finger.

Strange enough, less than three feet from the ground was a bridge, as it were, between the two trees, which may have stood three feet apart. The bridge, extended arm, or whatever else it might be called, was covered with bark, was of the same size throughout except where it emerged from each tree it was a trifle larger than at the centre. It was, in fact, a Siamese ligature, a bench—perfect, though rounded—to delight a school-boy. I should say, while the trees may have been a foot and a half in diameter, the connecting link was not a third of the parental bulk, being in the proportion of an arm to a leg.

How shall we account for this fraternizing in the wild woods? In the stress of wind and storm, did each instinctively lend a hand to the other? Did the sap of each mutually circulate in the veins of the other? Did this endearing companionship impart a grace and completeness to the existence of each, which we, in our imperfect comprehension of the marvellous heart of nature, are incapable of understanding?

It is well known that trees planted in groups thrive better than when solitary, but this is the only instance which has come to my observation of a tree-love.

ELIZABETH OAKES SMITH.

An Expressive Epitaph.—In a country churchyard in England, according to a lady friend of the MONTHLY, a

found the following epitaph upon a stone marking the "resting" place of a husband and wife:

Their warfare is accomplished.

Speaking of an epitaph, some of our readers may recall the sensation of some years since, in and near Newburyport, Massachusetts, aroused by the circulation in manuscript of Hannah F. Gould's epitaphs upon living characters; they were marvellously witty though not unkind. One of the most amusing was upon Caleb Cushing, noted for his energy and "push," it ran thus:

ON C. C.

Lay aside, all ye dead!  
For, in the next bed,  
Repose the ashes of C——g.  
He has crowded his way  
Through the world, as they say,  
And perhaps now he's dead, may be pushing!

Mr. Cushing took this in good part; but retorted by writing the following, which turned the tables on Miss Gould:

ON H. F. G.

Here lies one whose wit  
Without wounding could hit;  
And green be the turf that's above her!  
Having sent every beau  
To the regions below,  
She herself has gone down—for a lover.

**The Sumner Tree.**—A reader of the MONTHLY sends us the following, which he says he copies from his "scrap-book," and he asks what the tree is and where it stands:

"There is a tree in the east Capitol grounds which was the object of Charles Sumner's especial admiration. Mr. Serivener, who resides near by, gives the following as the history of this tree, which, he says, he related to Mr. Sumner: After the close of our last war with Great Britain Commander Bainbridge was sent by the Government to England to bring home our prisoners of war. While in Great Britain, and when visiting Edinburgh, Scotland, he saw a class of beautiful trees, grown for ornamentation, especially in cemeteries. He had one dug up and brought to Washington. Having landed it here safely he extended invitations among the men of note in Washington to be present and participate in the ceremony of planting this tree which he had imported. The ceremony, which partook more of conviviality than solemnity, was participated in by Generals Brown—then Commander-in-Chief of the Army—Scott, Jessup, and Townsend, Commodores Bainbridge, Decatur, and Porter, and many distinguished statesmen and citizens of Washington."

**The Tea-Kettle.**—A lady, whose contributions have often added to the interest and value of the MONTHLY in the past, and we hope will in the future, sends the following:

I sat listening to the low undertone of the tea-kettle, simmering before the fire at twilight, when for the first time I noticed its peculiar shape, broad in base, and as Milton would say, "quat like a toad," convenient, safe, unique. Can the "gossip" of the MONTHLY inform me as to its origin?

A sick man, slightly convalescing, was asked by a pious friend who his physician was. He replied: "Dr. Jones brought me through." "No, no," said his friend, "God brought you out of your illness, not the doctor." "Well, maybe He did, but I am certain the doctor will charge me for it."

**John B. Gough**, in his recent address on "Temperance," at St. Louis, said he had spoken on the subject 5680 times. He remarked in conclusion that this was his last appearance in that city.

**Mary Clemmer**, the accomplished correspondent of the Cincinnati *Commercial*, says, in a recent letter: "I have another neighbor whom I think of with great tenderness, Mrs. Lippincott—'Grace Greenwood.' This country has not produced a woman of deeper or richer nature, and were she to pass away I should think of her with long regret as one whom the barrier of ill health and of unkind circumstances held back from the highest achievements possible to her rich intellect and heart. She does nothing that she does not do well."

**A Remarkable Widow.**—Our little daughter solemnly declares: "I'll never get married; I'll be always a widow and stay at home with papa and mamma."

**Mr. Moses Titcomb**, of Bangor, who recently resigned the office of superintendent of the Senate document room, was one of the oldest officials in Washington, having been in the service for thirty consecutive years. He went from Boston at the invitation of his cousin, John Fairfield, then Senator from Maine. Webster, Clay, and Calhoun were in the Senate when he entered office, and he is full of interesting reminiscences of those distinguished statesmen and their associates.

To-day will be yesterday to-morrow.

**The Japanese minister's wife**, Madame Yushida, is said to be quite well known in her native country as a writer. She has readily adapted herself to the customs of Washington, but acquires the English language slowly. Her infant daughter is named Sfumi, which in the Japanese language signifies "Literature."

**Justice David Davis**, the United States Senator-elect from Illinois, is a millionaire, a second Daniel Lambert in size, very jolly, very genial, and very agreeable.

An Iowa paper tells of a smart wife that helped her husband to raise seventy acres of wheat. The way she helped him was to stand in the door and shake a broom at him when he sat down to rest.

**Colonel A. D. Steinberger**, ex-Premier of Samoa, and an early resident of Colorado, the *Denver News* states, writes to a friend in Baltimore that he expects to reap a rich bonanza from his recent adventure and experience on board an English man-of-war. He was taken prisoner by a British man-of-war, and forty days was in irons. He finally worked his way to a British province and secured passage to London, from which point he threatens the British government with a million-dollar damage claim.

A Boston boy: Hub-bub.

"I live by my pen," said a poet, wishing to impress a young lady. "You look as if you lived in it," was the reply.

**Religious Notes.**—The Chicago churches have gathered in 1792 members, as the fruit of the Moody revival meetings.

The German Baptist churches of the United States have 7516 members.

When Father Boehm died, at the ripe age of 100 years, Dr. Lovick Pierce, of Georgia, became the oldest Methodist minister in the United States. He is now ninety-two and filled a preaching appointment for his son, Bishop Pierce, the other day.

Virginia appears to be a Baptist State. One out of every nine of the population is a Baptist, making a total of 173,960 members, against 11,754 Episcopalians, 89,000 Methodists, and 17,000 Roman Catholics.

Rev. Dr. Richard Newton, of Philadelphia, will soon begin to preach to the Mussulmans through his books for children, now being printed in Arabic.

It is announced that one half of the proposed endowment fund of \$500,000 for the Southern Baptist Theological Seminary has been raised. Indeed, the Baptists have been very successful, considering the hard times, in raising centennial endowments for their educational institutions. The agent of Shurtleff College says \$75,000 of the \$100,000 which it is intended to raise for that institution has been secured, and it is now proposed to ask for a jubilee fund of \$50,000 in addition.

The "Catholic Directory" for 1877 reports that the number of Catholic churches is 5292; of priests, 5297. The estimated Catholic population is 6,200,000.

According to Dr. Cushing, on an average fifty Congregational churches die yearly, and twice that number are annually organized.

Bishop Herzog has confirmed 1583 persons since he became bishop of the Swiss Old Catholics in September last.

According to the official return, there are in Prussia 17,674 Old Catholics, and 22 Old Catholic priests.

Rabbi Blake, in an article in *The Christian at Work*, says of the differences between the Reformed and the Orthodox Jews that "neither party has preserved Judaism as it originally was; but has reformed it—the latter by increasing its hirsutness, the former by casting off not only these additions, but much that is essentially Jewish. The tendency of these last is towards absorption by Christianity, and in a few years we might look to see these very advanced Hebrews in the fold of the Church, were not signs apparent of a reaction toward the older faith." He believes that the two parties will yet be united, and that there will be "peace again in the camp of Israel."

The Wesleyans established the first Christian mission in the Friendly Islands fifty years ago. The pioneer was the Rev. John Thomas, and the king of Tonga last summer issued a proclamation appointing a public holiday in commemoration of the jubilee of Mr. Thomas's landing in Tonga. Mr. Thomas is still living, at the advanced age of eighty-two. This mission has been more than self-supporting several years, adding each year from \$5000 to \$10,000 to the funds of the Wesleyan Missionary Society.

Mr. Moody, says the *Boston Globe*, is but a rugged orator, but he so evidently means what he says that no mere fine pulpit scholar can have such an influence as this plain, warm-

hearted man will exert in Boston. Mr. Sankey's singing is sweet in the lower tones, and often expressive and tender. But at other times the strain upon the voice is painfully evident, and the singer sometimes pays scant attention to the rules of time and rhythm.

DR. LOVICK PIERCE.

The oldest Methodist Minister in the United States.

Mr. Ario Pardee, the liberal patron of Lafayette College, has presented a \$40,000 church to the Presbyterian congregation of Hazleton. Mr. Markle, of Philadelphia, has added an organ and bell costing about \$5000.

**REMARK.**—The above has just started on the newspaper rounds, but, if we mistake not, the munificent deeds recorded were done some seven or eight years ago, when Mr. Markle was a citizen of Hazleton, and before Mr. Pardee's noble benefaction to Lafayette College cast into the shade his former good works.

**Interesting Political Figures.**—Some interesting facts are revealed in the Congressional election returns as published in the *Tribune Almanac*. The largest vote polled in any one district for Congress was in Nebraska, 52,686, and the largest vote cast for any one Congressman was for Mr. Welch of that State, 30,900. Mr. Throckmorton, of Texas, had the largest majority of any candidate, 22,855. The Mormon Delegate, Mr. Cannon, of Utah, had a majority of 17,689. Mr. Buckner, of Missouri, comes next, with 16,893; Mr. Cox, of New York, next, with 16,658; Mr. Hatcher, of Missouri, next, with 15,600. The largest Republican majority in any one district was 13,485, for Mr. Ryan, of Kansas, whose district, in number of votes cast, is second only to Nebraska. The third district in number of votes cast is the Sixth Michigan, which cast 44,971 votes for a member of Congress.

No. 64.

## THE OLD COEYMAN HOUSE, SOMERVILLE, NEW JERSEY.

By REV. WILLIAM HALL.

Our attention was first drawn to this ancient New Jersey mansion—one of the few of the better class of its colonial domiciles still standing—by an article concerning it published in the *Elizabeth Daily Journal*, December 8th, 1874, from the pen of the late Mrs. Harriet Woodward of that city. This house was for many years the residence of her father, the Rev. John S. Vredenburgh, pastor of the Dutch Reformed Church in Somerville, and it was the endeared home of her childhood. Her reminiscences of it as such, went back to nearly the beginning of the century, and were of touching and beautiful interest. And, whenever she visited the old manse, now neglected and decayed, its every room had its tender souvenir to her eyes. Here was the nursery or corner where the little ones played merrily together; there was the father's dear familiar library and study, which he so often paced when committing his sermons to memory. So also it brought tenderly to mind the image of a sainted mother, who long presided in that domestic sanctuary, and who suddenly left it and ten

orphaned children, for one of the heavenly mansions. And she was the daughter of that eminent Revolutionary patriot and pastor, the Rev. James Caldwell, who, with his devoted wife, fell victims to the murderous shot of foe and traitor.

The old parsonage, thus associated with sacred and pleasant family memories in the mind of the venerable lady to whose record of it we have referred, was also photographed for her parlor wall in Elizabeth. And its picture there—a large and

finely-taken one—must have been a cheering companion in many a lonely hour of her declining years. She loved to show it, and tell its story to her friends, and hence our knowledge of the same, and, subsequently, through the kindness of her much bereaved husband, Dr. M. W. Woodward, the copy—reduced in size—procured by us for this periodical. In her memorial article, Mrs. Woodward speaks of the original interior architecture, ornaments, spacious hall and parlors of this house, at the time of her father's occupancy, as betokening the residence of a family of wealth and high social position, in the olden time. And such its history shows it to have been, as more recently learned from the Rev. Dr. Messler, who has been the pastor of the Dutch Reformed Church in Somerville for the last half century and upwards. He informs us that "the date on the old house is 1736. It was built by Andrew Coeyman, a brother of the owner of the Coeyman Manor, below Albany. The last of the name was Lieutenant Staats Coeyman, of the Navy forty years since. One of the granddaughters was Mrs. George Paterson, and another descendant, Mrs. Stephen Van Rensselaer, of Albany, was a great-granddaughter."

A centennial fact in the record of this historic house was also mentioned by Mrs. Woodward, viz.: that in its parlors, oft scenes of joy as well as of sorrow, an old friend of hers, a lady of Revolutionary associations, had the honor of dancing with Lafayette, who was in New Jersey so much during the War of Independence.

What is above given formed the substance of an article under the heading of "An Ancient Parsonage," from the hand of the present writer, published in the *Christian Intelligencer*, November 9, 1876. And to this were appropriately appended some very interesting additional particulars, by C. D. Deshler, Esq., its then acting editor, received from his near family relative, Mrs. Theophilus M. Holcombe, an aged lady residing in New Brunswick, New Jersey, who is of the Coeyman lineage, and the best living authority in the matters of its genealogy. Her statement, slightly abridged, is as follows: "Andreas Coejiemans," the original Dutch of the name, "built, or caused to be built, this house, and he imported both the building materials, and in part, the furniture which adorned it. He was the son of the widow Gurtrud, who came hither from Holland, with two sons, Andreas and Pieter. She purchased a patent of land on the

Hudson River, where the now town of Coeymans, which was named in honor of her. He settled in 'the Jersies'—so then called. He married the daughter of Dr. Samuel Staats, of Albany, and had, born of her, one son and five daughters. The son, Samuel Staats Coeyman, inherited the homestead, and also, as was the custom, the family relics. He married Ariantze Schuyler, of New Brunswick. They had two children, Andrew and Gertrude, the mother of Mrs. Holcombe, the wife of the late Capt. George Farmer, of Albany city. Andrew, as male heir, on the death of his father came into possession of the place, and died there, deceasing in 1804. Under the name of the modern manufacturing village of Rensselaer, which now covers the ancient Coeyman farm of several hundred acres, and on the beautiful slope, he sleeps, with three generations before him, the last of his race in Somerville." And the worn monument made mention of to us by Mrs. Woodward, within the ample house grounds, has left a lasting impression on the memory of the inhabitants of the Vredenburg parsonage, and what a change time and the hand of modern improvement have wrought in all the former surroundings! The old orchards, gardens, fruit shade trees, and old residents, all gone; and nothing left to tell the tale of that silent past, but the old house. And it too, will, no doubt, soon follow the rest, and disappear from the face of the earth. But its picture is now destined to live in perpetuity, thanks to the conserving care of the excellent Mrs. Woodward, and the illustration of POTTER'S AMERICAN MONTHLY.

May this engraving of the substantial, fast-enduring domicile of her honorable Hollandic ancestors in New Jersey—so typical of their character—long be a pleasant memento of her in the house of her earthly pilgrimage, venerable lady whose historical and genealogical knowledge her family, and also the antiquarian public, now have so much reason to value.

Nor can we better close the present record by here quoting entire the graphic concluding paragraph of her opportune supplement, by Mr. Deshler, her son-in-law, to our first issue of this ancient house, given in that ably-conducted organ of the sound old Dutch Reformed Church in America, the *Christian Intelligencer*:

"I recollect making a visit at this house,

me it was in possession of the good Dominie Vrenburgh. It was, I think, in 1819. While visiting in the vicinity, where we had many friends, a donation party was gotten up for the minister; and we, being farmers' daughters, were solicited to

spin a half-pound of flax for the party, to which we readily assented, and by which means I became one of a party at that donation visit; and it was the last time I ever visited that venerable residence of my mother's ancestors."

## A BIBLE LESSON.

Slowly, slowly fade, fair picture,  
Yellow lights and purple shadows,  
On the valley, on the mountain,  
And sweet Ruth among the meadows!  
Say awhile, true heart, and teach us,  
Pausing in thy matron beauty,  
Care of elders, love of kindred,  
All unselfish thought and duty.  
Linger, Boaz, noble minded!  
Teach us, haughty and unsparing,

Tender care for lowlier station,  
Kindly speech, and courteous bearing.  
Still each softest loveliest color  
Shrine the form beloved and loving,  
Heroine of our heart's first poem,  
Through our childhood's dreamland moving,  
When the great old Bible open'd,  
And a pleasant pastoral measure,  
As our mothers read the story,  
Fill'd our infant hearts with pleasure.

## DURING FORTY CENTURIES—FROM THE PYRAMIDS TO THE ST. GOTTHARDT TUNNEL.

BY AUBER FORESTIER.

WHEN yet the inhabitants of our planet were sparsely scattered over its surface there was little or no opportunity for intercourse between the isolated communities wherein they dwelt. Thus it came to pass that the discoveries of wise men, discoveries which might have been productive of blessings to all posterity, were lost with the decay of the community in which they had been known, and the entire weary process of investigation must be gone through with later before similar results could be again attained.

The ancient Egyptians, for example, understood how to fuse the most diverse metals directly from rude ore. They were most skillful metallurgists; but this art was lost during the long period of decay which followed the golden age of civilization. The art of casting bronze over iron, which has recently come up among us, was already known to the ancient Assyrians. Of late we hear of the reestablishment of the manufacture of a malleable glass which was known in the days of Tiberius. At that time, as Pliny tells us, the laboratory of the discoverer was destroyed in order that copper, silver and gold should not be dishonored, as it was feared they would be through the introduction of malleable glass.

Our technical scientists are constantly liable to fall into the grossest blunders if they do not keep themselves informed on the history of discovery.

In the lengthy disputes which preceded the completion of the Suez canal, a prominent rôle was played by a supposition that a difference of some ten metres existed between the altitudes of the Red and the Mediterranean Seas. Laplace declared this to be an impossibility, proving the level of the sea's surface to be the same all over the world; but it was not until after repeated experiments that the engineers would be convinced that their instruments instead of his statement were at fault. Precisely the same point had been argued by the engineers of two thousand years previous, during the opening of the Corinth canal, and then it was Strabo, supported by the authority of Archimedes, who settled the dispute.

At that period of antiquity, to be sure, science

was confined to the favored few, and mathematicians, as well as astronomers, priests, architects, sculptors and painters, were obliged in the public interest to execute work which in our day is entrusted to the common laborer. With the advance of civilization and the accumulation of wealth and power in different localities naturally arose a division of labor, and kings and rulers, striving after glory and magnificence, undertook the erection of costly palaces, superb temples and gigantic monuments. The post of court architect then became highly honorable and lucrative. Thus we see graven on the most ancient quarries of Egypt the pedigree for twenty-three generations of one of the Psammetic court architects. All his ancestors had been architects like himself, and all had been endowed with high priestly honors. Whether the calling which they represented was fraught with blessing thereby, deponent sayeth not. As much as seven hundred years before our era royal architects had been appointed in Assyria, as we are thoroughly apprised by ancient tablets, and as for the ancient Roman architects we recognize their status in the magnificent works which they have left behind them, and which serve as models for modern architecture.

And, as architecture had its origin and first brilliant prosperity in the East, so was it also with the science of engineering. Whether the Chaldeans and Babylonians independently developed the latter or whether they borrowed it from the ancient Egyptians remains an open question. Each were an agricultural people, inhabiting a fruitful plain, traversed by a mighty stream, which only required irrigation to be productive of almost exhaustless grain harvests. Under like necessities were devised in both places, some four thousand years ago, the most ingenious means of irrigation, whose ruins fill us with astonishment unto this day, when even the names of the engineers who planned them have been long lost in oblivion.

Religious motives, the foundations of so many marvelous structures, were the impelling powers which guided the works of the engineers of those ancient times. For the temples and sacred edifices

were selected the largest, most enduring stones, in order that the structures they were to compose might defy the ravages of time. Engineers were called upon to lend a helping hand in removing the stone from the quarry to the place of its destination, metal-workers had their part to play in preparing the implements of transportation, and thus architecture, engineering, and metallurgy all gained an important impetus from religious workings.

The most ancient stone structures, the date of whose erection we can approximate, are the pyramids of Gizeh. They were sacred edifices, esteemed even more sacred than the temples and royal palaces, erected as places of concealment for the earthly remains of the kings, whose souls, in accordance with ancient Egyptian belief, would return to take possession thereof after the lapse of three thousand years. Although constructed four thousand years ago, the masonry of the pyramids, aided by Egypt's propitious climate, is to-day in a state of perfect preservation, a miracle to all beholders. Almost beyond computation was the amount of human power brought into requisition by the kings in the transportation of the needful blocks from the quarries to the building sites, and even the statue of *Rameses the Great*, which weighed 800 tons, was moved by men, as the well-preserved panel representations show us.

When the numbers of the objects to be moved increased, when they became heavier and more colossal in proportions, mere human power must of necessity have become exhausted in the effort of transportation. Flesh and bones alone no longer sufficed. When the huge block, weighing 1200 tons, on which now stands the equestrian statue of *Peter the Great*, in *St. Petersburg*, was carried to its place of destination, it was found almost impossible to supply a sufficient amount of power; even the iron cylinders on which it was rolled were crushed, and must be replaced by a harder metal. The old Egyptians, in order to further the progress of their huge granite blocks and colossal statues, made granite roads from the shores of the Nile to the place of erection, and *Herodotus*, who saw these, admired them more than he did the pyramids.

While we find the old Egyptian mode of moving colossal statues frequently depicted, we have no authority upon their manner of erecting obelisks weighing 400 tons, certainly a far more difficult task than the transportation of the heavy blocks.

Monolites, similar to those of the Egyptians, were erected by other nations; none of them, however, were as tall as those of the ancient inhabitants of the Nile valley, and the Egyptian obelisks in Paris and Rome are the tallest of their kind in Europe. In the temples of *Baalbec*, erected under Roman government, we find the largest stones which have been used since the structures of the Pharaohs; but they do not by any means equal these. The removal of these stones must constantly have given rise to reflections concerning the feasibility of replacing the enormous expenditure of human strength by mechanical contrivances. Putting such thoughts into practice, however, was dependent on metals.

Often has the question been started whether the ancient Egyptians were acquainted with steel; yet there seems to be no reason for supposing this not to be the case. Iron was known from the earliest historic period to the races within our horizon; it is copiously mentioned in the Bible and in *Homer*. On the wall-paintings of the Egyptian tombs in *Thebes* we see butchers sharpening their knives on pieces of metal of a bluish coloring which unquestionably represent steel. Iron is found in enormous quantities about the ruins of the Assyrian palaces, and the inscriptions on the tiles tell us of the iron fetters of the prisoners. Even in the Great Pyramids is found a piece of iron which must have lain there four thousand years. Certainly a great age for a metal which is so liable to be destroyed by rust!

The iron which the Africans of the present day prepare by simply melting the ore over charcoal, is most nearly related to our forged iron; and similar to it we must conclude was the simple preparation of iron employed by the ancient Egyptians. There is required but a slight addition of carbon to such iron and the result is steel; indeed steel is often unintentionally retained in the primitive clay ovens of the Africans. Why then should it have been unknown to the Egyptians? It was unquestionably discovered and employed by them in their masterly works, as is assumed by *Sir John Hawkshaw*, who is our authority for the historic dates of this paper.

A second basis for the impetus to our industry and technical skill is coal. As early as 1611 a patent was taken out in England for smelting iron ore by means of stone coal; but this method did not become common there until the last century.

Until then charcoal had been used, and in certain forest regions of Germany it still serves for the fabrication of a most excellent iron. But only since the use of stone coal has been thoroughly established has the iron industry received a truly vigorous impetus. Here we cannot avoid giving a table of figures which will represent better than any multiplication of words how great this impetus must be. The increase of the yield of coal during twelve years may be represented in tons, as follows:

	1860.	1872.
Great Britain . . .	80,706,391 .	125,473,273
German Empire . . .	12,347,828 .	42,324,469
United States . . .	9,388,758 .	41,491,135
France . . .	8,393,700 .	15,900,000
Belgium . . .	9,610,895 .	15,658,948
Austria . . .	3,503,895 .	10,443,998
Total . . .	123,861,407	251,291,823

The explanation of this fact is simple enough: it results from the rapid replacement of hand labor by machinery and the consequent growth of manufacturing industries on the one hand, and the colossal development of railroad and steamship traffic on the other. Notwithstanding the enormous increase in the yield of coal throughout the entire world, the product has increased instead of decreasing in value, and always finds a ready market. If one merely estimates the approximate value of the annual yield of coal in the world, one attains the gigantic sum of four hundred and sixty million dollars in gold. This estimate has merely reference to the price of coal at the mines, which, of course, by the time it is delivered at large factories and elsewhere in our great cities, must be represented by a much higher sum.

Side by side with the growth of the coal yield moves onward the development of the iron industry; closely related causes, not requiring any special explanation, unite the interests of these two giants of the world's industry. During the year 1866 the iron production amounted to 10,500,000 tons, and in 1873 it had increased to 15,000,000. That the reader may form some idea of the approximate monetary value of this yield, it will suffice to estimate the worth of the iron manufacture of Europe alone. Of the 11,400,000 tons of iron ore which was its share of the yield in Europe during the year 1873 were produced about 1,500,000 tons of cast iron, about 1,200,000 tons of steel and some 7,500,000 tons of bar iron, tin, etc. Now the very lowest estimate of the cast iron would be \$2.37

per ton, that of steel, \$4.74, that of bar iron, 1.25 etc., \$3.31, and according to this the annual production of iron in Europe must amount to about six hundred and eighty million dollars in gold. According to the same estimate, that of the United States must be about one hundred and fifty millions, and that of the entire earth about nine hundred and thirty millions.

In the iron now prepared in such enormous masses in the anthracite coal blast-furnaces which moderns possess a material for construction of which the ancients had no conception. True, this iron having been thus employed but for a comparatively brief space of time, cannot with justice be compared in durability with the old staple of construction which the ancients, without remodeling, took direct from the bosom of mother earth.

While, in Egypt, as we have seen, architecture attained its highest perfection four thousand years ago, the art of building with bricks flourished ten centuries later, in the fruitful lands of the twin streams Euphrates and Tigris. Buildings of baked clay erected at this time, and preserved intact unto this day, give evidence of a high degree of technical skill. If the superb palaces and temples of Mesopotamia lie now in ruins, the fault is not due to their builders; for three thousand years they have served as a sort of stone quarry for neighboring people, and tiles having inscribed on them the names of ancient Assyrian and Babylonian rulers, or costly ornamentation, are found to-day in the houses of the dwellers on the Euphrates and the Tigris.

The labor called into requisition in building the temples of Babylon and Assyria must have been enormous. Layard's Kouyunjik excavations alone afforded a yield of 14,500,000 tons of bricks and brickdust, and represent, according to the most moderate estimate, the labor of 10,000 men for twelve years. The palace of Sennacherib, which stood on this site, was unquestionably the largest palace ever built for monarch; its walls were half a league long, inlaid with most exquisitely-carved alabaster plates, and entrance was gained into it through twenty-seven magnificent portals, flanked by colossal sphinxes and bulls.

If we reflect on the inexhaustible sources of human labor at the disposition of the rulers of those lands, these mammoth works no longer seem to have been erected by miraculous agency. Whole lands were depopulated and their inhabitants forced to do villanage work. What the Bible tells us of

the brick-making which occupied the people of Israel in Goshen, gives us a faithful picture of the employment of entire nations in similar labor. The tile inscriptions of Assyria afford us a faithful estimate of the amount of booty and the number of prisoners resulting from each war, and in Egypt very frequent mention is made of the work executed by the prisoners. Herodotus tells us that in the building of the temple of Sennacherib 360,000 men were employed. What marvelous talent for organization must have been called into requisition to control such a mass!

It were strange if architects who could conceive of such temples and palaces as we find in Egypt and Mesopotamia should not have produced other useful works, and indeed traces of such do exist, proving that war and conquest did not alone occupy those ancient people. Egypt, for example, was in the days of the Pharaohs better watered than to-day. It is no easy matter to perfect a system of irrigation, and requires immense engineering skill. The Egyptians possessed decided surveying knowledge, and Eustathius tells us of charts in which were marked all their roads and marches. Lake Mœris was one of the most significant works of the irrigation system of Egypt, a reservoir which stored up all the surplus waters of the Nile inundation to give them out again when needed. To this day admiration must be excited by the sluice-gates of this inundation regulator, which was built by Amenemha III., surnamed the "Sea-King." And equal in excellence to the canals for irrigation were those for navigation purposes.

The sources of knowledge whose outpouring was so abundant in Babylon and Assyria became at an early period exhausted. With the fall of Babylon and the destruction of Nineveh disappeared the people who had migrated from the fruitful plains round about, and in the region where extended a broad desert before the construction of the works of irrigation, the yellow sands blown by storm-winds gained once more dominion, veiling the former glory from human ken until the European investigation rescued it from oblivion.

Not so in Egypt. Long after it had attained the pinnacle of its splendor and majesty, it remained the sparkling fountain whence the ancient Grecians and Romans quaffed wisdom. The Hellenic philosophers, the first minds of the nation, wandered over to the wonder-land of the Pyramids as to a great and high school, and from Alexandria

learning and wisdom flowed in broad streams over the West. Yet the lands of the Euphrates and the Tigris contributed in no small degree to the foundation of old Hellenic culture; indeed, the distinguished Assyrian scholar, Smith, does not hesitate to state that the classic nations "borrowed far more from the valley of the Euphrates than from that of the Nile." In astronomy the ancient realm of the Chaldeans stood preëminent; an astrolabe was found in the palace of Sennacherib, also tablets showing the divisions of the year according to seasons, in which account is taken of an intercalary month. The Chaldeans possessed constellation charts; they knew the course of the planets, watched the courses of the comets; they computed eclipses of the sun and of the moon, and fixed the signs of the zodiac.

Through the seafaring Grecians, whose ships swarmed the Mediterranean Sea, the intellectual treasure-stores of the East reached the West. Its geographical position alone would naturally have acquired for it the rôle of mediator. But the earliest architecture of Greece, about seven centuries before Christ, formed a strong contrast to the works of art of Egypt and Mesopotamia. The so-called Pelasgian structures, monstrous walls of rude stone, are wholly wanting in the architectural beauty which later in the golden age of the Greeks, beneath the laughing skies of Athens, was revealed in the highest form ever attained.

To-day, when the question of public health is widely agitated, and the sanitary regulations of large cities are so zealously prosecuted, it may not be amiss to recall the fact that twenty-three hundred years ago the city of Agrigentum possessed an extensive drainage system, as we are informed by Diodorus. Nor is this by any means the only city of antiquity of whose drainage we are assured. Fully two hundred years earlier the Cloaca Maxima was constructed in Rome; also among the palaces of Babylon we find mighty vaults which have served as public sewers.

The palmy days of Rome alone can compare with ours in regard to useful public works. This, however, is not the place to do honor to the public works of ancient Rome, which, in a measure, extend to our day. Fortunately they are nearer to us than the monuments which we have been descanting upon, and it is therefore easier to form judgment upon them. The Romans were conquerors of the civilized world as it was known at

that time, and their capital on the Tiber was decorated with all the treasures of subjugated lands; yet they by no means neglected the development of the auxiliary sources of the most remote provinces.

Fearful as are the immediate consequences of war, it often proves indirectly a benefactor to humanity. During the long sieges carried on by the Grecians and Romans, was incited the spirit of invention of battering engines and machines of defence; the most able philosophers and mathematicians of their day devoted their energies to the service of war; and the great Archimedes, who invented the catapult which he used in the defence of his native city, Syracuse, against the Romans, fell himself in the same battle. And so it is unto the present day, when the most skilled engineers vie with each other in the construction of deadly fire-arms and implements of destruction; when they are constantly improving on the swiftness and impenetrability of ships of war, and when these marine inventions are constantly reverting to the advantage of the civil fleets.

In those old days when commerce and traffic gave no impetus to the construction of roads and bridges, these were built by the soldier for military purposes, and actually tended to serve as a promoter for peaceful traffic, especially in ancient Rome. Wherever the Legion made its way, arose, even in the most barbarous provinces, superb roads, whose remains fill us with astonishment even unto the present day, and which "all lead to Rome." No less than the roads were the water-works marvellous efforts; and while our modern cities were not supplied with water conduits until this century was well advanced, Rome possessed during the first century of its existence a system which could supply ample water for seven million people. Nine aqueducts carried it from the surrounding hills; later, five new ones were added to these; but three of these old aqueducts suffice to supply modern Rome with water.

With the fall of Rome arose a pause in the progress of culture; the barbarous hordes which were let loose on our part of the earth had no need to construct bridges and great highways. New impulses then arose through the Arabian men of learning, especially in the province of the astronomical and mathematical sciences.

From the tenth to the fourteenth century and onward was inaugurated the great period of church-building, during which were erected our

superb cathedrals with their heavenward aspiring towers and domes, and then came to be neglected, except perhaps in Italy, works serving to further the public weal. In Italy a strenuous effort was made, during the revival of the arts and sciences in the twelfth and thirteenth centuries, to employ largely once more on the construction of harbours and the canalization of streams. In 1481 the first canal sluices were constructed; Leonardo Vinci, great also as a painter, was a prominent engineer, and it was he who designed the sluice gates.

It would almost seem easier to conduct water to places where it is needed, than to restrain its overflow where its encroachment would be productive of wretchedness, want, and devastation. In the last respect the people of Holland have accomplished the most of all nations; actually compelled to unwonted exertions by the sea-encompassed land in the northwestern part of the realm, which for centuries has been wholly dependent on man's art. How early this people began its struggle with the sea is not precisely known, yet there are evidences of dykes having been built in the twelfth century, for the purpose of keeping back the ocean from the lowlands. When, in consequence of bold voyages and successful commercial enterprises in the spice-lands, and daring ventures of the whale fishermen in the Arctic waters, the prosperity of the Netherlands grew and the population increased in numbers, works of the most magnificent proportions were undertaken; defiance was offered the sea, canals were made, and gigantic machines constructed to pump dry entire seas, if needs be. Until quite recently the North Holland canal, completed in the year 1825, was the largest of its kind extant; the Suez canal was the first which exceeded it. But already has the Netherlands completed another work, which is in every respect the peer of the Suez canal—we mean the canal from Amsterdam to the North Sea, with its colossal sluice works. After pumping dry the Harlem sea and transferring its bed into a fruitful plain, the colossal question is agitated of the feasibility of doing the same by the Zuyder Sea.

As the Hollanders became teachers of the world in canal enterprises, so the French have, at least since the last century, become authority on the construction of roads. From thence to the provision of other facilities for intercourse was naturally but a step. Wooden clouts were first used in the Hartz mining works in the seventeenth century;

the first iron ones came up in England in 1738, thus laying the foundation for our railroads.

The greatest revolution in the commercial world, however, was brought about through the introduction of the steam-engine. At first, to be sure, the magnificent rôle to be played by Watts's invention was not foreseen, and great was the wonder felt at its actually controlling water and wind-mills, and replacing horse-power in the tread-mill. Deep mines from which the water had hitherto only been removed through the excavation of costly galleries, were now pumped dry. The slow work, in a word, of hands and fingers, of bones and sinews, was directed to other provinces, and thus was obtained the equivalent of a thousandfold increase of hands.

Thus, long before steam was rendered available as a means of facilitating intercourse, it became serviceable to industry. The most subtle and remarkable effects of all were produced by its application to spinning and weaving. What miracles has it not worked in the manufacture of cotton goods! Known in the Indies already in the earliest historic times, cotton did not make its appearance in Persia and Egypt until about the time of the birth of Christ. In Spain it was woven in the tenth, in Italy in the fourteenth century, and Manchester, to-day the greatest cotton market in the world, first became acquainted with it in the seventeenth century. A falling off of good old honest linen was inevitable. Its pedigree extends back to the ancient Egyptians, and many mummies are found wrapped in linen cloths of exquisite fineness. The Babylonians, too, besides woolen materials, wore fine linen garments of superb coloring and beautiful patterns. Our generation has witnessed the introduction of steamboats, telegraphs, and railroads.

Only forty years have elapsed since a celebrated Englishman of science declared that a steamer would never succeed in crossing the Atlantic Ocean. Shortly thereafter, in the year 1838, the passage from Bristol to New York was made in seventeen days by the *Sirius*, the first vessel which ever crossed the ocean by steam alone; the ship *Savannah*, two years previous having made the passage from America to England, partly by steam and partly by sail. The *Sirius* was followed by the *Great Eastern*, which made the transit in thirteen and one-half days. Thus was inaugurated the era of steam travel on the ocean.

Comparatively brief as has been the period since

the birth of the transatlantic steamer intercourse, the steamers begin already to supplant sailing vessels. Toward the latter part of the year 1800 the number of European ocean steamers was 2974; that of the sailing vessels, 92,272. In the year 1873 the number of ocean steamers had increased to 6228; while in all Europe could be estimated but 92,778 sailing vessels. Thus, during a space of thirteen years, European marine commerce gained an addition of 3254 steamers, and only 506 sailing vessels, leading to the inference that six times as many steamers as sailing vessels are built. With the increase of steamers is, of course, abbreviated the term of delivery as well as increased the amount of freight possible to be carried; for every ton of freight which a steamer has capacity for carrying is equivalent to four tons of a sailing vessel, because the steamer can make about four trips to the sailing vessel's one.

A comparatively long time was required by the electric telegraph, after its invention, before it came into universal use; Munich and the observatory at Bogenhausen were connected by the first perfectly adjusted electric telegraph; in 1838 the London Blackwell railroad introduced it, and since then the electric telegraph has conquered the world. Telegraphic wires now, fearing neither ocean nor desert, encompass nearly the whole earth, and there is prospect that the missing link between San Francisco and Yokahama will at no far distant day be supplied. The cable connection between Europe and America is now so thoroughly insured through five concurrent lines that there can be no question of a possible break in the telegraphic intercourse between the Old and the New World; and with Australia, since 1872, we stand in regular telegraphic communication. The length of the telegraphic wires of the world now measures some 95,000 geographic miles.

From a scientific standpoint we must rank the invention of the electric telegraph above that of the railroad. The results arising from the enormous increase of railroads, however, far exceed those of the telegraph, for the railroad is serviceable to a vastly greater number of people, and the name of George Stephenson, the railroad inventor, will be placed among the greatest benefactors to mankind, until perhaps one day some more stupendous invention renders the railroad superfluous.

Just fifty years have elapsed since the opening of the first railroad—in 1825, between Stockton

DURING FORTY CENTURIES.

ton. The victories of technical skill, our day find no mountain-wall too break through, are so universally known; we scarcely in place to dwell thereon; the union of capital and labor the boldest have been brought into realization. As Europe as in North and South America are of this kind undertaken of a magnitude must surely awaken the wondering admiration of posterity. To the two Alpine passes, Cenis and Brenner, was added, in 1871, the Gotthardt railroad, with its tunnel 12,236 metres in length; and with the fourth gigantic enterprise, the Swiss and Italian sides which such rapidity that its completion will scarcely be delayed after the prescribed time. But far beyond any of these is the prospect of a submarine railroad between France and England.

The northern and eastern railroads of Europe may, to a large degree, be viewed as pioneers of culture. The project of a railroad running through Lapland belongs no more to the realm of fancy, for the tracks of Norway and Sweden are forcing their way onward. Russia too stretches out her iron arms further and further northward as well as eastward, and Turkey of late contributes her mite, through the main line reaching to the Bosphorus, traversing her confines from east to west, and through the projected road which is to penetrate Asia Minor as far as Angora. Russia possesses already six lines terminating at the Volga, and pointing to Asia. From the terminus, Zarizyn on the Volga, the steamer makes its way in two days to Astracan, at the mouth of the stream in the Caspian Sea, and from thence in four days more to Enseli on the Persian coast. In Southern Caucasus, since 1872, the Black Sea has been opened to Tiflis, and a railroad follows the sloping banks of the Kur, scaling mountains far above the snow-line, through lengthy tunnels, and across four hundred and thirty iron bridges spanning ravines and flood-tides, the city of Tiflis is reached. In its eastern continuation this road leads to the Caspian Sea. And now that our railroads touch on Asiatic confines, projects of the greatest magnitude have been afloat, plans to cross diagonally the largest of continents, to unite the Russian roads; with the terminus has been even so bold an enterprise has been further the most

CENTURIES.

populous land of the East, with its four hundred million inhabitants, and the three hundred million inhabitants of Europe. What prospects would be open for traffic and intercourse of our planet most thickly populated sections of our human beings, merchandise and ideas be transported from forthright from European metropolises to Peking. Thus far, however, the Chinese oppose the construction of this road; they shrink from having the sacred soil, in which rest the ashes of their forefathers, torn up and desecrated by the rude hand of the foreign workman. Quite different from the Chinese are their near relations the Japanese, who have plunged with zeal into the stream of Western culture, and since 1873 have possessed excellent railroad building has been the United States railroad enthusiasm. The most the Pacific Railroad the continent

from the Chinese, who have plied the Japanese, who have plied the stream of Western culture, and since possessed excellent railroads. In the United States railroad building has been prosecuted with the utmost enthusiasm. The most stupendous undertaking was the Pacific Railroad completed May 16, 1869, spanning the continent from ocean to ocean, and so soon as the present complications in the money-market are swept away the other projected transcontinental routes will be doubtless completed. In the Kansas Pacific road there will be a tunnel exceeding twelve miles in length, but in its excavations it is believed that valuable veins of metals will be found whose products will more than defray the expenditure of the part of the work.

Nor has South America remained backward; the Andes road, from Lima to Oroya in Peru, meets the highest commendation; destined to render available the rich agricultural lands on the east slope of the Cordilleras, to open a transit to sea ports of the Pacific border, and to lead to development of the mineral resources of mountains. This road penetrates an apparently impenetrable barrier by means of a tunnel at least as high as the summit of Mont Blanc. The length of the combined railroad is 187.3 miles, and the cost \$81,460,000.

The length of the combined railroads of the world was, in the year 1873, 81,461.171.061 miles; of this number 81,461.171.061 miles in America. 6622 in Asia, Europe, 80,210 in America. 6622 in Asia, Africa, and 1496 in Australia. According to the computation of Prof. F. X. Neuman, the doubted authority on this point, the world invested in the railroads of the world about fourteen thousand million dollars; and the monied value of the locomotives and rolling stock use equals about twelve thousand million dollars.

**A GENTLEMAN'S PORTRAIT, AND HOW IT WORKED MISCHIEF.**

BY AGATHA CHANDLER.

I HAVE no words for her sweetness; I can't describe her; perhaps, were I to do so, or even could I place her picture before you, you might not see her as I did or do. Every eye makes its own beauty, and to me she was more beautiful than any other living creature. Nellie Brodie, I mean lovely Nellie Brodie, whose father was the sexton of our church, a good old man, but prosy, and prone to tell one or two long stories about ghosts, which proved not to be ghosts after all, whenever one met him. Many and many a time I've listened to them, out in his little porch, of a summer's night, with the moon bright above us, and mysterious chirps and cries in the bushes, and the smell of the evening primroses growing far sweeter and sweeter, and Nellie, still and quiet as a mouse, sitting with folded hands between us.

We were busy folks enough by day; but we idled away the long summer evenings together, and thought no harm of it. It is good to be idle sometimes, in that happy sort of way; and to tell the truth, I like it. No man can say I neglected my duty. A better farm no man ever had, and larger crops none gathered, and no starved cattle grazed in my meadows. As for my dairy—but that was sister Jane's doing. A good house. A pretty, bright-eyed girl, with a warm heart, and a laugh that seemed to be catching. Alone together we two were, and we were fond of each other.

I never told her I liked Nellie Brodie, but I did not hide it from her. Nellie and she were great friends. Over and over again I tried to find out from Jennie what she said about me—Nellie, I mean—but the girl would never let a word slip out. A true woman hides another woman's secrets. I knew that and I built on it.

"For," said I to myself, "if Nellie disliked me Jennie would give me a hint, sister-like, and save me from mortification. Either she knows nothing, or she knows Nellie likes me."

After that, I may say I courted Nellie. She knew I loved her, I'm sure of that; even if I had not said so out and out, she could not help knowing it.

But there were other young men in the place of course, and many willing enough to listen to old

Brodie's stories for the sake of looking at his daughter; and many a jealous pang I had in those days, for Nellie had the same pretty, kindly ways to all, and the same for every one.

I used to think that a "no" from Nellie's lips would go straight through my heart like a bullet, and I found it hard to risk the hearing of it. She must say it to all but one of us, and I was not so handsome as one, and not so witty as another, and not so rich as a third. I think I never knew how plain I was though, until I had my photograph taken one day, by a man who had a gallery in the village. I thought at first he must have made too much of my mouth and too little of my eyes, but he showed me plainly that the machine must take a good likeness, because it was a machine and couldn't make a mistake. I took the things home and put them in a drawer, and showed them to nobody; but they took the little vanity I had out of me, though I kept saying over and over again, "What do looks matter for a man?"

I'd meant, you see, to give Nellie one for her album, but I thought if I looked like that it was best not. I've heard other people speak of the same feelings since, in regard to photographers; and I am not sure now that they are always perfect.

Waiting and watching, hoping and fearing, I let the time slip by; and winter came, with its frost and snow, and old Mr. Brodie told his stories by the fire, instead of in the porch; and the lamp-light fell on Nellie's yellow hair, as she sat knitting, making the prettiest picture you ever saw; and I made up my mind to put my fate to the test before Christmas, and didn't. You see when a fellow is in love he loses courage. But one thing I vowed—Nellie should take a sleigh-ride with me.

Tom Armstrong had said—I had heard him—that he meant to drive the prettiest cutter, the prettiest pair of horses, and the prettiest girl in New Bridge. He meant Nellie by the prettiest girl. His turnout might be what he chose, but Nellie should never go with him. She should go with me.

The snow fell fast; and by morning you could see nothing for miles around but great white drifts, though the sky had grown as clear as though it

had been summer. I called for Nellie in the afternoon, and she was ready, and away we went. She looked charming, with her rosy cheeks and bright eyes and sunny hair; and I was happier than ever I had been in my life.

Going out of the village we met Tom Armstrong with his splendid cutter. He looked daggers at us both—or at least I thought so; and he went, as I heard afterwards, to invite Sue Nichol to ride with him. As he drove out of sight, I made up my mind to ask the question that would settle everything on our way home.

Man proposes and Heaven disposes. Things happened that evening that I had not thought of. We were going back, in the moonlight, when I put my hand on Nellie's, and made her turn her eyes towards me.

"I had been trying to say something to you for a long while," I said. "Perhaps you guess what it is."

But before I could utter another word my horses became frightened at something, and away they went like mad things. Nellie clung to me and screamed. I did my best to stop them. They left the road entirely and took their way across a field, and striking against a stump the snow had hidden, the sleigh was overturned, and we were thrown out together.

I was not hurt; but Nellie lay insensible. I lifted her in my arms and clasped her to my bosom, and begged her to open her eyes and to speak one word to me. But she was like one dead, and in my terror I dared not take her home. I carried her, instead, to my sister, who, frightened half out of her senses, came forth to meet me. She took Nellie into an inner room and bade me bring a doctor, and he was there soon.

I spent an hour of agony such as I had never felt before; but at last Jennie came to me, all smiles.

"There is no danger," she said. "She has come to herself; she only fainted from fright. You haven't killed her or even hurt her much, you foolish boy."

And I burst into tears. Jennie bent over me.

"But to think that she should be so sly," she said. "A gentleman's portrait in her bosom all this while, and not a word to me of it! I'll punish her for it now."

And away she ran back to Nellie, but my tears were all dried up, and my heart was like gall. She was engaged to some one else, then, this girl who

was so dear to me. Some one had been before me, and she wore his portrait next her heart. Fool that I was not to guess it.

I never asked whose portrait it was—Tom Armstrong's or Jack Mayden's I did not care. When Nellie was well enough to go, in the course of an hour or two, I drove her home and bade her good-by.

I said, "I regret that I should have been the means of alarming you so, Miss Brodie," and she looked up into my face with her great blue innocent eyes, and said: "It was not your fault; you could not help it. I was so foolish to faint away."

And I thought to myself, "what deceitful creatures women are!" for the look she gave me was as sweet as if she had not worn another man's portrait in her bosom.

A week from that day I went to New York, and sought out an old ship-owner, who had been my father's friend.

"I'm tired of farming," I said, "and want to try the sea as a common sailor."

The old man would have laughed me out of the notion; but when he found me firm, he gave me what help he could.

I went on board a vessel bound for China, and wrote to sister Jennie, telling her to send for Uncle William and his wife to manage the farm, which I knew they would be glad to do; but I never told her where I was or what I had done. I meant, you see, to throw myself away, and be heard of no more by any one. Of course, I was mad for the time; that is the only excuse for me.

So I led the sort of life a sailor in the merchant service leads—no very pleasant one I can tell you for a year or two, and I grew no better for it, and no happier. The other men had mostly some one at home—mother or sister, or wife or sweetheart—to get a letter or a message from at times. I, of my own act, had no one. And all the while, at work or at mess, or in the hours when watch was kept on deck, I thought of Nellie; saw her as she looked when she sat by her father's side in the summer moonlight; saw her with the firelight on her golden hair, beside the winter hearth; saw her smiling at me, as we whirled through the snow drifts on the last bright day, and saw her as she lay like a dead thing in my arms. And fancy painted other pictures. I saw her as Tom Armstrong's wife. I saw her—oh, good heavens!—with his children on her knee!

I am not sure but that I should have turned idiot, had not something happened to alter the circumstances of my position. This was nothing else than the total wreck of our vessel, and my narrow escape from drowning, but with an arm broken by the falling of a spar. For a month I lay on a sick bed; and then, with a softened heart and a feeling that I was sick of the sea, I went home to sister Jennie, to be a farmer again if I could.

In those two years she had never had a line from me. Not an angry word did she give me, but ran into my arms and wept on my bosom like a child; and then she showed me the wedding-ring on her finger, and the baby lying asleep in the cradle, and told me whose wife she was.

She was Mrs. Tom Armstrong, and I had never guessed they liked each other.

"And I'm as happy as the day is long," she said, "only fretting about you. How could you go away so, Ned? If you did not think of my feelings you might have remembered Nellie Brodie's."

"Nellie Brodie's feelings!" I cried. "Nellie Brodie's! Don't laugh at me, Jennie."

"Laugh at you!" she cried. "Laugh at you, dear! I haven't thought of it. Did you quarrel that night? It must have been a quarrel, I think, whose fault was it, yours or hers?"

"Miss Brodie and I never had a quarrel," I said.

"Oh, Ned," she resumed, softly, "don't try to hide it from me; when I saw your portrait in her bosom, I told you so, I know, and thought it was all settled and was so glad."

I started up and caught Jennie's wrist. "My portrait?" I cried.

"Why, Ned, Ned, don't look at me so," screamed Jennie; "what does it all mean? Your portrait, of course; one of those photographs you had taken—I found the rest after you went away. Oh, Ned, don't—don't look so, dear!"

"I thought you told me she wore another man's picture," I said—"That drove me away; that, and nothing else. Oh, what a wretched fool I've been! I did not know she had my picture; and I might have cast her away! I, who loved her so, and have pined for her all these years."

But Jennie, dear Jennie, with her kind, motherly face, and loving woman's eyes, came close to me, and putting her arms about my neck, whispered, "Don't despair, Ned. She has never liked any one else, and I know, for certain, that she wears your picture still."

And those words brought my youth back to me; the years seemed blotted out, and I was the Ned Brown who fell in love with Nellie Brodie, once more.

Well, Jennie told the truth. I went to see Nellie Brodie, and found her sweet and beautiful as ever; and we were married when the spring came and the birds began to build their nests in the green orchard. Afterwards, when she had been my wife some time, Nellie told me under those very apple-trees, how she had found my picture one day, when no one saw her, and worn it afterwards for love of me—wore it and wept over it while I was far away, trying to forget her—trying, but never succeeding.

## DANCING.

BY LOUIS T. HARDUIN.

**F**EELING finds its first and most natural expression in a gesture, a posture, a pantomimic action. The child who has not yet learned to speak, like the animal who must remain forever dumb, dances and frolics, and capers to show its joy; or writhes and twists, and flounces, to declare its grief and anger. Rude and savage races, who never get beyond the stage of childhood, instinctively develop the impulse for action into set rythmical movements of various character, according to the emotion that governs them; and

thus we have the origin of dancing. It is coeval with the history of the human race, and will continue in practice so long as mankind are capable of untrammelled and spontaneous action—we hope it may be through eternity. There is scarcely an individual so staid, so demure, and self-controlled, even among the most straight-laced sects of the Quakers and Puritans, who have not, at some moment of gay excitation, yielded to the sudden passion for cutting a pigeon-wing, and felt the better for it. Until the freedom and

frankness and fearlessness which spring from the innocent, happy, and childlike emotions have become utterly alien to us, there will recur passages in every lifetime when the only perfect utterance of the feelings will consist in some lively, fantastic swaying motions which come under the denomination of dancing.

In most of the ancient nations dancing composed a part of their religious ceremonials. The Egyptians danced in honor of their god Apis, who symbolized the sun, and moved in circles and evolutions, indicative of sorrow at sunset and rejoicing at sunrise. The whole Greek population met on certain days at the market-place, and joined in hymns of thanksgiving and in dances consecrated to their divinities. In the Jewish records there is frequent mention of dances of a sacred character. Moses and Miriam danced to their song of triumph after the passage of the Red Sea, and David danced before the Ark on its rescue from the Philistines. Among savage tribes, at the present day, dancing is one of the chief observances on all occasions where religious rites are performed.

We read in Homer that dancing as well as reading was customary at entertainments, and, from his time on, the Greeks manifested an extreme fondness for this pastime. It accorded with the genius of this beauty-loving people, and afforded them an ample opportunity to exhibit their graces of person and their elegant action. Aristotle ranks dancing with poetry, and, carrying this idea into a figure, the art has been prettily defined as "the poetry of motion."

The sedate Romans preferred to look upon social dances rather than to perform them, and deemed it derogatory to their dignity to join in its mazes, except in religion. Professional dancers, who were generally slaves, were employed to amuse the company at banquets and private entertainments. It is still the fashion in the East to secure the services of professional dancers on all festive occasions. In Egypt and India dancing-girls are a necessary adjunct to every entertainment.

The religious dances of the ancients may have given rise to the Greek drama, but they cannot be considered the source of the ballet. The first indication which we have of the modern ballet is at the Court of Leo X., in Italy. It was, in the beginning, connected with the crude theatrical exhibitions which took some Scriptural or sacred

theme for illustration. But it soon lost its religious association, and became a purely secular source of amusement. From Italy it spread to other countries, and in the reign of Henry VIII. was introduced to the English Court. Henry himself, his young daughter, the Princess Mary, found pleasure in this species of pastime.

When the Great Prior of France and the stable Montmorency visited Queen Elizabeth, she entertained them with a ballet, the subject of which was "The Wise and Foolish Virgins," which was performed with elaborate scenery by the ladies of the Court. Dancing was a favorite amusement with Francis I., and the fair, fragile Valois acquired a wide repute for her exquisite grace in its execution. Don John of Austria, paid a visit to Paris for the sole purpose of witnessing her skill in the art. Louis XII. was fond of the ballet, and sometimes condescended to tread its measures. Louis XIV. particularly favored the ballet in his youth, and, at the advanced age of sixty-one, appeared on the stage in the character of Flora. Masked balls became the fashion of this monarch, and were given with great splendor. After the death of Louis XIV. the Regent abolished the masked opera-ball, which has since been a notable feature in the dissipated life of Paris. In 1739 a masked ball was given by the City of Paris on the celebration of the marriage of Menebeth with Don Philip, for which fifteen thousand invitations were issued.

In 1765, Almack, the keeper of a fashionable gambling-house in London, opened a magnificent assembly-room in his establishment for the convenience of the lovers of the dance and the pleasures of gay society. A series of balls were inaugurated at the rate of one a week for several weeks. Admission to these balls was procured by a subscription of ten guineas; but the popularity was so great that it soon became an exceedingly difficult matter to obtain tickets, and many persons of both sexes, whose claims on account of rank and wealth to admission into high society were not slight, failed to get entrance to this exclusive resort. The popularity of Almack's continued for upwards of seventy years, with occasional periods of intermission; but, in 1836, it reached its final decline, and now its prestige is irretrievably lost. During the last twenty-five years, there have from time to time been made to revive balls, but with indifferent success.

## GUNNING BEDFORD, JR.

BY JAMES GRANT WILSON.

GUNNING BEDFORD, JR., of Delaware, one of the framers of the Constitution of the United States, was born at Philadelphia, Pennsylvania, in the year 1747. He was of English descent on his father's side, while his mother was of a French Huguenot family, and he was a first cousin of Governor Bedford, of Delaware, who distinguished himself in the French War, and also during the Revolution as Lieutenant-Colonel of Haslet's regiment. Gunning Bedford, Jr., entered Nassau Hall, New Jersey, in 1767, numbering among his classmates James Madison, fourth President of the United States, and Philip Freneau, whose patriotic poetical lines inspired his countrymen in the very darkest days of their struggle for freedom. Bedford had no superior in his class, and carried off the honors, being selected to deliver the valedictory oration at Commencement. During his second year in college he married, and among the audience who listened to Bedford's eloquent address was his young wife, who travelled with her eldest born from New York to Princeton for that purpose. The child was kindly cared for by Mrs. Witherspoon, the wife of the President, while the mother went to listen to her student husband. She was the daughter of one of Dr. Franklin's friends, who encouraged him in giving her a good education; and when her father edited a paper in New York aided him by writing and translating from the French. Her name was Jane B. Parker.

Having graduated in 1771, Bedford studied law with Joseph Reed, an eminent lawyer of Philadelphia, the same who, in 1778, said, "I am not worth purchasing, but such as I am the King of Great Britain is not rich enough to do it;" and having been admitted to the bar he removed to Dover, in the State of Delaware, where, after a brief residence, the unhealthiness of the town induced him to remove with his family to Wilmington. During the war he was for a short time acting aid-de-camp to the Commander-in-Chief of the army. On one occasion he was sent by Washington on a secret and hazardous mission from Trenton to New York, and the General, fearing that he was not sufficiently armed, presented him with his own pistols, saying, "If you return, keep these pistols

as a memento." They are preserved in the Smithsonian Institute.

Resuming his practice after the close of the war, Bedford, by his agreeable manners, his legal abilities and eloquence as an advocate, soon won the esteem and admiration of his fellow-citizens, who, in the course of a few years, elected him by large majorities to the State Legislature, to the Continental Congress and as a member of the Convention which framed the Constitution. In the deeply exciting debates upon the question "Whether or not the States should be equally represented in the Federal Legislature," Bedford, by his fluent, eloquent and earnest appeal in behalf of Delaware, on a question of vital importance to her, was chiefly instrumental in obtaining two Senators for his geographically diminutive State. His name appears as the second among the six signers from Delaware, the others being George Reed, John Dickinson, Richard Bassett, Jacob Brown and James McHenry.

The next position of honor conferred upon Bedford was that of Attorney-General of Delaware, which office he filled with fidelity until, upon the organization of the government, he received from the hands of Washington the commission of the first Judge of the District Court of Delaware. This high office Judge Bedford continued to occupy with distinction until disabled by disease, which terminated his honorable career in the month of March, 1812, in the sixty-fifth year of his age. Over his grave in Wilmington is a beautiful monument erected to his memory by the last survivor of his children.

Judge Bedford, it may be added, was in all the relations of life a man of spotless character. He was a consistent Christian, and for a quarter of a century an elder in the Presbyterian Church. His spacious residence in Wilmington was the resort of many of the most distinguished men of the nation. Mrs. Bedford spoke French fluently, and when Wilmington was filled with French emigrants they were frequent guests at her house. It is to be regretted that the voluminous correspondence of Judge Bedford with Washington, Jefferson, Madison, Franklin and other founders of the Republic, was totally destroyed in the destruction by fire of his historic mansion.

## ARCHITECTURAL PROGRESS, AS SEEN IN THE RELIGIOUS EDIFICES OF THE WORLD.

BY REV. WILLIAM BLACKWOOD, D.D., LL.D.

### III. ROMAN ARCHITECTURE.

Two elements were combined in producing the style of architecture which prevailed in Rome in the days of the Empire. At an early period Italy adopted as the embellishments of such objects of taste as their workmen fashioned. This tendency to approach Greek art in matters of social economy

TEMPLE OF AGRIPPA, AT ROME.

was inhabited by a branch of the same Pelasgic race which settled in Greece; but owing to the peninsular shape of Italy and the barrier interposed by the sea, the intercourse of the two populations soon ceased, and middle Italy yielded to the Etruscans, who had risen to influence and power about the time when Rome was founded. It is probable that the Etruscans were of a northern origin, but little is positively known of their early history. Once settled in the country they soon began to display a fondness for Pelasgic art, as their remains attest, Greek myths being usually

was also apparent in architectural structures, although they had a distinctive character of their own which was displayed for many ages, and which was visible in buildings erected as late as the first century after Christ. The oldest monuments of this Etruscan period are the remains of walls in which great blocks of stone were placed above each other in horizontal strata. In some cases these blocks were reduced to an oblong shape, thus showing progress in art, while in others the blocks were rude and polygonal in form, thus exhibiting an accordance in style with the earliest and rude

forms of building in Greece proper. Examples of walls raised with hewn blocks may be found at Cortona, Fiesole, Populonia, Rosella, and Volterra, which show that the Etruscans were making progress in style, while farther south below the Tiber, among the Sabines and the Latins, the ruder practice continued to prevail of using polygonal or unhewn blocks. It is worthy of note that in these primitive Etruscan remains there are evidences

times. Though the arch was known to the Etruscans, it seems to be an established fact that in houses or temples or large buildings it was not introduced. Their edifices were simple in style, undecorated and suitable to the wants of a primitive people of warlike tendencies and as yet unaffected by habits engendered by luxury. The unadorned style of the Etruscans long continued to affect the buildings of Rome. The people were

THE PANTHEON AT ROME—INTERIOR.

that the use of the arch was known, as may be seen in the gate at Volterra, in the gate at Perugia, and in the Cloacæ at Rome. The greatest of these sewers, the Cloacæ Maxima, built in the reign of Tarquinius Superbus, is twenty feet wide, and it was always been attributed to an Etruscan architect. To conclude, however, that the Romans were indebted to the Etruscans as the inventors of the arch, would be contrary to the evidence which is supplied by excavations in the ruins of Assyria, which carry the antiquarian back to the remotest

engaged either in extending and consolidating their sway over surrounding regions, or they were contending in all the bitterness of civil war as to who should rule and by what forms the state should be managed. Palaces, vast temples and edifices of a public character held a secondary place in the popular mind for ages, and it has even been held that such temples as they had were often protected from the seasons by a covering of straw and clay. Magnificence and slavery entered Rome together at a later age. Vitruvius is the only

reliable authority on the elements of Etruscan art that passed into the Roman style. The simple Doric of Greece, the earliest of the purely Greek styles, commended itself to the Etruscan mind, and it was soon adopted, but with decided alterations. The columns were reduced in their diameter, the elevation of the shaft being about seven diameters, while a base was added. The columns stood farther apart, intimating, what no doubt was the fact, that wood had been used instead of stone in the architraves. The tie or cross beams projected considerably over the architrave and supported a very prominent roof. Then, again, the ground plan of the temple differed from the Greek, which was oblong, while the other approached the form of the square, the front part resting on pillars, thus forming an extensive portico, while the rear end of the building was divided into three parallel cells or apartments, each entered from an opening under the portico. The Etruscan influence affected the character of Roman buildings for ages, but in the time of the Scipios the popular taste had become imbued with a love of Greek art. In the long-continued struggle with Carthage, the Romans were brought into contact with Greek art in Sicily, and when the Macedonians, dreading the growing power of Rome toward the East, cast in their lot with Carthage, the result was inevitable: for the final overthrow of the great African power necessarily opened the way for Rome to deal not only with the Macedonians, but also with the other fragmentary powers into which the empire of Alexander had become divided. No sooner had the Roman eagles

spread their wings over Greece, than the civilization of Greece began to assert its influence in Rome. Greek architects were soon brought into Italy, "*Grecia capta ferum victorem cepit*," for it very speedily came to pass that Roman architecture, Roman art, and Roman philosophy were dominated by the civilization of the people who had bowed to the power which was marching onwards to the mastery of the world. And now, as in an earlier age, the Etruscans had left their impress on Roman buildings, the second

element which made the architecture of Rome what in its palmy days it became, began to assert its power.

The mental characteristics of the Romans

as decidedly displayed in their handling of art as in other departments of social life. In main, their temples were Greek, but they were Greek with Roman modifications. During the last century of the Republic much was done in the department of building at Rome and elsewhere, not so much in the introduction of new and original styles, as in the greater magnificence of the work which they raised; and the work thus beg-

n, until it reached its greatest glory in the days of Augustus, who may truly be said to have found

matters connected with taste and the external magnificence of the Capital. The palmy period of architecture and this devotion to art which he introduced continued to prevail during the reigns of the earlier Cæsars. It was under Augustus that Vitruvius produced his celebrated work on Architecture, the only ancient treatise on the art which has lived to our day, a work the merits of which are such that it will unquestionably continue to be a text-book in years to come as it has been in years that are past. Succeeding emperors aimed at exceeding the works of their predecessors by raising structures of vaster size and richer ornament. The Pantheon, one of the grandest of the famous edifices of Rome, was built by Agrippa, the son-in-law of Augustus. Not satisfied with the fame of the Pantheon, Agrippa resolved on displaying his public spirit and on securing the popular favor by introducing baths on an enormous scale, and to them he added fountains, temples, and other works which gave a character of splendor and magnificence to Rome.

Purity of taste and correctness of design soon became apparent. The order of the succession of the *twelve* Cæsars of history, as they are usually called, was Julius Cæsar, Augustus, Tiberius, Caligula, Claudius, Nero, Galba, Otho, Vitellius, Vespasian, Titus, and Domitian, the last of whom died or rather was murdered because of his cruelty, in the year A.D. 96. As early as the reign of Titus peculiarities were introduced which tended to vitiate the public taste; still the general characteristics, so far as ground-plan and external form which had prevailed in large temples still continued, but the tendency to decline had set in. It was during this era that the amphitheatre,

ROMAN IONIC.

COMPOSITE.

IN ROMAN ARCHITECTURE.  
Rome a city of clay or brick, and to have left it a city of marble. Livy complimented him as the restorer of temples, "Templorum omnium conditorem aut restitutorem." His liberal patronage was designed to bring the most skillful Grecian artists to Rome, as he aimed at a policy which would withdraw the popular mind from politics and the principles on which he sought to rule, to

usually known as the Colosseum, was erected at Rome. Commenced by Vespasian and finished by his son Titus, it is the most stupendous edifice ever raised by any monarch for the gratification of any people. The Romans acquired their taste for such structures from the Etruscans, to whom are attributed the first gladiatorial fights; and like the Etruscans, the Romans preferred such displays as

gold which this house contained were not so much a matter of wonder (being quite common at that period) as the fields and pools; the woods too in one direction forming a kind of solitude; while here again were open spaces with commanding views."

The buildings erected during the reign of Trajan exhibited a magnificence of conception which indicated the greatness of his character. The column, the triumphal arches and the forum which he constructed show how auspicious his influence was towards art, and under his patronage the architect Apollodorus was enabled to display the loftiness of aim which still characterized the builders of Rome. So also during the reigns of Hadrian, the Antonines and Marcus Aurelius a love for the great and bold in art prevailed. Hadrian himself gave practical attention to art, and so enthusiastic was Marcus Aurelius that he became a pupil of Diogenes.

The taste for extensive palatial establishments continued to prevail, and to vie with the "folly" of Nero. Antoninus Pius built a country house at Lanuvium, of which the ruins remain to astonish the beholder and attest the ability of the emperors to control the wealth of the people for their personal ends. That architectural taste

ward. The fostering hand of Alexander Severus for a time arrested the decline which became

general on the fall of the Western Empire, for the arch of Gallienus affords sufficient evidence to show that taste had died out, and the true principles of art had departed. Still huge structures arose from time to time as in the case of the baths of Diocletian, and in his palace at Spalatro. In the distant provinces a powerful impulse was felt for a time as if the life force of the empire had worked its way to the borders: for about the time of Diocletian and Aurelian the enormous edifices were built at Baalbec and Palmyra, which, though long in ruins, still astonish the spectator by the boldness of conception, the magnitude of their size and the command of means which must have been available by their builders. Many things in their arrangement appear unusual and peculiar while ornament is unduly used in the details, but the vastness of these structures, now great in ruin, display the splendor of design and the amount of energy which characterized their founders.

Such is a brief review of the rise, progress and

THE FORUM.

may be seen in the arch of the sculptures on that structure the time of Marcus Aurelius had been steadily down-

THE COLOSSEUM.

buildings impressed the beholder with their size. Domestic architecture in Rome was generally poor and monotonous, consequently the eye was surprised and pleased by the effect of the contrast between the mean and irregular home of the citizen and the lofty columns, the foliage of the capitals,

decline of art in building at Rome, in the temples, palaces, baths and forums, which made that mighty city a worthy capital for the ancient world. All the architectural designs of the Romans were on a magnificent scale, in unison with the greatness of the

mass of the entablature and the great bulk of the great Corinthian temple. As stated in a former article, the Corinthian style was usually adopted in the smaller edifices of Greece; but in Rome the Corinthian at once became the prevalent type, a

LONGITUDINAL ELEVATION OF THE COLOSSEUM AT ROME.

Roman power. In Greece there was a succession of styles, but in Rome the florid Corinthian at once commended itself to the popular taste by the richness of its adornments. In Greece the eye was pleased by the correctness of style, while Roman

it was used in the largest edifices. As in Roman architecture the column was derived from Greece so the art of vaulting or the use of the arch derived from the Etruscans, and in the hands of Roman builders it was used with such effect that

LONGITUDINAL SECTION OF THE COLOSSEUM AT ROME.

TEMPLE OF THE SIBYL, TIVOLI, ROME.

became the most peculiar element of their style. Thus the Roman building embodies the characteristics of both people. The introduction of the arch at once affected the forms of ground plans as well as the size of the spaces which were covered or roofed over. In the great temples the length of paves in the entablature determined the distances of columns, and in the great structures the centre of the roof had to be left open to the sky. On the other hand the use of the arch enabled the Romans, by simple bricks and mortar, to cover in great spaces, and thus protect the interior as well as to modify the shape of buildings, and to make them suitable for baths and palaces of any size as well as for the largest temples. Hence the column which in Greece was an essential became in Rome a matter of detail and ornament, and accordingly the columns in Roman buildings soon began to change in their proportions as taste and fancy dictated.

No better illustration is needed of the power of the arch and the value of the principle of vaulting than that which is supplied by the Pantheon. This monument of the taste of Agrippa presents a marked contrast to the oblong Greek temple,

which, though outwardly magnificent with ranges of columns, was not protected by a roof; while the vault of the Pantheon covers a space of one hundred and forty-four feet in diameter, and it rises to as great an altitude from the floor to the central opening which serves for light. Thus a vast audience was accommodated in a comparatively small space, all able to see or to hear in the Roman building; while the Greek temple would be utterly unable to contain such an assembly.

The Roman capital became richer than the Greek, and instead of using the tendril-shaped volute of the Greek style the Romans boldly introduced the heavier volute of the Ionic; thus forming a heavier capital, which was in accordance with the larger building of which it formed a part.

In time changes were introduced in the forms of the shafts and other details of the column, as may be seen in the illustration displaying the Greek and Roman styles. In some specimens the fluting, which always prevailed in the Greek shaft, was omitted in the Roman; while in others, two-thirds of the upper part of the column were fluted, while the lower third was left plain. The Roman entablature was also richer than the Greek, inasmuch as Ionic ornaments were added to the

THE CIRCULAR TEMPLE OF BAALBEK.

Corinthian. Half columns and pilasters are sometimes found in Greek work, but they are very commonly used as external embellishments in Roman structures. The Tuscan order was a modification of the Doric and other forms derived from the Etruscans, the shaft being more slender than the Doric. It rested on a base to which it was united by a fillet, and the forms of the capital were

had a prostyle or portico formed by a single or double row of columns. Half columns were placed in the flank walls corresponding to the columns of the portico, and the walls of the flanks were continued forward so as to include the ends of the steps, as may be seen in the illustration of the temple at Nismes. The manner in which the pillared portico was made to shade the entrance

ARCH OF TRAJAN, BENEVENTO.

reduced in their proportion from the Greek model. The ground-plan of the Roman temple departed from the Etruscan, which admitted three internal cells, and generally conformed to the Greek plan of a single cell or chamber. So also externally the Roman temple was peculiar, inasmuch as columns were not carried round the edifice as in the Greek peripteral buildings. Usually a slight of steps led to the temple on the entrance end, which

and give it prominence may be seen in the illustration of the Pantheon as well as in the view of the temple at Nismes.

Into the details of palaces, baths, triumphal arches, circuses and such buildings, it is not object of this article to enter. Triumphal arches were generally constructed in the same style, may be seen in the illustrations which are given with the text, and the circus and the amphitheatre

## THE AMERICAN DRAMA—ITS SUCCESSES AND FAILURES.

By A. E. LANCASTER.

## THE THIRD PAPER.

WE have seen, in the two preceding articles, that American dramatic literature was very productive during the first half of the present century. Many admirable plays that will live were then written; and such names as Conrad, Bird, Steele, Willis, and others too numerous to mention, will always be remembered with mingled feelings of admiration and gratitude. From the year 1850, however, the native drama seems to have declined; few works were thereafter produced that stand out, like "Jack Cade" for instance, as representative of the period. We have had clever adaptations and some good original comedies and melodramas; but few contemporary authors have made any brilliant additions to the long list of dramas written during the first period. At the same time our later records have not been uninteresting. In the present paper we can only allude to plays that achieved decided success, or that are noteworthy for some special reasons.

One of the first dramas to which our notice is called was entitled "Kate Woodhull," the plot of which was founded upon events of the Revolution. This play was one among many of the same school, although it possessed some merits over several others. It was the work of Charles Edwards Lester, and, on the first occasion of its production, in November, 1848, it ran a week—not an inconsiderable success in those days. About the same time the celebrated actor, Mr. F. S. Chanfrau, made his first appearance in Mr. Grattan's adaptation of a popular sensational novel, "The Mysteries and Miseries of New York," which, thanks to Chanfrau, became a popular success. But this admirable comedian was yet to make his greatest success. On the 15th of February, 1849, Mr. Chanfrau appeared for the first time as Mose in Baker's famous dramatic sketch, "A Glance at New York." This characterization took the town by storm. Mose was a perfect portraiture of a type that every one recognized. Never was an actor welcomed with more unbounded praise than Chanfrau in this piece. With the rôle of the fireman he afterwards became so closely identified

that two more plays, in which this part was centre of attraction, were written for him; were "Mose in California" and "Mose in C

In the same year John Brougham's successful adaptations from Dickens and Thackeray, "Haunted Man" and "Vanity Fair," were produced. We may here pause to speak of men whose names have become indissolubly connected with our dramatic literature, and who as truly Americans as anything save birth make them. We allude to John Brougham and Dion Boucicault; both of whom were born in Ireland, and both of whom have apparently made America their home. If American scientists claim Agassiz, the American drama may claim Brougham and Boucicault.

On the 21st of September, 1849, Boucicault's "Knight of Arva" was first produced in New York. In the month of January of the following year a drama entitled "Spirit of Gold," by H. Rodwell, was brought out and achieved moderate success. A good idea feebly treated to characterize this piece; otherwise, it is notable as being the first American play produced in the second half of the present century.

On the evening of February 25, 1850, a farcical and satirical comedy entitled "Extremes," by The author was a Mr. Sperry, of Baltimore, whose name, we believe, is not connected with any work of this kind. As a comedy, "Extremes" had decided merit, and its success was instantaneous. It ran twenty-one successive nights. On the 4th of May, 1850, Mrs. Farren brought to the Broadway Theatre, New York, John H. Payne's tragedy "Remorse," which never became popular. We must allude in passing, also, to an anonymous drama known as "New York Fire and the Bond Street Heiress," which obtained immense success about this time. On the 1st of June, 1850, a comedy entitled "Upside-Down" by J. Fenimore Cooper, was played for the first time; its merits may be imagined when we remember that it was very quickly forgotten. Not so

cicault's "Love in a Maze," which was warmly favored by the public—not an unusual result with his productions. On May 14, 1850, a new American play, "Fortunes of War," by J. Wallack Lester, was acted successfully at Brougham's Lyceum. Later in the same year Isaac J. Pray's tragedy, "Poetus Cæccina," was produced, and proved in many respects a very meritorious work. We may here allude to Mr. C. P. S. Ware as one of the industrious playwrights of that day.

A work that deserves notice is "Nature's Nobleman," a comedy in five acts, by H. O. Purday, the initial performance of which was successfully given October 7, 1852, and which was very often repeated. But the great event of the season of 1852-53 was the production of "Uncle Tom's Cabin," at Purdy's National Theatre. This version of Mrs. Stowe's celebrated novel was Aiken's, although another version by C. W. Tayleure was then extant. To say that the play was a success would be to give but a faint idea of it. It was acted two hundred successive nights, and afternoon performances were often demanded in addition. The cast comprised Mrs. G. C. Howard as Topsy, and her little daughter Cornelia as Eva. Few dramatic works ever gained such a hold upon popular sympathies, although in artistic merits "Uncle Tom's Cabin" was woefully lacking.

During the season of 1853-54 several successful dramas were introduced for the first time to the public; of these Sterling Coyne's comedy, "The Hope of the Family," was the first to win favor. George H. Boker's carefully written drama, "Leonora di Guzman," was brought out by Julia Dean. Boucicault came forward with three comedies now well known: "The Fox Hunt," "Peg Woffington," and "Love and Money." A new play by Brougham, "The Game of Life," was also produced at this time. Finally, J. E. Durivage's clever comedy, "Our Best Society," founded upon George William Curtis's "Potiphar Papers," attained considerable success.

The following season, 1854-55, was scarcely less prolific. J. H. Wilkins's "Egyptian," Robinson's "Love and Loyalty," and C. W. Tayleure's "Fashion and Famine," founded upon Mrs. Ann S. Stephens's well-known novel, and written expressly for little Cornelia Howard, were all brought out and favorably received. Three other comedies may be added to this list, namely: Durivage's "A Nice Young Man," G. C. Foster's "Now-a-days,"

and Barnett's "Our Set." We must allude particularly to a drama by T. B. de Walden, called "The Upper Ten and Lower Twenty," which achieved great popularity. Boucicault's local satire, "Apollo in New York," and his drama, "Janet Pride," also saw the light at this time. Brougham's comedy, "My Cousin German," and a two-act comedy, "A Gentleman from Ireland," were highly successful, above all the latter.

Four good plays, though by no means perfect ones, ushered in the season of 1855-56. These were Boker's poetical tragedy, "Francesca di Rimini," which has great literary merits; Sterling Coyne's comedy, "The Man of Many Friends;" a comedy by Cornelius Matthews, entitled "False Pretences;" and a clever drama by Charles Gayler, "Taking the Chances." These plays were all moderately successful, and the three last named, especially, showed the touches of experienced playwrights. During this season, also, was produced that ever-popular and ably-constructed burlesque, by John Brougham, "Pocahontas," in which the author himself sustained the leading part.

On March 16, 1857, a tragedy in five acts, by Mrs. Julia Ward Howe, entitled "Leonora," was first performed, and ran nearly two weeks. Like all the writings of this celebrated author, "Leonora" contained much that was beautiful and elevating, and its merits were appreciated by the public. During the same year, an excellent comedy in three acts, "Self," by Mrs. Bateman, was produced. Two new plays by de Walden and E. G. P. Wilkins, called respectively "Wall Street" and "Young New York," were favorably received; and a new domestic drama by George H. Miles, the author of "Mohammed," entitled "Mary's Birthday," achieved some success. Charles Gayler's "Love of a Prince," written for Laura Keene, may be added to the foregoing list.

During the season of 1858-59 a few noticeable plays were produced. Mr. Wallack opened his season in New York with a new comedy by Sterling Coyne, who was rapidly gaining a reputation as an English playwright. This last work by Mr. Coyne was entitled "Nothing Venture, Nothing Win," and was favorably treated by the public and the press. In January Mr. Lester Wallack brought out his own drama, "The Veteran," which has since been occasionally played. We may here allude also to a drama due to the pen of an Eng-

lish writer, Tom Taylor, because of its identification with the American stage; this was "Our American Cousin," which was first performed at Wallack's Theatre, October 18, 1859. It proved an immense success, establishing the reputation of Joseph Jefferson, and making the fortune of Southern, who found in the rôle of Lord Dundreary a part eminently suited to his abilities.

The season of 1859-60 was more productive than the preceding one. A new comedy by Sterling Coyne, "Everybody's Friend," was successfully brought out. On the 29th of March, 1860, Boucicault's "Colleen Bawn" was represented for the first time, and proved to be one of the most attractive of the works by that prolific dramatist. It ran triumphantly until the end of the season. Mr. Jefferson, the actor, then took control of Wallack's for the summer season, and produced two new plays, "Our Japanese Embassy," and "Tycoon; or, The Young American in Japan."

The Winter Garden Theatre, New York, opened in September, 1859, with Boucicault's "Dora" ("Cricket on the Hearth"), which filled the theatre for over a month. Later on, the "Octoroon," an admirably constructed drama, was presented. In February the dramatic version of "Oliver Twist" was first performed, and in the following month Miss Bateman's adaptation of "Evangeline" was successfully produced. A few more plays of small importance were brought out during the season, with the titles of which we will not burden our pages.

In a measure, the season of 1860-61 was a remarkable one. Wallack's Theatre opened with a new comedy by John Brougham entitled "Playing with Fire," which was one of the best things the versatile dramatist had written. It had a brilliant success, and it was often repeated. A good subject, bright dialogue, and able construction were shown in the elements of this drama. In the month of February Lester Wallack's "Central Park" was performed, a play with which most of the older theatre-goers are familiar. Later on, a third American drama, "Henriette," by E. G. P. Wilkins, was very favorably welcomed by the public. The third season witnessed the first representation, at Niblo's Garden, of Watts Phillip's powerful drama, "The Dead Heart," a play full of vigor and passion, and treated in a careful and delicate manner.

The season of 1861-62 opened at Wallack's

Theatre with a drama to which no author was attached. This was "The Magic Marriage," a play at once ably constructed and in its execution. It was received so favorably, that the author made himself known in the person of Mr. Gayler. However, although we do not wish to lessen the credit due to Mr. Gayler, the chief merit of the piece was questioned, and the truth of the plot was speedily discovered. The treatment of the subject was effective, and the "Magic Marriage" Mr. Gayler can lay claim to having written an interesting drama.

On Monday, April 7, 1862, "Sibyl," an Irishman's tragedy, by John Savage, was produced at the Winter Garden, New York. This play was on the celebrated Beauchamp tragedy ("The Luck of the Irish"), and, besides its real merits as a dramatic written work, certain peculiar circumstances gave it an additional interest. It was well received and was warmly welcomed by the public, who recognized in Mr. Savage something more than an ordinary place talents. In the month of February, 1862, Laura Keane produced at her own theatre an adaptation of Banim's well-known Irish play, "Macarthy," in which Mr. and Mrs. Deane made their first appearance. The drama showed considerable constructive ability, and it was a popular success. In the following June, at the same theatre, "Fanchon," a drama adapted from the German by A. Waldemar was presented for the first time, and, it is almost useless to say, it made a very powerful impression upon the public. During this season, also, two new plays by Mr. Gayler, "Bull Run" and "Hatteras Inlet," were performed at the old Bowery, New York. None of these had any permanent value, and they have been well-nigh forgotten.

The first important theatrical event of the season of 1862-63 was the production at Laura Keane's Theatre of a new drama written expressly for her by Laura Keane. It was entitled "Jesse McLane," and proved a lucrative investment to the theatre. On Monday, January 19, Miss Kate Bateman made her engagement in New York, where her great success in the drama "Leah," adapted from the German by Augustin Daly, was first performed at Niblo's Garden. Miss Bateman's acting in this play was exceedingly fine, and this singular performance raised her to the front rank of our tragediennes.

The season of 1863-64 was commenced

lack's by the production of "Rosedale," a drama by Lester Wallack, the incidents of which were taken from various sources and cleverly worked into a good acting play. The success of "Rosedale" may be inferred from the fact that it ran one hundred and twenty-five consecutive nights. Even at the present day it is still popular, and in all probability it will long remain a favorite with the New York public.

The next American play that attracted much attention was a comedy entitled "Pure Gold," the author of which was Dr. Westland Marston, who wrote several good dramas. The plot of "Pure Gold" was somewhat conventional; but the situations, though in a manner forced, were powerful. The dialogue was clear and bright, and, in short, the advantages outweighed the faults. This play was a decided success, and it paved the way for better efforts.

On Monday, August 22, Olive Logan made her appearance at Wallack's in her own play, "Evening." The plot of the latter was sensational and complicated, but the treatment showed tact and literary ability.

The season of 1864-65 was opened by a new play by Boucicault, "How She Loves Him." This comedy was ably constructed and abounded with wit; its success was assured from the first night.

We may stop here to call attention to a clever playwright who was rising into notice about this time, namely, Mr. Frederick G. Maeder. This gentleman wrote several plays, most of them of a sensational character; but he occasionally gave proof of the possession of excellent literary ability. We shall have occasion to speak of him further on.

Boucicault's admirable Irish drama, "Arra-na-Pogue," was produced at Niblo's Garden in July, 1865, and ran very successfully. It was announced as by Dion Boucicault and E. H. House. The connection of the latter's name was only to secure an American copyright for the play.

During the following summer season at Wallack's, another Irish drama, the joint production of T. B. McDonough and F. G. Maeder, entitled "Shamus O'Brien," was successfully performed. In August, 1865, John Brougham's stirring romantic drama, "O'Donnell's Mission," first saw the light. On Monday, October 9, Mr. F. S. Chanfrau produced the celebrated play, "Sam," by T. B. de Walden, in which Mr. Chanfrau and

Olive Logan sustained the leading parts. The success of "Sam" was immediate.

In the beginning of the season of 1866-67, Mr. Wallack brought out "The Favorite of Fortune," written for Mr. Sothern by Westland Marston. This play was beautifully written, and, although its action was somewhat quiet, the public received it favorably.

One original drama, "Hunted Down," and three adaptations were brought out during the season. These adaptations were Boucicault's "Long Strike," taken from a novel by Mrs. Gaskell; Augustin Daly's "Griffith Gaunt," founded upon Charles Reade's well-known work; and Olive Logan's "Armada," the plot of which was borrowed from Wilkie Collins.

The only original plays presented during the season of 1867-68 were, "Maud's Peril," by Watts Phillips, a very effective play; "A Flash of Lightning," by Augustin Daly, a commonplace and improbable melodrama; F. G. Maeder's "Black Sheep," a well-written drama founded upon a novel by Edmund Yates; and "Under the Gaslight," which ranks with "A Flash of Lightning."

The season of 1869-70 brings us down to a period at which most theatrical records end. The first play produced at Wallack's this season was a comedy-drama, by Captain Leicester Vernon, entitled "The Lancers." This comedy was well written, smooth, and sparkling; it was very favorably received by both critics and public. In July, of the same year, Charles Gayler's combination of whimsicalities, "Fritz," served to introduce Mr. Emmet as a good character actor. John Brougham's successful drama, "The Red Light" also dates from this period. In February, 1870, Mr. T. C. De Leon's burlesque of "Hamlet" was brought out, Mr. G. L. Fox playing the title rôle, and proved highly successful; as a pure burlesque, Mr. De Leon's "Hamlet" was an excellent piece of work; full of quiet humor and satire, it never offended delicate taste. A few more like it could do no harm.

On Wednesday, January 12, 1870, a new play, by Olive Logan, was presented at the Fifth Avenue Theatre; this was "Surf," a five-act comedy, dealing with farcical incidents, into which was woven a thread of melodrama. It had been previously acted in Philadelphia. [We are compelled most reluctantly to close this valuable paper here, and defer the rest until our next number.—EDITOR.]

## COTTON SPINNING.

BY EMMA L. PLIMPTON.

IN passing through certain portions of our country there is nothing that forces itself more conspicuously upon the attention of the traveller than the number of mills and factories scattered along the route. They crown every waterfall, and nestle along the banks of so many streams that few, indeed, are reminded from how small a beginning all this industry sprung, or of the days when every thread used in the manufacture of cotton, worsted, and flax throughout the world, was spun singly by the fingers of the spinners, with only that classical instrument, the spinning-wheel, to aid them.

It is little more than a century ago that the possibility of one person working more than a single spindle at a time first entered into the mind of man; and this idea was suggested by a mere accident. How many of our most useful inventions were born of happy chance? As one has already said, "chance happens to all, but to turn chance into account is the gift of only a few."

James Hargreave, an illiterate artisan in Lancashire, was one of that chosen number. At this time, spinning was the employment of men as well as of women. To Hargreave the slow process of making welt on the thread-wheel was most irksome, and he was continually trying to devise some quicker and easier method of performing his labors.

Having little mechanical genius, he at first failed to make any improvements. But one day, a party of young people having assembled at his house for a frolic, the wheel upon which one of the family was at work was overturned by accident, and the spindle thrown from a horizontal to an upright position. He noticed, as a curious fact, that notwithstanding the misplacement, the spindle and wheel continued to move, and it occurred to him that if several spindles were placed upright and side by side, a number of threads could be spun at the same time.

With this idea in his head, Hargreave constructed a frame to hold eight spindles, which he called a jenny; little thinking that the rude machine, made with the aid of only a common pocket-knife, was yet to revolutionize the whole art of cotton spinning. With what honest pride he must have shown his simple contrivance to his fellow-work-

men! but only to be overwhelmed with abuse and execrations; for it was supposed that such an economizer of labor would throw thousands out of employment. Discouraged by this outbreak from bringing it again before the public, Hargreave used it secretly in his own business, his wife and children acting as operatives.

The doors of the little cottage in Lancashire were now closed, and the walls resounded with the whirl of many wheels and the flutter of great achievements. As these became manifest, in the fast-growing welt, the difficulty of keeping the secret confined to his female auxiliaries increased.

But this was not the end of the invention. The opposition to it only impressed Hargreave more with its value. He may have remembered, too, that by lack of nerve and perseverance he had combat the prejudices of the workmen, a greater scheme than his, conceived by the gentle John Wyatt, of Birmingham, was lost to the world; though forced to flee from Lancashire by an angry crowd, he perfected the jenny in Nottingham where he again suffered great persecutions.

By the aid of Hargreave's invention, however, twenty and even thirty threads could be spun once; but this was effected by muscular force until the year 1767, when a master spirit revived and improved the self-acting machine, which Wyatt thirty years earlier, had despaired of introducing. This was the work of Richard Arkwright, a barber by trade, and of so mean an exterior that when applied for pecuniary assistance in the construction of his engine for spinning cotton, help was refused him on account of his unpromising appearance. His nature had been prodigal of gifts to him notwithstanding, and destined him for a great work, which he labored assiduously to accomplish, consuming so many hours from his legitimate calling that his wife, fearing that his mechanical schemes would starve the family, broke up some of his experimental models of machinery and bade him "go to shaving beards again."

It is not strange that this mill attracted great attention. It was not absolutely the first in England, for a few silk-mills had been erected there in imitation of the silk factories of Italy.

cotton spinning, however, had been principally accomplished in the cottages of the operatives; but Arkwright's complicated machinery necessitated a separate building wherein it could be inclosed. Not that the noble Arkwright accomplished this all at once. It required prodigious industry to perfect the system which he introduced, laboring from five o'clock in the morning until nine at night, for many years. His great service to the industrial interests of his country raised him, at last, from obscurity to high rank; and we read, that, finding, when over fifty years old, that the defects of his early education brought him many mortifications, he determined upon overcoming them; but not willing to spare the time from his labors for these elementary branches, he encroached upon his sleep, spending one hour every night in learning English grammar, and another, in improving his writing and spelling.

Arkwright's invention received a fresh value by being combined with the principles of the jenny. Crompton effected this only five years later. He called his machine a "mule."

While all these improvements were in progress in England, our own progenitors were too busy in clearing our forests and subduing their savage foes to engage in manufacture. During the early days of the settlements, they were perfectly content to receive their supplies from abroad. It was not until it became only too evident that the mother country was abusing our dependence, that the colonists determined to manufacture their own necessities; but to lose the large revenue which trade with the States brought to England, was not the policy of her government. It finally tied the hands of American manufacturers by passing a law prohibiting the erection or continuance of any mill or engine for splitting or rolling iron, or any plate or large to work with a tilting-hammer, or any furnace for making steel in the Colonies, under a penalty of two hundred pounds. This was a part of the grievance which finally wrought out our independence. When the colonists talked of war, it was to the great merriment of the English Parliament. "The Americans cannot make even a razor to shave themselves," one said there, and with truth.

During the struggle, however, manufacturers increased, but our machinery was of the most elementary character. Rumors of the great progress in mechanical inventions on the other side of the

Atlantic, made the despair of our manufacturers; for Great Britain, according to her selfish policy, had prohibited the exportation of machinery, or the departure of a mechanic for America.

Such, indeed, were the discouragements attending home manufacture, and so rapid its decline, that the Legislature of Massachusetts, alive to the fact that the wealth of the State was dependent upon it, granted both money and land to the little cotton-mill in Beverly, and even with this assistance it was only sustained by the patriotic self-sacrifice of its proprietors. Though the Beverly mill was said to be the first in the country that used the jenny, we find records of mills in Philadelphia, New York and Providence, Rhode Island, before 1790; but all of these were in the same desponding condition.

Yet, unknown to these disheartened proprietors, help was near at hand, and this is how it came about. Several years earlier, a lad at work in one of Arkwright's mills in England picked up an old Philadelphia newspaper. It had travelled over leagues and leagues of blue water, and was laden with the enterprises and struggles of a new nation. Samuel Slater glanced with a keen eye over this waif from a new republic, and noted, with surprise, an offer made by a society in Philadelphia for a machine to make cotton rollers; for it showed the primitive state of machinery in this country and the anxiety felt by Americans to promote manufactures.

The tone of the paper, too, was congenial to his own enterprising spirit, and the thought came to him that the United States would be a good field for his own ambition. He said nothing of his plan, however, but applied himself to get a general knowledge of the business; then, one bright autumnal day, he bade a cheery good-by to his friends, with the ostensible purpose of running down to London. He took no papers with him except his indenture, for fear of being stopped by the officials, who were ordered to search every passenger to America. Young Slater's robust appearance justified the officers in supposing him a farmer's son. So one more ardent, ambitious soul landed on our soil; but even the newspaper had not prepared him for the crudeness of our machinery.

NOTE.—We are, for want of space, obliged to defer the completion of this interesting subject until our next issue.—EDITOR.

## SOME SAVAGE VIRTUES.

BY H. M. ROBINSON.<sup>1</sup>

TOWARD mid-afternoon of an intensely cold day in the month of February, of a year not long passed, the writer was sitting on the end of a fallen log in the dense wood bordering the second or lower bank of the Red River of the North. The temperature was somewhere in the forties below zero. Under the force of the fierce blasts, a little eddy of loose snow rolled into the timber from the plains beyond; at first a mere puff, not larger than one's hand. Another followed; miniature coils of snow circled about over the smooth surface, and sank back invisibly to the level again. Drifts of larger proportions rolled over the expanse, until the atmosphere became filled with crystal, scintillating, minute, almost imperceptible particles of snow, drifting on wings of air, impalpable and fleeting. The outlines of the trees were lost, and the range of vision limited to a few yards. Nearly beneath me was a fire, which, originally built upon the surface of the snow, had sunk under the influence of its own heat to the level of the earth, some four feet below. A few yards on one side stood a shaggy Indian pony, shivering under two buffalo-ropes; on the other, a half-dismantled sledge, or jumper, with its drift-covered load of blankets, camp equipage, and provisions. A short distance away a huge snow-drift and a projecting sledge-runner marked the presence, or rather absence, of a companion who had disappeared into the wrack and tempest in quest of a second unkempt pony, which, an hour before, had succumbed under the fatigues of a protracted and terrible journey. The situation, upon reverting to it after this lapse of years, seems possessed of certain dramatic features; at the immediate time, however, it suggested only a favorable opportunity of preparing dinner against the return of my attendant; hence my attitude and altitude upon the splintered end of that prostrate log.

Armed with a long-handled skillet, made still longer by the insertion of a stick into the handle, and muffled as to body and hands in many wraps, I sat upon the log and carried on my culinary operations at a distance of four feet, in compara-

tive serenity of soul. No contiguity of bough threatened to scorch the cuticle, nor character of the *plat* necessitate those frequent frantic dartings fireward to rescue some fry or blackened roast, which so often obtain when man usurps the place of deft-handed woman. The *menu* was pork—an aromatic comestible sizzled, and crisped, and curled into delicious morsels of delicious hue, and sent an appetizing abroad upon the wings of the storm.

Lost to the howling wind, the wrack of the sense of isolation, to everything, in fact, save the suggestive odors of the nearly-done pork in the skillet in hand, until an intuitive but definite sense of companionship suddenly possessed me. I felt that I was no longer alone; I could make a bodily presence beside me; yet I had heard no sound of footsteps, had seen no shadow to relieve the gloom. Nevertheless, I was as certain of human companionship as if its visible representative stood before me. For a moment the paralyzing fear forbade my looking up. When I did look up, I found standing beside me, so near that I could place my hand upon him from where I sat, an Indian! He was a gigantic fellow, of more than six feet high, and the bones of his huge frame stood out conspicuously at the joints and the muscles showed distinctly in his thinness and meagreness. His aspect was positively forbidding. His large nose had been driven sideways from his face; over one eyeless orbit was a black patch; while in his gums two long canines alone remained. The man was in what seemed to be a hopeless state of destitution. A few pieces of blanket were all the protection he had against the intense cold; he had no gun, knife, or other appliances required of a hunter, except a small hatchet and a pair of moccasins.

All these things I took in at one quick glance. My own situation also flashed before me with conceivable quickness. The man was a Plover of the Ojibway tribe, whose tender mercies to lone strangers are cruel. I was alone, unaided, and far from aid. A murder in those terrible solitudes would be easy of concealment. T

<sup>1</sup> Late Vice Consul at Winnipeg, British North America.

was armed with a hatchet, I with a skillet. So I dropped that utensil into the fire, with one bound reached the nearest sledge, and, grasping an axe, turned about and assumed the defensive. To my utter astonishment, I found the Indian down in the fire-hole, rescuing the pork from the blaze. This done, he placed the skillet carefully on the snow, clambered to the surface again, then usurped my seat upon the log and broke into a hearty laugh. It was no simulated laugh, either, but a rollicking, thoroughly amused, good-natured laugh, coming from the depths of his soul. The uplifted axe gradually dropped, as I gazed upon this gigantic son of the forest and plain, unbending at the sight of my fright and discomfiture. A sense of the utter futility of all attempts at resistance gradually stole over me, as I considered the opportunity presented him for the perpetration of crime in my entire unconsciousness of his presence for an indefinite period. At last the ludicrous picture of my flying leap, the hastily dropped skillet, the quick awakening from reverie to horror, and, above all, the sight of the savage himself, as he gazed amusedly at me for a moment, then relapsed into uncontrollable paroxysms of laughter which shook his huge frame, proved too much for my philosophy; and I joined in the merriment until the laughter rang out above the voice of the storm. Civilization and savagery united in common hilarity, and demonstrated their relationship in an equal appreciation of the ridiculous. It revealed at least one link in the chain of unacknowledged brotherhood.

I know there are many people who regard the Indian as an austere savage who never laughs save at the agonies of his bleeding victims, and who, like Mrs. Merdle, has "no begad nonsense" about him; and I have related this incident to show that one red man, at least, was as ready to place a bent pin upon the seat of his fellow as the most civilized among us. Indeed, a considerable experience leads me to believe that the Indian is possessed of a vast fund of mirth and humor, although in later life, perhaps, tempered somewhat by the vicissitudes of his existence, and the stamp which his nature receives from the regions in which he dwells. Young savage life is full of a certain wild hilarity, of practical jokes, and of the humor pertinent to its age; and it may be seriously doubted whether the youth of our own race entertain more kindly feelings towards each other, during the sports and games of

boyhood, than are developed by the errant children of the prairie and stream. I have seen nothing more tender among my own kindred than the treatment of helpless little ones in an Indian camp by their elders in years. True, there are exceptions to all the savage virtues which it is the purpose of this paper to note; but the exceptions may be fairly regarded as no more frequent than would be found among the uneducated of our own race, and only prove the general correctness of the rule.

It has been charged against the Indian in his domestic relations that he is a brutal husband and a hard taskmaster, exacting an amount of labor at the hands of the females of his family from which he shrinks himself. Indeed, it is quite the fashion to picture the red man as sitting at an abundant meal and flinging, from time to time, a refuse bone over his shoulder to the wife of his bosom; and as marching at the head of his following of women, encumbered only with a gun, and not always even that, while they toil painfully along under the weight of all the household goods. To any one, however, who has witnessed the arrival of a party of starving Indians at the buffalo-grounds, during the winter season, the reverse of the picture presents itself. Day by day, family after family come straggling in—a spectral cavalcade; the men gaunt and wan, marching before skeleton dogs, almost literally skin and bone, with hide drawn tightly and unpadded over "crate and basket, ribs and spine;" dragging painfully along sledges as attenuated and empty of provisions as themselves. The women and children bring up the rear, who, to the credit of the men, are in far better case; indeed, tolerably plump, and contrasting strongly with the fleshless forms of the other sex. Although the Indian squaws and children are kept in subjection, and the work falls principally upon them, it is erroneous to suppose that they are ill-treated, or that the women labor harder or endure greater hardships than the men. The Indian is constantly engaged in hunting, to supply his family with food; and when that is scarce, he will set out without any provision himself, and often travel from morning till night for days before he finds the game he seeks; then, loaded with meat, he toils home again, and whilst the plenty lasts, considers himself entitled to complete rest after his exertions. Much in the same manner does the merchant or hard-worked mechanic repair to his home after the day's toil, assume his gown and slippers and settle down to

absolute rest, while expecting of his wife the continuance of her household labors.

The red man, as a rule, manages his family admirably. A child is seldom heard to cry, and matrimonial squabbles seem unknown. He is an affectionate husband and father, and his wife and children obey him at a word, evidently looking up to him as a superior being, to be loved with respect. In return, the red man's first thought is for his little one. In the barter of his furs, the first purchase is blanketing for tiny backs, a capote for some toddling papoose, a bright handkerchief for little Thisbe; then come the powder and ball, the flints and fishing-tackle for his own use; and lastly the wife gets her share, not because least in estimation, but on account of the importance of the first two; the children's outfit being a matter of common pride, the ammunition a matter of common necessity to the existence of all. That the love of man and wife is deep and lasting, is capable of ample proof, and instances would only serve unduly to extend this paper. In one of the graves in a certain burying-ground, near one of the forts in the north country, is fixed a pole, from which are suspended several buttons, a tobacco-bag of bark and beads, a piece of tobacco, and a human hand dried and stuffed. This is the grave of an Indian's wife. She was young, handsome, and apparently healthy, but a concealed disease affected her heart, and one day she fell down in a fit and died. Her husband was absent at the time, but on returning his grief was terrible. He refused all sustenance, lingered about the grave of his wife, and was finally found lying across its head with his arms extended over it, stone dead. Another Indian, meeting with a similar loss, went away into the mountains and lived there for two years without seeing a human being. A Blackfeet chief, in speaking to a missionary, said: "If you wish to do anything with my people, you must no longer order them to put away their wives. I have eight, all of whom I love, and who all have children by me; which shall I keep, and which put away? Tell those who have only one wife not to take more, but do not talk about putting away wives already married." The Maiden's Rock, on Lake Pepine, bears similar testimony. The hand of a beautiful girl was sought by two lovers; the one a brave warrior, the other a quiet hunter. The latter she loved, the former her friends would constrain her to marry. The intensity of her affection chose death rather than

the life of the brave's wife. And she cast down from this rock into the blue waters, at the warmth of her love with her life.

Nor is the Indian indisposed to toil, or to hold. His aversion to agricultural and mechanical labor is almost invariably attributed to idleness. Those, however, who have lived much with them know this to be a mistaken idea, derived from a limited observation of that class of aborigines frequenting the frontier, who, in adopting the vices of the white man, have been degraded into loafers. But the Indian of the plain is not a lazy man. No man labors harder than he is accustomed to do in the chase, in carrying to the camps, or in trapping or fishing. But the necessities of nomadic life are such that when these wants are satisfied, the Indian rests from arduous toil. Sufficient for the day and the night's labor, for, has he not the same forests, the same streams, the same prairies from which to get his sustenance for the morrow? Continual accumulation would fill his lodge with robes and pelts, dried meat and pemmican; but, if he does not merely accumulate provision for distribution to others. We blame the red man for not laying up supplies against the inevitable rainy day of winter. He is the only perfect socialist or communist of the world. Everything is held in common by the tribe: the prairies, the forest, the stream, the bison, and the deer. The camp is starved when an Indian kills a buffalo. Instead of claiming the carcass as his own, the coveted food, to the rest of the tribe is shared by all. A war-party takes a ride by a raid into an enemy's country; and the captives of the tribe are free to help themselves to the best of the plunder. The largest *tepees*, the brightest blankets, the best of the captors touch an article of the plunder. But a single fish, a thin badger, a scrap of pemmican, the lodge, and a stranger comes and asks for it. He is given his share first, is first served, and is first attended. Nor is this simply tribal custom, but often true generosity. A missionary is met on a long winter's journey. As guides and interpreters he takes three Indians, as yet outside of religious influence. Their provisions are exhausted, and for two full days they have nothing. At last a single fish is caught by the Indians. Instead of eating it at once, the intense hunger would dictate, they bring it to the missionary and insist upon his eating it.

they touch it until he has divided it. If a child starve in an Indian camp, one may be certain that want reigns in every lodge and hunger dwells in every stomach. Why should he lay up a store of robes and provision for others to consume? His is a gregarious and communistic state, merging his individuality into that of his tribe.

Suppose, however, that the red man advances somewhat into civilization, thus weakening the communistic bonds of his tribe, and supplanting them by a disposition to assume a certain degree of individuality, and a desire to accumulate property and found a home for himself. And just here I beg leave to quote a pertinent illustration from an article upon a kindred subject in a contemporaneous review.<sup>1</sup> The Indian "has seen the comforts of civilized life and earnestly desires them. By years of toil and self-denial he has built himself a comfortable cabin, and gathered into it a crop sufficient to feed himself and family until he could raise another. It is winter, and his neighbors, who, while he was working hard, were lounging about, abusing him for violating the religion and customs of his people, ridiculing him, and calling him a woman and a slave, now have nothing to eat. They come to him and ask him if he has. He answers in the affirmative, and they tell him they are hungry. If he feeds them, they will come again till he has nothing left. If he refuses, they say he is a bad man, and deserves to suffer for violating the customs of his people, and kill his team. If that does not bring him to his senses, so as to give them food, they destroy his home and its contents, or they say he is incorrigible, and kill him."

Such is the result of the red man's attempt to accumulate property by continuous labor in his natural state, as brought to my own observation in a number of instances; although the victim was seldom suffered to attain so high a degree of prosperity before being despoiled as here described. When he is taken under the protection of the Government, the law refuses to recognize the robbery of one Indian by another as a crime within its jurisdiction, and so affords no security for the safety of his property or the inviolability of his life. And yet, with that dull brutality which denies its enemy the possession of one atom of generous sensibility, we stigmatize the Indian as a lazy vagabond because he will not sow that others

may reap. We do this, too, recognizing the fact that a white man will not labor industriously, if at all, save when expecting a reward for his labor. Nevertheless, we insist upon the red man's doing so, and call him lazy and worthless when he does not. In effect, the possession of the same noble qualities of independence which we affect to reverence in other people, makes us kill the Indian.

But there is another obstacle to the performance of agricultural and mechanical labor by the Indian, of a more serious nature. Not only does he know that he has no reward, and labors only for others if he accumulates, and dares not at the risk not only of his standing in his tribe but of life itself, refuse a division of his property, but his conscience, his religion, forbids the forms of labor in which the white man engages. He sincerely regards it as wicked and dangerous. And this is fully attested by the fact that as soon as, through conviction, he forsakes his religion for that of the white man, he is ready to take up the toil of the white man and adopt his habits. The red man believes that his only avocation is to hunt and to fight; and, while finding no fault with the white man for laboring as he does, yet for himself he considers such labor not only degrading but certain to be followed by punishment. He believes that, were he to do so, he would die at the hands of his incensed gods. This feeling is real, and any scheme for his civilization which ignores its existence will assuredly fail of success. The same man who will undergo all manner of hardship and toil in the chase, cannot be induced to perform any manual labor of a different and lighter character. To this, however, the writer before quoted recognizes some exceptions: "For though the red men are more generally religious than white men, there are infidels among them as among ourselves; and such might be hired to use a hoe, or an axe, when and where there was no probability of being seen by any of their own people. I will mention a single case in illustration. The late Major J. R. Brown, who, as United States Agent, first succeeded in inducing heathen Sioux men to engage in cultivating the soil, and began this by hiring White Dog, a well-known brave, and brother-in-law to the celebrated chief Wabashaw, still living, to have his hair trimmed, and dress as a white man, himself acting as barber, and subsequently, as United States Marshal, adjusted the halter on his neck when White Dog was hung at Mankato, Minnesota, for partici-

<sup>1</sup> Dr. J. P. Williamson, in the *Princeton Review*.

pating in the massacres of 1862, often said that this Indian evinced far more terror when his hair was being cut than when the halter was being adjusted on his neck. I was present at the execution of him and the thirty-seven others executed at the same time, and conversed with him, after he knew that his last day had come and the time of his death was very near, and I never doubted the truth of Major Brown's report; and I think it was not doubted by any who were present at the time. White Dog constantly, and I, after considering all the evidence brought against him, suppose truly, affirmed his innocence of the crime with which he was charged, and feeling innocent, death was less terrible to him than had been the idea of offending his gods by becoming an agriculturist."

But in order to fully understand the circumscribed light by which we measure the virtues of of the red man, perhaps, after all, the best possible illustration is the reverse of the picture—the light by which the red man measures us. He has his own standard by which he determines truth and falsehood, misery and happiness, and all the accompaniments of life, and it is difficult to make him look at the white man from any other point of

view but his own. From this standpoint everything is Indian. The different peoples of the earth are so many tribes inhabiting various parts of the world, whose land is bad, and who are not possessed of buffalo and beaver. For these last articles (provisions and furs) the whites send merchandise, missions, etc., to the red man. "Ah," they say, "if it were not for our buffalo, where would you be? You would starve, your bones would whiten the prairies." With the Indian seeing is believing, and his world is the visible one in which his wild life is cast. To the white man, the Indian has no dislike; on the contrary, he is pretty certain to receive him with kindness and friendship, provided always that the newcomer will adopt the native system, join the hunting camp, and live on the plains. This is the Indian's view of the white man; is the white man's view of the Indian one whit more generous or liberal? Do we acknowledge that he is a man, and allow him all those rights which at the origin of our nation we declared belong to all men, and make him, before the law, equal to an immigrant from Asia, Africa, or Europe? If we do, why is it that in so many of our laws for the security of person and property occur the words, "except Indians not taxed?"

## JOHN ROSE.<sup>1</sup>

BY WILLIAM L. STONE.

It was during that gloomy winter at Valley Forge that a Russian gentleman of prepossessing appearance, pleasing in manners, and apparently highly gifted, appeared in the cantonments of the American army, vainly soliciting a Continental commission. The general opinion was that he

<sup>1</sup> Garden, in his "Anecdotes of the American Revolution," alludes briefly to a Russian by the name of John Rose who served on the side of the Colonies in their struggle for independence. The fact, however, that this person was the only Russian, as far as is known, who was in our "Seven Years' War," seems to justify a more extended notice of him. Learning that there were manuscripts still in existence relating to his career in America, I wrote to Dr. William A. Irvine, of Irvine, Pennsylvania, who, with great kindness, at once placed at my disposal such family papers as related to the subject, including also the entire manuscript correspondence of his grandfather, General Irvine, with Washington and Rose. It is from these original and authentic sources that the following narrative is derived.

was as certainly a man of rank as he was acknowledged to be of high attainments and finished education, but on this point he always maintained the most profound silence. His exemplary conduct and pleasing carriage, however, soon won the general esteem of the army, and obtained for him the position of surgeon's mate in the hospital at Yellow Springs. It was at this period that General William Irvine, who had been recently exchanged having been taken prisoner in Arnold's expedition to Quebec, rejoined the Pennsylvania line in camp. The many noble personal qualities Rose immediately attracted his attention, though having himself served in the British navy as a surgeon before the war, he very soon discovered that the young Russian possessed but a very limited knowledge of the medical art. Believing, therefore, that his bravery and intelligence could be made more available to the Colonies in another

position, he procured his transfer the same year into the staff of his brigade, and afterward obtained for him a lieutenantancy in the Pennsylvania line. A feeling of jealousy, however, soon arose toward him on the part of some of the American officers, which, though slight, was sufficient to arouse his extreme sense of honor, and he therefore left the regiment, in 1780, and volunteered as a surgeon in the navy of the United States, only to be taken prisoner and carried to New York the same year. From this point he addressed to his old patron a letter, which is here given entire, both as corroborative evidence of tradition and as showing the wonderful mastery he had already acquired over the English language. The punctuation and spelling of the original letter, which is written in a beautiful flowing hand, are strictly preserved:

"NEW YORK NOV. 6<sup>th</sup> 1780

SIR:—Since my last letter to you from Philadelphia, the scene is wonderfully changed. My greatest expectations are annihilated, and I am inclosed by the unpenetrable walls of the Prevost. If I do but continue in health, I shall merrily dance through the various scenes of this tragic comedie, in hopes to accomplish my latest engagements, which shall always remain sacred on my side. I am told a general exchange is to take place immediately; but should this not be the case, the thoughts of an approaching winter, being destitute of every necessary to render life tolerable, make me wish for a change in my present situation. Assisted by your influence in Philadelphia, as I was taken as surgeon in the ship 'Revenge,' I make no doubt to see my expectations shortly realized.

I am your most obedient, humble servant,

JOHN ROSE."

That his "expectations" were realized is evident from the fact that upon being exchanged the following year General Irvine was so well pleased with the man as to receive him into his family, and appoint him one of his aids with the rank of major. In this latter capacity he served during the remainder of the Revolutionary War, retaining the last the affection of his General and brother officers.

The story of this young Russian officer, upon becoming acquainted with General Irvine, was not, sympathizing with the Colonists in their struggles with the mother country, he had, against the urgent entreaties of his friends, left his native

province of Livonia, made his way to England and thence to Baltimore, where he had arrived destitute of either friends or money. Disappointed in obtaining a commission in the Continental army, as he had been led to expect, he had taken a brief course of surgery under Dr. Wisendorf, a German physician in that city, whose language he spoke, and had finally succeeded in obtaining the situation of surgeon's mate as above mentioned. In the military and personal family of General Irvine he was a great favorite, and it is handed down in the traditions of Irvine's family that he was a gentleman of polished manners, who made himself exceedingly agreeable to the household, in strong contrast with many of our worthy but uncultivated officers.

The laurels of Major Rose, however, were not confined to the carpet. He was a very efficient aid to General Irvine during the remainder of the war, and was of particular service while the latter commanded the western department at Pittsburg; a command rendered the more embarrassing on account of the disputes arising out of the conflicting claims of Pennsylvania and Virginia. Rose made himself very popular with the country people, and at their request he was sent by Irvine as an aid to Colonel Crawford on the ill-starred expedition to the Sandusky Plains in 1782. "Crawford pressed me for some officers," writes Irvine to Washington at this time, "and I have sent with him Lieutenant Rose, my aid-de camp, a very vigilant, active, brave young gentleman, well acquainted with service, and a surgeon. These two are all I could venture to spare." "Mr. Rose, your aid-de-camp," also writes Lieutenant James Marshall to Irvine, "was very hearty when I left him at Mingo Bottom. His services on this occasion have endeared you much to the people of this country, and given great satisfaction to the men on the expedition."

Indeed, the presence of Rose at Mingo Bottom, on his way to Sandusky, gave much satisfaction to such of the volunteers as had previously made his acquaintance at Fort Pitt (Pittsburg), all being captivated both by his fine appearance and by his urbanity and warm-heartedness. In a letter from him to Irvine from this place, he says, "My presence caused, seemingly, uneasiness. It was surmised I had been sent to take command. An open declaration of mine at a meeting of the officers that I did not intend to take upon myself any command of any kind whatever, but to act as

an aid-de-camp to the commanding officer, seemed to satisfy every one, and all goes on charmingly. I must beg the favor of you," said Rose, in conclusion, "to receive my half boots from Patrick Leonard, and one pair of shoes, as I am already almost barefooted."

In the battle of Sandusky itself, also, Rose did brave and efficient service. As the opposing forces drew near to each other his keen, dark eyes flashed with excitement, and his demeanor was calm, cool and confident. As he scoured along on his blooded mare from point to point, carrying orders to his commander, his intrepidity and fine martial appearance attracted all eyes and won all hearts. When the foe was seen directly in front taking possession of a grove on the prairie, a quick, forward movement, led by Rose, soon drove the Indians out into the "open," and the battle raged with alternate success until night put an end to the conflict.

It is not our design to enter into the details of the unfortunate engagement of the next day, in which Colonel Crawford was captured only to suffer a horrible death by torture, and the Americans sustained a disastrous defeat. As the latter broke Colonel Williamson assumed the command, and, aided by Major Rose, covered the retreat and saved it from becoming an utter rout. "I must acknowledge myself," writes Colonel Williamson to General Irvine, on this occasion, "ever obliged to yourself for your favors on this expedition. Major Rose will give you a particular account of our retreat." General Irvine, also, bears testimony to his aid's truthfulness and integrity. "The inclosed letters," he writes to Washington, in his official report, "one from Colonel Williamson, second in command, and the other from Major Rose, my aid-de-camp, contain all the particulars of this transaction which have as yet come to hand." But the major himself did not return from this expedition without some hair-breadth escapes. Dr. William A. Irvine, a grandson of the General, speaking of the conduct of Rose on this occasion, in a letter to the writer, says, "I remember to have heard an officer relate that having made his own way into a tree-top he witnessed the pursuit of Major Rose by a party of mounted Indians, who were at times so close to him as to throw their tomahawks. They were, however, finally baffled by the superior horsemanship and the coolness of Rose."

It would seem, moreover, that Rose did not

leave America without having had a share in the peculiar American instance as "lobbying." Nor is it a slight confidence which was reposed in brother officers that he, himself, a few years ago, have been sent to Philadelphia to look after the interests in the Pennsylvania Legislature of military gentlemen of our line," he writes in the session of 1784, "have awakened the slumbers, and the walls of the city have been twice the silent witnesses of our deliberations. . . . The House will not assent to the act granting us lands upon the waters, but it is very probable they will have vailed on to assume our commutation apart a certain defined tract of country on the west branch of the Susquehannah, for the redemption of our commutation notes at a rate of one hundred acres. A committee was appointed to confer with the committee of Ways and Means of this Assembly; which has not yet transpired." In the use of the language he certainly sets a more pretentious English scholar of the present day.

Besides these good qualities, however, he was noted for his strict integrity and high sense of honor, carrying them indeed so far as to be amusing. An instance of this, in the way, reminds us of Governor Morris. It occurs in one of his accounts rendered to the government for his expenses while on a tour. This is here copied in full, although it is a little risk—in these degenerate days—of sneering upon the faces of that coterie known as the "Ring."

"Major Rose, his  
4th, 1783, B

To two meals victuals . . . . .  
" one quart of cider . . . . .

" hay, one night, for two horses . . . . .

To two gills of whiskey for y<sup>e</sup> man. . . . .

N. B.—The half-pint of whiskey was used to wash the back of my port-mantau horse which was much hurt.

JOHN ROSE."

Indeed, this strict integrity of character was fully recognized by his superiors, who, at the close of the war, entrusted to him the payment of the troops garrisoned at Pittsburg, investing him with this responsible trust in the following order :

"It is ordered that the privates of the infantry in the Continental service receive, on account of their pay, by the musters of January, 1783, half-a-dollar specie per week, and the non-commissioned officers the same portion, until further orders. Major Rose having been pleased to take upon himself the trouble of paying the troops of this garrison (Pittsburg), agreeable to the above directions, he requests that a commissioned officer of each company attend the payments made to his men. The commanding officers of companies are, therefore, directed to attend, with their respective companies, immediately after troop-beating in the following succession, viz. : artillery, Virginia detachment and Pennsylvania detachment."

In the spring of 1784 Major Rose returned to Russia. When on the point of leaving Philadelphia for New York, where he was to take passage for Amsterdam, he, with that order and system for which he was remarkable, wrote General Irvine as follows :

"Your forage accounts I attempted to settle with Major Hodgston; but the day not being determined by Congress when the army was discharged—whether it was the third or fourth of November last—prevented me. Your receipt books you will find among the magazines, packed up in a small box. The final accounts of your Continental settlement I have properly adjusted and committed to the care of Mr. Howell, who was to have left West Point yesterday to settle the accounts of our line."

While the vessel was lying in the harbor of New York, waiting for a favoring wind, Major Rose wrote a letter to General Irvine, expressing his warm gratitude and attachment to his benefactor and his family; expressing, however, his sorrow for having abstained so long from making known his true history. He then stated that his name was not John Rose, but Gustavus de Rosenthal, of Livonia, in Russia; that he was a baron of the Empire, and that in an encounter with a nobleman, within the precincts of the palace at St. Peters-

burg, he had killed his antagonist in a duel, brought on by a blow the latter had inflicted upon an aged uncle in his presence. He had then fled to England, whence learning of the American war, he had sailed immediately for America, anxious to draw his sword in behalf of the American Colonies. He had now, through the mediation of his family, received permission to return, but he designed coming back and making America his home. The fact, however, that he was made Grand Marshal of Livonia soon after his return to his native country, and other circumstances which need not here be enumerated, prevented the fulfillment of his intentions, though he often recurred to it in a warm correspondence which he kept up with the Irvine family until his death, in 1830.

"Though my wishes," he writes from St. Petersburg, in 1804, "are crossed against their will, my thoughts remain at liberty and took their flight across the Atlantic, at the sight of an American vessel I discerned in the river making ready to get under sail. I went immediately home and sat down to write you these few lines."

The republicanism, however, which he had learned in America, he seemed not to have forgotten in Russia; and it is rather an interesting incident that Alexander, who has been suspected of democratic leanings at a later period, should have expressed the wish that he (Rosenthal) should wear the insignia of the Republican Society of the Cincinnati.

"Having already got to the age of fifty," he writes, in 1805, to General Irvine, "you'll think I could well go into my grave without having the emblem of the Order of the Cincinnati dangling at my button-hole. As for myself, I think so, too; but the people, having heard of my being a member of that order, will begin to think me a cheat if I do not wear it as a matter of great distinction agreeably to their notions; and, moreover, the first man himself [Alexander] has been asking me about it, and desires I should wear it. I am therefore obliged to entreat you again to send me the ribbon with the emblem as it is worn."

The last letter that was received from him was written to Callender Irvine, a son of the General, in which, after expressing the most cordial attachment to his friend and benefactor, he added :

"An affair of honor compelled me to abandon my own country. I fled to America for refuge; was graciously received by your venerated father,

and cherished by him as a son. My obligation cannot be told—the power of language cannot express all I feel. I wish his portrait above all things. Send it to me that I may possess the delight of constantly reviewing the resemblance of my best friend. It will fill up the measure of my happiness. I have contentment with opulence. The mistress of my early affections is now my wife."

The children of Baron Rosenthal, one of whom served with distinction in Poland, all died before

him, though two granddaughters were still living, in 1867, in Russia.

In consideration of the long and valuable services of Major Rose, the general Government granted him bounty lands in Ohio, and he received from Pennsylvania two tracts of "donation land" in the northwestern part of the State. What became of his interest in the Ohio lands is unknown; but that he saved his other tract is certain. They are situated on Oil Creek, and have become very valuable.

### THE APPROACH OF AGE.

By JOHN H. BRYANT.

GONE are the friends my boyhood knew,  
Gone threescore years since childhood's morn;  
A lonely stalk I stand where grew  
And proudly waved the summer corn.

Scanning the record of my years,  
How blank, how meagre seems the page,  
How small the sum of good appears  
Wrought by those hands from youth to age.

Yet, 'midst the toils and cares of life,  
I've tried to keep a cheerful heart;  
To curb my fiercer passions' strife,  
And as a man to act my part.

And I repine not at my lot,  
Glad to have lived in times like these,  
When mystic chords of human thought  
Bind realm to realm across the seas.

When this dear land, Time's latest birth,  
Smites every chain from human hands,  
And 'midst the nations of the earth  
The greatest, freest, noblest stands.

When progress in material things  
Leads upward immaterial mind,  
And into nearer prospect brings  
The perfect life of all mankind.

Kindly, as yet, life's autumn sun  
Gilds the green precincts of my home;  
Softly, though fast, the moments run,  
And fleeting seasons go and come.

Yet nearer moans the wintry blast,  
The chilling wind of Age that blows,  
Through darkening storms with cloud o'ercast,  
With blinding sleet and drifting snows.

Ho! gleaner on life's wintry lea,  
I hear thy steps 'mid rustling leaves,  
And soon this withered stalk will be  
Close garnered with the autumn sheaves.

And then will He, beneath whose eye  
Each act of right and wrong appears,  
Aught of untarnished grain descry  
Among these husks of wasted years?

Haply these mustering clouds that lower  
On the low sky in seeming wrath  
May vanish, and life's sunset hour  
Shed a calm radiance o'er my path.

Then may the clear horizon bring  
Those glorious summits to the eye,  
Where, flanked by fields of endless spring,  
The Cities of the Blessed lie.

### "IF WE WOULD."

If we would but check the speaker  
When he spoils his neighbor's fame,  
If we would but help the erring  
Ere we utter words of blame;  
If we would, how many might we  
Turn from paths of sin and shame.

Ah, the wrong that might be righted  
If we would but see the way!  
Ah, the way that might be lightened  
Every hour and every day,  
If we would but hear the pleadings  
Of the hearts that go astray!

Let us step outside the stronghold  
Of our selfishness and pride;  
Let us lift our fainting brothers,  
Let us strengthen ere we chide;  
Let us, ere we blame the fallen,  
Hold the light to cheer and guide.

In each life, however lowly,  
There are seeds of mighty good;  
Still, we shrink from souls appealing  
With a timid "if we could;"  
But a God who judges all things  
Knows the truth is, "if we would."

## THE FAIR PATRIOT OF THE REVOLUTION.

BY DAVID MURDOCH.

## CHAPTER XXIII. FUN, FROLIC AND FOLLY, FINISHED SOBERLY.

CLARENCE CLINTON, after parting from Bertram and Gabriel, made quick progress on his faithful nag. There was good cause for the animal's haste—his mate was on the same road that night before him. Old Cornelius Wynkoop's negro Ebo, was a dissolute fellow, spending three nights in the week, besides Sunday, in some dissipation. He never went far without a good horse, and though it might be to a distance, he was sure to return before his master had shaken the ashes out of his first pipe.

Ebo, Wynkoop's right-hand man, loved a horse, as all his race do, and mounted on black or brown, he forgot everything for the time. He treated the span impartially, taking them always out time about. The horses were brothers, and never parted from each other but they were glad to meet again. This instinct led them always to run to the same point when they could get free, and the wild Ebo had been found out before now in this very way, and traced to the very place he was most averse to being found in.

As Clarence rode along in the middle of the night, to his great surprise and sudden alarm his horse set up a loud neighing and whinnying, which made all the fields around vocal. At short intervals, these calls were responded to by others of the same kind, which increased in number and loudness in proportion as he advanced. All at once he was brought up standing at the door of a low cabin, where voices and screams went up, as if a hundred witches were dinning the air and performing their eldritch rites. "Black spirits and white, red spirits and gray," all seemed mingling together.

After gratifying his curiosity a moment by looking through the low window, he prepared to go forward; but to his mortification his horse would not move a foot, but sent forth one of his loudest neighs, that provoked the rider to vengeance, which caused the animal to make all the more noise, till it at last arrested the attention of the company within for an instant. One of the dancers came to the window, and seeing nothing,

called to the fiddler, "Cæase, play up;" and the old fellow within gave his bow a double stroke, that, skirled on the strings till the screams of the company came again in full force. Clarence descended and looked in more closely, intending to lead his horse past; and such a sight he never beheld before. There were at least forty negroes, enjoying themselves in the most outlandish sports. The dance was a cross between the wild African jig and the low Dutch hornpipe.

During a brief pause in the noise Black and Brown gave an impatient neigh, that went to the quick ear of the delinquent negroes. Some one who had been out of doors ran in crying, "Ebo! your massa come; ole Kaarney at the door."

Quick as a flash, the black rogue ran to the door, and seeing the horse that Clarence held—he knew his shape and his neigh in an instant—he prepared his back for the whip; running out in the dark, to where Clarence stood, he screamed out, "Massa, massa, forgive ma 'passes, as Dominie says, in our Fader. Me come down to Phœbe Caunterwalikin, but didn't mean to come; forgive me ma dets."

Clarence saw that he was under some mistake, and quietly said so; asking Ebo if he would help him to take the animal past the door, for he was in great haste to get on.

By this time Ebo had seen his error in regard to the man, but was still sure about the beast; and suddenly changing his tone, he called out:

"Ha! Cowboy stole massa hoss. Goot; the tief found out dis time. Fox fal ente de trap himselv. He! he! he!"

And his mirth returned with something additional to pay for the fear he had incurred. All the company had felt the alarm—quietness had reigned till Ebo called out, "Cowboy," when a shout arose as the whole party, male and female, surrounded the man and horse.

Clarence, in the midst of this black mob, found himself in a complete hornet's nest and dilemma. To tell them who he was would be folly, and to go back would be to frustrate his whole plan. His first thought was to leave the horse in the hands of those who claimed it, and go forward afoot. As

he proposed this, he soon found that Ebo was in as great a quandary as himself; Old Kaarney would demand of him how he happened to be there, to make the discovery, and he knew that the bringing back of Brown would not save his own carcass from the lash; so that between the doubt of the stranger and the doubt of the negro, there was rising an uncertain state of things. Old Phœbe, who was in reality the leader of the whole party, cut the knot in the right place, when she called out:

"Take 'em to de Squire. To de Squire Burhouse!" To this proposition all responded with the heartiest good will, and as Clarence found out that the Squire's was not far off, he hoped to prove to his satisfaction that he was neither Cowboy nor horse thief.

Just as they all were about to start for the Squire's, a young lithe negro came up, blowing and puffing, saying, as his breath would allow him, "the bulls! the black bulls!—Bob and Peet."

The young scamp had been sent off to drive two bulls, that were kept at opposite sides of Judge Abiel's farm, into the same lot, where they were sure to fight, with a force and a fury which could not fail to be prodigiously interesting to the blacks. With their characteristic thoughtlessness of all but the present, they forgot everything but the expected sport. Ebo, however, took hold of Brown's bridle, and led him down through the rail fence into the field, thinking, of course, that his late rider would follow, which he did with apparent good will. The two mad creatures were coming toward each other from opposite sides of the field, foaming and pawing the ground as they drew near. They bent their heads, then rushed together with all their fury, meeting in the centre, when their skulls cracked. Retiring, they flew forward again with still greater force and anger than before, continuing these repeated attacks, till the one and then the other grew weak with the effort. When fastening their horns, they pushed, as one of the ruling spirits said, when asked,

"What would de Domeley say, 'Tom?'"

"Dev push like the bulls of Bashan."

The great interest which Clarence took in the battle was in the human animals, whose excitement was beyond bounds as the fun proceeded. Young and old, male and female, at every new onset, screamed and laughed, clapping their hands, holding by each other, and then falling down, seemed more

like persons possessed with noisy spirits than mortals. Even Ebo had forgotten all about Brown.

In the midst of this fun, Clarence stepped rear, and leaving the horse tied to the post, took the road afoot, plainly perceiving that he would reach his destination sooner in this roundabout by the Squire's.

On the road he was overtaken, to his mortification, by three of the late frolickers, who called back, and ordered to stop, or be "shot like the small ob de back." There was no alternative for him but to submit, in hope of escaping the intervention of the Squire, to whom he must go for stealing that horse. But he fortunately thought of an expedient which gave him a chance of escape; he asked, coolly:

"Where is the horse that any one saw? Produce the animal."

Here was something they had not thought of, for Ebo had seized the bridle, and at this time far on the way back to his master's; consequently no evidence of horse-stealing was on the ground, the fellows felt themselves at a loss now when the prisoner was in their hands.

By this time a new actor appeared on the stage, in the person of a singularly dressed man who said, "this is my prisoner. Begone! taking Clarence by the arm, led him to a distance, and dismissed him, saying: 'Go to the main road and make haste, for the day dawns after cock-crowing.'"

#### CHAPTER XXIV.—THE DOMINIE SCHUYLER.

CLARENCE, walking on in the gray dawn, followed the well-beaten road, thinking of the scene he had witnessed with surprise. What chief part in it was the voice of the mysterious man he had heard it before—but where? The call, uttered in the dark morning by a stranger, haunted his imagination. He remembered a preacher say, when preaching on the text, "The voice is Jacob's voice, but the hands are the hands of Esau," that deceivers can disguise themselves in all things but their voice. What was this unknown friend he had met?

Day was beginning to dawn as Clarence came in sight of the stone church that stood in the middle of a neat yard on the roadside. A small stream was scattered around a mill. The mill-race waterfall mingled with the dashing sound of the

wheel. There also stood the smithy, and the tavern. The fields showed a better cultivation than were to be expected in a new country. He did not know that the whole region was more than a century old. A plain of considerable extent, running from the south as far north as the eye could see, was well dotted with dwellings, surrounded by orchards and barns; while the hills here and there had bare places on their sides, showing that improvement went on.

Clarence came up to the door of the church, surveying it with interest, as it reminded him much of what he had seen in the Low Countries of Europe. It was built of stone, and covered with the red tile so common in Holland. Posts were placed all along the road, with rings in them, for fastening teams; and a few sheds stood at the rear of the church for such as had more care for their carriages than the majority. The small belfry rose from the middle of the square roof; and a bell hung in it, which, no doubt, had been the gift of some pious Dutchman of the past, whose monument stood in the graveyard near by. There the traveller went first, and read in the gray of the morning, the names of the forefathers of the place, showing that they had mainly been of Holland origin, with less of the Huguenot blood than he had seen in some other places. Van Bergen, Van Kleek, Van Duesen, Van Vechten were most numerous. What surprised Clarence was the mixture of both English and Scotch, especially of the latter, in a place so far remote from the thoroughfares of the world.

"These Dutch," he muttered to himself, "I believe are found everywhere except where hunger and starvation are known; and here, too, are the highlanders from Scotland, that hungry country. You cannot starve them out."

Here, were Salisbury and Grant, McPherson and Newkirk, all met in this fine amphitheatre, surrounded with high hills, that were washed yearly of their best soil to fatten these lands below, and these, in time, became fit to support an immense population, already flocking into it from many countries. Here, too, was the temple, where all worshipped their Maker.

With such reflections, the young Englishman spent the half hour that preceded the sunrise, when he was told to expect a meeting with the greatest man of the place. Standing as he did, at the door of the church, he looked to the east and saw a stone house in the midst of a small orchard,

and the whole surroundings showed uncommon thrift and neatness.

"That is the parson's house, no doubt," said Clarence to himself, "and there is the man of God himself; the instructor, the guide, the friend, and the true patriot; I wonder if he be at all like the one I have just left! I marvel if our clergymen in old England would fight and preach for their country and their people, as these men are doing!"

The Dominie Schuneman, of Kaatskill, with whom we are already somewhat acquainted, was walking slowly from his house to his barn, surveying things to the right and left, that he might have all put in order. For having been absent on public business for his people, he had of course neglected his own affairs, and as he depended more upon his farm than upon his salary, it was necessary for him to watch on all sides. Clarence, to give the reverend gentleman time to mark his presence, had walked deliberately across the way from the church door; but as the parsonage stood on the highway to the city of Albany, every passer-by was seen, and scanned carefully in those times of excitement. The Dominie had seen the stranger, and was watching his movements, as he continued to throw out handfuls of Indian corn to his poultry, of which he had a numerous flock, including a herd of turkeys, that would have fed an army in a strait.

"Good morning," was the salutation of the stranger, to which the pastor courteously responded by a slight touch of his cap, that came close to his head, falling in flaps over the ears, after the manner of John Calvin, as seen in pictures of that great man. Clarence found little difficulty in opening a conversation with the good man, who, meanwhile, having finished feeding his poultry, passed on into the stable, and at once called out, in a sharp voice, "Tom! Tom! You vagabond, come into the stable." Looking behind, Clarence saw the one called, and recognized in him one of the ringleaders in the singular frolic of the night before, the latter also recognizing the supposed horse-thief, and with his eyes apparently appealing for silence on his part.

"What is the matter with you? What makes you look so drowsy? Ha, what is here! What makes Dick all over in a muck of sweat? Who has had him out of the stable in the night? Some black skin will pay for this before sundown."

The negro went about his business in anything

but a comfortable mood, seeing a witness of his folly in such familiar intercourse with his master; and at the same time he was planning in his mind how he might counteract the evil effects of anything against himself, by something equally disastrous to the stranger.

Dominie Schuneman, whose company we expect to keep the greater part of the time through this history, was a man of large and wide influence in his time. He belonged to one of the oldest families that came from Holland at an early day, and which had risen to some wealth and a good position. Of their ancestors, he was one who would not boast. When his wife, who rather looked up to the aristocracy, would begin to trace back, he would curtly say:

"The less of that, Maria, the better. My name is Schuneman; and you are Dutch enough to know that that is skinner; another word for plain butcher. A Yankee would call it Skin-flint."

But the parents of our friend were able to send their son back to the *Vaderland*, where, at Leyden, he obtained a liberal education, and was ordained to the Gospel ministry, which he had exercised with great fidelity in this place, Kaatskill, since his return to his native country. His parish extended from Caatsban to near Albany, taking in all the mountain districts; so that he was as well known as any man in the province, and knew as well what was going on in it as if he were an officer of the State. His ardent temperament made him a fierce foe and a firm friend, while his superior learning raised him above all the laymen in his region; and his office gave him a power which he was not slack to use, on his own responsibility. He was a fair representative of the majority of his class, both in their good and doubtful qualities. The whole colony of New York was in the hands of these Dominies, and it is praise enough to their memories, that that portion of the new States came out of that great struggle as honorably as Massachusetts.

Clarence, taking the hint given him by Gabriel at parting, followed the Dominie into the house, and, when the breakfast was announced, sat down to the table as if he were one of the family. A large platter of fricasseed chickens, mixed with slices of pork, stood in the centre of the bountiful board, surrounded by other dishes heaped with cold meats of different kinds. Venison and bear's meat, and hillocks of bread and bowls of milk

abounded. After grace, said in Dutch, the master of the feast said, "Set to, help yourselves, as your neighbors will like you the better," and setting the action to the word, he planted his fork in the leg of the fattest fowl and transferred it to his own plate of wood, of which material were all the vessels at the table. His guest understood the hint, and did justice to the viands, not having tasted anything since his imprisonment at Sander's, except a piece of apple pie that fat Phoebe had thrust into his fist as he went down to see a bull-fight.

There was but little said during the meal, and that in a language which Clarence could not fully understand. Still he knew more than they gave him credit for. Having resided for some time in the Low Countries he had picked up enough of the language to enable him to follow the meaning of certain questions and answers given, in the plain style which an educated man always uses in his family. The wife was a large, grand-looking woman, and her speech was with authority, excepting the Dominie himself. Her complexion was pure white and red, but her look was harder than one would expect in a place so remote from the public eye. It might be the times had made her severe; but it struck Clarence that she was more masculine to be motherly, and was more likely to be feared than loved by the people of the parish. Her husband always addressed her under the title of *Yfvrouw*, which the stranger soon found was much her official name as Dominie was his, which she never failed to give him, fulfilling to the letter the spiritual injunction and example of Sarah, who called Abraham Lord. A swarm of children were around the table—not like olive plants, but more like Dutch cabbages, and Clarence noted that they all had the Latin terminations to their names, Johannes, Wilhelmus, Martinus.

Breakfast over, the householder, with the handle of his knife struck the cherry-table three times when a large ebony wench entered placing a large clasped Bible before him, then he marched a drove of old and young negroes. Where they found lodging and procured food it was difficult to guess. The whites present took possession of the seats on the right, while the blacks squatted down on the floor, becoming as still as midnight, while the father and the priest read from the sacred book in English, for, though it was the Dutch translation he gave it in the other tongue freely as he w-

along. He read the forty-sixth Psalm, and said, as he closed the book, "this was the favorite portion of Luther in the times of his trouble. These are times of trouble in which we live. We need the same comfort and defence. Let us seek them from God." He then offered up fervent petitions in the two languages spoken around him. There was some comfort for all in what he said. Clarence observed that the common cause of the country was not overlooked; defence against all enemies from within and from without. Nor was the "guest and the stranger" passed by, when the wish was expressed that this "youth of fair countenance and of pleasant speech might be prospered in his way, if he had an honest heart and an upright purpose." After prayer there was a general rush for the door; the young fry, white and black like, eager to be off away from restraint, while the older and the confidential lingered behind for word of recognition, or for orders concerning the duties of the day before them. The Dominie was evidently a man of large business, from the commands he issued and the questions he asked. There were these all about farming or parish work; some referred to public business, but spoken in a low tone, which told the guest that he had not yet obtained the confidence of the family or of its head.

The last who went to the door was Tom, who, knowing that all was not right, waited behind.

"You were out at Phœbe's last night, you rascal, and had Dick with you," was the pointed accusation of the master.

"Lor, massa, who tol' you? Me covered up de big book, and me tought it could no speak in de dark."

"I can see in the dark, you rascalion that you are. Get your back bared. Ten stripes with the rawhide will save Dick another race to Phœbe's."

Tom cast his jacket at once, and, turning round on his master, asked, "Your spook see dis gentleman here too at Aunt Phœbe's?"

Clarence, who had not been an unconcerned spectator of the scene, became now an eager listener.

"What do you mean?" said the enraged master.

"Do you think such a gentleman as this would stop at such a bedlam as you have just come from?"

There was a sharpness in the tone and a look of the eye in the interrogator that made Clarence

start, and which sent a look of fury into the eye of the culprit, who evidently wished to involve the young man in the trouble; so rising from his seat he held out the letter which had been given to him, and was stepping forward when he was met by the reverend gentleman half way, who, with great dignity of manner, held out his hand, saying:

"You have some commands for me I suppose, sir? Excuse me while I dispose of this business;" and with that he informed the impudent Tom that he might look out for the full payment of what was owing to him before he went to bed, unless something occurred that would make atonement for the doings of last night.

"Sit down, sir. I see that this letter is from my worthy brother of Sopus. Dreadful times there; wicked devils those red-coats. Unprovoked outrage. It would give them no more than they deserve if every one engaged in that act were hung. Yesterday, too, setting that good man's house on fire. Poor Martin Schuyler. Savages, all of them. Gentlemen! Devils!"

All this sent forth in fierce objurgations as he read the letter, which, for aught Clarence knew, was telling the passionate Dominie how he had been engaged during the night of the Sopus raid. It was plain that the Dominie was in no good mood. He had more of the magistrate in his look than the minister of religion. Rising, he said with severe authority, "Your business will require consideration; and as there are a great many things to be done to-day, we will dispense with your presence till we have more time."

With this, he opened the door, when they were met in the hall by one of his parishioners, inquiring if the Dominie had made "up the salve for Aunt Nilly's foot." It was handed to him in a small box. Clarence saw inscribed on it: "To be well rubbed in; and this will cure, *with God's blessing*."

"A droll mixture," said the young Englishman. "This man is a minister, master, magistrate, doctor, and if I may judge by my being sent to him, he is captain of the Kaatskill Whig militia. But I doubt very much if he serves me and my cause. My notion is, to bribe some one as a guide, and flee to the mountains, trusting myself to Brandt, claiming his aid as an officer in the king's service."

With these half-formed plans in his mind, he

left the presence of the Dominie, wandering he knew not whither, but every now and then recurring to the idea of escaping to the hills. But was it not long before he perceived that that would be a difficult matter, for it did not seem to him that he was for one moment out of the sight of Tom, or some one else that he had seen with Tom. At last the thought darted across his mind, "I am watched. They suspect me, and that vagabond is the spy."

CHAPTER XXV.<sup>1</sup>—A PRISONER IN DISGUISE, BEFORE  
A TRIBUNAL IN DISGUISE.

CLARENCE CLINTON, whom we left in a state of uncertainty, politely bowed out of doors, and yet not at freedom, felt it hard thus to submit. He fretted himself, wishing a thousand times that he had insisted on being taken up at once to the camp of Brandt. That being now impossible, he at length resolved to follow the current of events. So, composing his feelings as he best could, he set about diverting his mind by observing what was new to him.

It was evident from the unusually large number of people in so small a village, that something of importance was about taking place. Following the current he was landed at the church door, where was a motley assemblage.

While this gathering was to our adventurer the subject alike of study and wonder, he noticed a

<sup>1</sup> The real object of Vaughan's expedition to the north was, if possible, to form a junction with Burgoyne, who was now hard beset at Saratoga. All that was known of that daring commander's movements at the south, made the king's friends despair of his success. The communication between these two extreme points of operation was entirely cut off; and he who was willing to become the forlorn hope of the army, was regarded by the one side as a spy and by the other as a hero. Messenger after messenger was thus despatched and caught, and still another went for help as their fate still remained in suspense, till it led in some instances to desperation. He was ready at length for any deceit or scheme, bearing the least semblance of feasibility. Once succeed in getting his spies below Albany, with the river on one side and the mountains on the other, and what was to hinder their communicating either with Brandt or with Vaughan in time to let Sir Henry Clinton know his position and obtain his aid? Having recently come all the way from Canada, a journey over the Kaatsbergs, keeping back by the Round Top, seemed to him an easy thing: nor were there wanting gallant men willing to undertake the risk, at the command of such a chief. How far their judgment was well informed, or how well the people of the country met these plans, must be left to our history.

face strangely familiar. He puzzled himself to recall some name that he might attempt but in vain. He viewed it in every possible profile and direct; and while in each of the glimpses satisfied him that he had known him in some other place, he still was at a loss to find him a locality in past history. Tall, thin in his appearance, it was evident that he was not here. His dress was buckskin, with a cloak thrown over his shoulders which was not a coat of homespun gray. He wore a cap of buckskin and a beard that seemed to be but the same animal's fur, cut from its neck. The man's eye wandered around the crowd as if looking for some one, it fastened at last on a man so searchingly that the young man found it rising to his eyes; and he was about to go forward and demand an explanation, when he was checked aside with a slight tap on the shoulder by a man he knew to be an officer in his Majesty's service but who had been taken prisoner six months in an attack upon Fort Washington. The air on both sides was warm but silent.

"Clinton," said the officer, "why, in the name of all that is good, are you here?"

"May I not ask of you the same thing, officer?" said Clarence. "You seem to be in the best of health and so near the mouth, one might think that your stay was desirable."

"Oh," said the other, "I am here on a mission of honor and must run my chances of success. There are ten of us here among these bushes."

"Pray," said Clarence, "is that one of them there with the rough cap? Look cautiously, for he is watching us, and his eyes seem to be searching me through. I am sure he is an Englishman, and I am confident of having seen him somewhere in my travels."

Clarence's companion declared that he must know that pale face well, he had never seen him in this region; and he could not conjecture that he must be some one in disguise looking around him for sport, like others. Clarence replied in a whisper, "We are separated and must separate for the present."

"Well, we must, of course; but," said the other, "I will gather our friends together, and keep ourselves on the alert lest anything should happen to you."

Clarence thought it best to mix with the fugitives; and stepping up to one who had the

An Englishman, though dressed in the fashion of the common people of the country, he saluted him, saying,

"Is something of importance about to be transacted here to-day?"

"Yes, sir," was the courteous reply. "One of Argoyne's messengers has been caught on the road from Albany, on her way to Sir Henry Clinton, whose vessel is now at the mouth of the creek."

"It is a lady then?" said the inquirer, with some perturbation of mind that almost betrayed him.

"It is a woman at any rate; as to her being a lady is another thing. We are not accustomed to calling spies ladies." This was said with a sneer, not to be mistaken.

"She is to be tried," he continued, "just now before the Consistory. She is a young woman, and very beautiful; above the common manners, and, perhaps, a lady. But here comes the Dominie, who will worm out her secret. You asked, I think, if this was a court to try such cases. No, not in law, but though the Dominie be no squire himself, he always sits on the bench; for he knows more than all the squires between Sopus and Albany."

Clarence had not asked for this information, for he understood it from experience and was prepared to hear sentiments like these from one who spoke more like an Englishman than a Dutchman, though evidently a colonist.

"I perceive that you are an Englishman," said Clarence, "and are smiling at the power of this court to try a spy, as you say the lady is?"

"No, sir, not English born. My father, after the fighting at Lake George, in the French war, gave up his commission and received a large tract of land on which he settled, along with his company. We are most of us the sons of those men. The Scotch are clannish, and so you perceive a great many of that nation, though the greater part of them were so loyal that they could not live where the king's power did not extend, and have removed to Canada. Those here now are most of them true to their country, though they stiffly keep to their religion and their dress."

"Ah!" said Clarence, "those men with the kilt and the hose. A fine country for highlanders."

"Tell me here," said the colonist, "who you are, as you seem to be an entire stranger?" a new thought having entered his mind. He looked right into the eyes of Clarence for an answer.

"I have a case before the reverend Consistory," was the ready reply, "and I am waiting till they meet. Are not those the members who have entered in at present?" With that Clarence went in with the rest, and took a seat in a large square pew that was made to contain a whole family. His new acquaintance, whose name he found was Salisbury, sat next to him, and was all alive to the business of the occasion. Suspicion of Clarence's business had induced him to take this seat, as if he meant to watch him. Nor was Clarence unaware of the suspicion.

The Consistory was called to order by the Dominie, who sat as president. He offered prayer longer than might be necessary. Patriotic sentiments prevailed, the recent devastation was referred to, and the abduction of two members, worthy of their place, was mourned over, and petitions offered on their behalf. Sympathy for the distressed drew out sobs and tears from the multitude, and a fierce sighing, like a surging wind, ran through the whole house when the good man exclaimed, "Our country is desolate, our cities are burned with fire, our land strangers devour, and the daughter of Zion is left like a cottage in a vineyard, as a lodge in a garden of cucumbers, as a besieged city."

"Call the prisoner," said the officer, who sat beside the reverend man that he might be benefited by his counsel. It was a semi-sacred, semi-civil court. Indeed, the squire was one of the Consistory, as the pastor always took good care that he should have his hand felt in all his parish. Nor did this mongrel court appear so much out of character to Clarence, who had seen the clergy of England sitting at quarter sessions in their canonicals trying the poacher and the vagrant. The suspense of the stranger who had heard of a woman being arrested, who was described as beautiful and of superior breeding, when he saw the prisoner brought in was great, but he was soon relieved from his fears when the lady, who was unknown to him, stepped forward and made her obeisance to the chief man on the bench. The Dominie wore his three-cornered hat, a flowing wig, newly powdered, and long white bands that lay upon his capacious chest.

"Who be you? What be your name? And where do you come from?" said Squire Van Bergen, who was a peaceful, common-sense looking man of fifty-five, or about that age.

"You ought to know who I am, and should

have some knowledge of where I am from before you venture to interrupt travellers on the king's road."

This was said by the lady with some tartness, as if she really felt herself to be the injured party. She stopped short and watched the effect of her reply upon her inquisitor, whose brains were confounded by the hardihood of the woman. But the Dominie whispered something in the ear of the legal functionary, when he again woke up, saying:

"Madam, the country wants watching, and you were travellin' by yourself, and you must tell where you be come from, and where you be goin'."

There was meaning in these words; and, though they were said with one leg thrown over the other and the arms resting on the knees, yet they were firmly said, and the prisoner saw that it would be vain attempting to carry these men by storm. So putting on her sweetest manner, she said in the softest tones, "You surely do not suppose that a lady could in any way endanger a country where there are so many brave men to defend it?"

"Madam, were you the bearer of public despatches that you must be alone on the way?"

"You do not mean," said the prisoner, "that the good people in this Christian land, with such good men for their pastors, are such savages that a lady cannot go alone where she pleases?"

She said this looking straight into the Dominie's face, as if he was the one to answer that question which involved his calling and responsibility. Nor was she disappointed, for that earnest man was only waiting for the chance of taking up the case himself, since he saw plainly that the woman was too much for his honest elder, the squire.

"There are savages in the land," said the Dominie, "but they do the bloody work of their own master."

"You mean," said she, artfully misconstruing his allusion, "that I have nothing to fear from the inhabitants of this place?"

"Nothing if your own intentions be good. We are more afraid of serpents than we are of savages. There are both around at this time."

"I have heard, reverend sir, for so I esteem you, that the fierce Mohawk has been near, but surely you do not perceive in me any resemblance to that monster?"

"There are painted Jezebels more cruel than Brandt, madam. But we have no time to parley. Are you the bearer of any message to our enemy

now on the river? Answer, if you be, that may get through with your business at once."

This was said with a sternness which could be set aside, and which had the effect of rousing up the feelings of the assembly to a nervous tension, so that a pin dropped could have been heard as she answered:

"How should I be the bearer of a message to a country watched by a thousand eyes at every point? If your gallantry be equal to your appearance, you, a gentleman and a Christian minister, you will demand my immediate release."

"Madam," said the dignified man, as he rose from his seat, "your evasion and your appeal to chivalry will not avail with us. Do you think you are aught of this cup?"

At this a silver cup of rare workmanship was produced and placed before the prisoner, which had a slight shade of red, which showed chagrin rather than shame, passed over her fine but rather stern countenance; recovering herself, she said, "I am posing that I do know, you surely do not expect me to say anything that would criminate myself."

"That's the law," said the squire, edging forward; "but why did you hide this cup last night before the lads found you?"

At this point a young man stepped up to the Dominie, whispering in his ear, and at the same time putting a small parcel into his hand. The parcel was immediately produced, and turned out to be a large silver watch, with a silver face, to which a gold chain and seals of several kinds were attached. This rare timepiece excited universal attention, and diverted the minds of the spectators from the lady. Clarence took occasion to mark the movements of her lips and the corners of her mouth, which, notwithstanding her resolute will, showed her mortification. She lifted a wooden cup to her lips with water, that she had asked for soon after she came in, and took a sip of it, and this she did the whole time, showing that her coolness was more affected than real.

"Stan' up, Hanchy," said the squire, "and give your oath that you will tell the truth, and the whole truth, as at the day of judgment."

"Where did you find the watch?" was the next question.

"Near the place where we found the cup."

"And where was that?"

"Where we found this woman."

"And where did you find the woman?"

"I told you all about it this morning," said the great lout, who did not understand the object for which he was brought there. The Dominie, who was provoked beyond all endurance, rose in his seat storming at the witness in such a way as would have driven all the brains out of ten dolts like him; and ordered him to tell his story as he had told it to him that morning. "And see that you stand on both your legs at once, and keep your nose there from sniffing like old Egbert Bogardus's yellow mare in the spring grass."

His story was a long rigmarole, and but a few facts. He and another of the same squad had been out sparking when they overtook on their way home something that they took at first sight to be a spook sitting by the roadside. It turned out to be this woman. She made inquiry after some one, whom the Dominie forbade him to name. They suspected her to be of the Tory side, from the person she inquired after. Pretending to take her where she wished to go they took her to a genuine Whig's house and left her. Thinking that she had fallen among her own class she directed them where they would find a small bundle, which, instead of taking back to her, they put into the hand of the squire, who in duty bound consulted the chief man, and hence this investigation.

"This," said the Dominie, "is a valuable time-piece. I see here marked on the inside of it a name that no one in this colony, of the true blood, has any cause for loving—'Burgoyne.'"

At the announcement of this name, which the Dominie said was engraven on the inside of the case, a general buzz ran through the house, which went further into the heart of the prisoner than anything that had occurred hitherto, as she evidently feared that the crowd would take the law into their hands, and make quick work with her at the ducking-tub; for the name of Burgoyne was as famous for loose morals as for the owner's enmity to the colonists; and in a place where a vile woman was a baser object than a vile man, Jezebel would be as likely to suffer some penalty as King Ahab.

"Silence!" shouted the Dominie. "Have you no manners, nor regard for law, that you look like a set of barbarians about to eat a woman up alive?"

Quiet being restored the examination of the watch was continued. The case was opened and

shut twenty times, the woman's eye following every movement. He stopped, shut it up again, weighed it on his fingers, drawing the seals through his hand as if satisfied, and seemingly was about to hand it back to the late possessor. When the Dominie made as if he would hand it back to her he perceived such a sudden gleam of pleasure that he was sure it meant relief, for he drew his hand back, saying, "We will give it one more trial." Clarence thought it cruel in the man to torture her by this tantalizing movement, for the blood rushed suddenly to her heart through this unexpected disappointment, and she sat down holding her hands so that her chin might rest upon them, as if saying, "I will see the worst of it and defy you."

The Dominie then went over the whole surface with his thumb-nail, when at last he touched a spring, which revealed a double case, within which there lay a small bit of paper bearing the words:

"De spe decidere."

"Read this," he said, with a smile. "What does this mean?"

"Nay, nay, Dominie, that is for you to read and explain; you are the only man of learning here."

"'We have lost all hope.' God grant that it may be so," was the fervent saying of the reverend man as he translated the inscription on the secret missive.

"What is meant by that, Dominie?" was called out by twenty voices at once.

"I think it means that Bur——" Before he could complete his answer a rush of men to the door bewildered the Dominie and all around him. So sudden and great was the alarm, some thought one thing and some another; but it was evident that the greater part supposed that Brandt was surrounding the house. The pastor here showed his true courage. Raising his voice like a trumpet he cried out:

"Shut the door and bolt it there, Jack Pearce. Stand firm. Salisbury, here leap out of that window and rouse our friends. Now, men, stand to your arms. Here, Captain Hallenbeck, take your place and muster your men."

The Dominie was first in war as in everything else; nor was he behind in the true argument, for, sitting down, he deliberately took out a pair of large horse-pistols, and examined them with the eye of one who knew how to use them. The whole

Quiet being restored the examination of the watch was continued. The case was opened and

Consistory were equally well armed, while the men in the seats were lifting up guns that were lying innocently beneath their pews, and began shaking fresh powder into their pans out of their hunting-horns with something of the zest of those who watch a deer lick.

"Look well to your flints," was the order from the desk; "and when you see the first signal of danger, lie down till we know where our enemy is. Spare your fire till you mark your man. Some of you climb up to the belfry and snap off the leaders."

Here the squire, who had descended from the bench and was sitting humbly on a lower seat, remarked loud enough for the rest to hear:

"The Dominie might have some pity on himself and hide his head."

"Nay, nay; the bullet has not been cast that will take me down, squire; I have as much fat on my ribs as will hide a dozen pigeons' eggs. Come up beside me here, and let us remember how our two brethren of the Consistory are up in the mountain there prisoners of that heathen Brandt. Oh, how I would like to tell him, and his master George that sent him, 'With what measure you mete, it shall be measured unto you again.'"

By this time the cause of the uproar was made known. A report was spreading through the crowd out of doors, of Burgoyne's defeat at Saratoga; and as a multitude are never too particular in trying the evidence of good or bad news, they shouted so loud that the report was believed.

"Open the doors," cried the Dominie. "Three cheers for General Gates! three times three for Washington! Now for thanksgiving to the Captain of Salvation."

In an instant that uproarious crowd were as sabbath assembly, bending their uncovered heads, and following the voice of their spiritual guide, as he led them to the footstool of the Gr Deliverer. It was an impressive sight, only to be seen on remarkable occasions, when the souls of earnest men are wound up to the highest pitch to meet a danger, and then suddenly thrown back within themselves, to record a deliverance. The prayer of that day seemed to Clarence more of inspiration than anything he had ever heard. That which had passed had taken them so completely by storm, that even he, from the other side, could not refrain from joining in the rapture.

After they began to recover themselves from the ecstasy, one and another of them asked, "Where is the woman?" "Where is the prisoner?" "Where is the lady?" said the old squire; "I laid down my head at the Dominie's prayer, and when it was over she was away." Such was the tale that all told.

"Jake Van Deuser, look after the prisoner," said the real prisoner of the day; "and now the Consistory is adjourned till after dinner."

With that all left, evidently pleased with the doings of the morning, but expecting still more before the day was over. A signal from the leader of the day brought Clarence to his side, when he was told to be on hand at the hour appointed.

"As your case requires both *secrecy* and dispatch, you will see that you inform no one of our meeting. An hour after noon, at the parsonage."

The emphasis put upon the word *secrecy*, told painfully on the ear of the young man; but he had no resource left but to stand it through to the end.

### CHAPTER XXVII. THROUGH THE CROSS TO THE CROWN.

"HONOR is dead!"

When these terrible words forced themselves from Humphrey's dry lips, Dym staggered back as though he had given her a blow, and her hands fell weakly to her side.

Was this some awful delusion bred of the wild gusty evening? The conservatory-door had blown

open again of its own accord; Dym's dress and hair waved in the wind; a great noise and tumult and roaring seemed in her ears; splash-splash went the rain; the drops trickled down the folds of Humphrey's dreadnought, and formed themselves into a glistening pool at his feet; the lights seemed to flicker and flash more brightly before Dym's eyes. Was she standing on firm ground, or was everything tottering and reeling around her?

"It is not true," she said, putting out both hands to steady herself, and catching hold of Humphrey again.

"Don't touch me—I am wet."

How hoarse his voice sounded! He never knew why such a little thing as that should come into his thoughts. He took the girl's hands gently from his wet sleeves, and held them. Dym's white face and fixed staring eyes frightened him. A sort of hysterical cry burst from her lips.

"It is not true! Oh, Humphrey, it can't be true! If it were, it would kill him."

And she looked up pitifully into Humphrey's gray face. Her first thought was for him—not for this poor Humphrey, who stood there striving for words with which to answer her, and chafing the little hands that were not half so cold as his.

"Hush! you must not cry—not yet," he implored, as though he were speaking to a child. "We must think of him and her too," with a look at the closed drawing-room door. "I thought I would tell you first, and then you could help me."

"Of course I will help you, if I know how," returned Dym, putting back her hair from her face in a bewildered sort of way. "I am thinking of him—I always do. I think I shall pray that he may die too. Oh, Humphrey, you are sure it is true?"

Need she have asked? A sort of heart-broken smile wreathed poor Humphrey's lips for a moment.

"There is the telegram—read it for yourself," he said. "No, put it away; there is Madam coming," he answered, hastily; and Dym glided a step or two away from him.

Mrs. Chichester looked a little taken aback when she saw the two standing together.

"Is that you, Humphrey?" Why do you keep him standing there, Miss Elliott? Come in, both of you, and let him warm himself at the fire."

Humphrey cast a piteous look at his companion. He had asked her to help him.

"Come," he said; "it is no use waiting; she will see it in our faces."

Humphrey was given to meet his trouble with a dogged sort of courage, and even now it did not forsake him. Dym felt as though she were doing her part badly. He had asked her to stand by him, but as yet she had bethought herself of no way in which to assist him.

"What brings you up on such a night as this, Humphrey?" continued Mrs. Chichester, cheer-

fully, for the prospect of a chat with her old friend was very pleasant. "I think you deserve an extra welcome for coming to see us on such an evening."

"Ay, ay, if my errand were a good one," returned Humphrey, gruffly, not taking the chair to which she pointed him.

"You have bad news!" exclaimed Mrs. Chichester, suddenly changing color as Dym had done, but speaking still in her silvery tones.

"I have," was the blunt answer.

"Then, for the love of Heaven, Humphrey, do not keep me in suspense! My boy"—catching her breath quickly—"nothing ails my boy?"

"God help your son, he has lost his wife!"

"Not our Honor?"

"Dead!" And, as Humphrey uttered the monosyllable, he put his hand to his throat, as though something strangled him.

Mrs. Chichester looked at him almost vacantly for a moment, and her head moved tremulously; Dym saw the soft hands fluttering aimlessly in the air, and she knelt down and put her arms around her.

"Don't look like that; God will help him to bear it," she sobbed; "we must all pray that he may be able to bear it."

But the poor mother had not taken it in yet. "My son has lost his wife," she repeated, mournfully; "my son Guy." And her hands dropped heavily into her lap; she turned with helpless scared looks from one to the other, as though beseeching them to help her.

"You have been too quick Humphrey—she cannot understand."

But Humphrey only shook his head with a look of anguish. "I have done my best," he answered, in a stifled voice. "What could I do, when every word choked me? Speak to her, Miss Elliott; she is only dazed with her trouble."

But Humphrey's voice had already aroused her.

"Why do we wait? Why do we not go to him?" she suddenly exclaimed. "Dym, why do you not tell Dorothy to come to me? I must go to my son."

"Dear Mrs. Chichester—dear—dearest—you cannot go."

"Madam is right," interrupted Humphrey, hoarsely; "we will be off to-night. If I travel day and night, I will see my poor Duchess again. Oh, Honor! Honor!" And Humphrey's iron face was convulsed suddenly, and he dashed away

a hot drop or two with his hand, as he remembered his Duchess would never come smiling to him again.

"Good Humphrey, you will take me," and the poor lady stretched out her hands to him. "I do not forget Honor is your sister, but I must go to my son. My boy is in trouble, and wants his mother—I know he will want his mother."

"She is right," Humphrey said again decidedly. "Madam is right; of course the squire wants her, and of course she will go to him. Tell Dorothy to pack up her mistress's things. What are you looking at? you may trust her with me," he finished with a touch of impatience, as Dym stood looking at him in helpless perplexity.

"Do what Humphrey tells you, my dear. I think God has sent him to help me." With the necessity for instant exertion, Mrs. Chichester had recovered her calmness—these mothers have such strength: her limbs still trembled strangely, and her face was deadly white; but when Dorothy came she could still give her full directions, appealing to Humphrey at every word to know if she might do this or that.

"I think I ought to take Dorothy, she may be useful;" and as Humphrey nodded, "Go up with her, my dear, and let one of the maids help; and tell Stewart to bring some coffee for Mr. Nethcote;" and as poor Humphrey shook his head with a gesture of disgust, she said, reproachfully, "We must eat and drink, Humphrey, that we may have strength on the way. I want to be of use to my boy when I arrive, and you must let me take care of you too. And the gentle creature took the rough hand and pressed it to her lips, as she repeated, "I think God has sent you to help me find my boy."

Dym left them and went up stairs, with a load of dull aching sadness at her breast. As she closed the door she heard a hoarse sob from Humphrey—one, and then another—and she knew that the unhappy brother had broken down for a minute under that touch of motherly sympathy—only for a moment, however, and then the man's intense strength forced back the anguish again.

Poor Dym! her tears seemed dried up at their source. They were going to him, all through the night and the driving rain, through other nights and other days, that Humphrey might see his Duchess again, and that Mrs Chichester might comfort her son.

She had no part or lot in their trouble. He loved her, and Honor was lying cold in her shroud—that beautiful life was ended. The wife snatched from her husband—the mother from her babe; the happy bride, yearning for her husband, was already in the icy arms of Death. That beneficence, that sweet womanly presence, that blessing no longer; the brother and husband must sit broken-hearted beside their empty bed and who should comfort them?

Dym packed and folded, and strove to remove the little comforts that Mrs. Chichester would require on her journey. The tears were streaming down Dorothy's stern face and over Phyllis's cheeks, but Dym had an odd lump in her throat and a strange ringing noise in her head. "I never forget my little friend;" some dull echo in her brain seemed to be repeating the words over and over—"little friend—little friend." They were leaving her behind, when she would be gone barefooted only to have kissed those gray eyes again. Hark how the wind howls; the rain is driving across the terrace; the beds are creaking in the garden below; doors open with a bang; lights flicker and go out.

"Leave out the seal-skin, Phyllis, and the blanket lined with black bear," Dym says, in a strange far-away voice. Where is she? Not here—in this softly-lighted room. Her face is damp with cold, as though she were dying; dreadful shadows dart through her frame; the piercing wind is lancing her with icy knives; strange faces glimmer through the darkness; the stars come out one by one. Who is this crying to her dear Lord to come to her—for Death is abroad and walks the field of night? Something warm and loving touches her; strong womanly hands raise her up; delicate warmth tingles in her frozen veins. Who wraps her in her own soft furs? who holds her the stiff hands? who kisses the poor cold cheek and lays it on her bosom? "He has sent me an angel. Oh, Honor! Honor! The one that was left and the other left."

Phyllis's rosy cheeks are quite blotched with crying; she looks at her young mistress with frightened eyes. Dym's lips are tightly pressed together, her face looks dark and wan, and a frown of pain furrows her brow.

"What are you doing, Phyllis? Mrs. Chichester will want her warm wadded cloak for to-morrow," she says, with quick impatience. She takes

snatched out of the girl's hands, and buckles it more tightly; she almost snatches the travelling cloak and bonnet and carries them down-stairs.

"You have been very quick, my dear; the carriage is not around yet," says Mrs. Chichester, quietly. Her soft voice and gentle movements contrast strangely with Dym's feverish eagerness. Dym notices the hands shake a little as the bonnet is adjusted; but nevertheless she makes the cup of coffee herself, and carries it around to Humphrey, and stands by him while he drinks it.

"Have you anything to say to me?" asks Dym, in her forlorn young voice. Humphrey raises his heavy eyes, and looks at her—a slim girlish figure, in a gray gown, standing under the great chandelier, with the heavy seal-skin dropping out of her arms. Her eyebrows seem to frown over her great watery eyes; a pathos of repressed impatience and trouble is in her voice.

"Come here, my dear;" and the kind hands draw her and hold her fast. "You must not fret more than you can help—remember that; but your brother will take care of you."

"Will!" Dym's face grows a little less contracted now.

"Yes, I shall send you to him. If I left you here you would make yourself sick, and that could help no one. Be brave and patient. We will write to you, Humphrey and I. You shall know all. Ah, my child, let me go. We must not say more to each other now." And the mother's lip trembled as Dym kissed and clung to her with a sudden appreciation of that dear and tender friend.

"Take care of her, Humphrey; oh, God bless you both!" cries poor Dym. She puts up her face and kisses Humphrey, laying her innocent cheek for a minute against his, as though she can think of no other way in which to express her sympathy. The wind blows about the gray gown wildly, the lamps splutter and wave round the little shining head, a long lock of dark hair streams over one shoulder; so she stands in the halo of the lighted threshold, with the shadows creeping to her very feet; so he goes into the night and darkness, and bestows her blessing with him. Hark how the storm-furrows rage above the valley; they can hear the hoarse voice of the Nid chafing against its banks; the elms are straining their mighty arms; the young rowan-trees are shivering like aspens. "There is no light there," says Dim, looking up at the angry black skies; and then she closes the door, and goes up to her room.

Mrs. Chichester had done kindly and wisely in bidding Dim go to her brother; the girl would have spent long miserable days wandering about the empty rooms and thinking of her friends. Action was a relief to her, as it is to all of us in our trouble. To sit waiting with folded hands for news that is long in coming; to watch the sorrowful faces of those we love, and see the sadness reflected in our own, and yet not to be able to minister to them or to lighten their burden,—this is the saddest part that could be allotted to us.

Dym lay and cried half the night for the loss of the friend she loved, and the sorrow that had come to those about her. She listened with a sore heart to the clock striking through the darkness as the storm lulled. When the wet gray dawn crept through the unshuttered window, she woke from a miserable dream, and with aching head and trembling fingers began to dress herself hurriedly.

She had told them that she should take the early train; and when Phyllis brought her a hot cup of coffee, she found her standing by the window with her bonnet in her hand, her little trunk packed, and Kiddle-a-wink sitting on her old plaid shawl.

"You will have a wet day for your journey, miss. Miles says there's a mort of clouds to come down yet, all the more that the wind's lulled," said Phyllis, stealing a sympathizing glance to the tired face and reddened eyelids of her young mistress.

"What does it matter, Phyllis?" returned Dym, listlessly; but she was glad of the coffee nevertheless. Miss Elliott was a great favorite in the household. Mrs. Bridget, the housekeeper, came up herself with the sandwiches for the young lady; even Miles, who could be high and mighty enough sometimes, thrust away his young coadjutor Stewart and himself put in the shawls and bags, and hoped Miss Elliott had all she wanted, and that she would not be tired by her long journey.

"Thank you, Miles, and you too, Stewart," returned Dym, with her sad little smile; even the kindness of these hirelings was sweet to the poor child; even the station-master touched his hat, and said a rough word or two of sympathy.

"This is a black day in Birstwith, miss: there is not a house in the whole village that has not lost a friend. I've put the box in the van; is the little dog going in with you, too?"

"Yes," returned Dym, absently. Kiddle-a-wink had already established himself on the opposite seat, and was looking out of the window.

Hark, the bell was tolling the dismal news. Dym leaned out for a moment eagerly, as the train moved from the platform. There was the little windy platform, with honest Dison stumping along it with a yellow dog at his heels; two children were carrying a great basket, and put it down to listen. "Mother says that's for the Good Lady," said one of them. The great rain-clouds were piling over the valley; the Nid was brawling and chafing over its boulders. There was the cottage beside the weir; it was empty still. The mill-garden looked dreary. Dym shivered and threw herself back on her seat, and the long weary journey had begun.

Dym had fallen asleep, and woke up stiff and tired as the train slackened speed and drew up at the platform of King's Cross Station, with its lights and bustle and crowd of passengers and porters, which was rather a bewildering scene to Dym's sore and aching eyes. Two or three passengers looked back at the little gray-gowned lady with the gray dog under her arm; the crisp dark hair had got disarranged under the neat bonnet, and lay in stray waves over her temples; a pale wistful face looked out of the cab-windows.

They were jolting into brightness again, wide shiny pavements, flaming gas-lights, a jostling of foot-passengers and umbrellas across the muddy road; the omnibus horses were steaming, the shop-windows reeking with moisture, as Dym turned into Camden Town; she suddenly remembered it was Saturday night.

High Street, Camden Town, drove its usual Saturday-night traffic in spite of the wet. The cheap vendors of provisions had set up their stalls, and chattered and cheated under the guttering tallow candles; thin women's faces hovered over the mountains of refuse fruit and odoriferous fish; the hot-pie man drove a fierce competition with the vendor of kidney potatoes; two or three coal-heavers were scalding themselves with cups of hot coffee; some ragged boys had collected round an apple-stall; the butchers' shops were flaring to the tune of "Come buy, buy;" a few slouching figures came out from the swing-doors of the great shining gin-palaces.

Dym looked out with amazed eyes; this was one of the phases of life in the great Saturday-night Babel. A hungry face or two, thin shawls and draggled gowns, a hubbub of voices, of straggling hoofs, then the dark bridge and the canal, more stalls and shops and brightness, a quiet corner

with some almshouses, and a clock striking rain splashing down on the empty pavement on the iron railway, and down into the modest villas, and on the snowy steps of Paradise Row.

Dym paid the man and ran in, with a hail to Mrs. Maynard. It was Saturday night, and she knew she should find Will at home.

The cheerful glow of a little fire shone from the half-opened door; but the candlestick on the table still unlighted. Will was not over his books or papers as usual. The tea-cups were at one end still untouched; a kettle cosily on the hob; there was a curious faintness of ether in the room, and Will was in his chair half asleep before the fire.

He did not rise when Dym came in, but held out his hand to her with a look of surprise.

"My dear child, why did you not let me know you were coming up? Who would have thought of seeing you to-night?" but his look said she was very welcome.

"Were you asleep, Will?"

"I believe I was,"—yawning and stretching himself—"I thought it was part of my dream when you came in and woke me. What time is it now, and when did you arrive in London?"

"I have only just come on from King's Cross. What is the matter, Will?—you look pale." Mrs. Maynard was keeping her own face out of sight, while Will Maynard lighted the candles and bustled about the room.

"Mr. Elliot has not been well. I think he wanted you, miss. You have been sleeping so long, sir, for I opened the door once or twice quietly and you never heard me, nor Dick; but Dick creeps about like a little mouse."

"Not well, Will?"

"A return of my old pain. Never mind, it's better now. Make my sister some tea, Mrs. Maynard. And take off your bonnet, Dym, and sit down by the fire; I can't see you while you're standing behind me." And he took down the cold little hand from his shoulder, and put it in front of him.

"Oh, Will, how dreadfully white you look! your lips are quite dark! I could not half see you before."

"Pooh! nonsense! the pain is gone; I'm not stupid from my long nap."

But Dym noticed that he spoke feebly, and aided himself with difficulty.

"You are not much to look at yourself, Dym ; why, foolish girl, there are positively tears in your eyes. Indeed, I am better now."

"Yes, I know, Will, but it is not that ; we have had such terrible news from Mentone ; and Mrs. Chichester and Humphrey went last night ; and they left me alone, and—and—" But Dym could not speak any more for crying.

"You need not tell me ; I know, I can guess," returned Will, quickly. Dym had put down her head on his knee, and she did not see the strange look that came over his face ; one hand was hidden for a long time within his waistcoat, and his lips grew darker, and his breath was drawn with difficulty for a moment. "I knew it must come," he muttered, when the paroxysm had passed, and he wiped the cold perspiration that stood in drops on his forehead. Will was used to these attacks now ; but he was, nevertheless, very glad that Dym's face was hidden on his knee.

"Oh, Will, how could you know ? It seems all so sudden and dreadful ; just when he—when they were so happy."

Will pressed his hand heavily on Dym's head.

"Yes, it is just that. How mysterious are His ways ! Poor Chichester ! it will go hardly with him, I fear. Only one year of happiness, and a lifetime of regret. How strange that you should have come and told me this to-night !"

"Why to-night, dear ?"

"Because—because—well, I will not tell you ; I have queer thoughts sometimes. I did not want you to say it out ; I seemed to know all about it, as though I had expected it all my life long."

"Dear Will, it is not like you to be fanciful ; how could you know that Honor was dead ?" And Dym's lips parted anxiously as she looked at him. Will was hardly like himself to-night.

He answered her with a smile, half sweet, half sad,—

"Dym, do you believe in dreams ?"

"Why, no, Will, of course not."

"I used to say the same," he continued, musingly. "Daniel was a man of dreams ; but then he was 'greatly beloved.' I wonder, if we kept our hands and hearts pure, whether our guardian angel might sometimes come and whisper them to us. I had a strange dream once."

"You have never told it to me, Will."

"I never spoke of it to any one. I was afraid to breathe it even to myself. I seemed asleep and yet awake. It has haunted me ever since."

"You will tell it to me, dear ?"

"When I woke it seemed to me as though the meaning was quite clear. Such a beautiful life could not die out without a sign. He thought he had her safe, poor wretch ; one might as well have tried to detain an angel." He seemed as though he were speaking to himself, but Dym held her breath, quite awe-struck, as she listened.

"This angel must have had a woman's face, for the hand was hers. Perhaps you are right, and I am fanciful ; but your news has not surprised me."

"You forget ; I have told you nothing, Will."

"Nothing but what I knew. How did it happen ? Is the child alive ? I hope so, for Chichester's sake."

"Indeed we don't know," returned Dym, weeping ; "the telegram said nothing, but that she was gone. Humphrey said he must set out at once, and so did Mrs. Chichester ; they have both promised to write and tell us all."

"And you have heard nothing ?" returned Will, disappointed ; "you don't know even if she took her child with her or left it to comfort him. She would rather do that, I know. I wish Mentone were not so far off, and that I could go to him."

"Oh, Will, if you only could go !"

"What would be the good of it to either of us ? He would wring my hand and look me in the face, but he would say no word to me. I should not dare to speak to him, he would be so hard and fierce and speechless in his misery."

"You are the only one to whom he would listen."

Will shook his head. "I tell you no, Dym ; if he opened his mouth to me it would be to rail against Heaven, and curse his fate. Poor Chichester ! we must pray for him ; but no spoken sympathy can avail him."

"And his mother ?"

"He is beyond her now ; he will put away her arms from about him and say terrible words, and go away and shut himself up with his dead. Her tears will craze him. She will want him to eat and drink, and to keep his miserable life in him ; and one of these days, when it grows too intolerable, he will leave you all."

"Oh, Will, cease, cease ; you frighten me."

"He will come back, my girl," returned Will,

looking at her with his gentle smile. "I know him so well. These noble souls are not left to wander away into outer darkness. Do you remember the story of Sintram, Dym, and how the Lady Verena prayed for him from behind her convent grating? Don't you think that a wife in Paradise prays for her husband on earth?"

"Do you think so, Will?"

"My child, why should we doubt? There are sudden horizons, where heaven and earth seem to touch and mingle. We believe 'in the communion of saints.'"

"Do you really think she will watch over him, Will?"

"You would call me fanciful again if I were to tell you some of my thoughts. We are getting too material nowadays, Dym, and so the finer voices get hushed out of the universe. We talk too much, and listen too little."

Dym sat on the floor, with her earnest face propped on her hands; her bonnet had fallen off, and her hair fell into dark shining waves. What a childish sweet face it was, in spite of its paleness and tear-stains! Something pathetic in Dym's attitude seemed to strike Will, and he suddenly bent down and kissed her forehead.

"My poor tired little Dym!"

"It rests me so to hear you talk, Will."

He gave her a full bright smile of understanding.

"I think we have talked enough now. Pour out the tea, Dym, and give me a cup; I must go out directly."

"To-night?" exclaimed his sister, in surprise; "there is no service."

"The boys will be practicing, though. No, don't keep me," as though he anticipated the remonstrance on Dym's lips; "I must go down to the church to-night." And Dym knew him too well to venture an objection.

She waited for him to come back until she was tired.

Kiddle-a-wink had curled himself on his chair and had gone to sleep, and Dym had fallen into a half doze over her sad thoughts; she was thinking what Will had said about Guy Chichester, and longing, with a vain fruitless longing, to see him again, and judge for herself how he looked. "Do the finer voices get hushed?" she thought, with a dreamy remembrance of Will's speech. "If I held my breath and listened, could I hear Honor's voice?" And it almost seemed to the weary girl

as though Honor's beautiful face were growing out of the stillness and firelight: the frank sweet eyes, the powerful gentle brow, the lips closely folded yet smiling. "I will do anything for you, Will," Dym seemed to be saying; and Honor, somebody else, answered, "By and by."

"How long you have been, Will!" opening eyes wide as Will came in and closed the door softly after him.

He came to her side with a face of grave brightness.

"What, up still, naughty child? I thought you would have gone to bed long ago; do you know it is eleven o'clock?"

"I am very tired," returned Dym, sleepily; "where have you been all this time, Will?"

"Where should I have been?" he returned quietly; "the church was nice and warm, so I need not be afraid of my vigil; the rain has stopped too; and there is such a moon!" and Will's face seemed almost to reflect some of its light still, dazzling Dym, holding her chamber candlestick and looking at him through half-closed eyes.

"Try and sleep well, precious child; we must both try to gain strength for to-morrow. I have been making up my mind to-night that I must tell you something that you ought to know; but to-morrow will do. My poor Dym," holding her very tightly for a moment, "you are very fond of your old Will Conqueror, as you call him."

Dym's eyes were not a bit drowsy now.

"Well, I would not have you love me less, if it caused you ever so much sorrow. God means to love each other, and so to draw each other; we must still keep hold of the 'silver cord,' though it is loosed sometimes."

"I wish I were as good as you, Will," returned the girl, humbly. She did not understand him at the least, only in a vague sort of way she thought how Will's sweet nature seemed to distill the bitterness out of sorrow itself; he had taken her new with the air of a man who is given to look on gravely at life. The terrible surprise had hardly elicited an exclamation; throughout their talk he had sat dreamily—self-absorbed—with the wondering look of one who is dealing with mysteries.

Dym was too weary even for sorrow to-night; she crept up to her little garret, next to Dick's, and chirped out a good-night to her as she passed, as had soon forgotten her own and other people's troubles.

As Will closed the door after her, a little of the brightness died out of his face, and he sat down sighing in his easy-chair.

He had been praying for Guy Chichester to-night, wrestling for him as he had never wrestled for himself; the links that had bound these two men together had never been stronger than to-night. Will felt a strange intense longing to press his friend's hand again and look into his dark grief-worn face; while Guy, stretching out his arms over his dead wife's face in the fierce writhings of despair, thought that there was only one voice he would bear to hear in his misery, and that was Will's.

Will raked up the dying embers of the fire again and fed it with fresh fuel; he had much to do to-night. With the clearness and perspicuity that sometimes come to us under the influence of some great emotion, he had set himself to review his past life: again the years passed before him, one after the other, each with its several marks of joy and sorrow, with its burden of sins and regrets.

"I have done so little; it has been so short, after all; I have not earned my rest," he thought, sadly, and his head drooped on his breast.

He remembered how an old pauper had recognized this instinct of longing once.

"We have all our troubles to bear," he had said to her, as he sat beside her in the great white-washed ward, listening to her dismal category of woes—Jem was at sea, and Susan was too poor to come to her, and it was hard dying with naught but strange faces about her. "One may have food and raiment, and yet feel sad and lonely at times." Something in the patient tones seemed to touch her; she was a hard, battered-looking woman, with a tanned face and bristling gray hair, and Will's face looked strangely youthful beside hers.

"Ay, ay, we all have our troubles, paupers as well as gentlefolks; thou'rt a lad to be a parson; thou'rt the sort women love; but I'm thinking the Lord loves thee, too, and He won't let thee be long lonesome."

Was not old Susan right? had it been long, after all? would he change his lot with Guy Chichester? No, a hundred times no.

"'He doeth all things well.' Why have I been so impatient, so distrustful? He has made this pain easy to bear—a joy almost. 'Lord, now lettest thou thy servant'"—we can guess how the humble soul chanted his *Nunc Dimittis*. Unhappy!—the length and breadth and depth of his peace seemed to flood the poor room with light; he stretched himself on his bed with a smile on his face; he was tired, and the morrow's work was before him. "I think I shall sleep now," thought Will, as he turned his face to the wall; and almost before the words left his lips he slept.

That night William Elliott had another dream. He thought he was standing on a strange place, neither land nor water, but on some shifting substance that gave way beneath his feet. A heavy burden was on his back, something that trailed behind him and dragged him back, and yet he dared not try to free himself.

"I am so tired of it all," he heard himself say; and the sound of his voice seemed to echo strangely; "so tired of it all."

"Conqueror, and tired!" said a voice that thrilled him strangely. "Look here!" and suddenly the weight slipped from him. At his feet lay a broken cross, and a crown of scarlet rowanberries lay beside it; but as he stooped and picked it up, they changed and brightened into gold.

## SIGNALS AND SIGNALING.

BY CAPTAIN S. B. LUCE, U.S.N.

SIGNALS, or arbitrary signs made for the purpose of conveying intelligence, have been used from the very earliest times, not only in connection with military and naval affairs, but by all classes and conditions of people, from the gay Parisienne who signals her lover by a camelia in her hair, to the dusky Indian whose bundle of arrows is the ominous signal of war.

According to sacred history the same Divine authority that made the everlasting stars "for signs," or night signals, commanded Moses to make trumpets for sounding the assembly, and for the "journeying of the camps;" at the same time a regular set of trumpet calls, or signals, was prescribed. Numbers 10.

The Israelites had a signal called *Nem*, which

consisted of a flag attached to a long pole. As soon as this signal was observed the war-cry was raised and the trumpets blown. "How long shall I see the standard and hear the sound of the trumpets?" exclaims the prophet Jeremiah. And again, "Then he lifteth up an ensign in the mountains: and when he bloweth a trumpet, hear ye."

"The Jewish ensign," says Calmet, "was a long pole; at the end of which was a kind of chafing-dish made of iron bars, which held a fire, and the light, shape, etc. of which denoted the party to whom it belonged." This undoubtedly refers to fire-signals, the existence of which is further shown by the figure used by Isaiah (30): "As a beacon upon the top of a mountain and as an ensign on a hill;" so that when the prophet Jeremiah admonished the children of Benjamin to "blow the trumpet in Tekoa and set up a sign of fire in Beth-haccerem," he simply referred to a system of signaling then well known—the trumpet and beacon-fires. It is with the latter that Homer compares the bright armor of "divine Achilles," as seen from beleaguered Troy:

"And, like the moon, the broad, refulgent shield,  
Blaz'd with long rays, and gleam'd athwart the field.  
So to night wandering sailors, pale with fears,  
Wide o'er the watery waste a light appears;  
Which, on the far-seen mountain, blazing high,  
Streams from some lonely watch-tower to the sky."

The value of beacon-fires as signals was very limited, however, and their significance had to be previously agreed upon. Thus Agamemnon, on setting out for Troy, promised Clytemnestra that on the fall of the city he would give her notice by means of lights kindled for that purpose. He kept his word, as we learn from the tragedy of *Æschylus*, the sentinel appointed to watch for the signal declaring he had spent many a dreary night at his post. We may readily believe that intelligence of the fall of Troy was sent in this way, for, when Athens was occupied by the Persians the second time, the news was transmitted to Sardis, in Asia, a greater distance even, by means of fire-signals.

Probably the earliest naval night-signal known to history or tradition is the one referred to by Virgil. The Trojans having drawn the wooden horse within their gates, a light displayed from Agamemnon's vessel was a signal to the traitor Linon to release Ulysses and his friends. The Greeks had retired with their fleet to the island of Tenedos, under pretence of abandoning the siege:

"And now, from Tenedos set free,  
The Greeks are sailing on the sea,  
Bound for the shore where erst they  
Beneath the still moon's friendly ray  
When, in a moment, leaps to sight  
On the King's ship the signal light,  
And Linon, screened by partial fate,  
Unlocks the pine-wood prison's gate."

Fire-signals are very often mentioned in history. *Aeneas Tacticus*, a contemporary of Aristotle and author of a treatise on the art of war, gives the following description of what was then among the first improvements in beacon-fires: Two earthen vessels of equal size (four and one-half feet deep by one and one-half feet in diameter he gives as the dimensions) were filled with water; on the surface of each was placed a piece of cork having attached to it a graduated rod. At the several graduations on the rods, characters or letters were inscribed, which, in war, both rods corresponding in every particular. Each vessel is provided at its bottom with a cock. At a signal station furnished with these instruments a light is displayed to call attention. On this being observed at another similar station, it is to be answered by displaying another light. The lights are then screened, the cocks opened, the water allowed to flow, and the corks to descend. When the message transmitted has reached the mouth of the vessel, the light is again displayed and both cocks closed. If everything has been conducted properly, the readings on the rods will be the same at both stations. Polybius found fault with this as being limited in its sphere of action, and explained the improved method by which the twenty-four letters of the Greek alphabet were placed on a rod, five columns of five letters each, save the last which had but four. By means of lights each letter of a word was to be indicated by showing the column and then the line in which it was found. (Polybius, Book X., Chapter 2.) The existence of some regular system of night-signals about the time of which we are speaking, is shown by the following: "That the early knowledge of the motions of the enemy might be obtained, Philip of Macedon, then operating in Asia, sent orders to the people of Phrygia and those of Euboea that they should inform him of everything that should happen by signals of fire, torches raised upon Tisæum, a mountain of Phrygia, which stood convenient for convey-

kind of notice to the parts mentioned." (Polybius, Book X., Chapter 1.) As the army and the navy were not as distinctly separated in those days as at present, there is little doubt that the same system of night-signaling was known to the fleet. Livy informs us that Scipio Africanus when personally superintending the embarkation of the troops for the African campaign, directed that all the ships of war should carry one light as a distinction by night, the transports (of which there were four hundred), two each, while the ships of the commander-in-chief was to carry three lights; the latter sign being common to all navies to this day.

Day-signals also are frequently mentioned as being in common use among the navies of antiquity; and in such a manner as to lead to the conclusion that they were adequate for directing the evolutions of a large fleet. In one of the battles off Artemesium, just before the fall of Thermopylae, the holding up of a shield is particularly mentioned as being used as a signal to the fleet; and, later, when the Spartan Lysander swooped like an eagle upon the Athenians, under Conon, at Goat's River in the Hellespont, the signal for the Lacedemonian fleet to advance was made from one of the lookout ships by "holding up a bright shield." The Greeks had a standard the elevation of which was the signal for joining battle. On the standard of Athens was represented the owl of Minerva. The galley of Alcibiades was known by its sail glowing with the rich purple dye of Tyre, as was that of the Antonia, the galley of Cleopatra, some generations later; and, generally, in the Roman fleet the purple sail was the sign of an admiral's ship.

In connection with the signals of the ancients may be mentioned the method of secret writing, by the *scytale* of the Spartans, once made use of to recall a celebrated admiral. The instrument consisted of a black staff which was intrusted to the general or admiral on his engaging in active service. A staff precisely similar was retained by the magistrates. To send a communication they wrote the message on a strip of parchment wrapped about the staff; then, unwinding the band, it was sent by the hands of a trusty messenger to the chief. Perfectly unintelligible when expanded it could be read only by him to whose care the staff was confided.

The *scytale* was sent to Pausanias,<sup>1</sup> admiral of

<sup>1</sup> One was sent to Lysander also.—See Plutarch's Lives.

the Lacedemonian fleet in the Hellespont, who was suspected by the ephors at Sparta of treason. "Stay behind the herald," said the stern and laconic missive, "and war is declared against you by the Spartans." He dared not disobey the dread command. In the Roman army the signal to prepare for battle was a red flag displayed on a spear from the top of the Prætorium. The trumpet was also used to sound "the assembly," and for other signals. (Cæsar, Book II., Chapter 20.)

Leo VI. surnamed the Wise, Emperor of the Roman Empire in the East (A.D. 886–911), in his instructions in naval tactics, says: "You will have in your trireme a signal flag conspicuously placed so that you may signify to the fleet the desired movements—whether to engage in battle, retreat, surround the enemy, or reinforce certain parts of the line; to increase or slacken speed; to go in ambush<sup>2</sup> or come out to attack, or any other orders it may be necessary to give; to this end all should keep a good lookout on your trireme. In the noise and confusion of battle neither the voice nor the trumpet will suffice to convey orders." He then proceeds to explain the method of signaling by the *kamelankion* (a sort of cap, probably like our liberty cap) surmounting a spear, or by the *phoinikis* (a red flag), which was also the signal for battle. The spear with its signal-flag, he says, was to be held upright, inclined to the right, to the left, or to the front; shaken, elevated, or depressed as might be necessary; adding, "as the ancients did." He concludes by saying: "But in order to prevent mistakes you will with your own hand make the signals." (Tactics of Leo, Chapter 19., 39, 40, 41.) This is probably the only explanation of the naval signal system of the ancients extant; a system too strikingly like that of our present army code to escape notice.

The next notable instance of naval signaling is to be found in the account of the fleet commanded by King Richard I. of England during his crusade against the Saracens. From "the Kynges own galeie, he cal'd it *Trenc the mere*" (Plow the sea), signals were made by the trumpet. In describing one of the fleet formations (the order of convoy) after leaving Messina, April, 1191, the account says: "The lines were so close that a trumpet could be heard from one to the other, and each ship was

<sup>2</sup> To be in ambush was to be under cover of an island or headland, in the mouth of a river, etc., so as to be out of the sight of the enemy.

near enough her consort to communicate by hailing." At the battle of Sluys, one hundred and forty-six years after, trumpets still seem to be used for making signals. The English fleet, commanded by Edward III. in person, advanced to the sound of trumpets, and Froissart says, "The French joined battle with many trumpets and other instruments of martial music; and the English giving altogether a mighty shout, it sounded horribly upon the waters" (A.D. 1337). We are not without negative evidence, however, in regard to the use, at this period, of naval signals. In what is known as the "Black Book of the Admiralty," written some time before A.D. 1351 in Norman French, there some curious items of information in regard to the navy regulations of the time. "If the King be in the fleet there shall be in his ship three great lanthorns, arranged in the form of a triangle." "All nights when the fleet is on the sea, the admiral ought to carry two great lanthorns in the two parts of the masthead of the ship in which he is." "When it shall please the admiral to assemble the captains and masters of the fleet to advise with them, he shall carry high in the middle of the mast of his ship, a *Banner of Council*, so that in all parts of the fleet it may be known." "In case that any ship of the fleet perceive any vessel of the enemy on the sea then he shall hoist a banner on high, whereby the fleet may have cognisance," etc. But the principal signals are, signals or motions of the admiral's ship. "No master of a ship shall cross his sail aloft before the admiral has done so; directly afterwards all the other ships shall cross their sails." "No ship shall cast anchor before the admiral shall have anchored." These directions indicate that the only signals in the case mentioned, were the motions of the commander-in-chief, which the fleet was commanded to follow; an injunction contained in every modern signal-book. The fact of this system being in use is curiously confirmed in the account of the movements preceding the battle of Agincourt. "The King (Henry V.) ordered the sail-yard of the Trinity Royal to be hoisted to the middle of her mast, indicating that he was ready to put to sea and that all vessels in the neighboring havens were to hasten to him." The fleet, consisting of some fourteen hundred vessels of various kinds, left England August 11, 1415, and soon

after anchored in the Seine, about three miles from Harfluer, where the King proposed to disembark and he desired a banner to be hoisted as a signal for his captains to attend a council; "the banner of council" before mentioned. (Ibid.) Another of the regulations referred to required that the divisional officers of a fleet at sea, to send their commander-in-chief before sunset, so as to ascertain the course to be steered during the night, and to communicate it to their several commanders. The fact that no other signals are mentioned in the present document going so much into detail leads to the conclusion that there were no others in use in the English navy at this time. As far as can be ascertained, signals made by flags were first used in the reign of Queen Elizabeth.

Sir William Monson remarks, in one of his Naval Tracts (1587), "The shewing or taking of the Flag in the Admiral's Ship being considered and resolved of beforehand, is a way to direct a Fleet in many Cases, as fully as I have had given his Instructions by Writing." The flag carried under the Poop of a ship shewed the Admiral's grace, and never used but when it was won from an enemy."

It was not, however, until the "Fighting Instructions" were issued by the Duke of York in 1665, then High Admiral of England, that the fleet were formed into anything like a regular system. Even up to a comparatively recent period (the early part of the present century) certain signals were used instead of flags. *To loose the foretopsail and fire one gun*,<sup>2</sup> for example, was a signal for sailing. All boats and persons to return to their respective ships, *the foretopgallant sail hoisted, and one gun*. To unmoor, *the foretopsail loosed*. To moor, *mizzen topsail hoisted, and cleared up*, etc. As a further illustration, the following expressions as the following may be met in English naval history. "The Phaeton made a well known signal for a fleet by *letting fly the foretopsail and firing two guns in quick succession*." Again, the look-out frigate made a call in the fleet "by hoisting the Dutch E flag." Signals by arbitrary signs made with sails, as given above were used by our Continental fleet in 1776 (see Preble's "History of the American Flag," page 163).

<sup>1</sup> History of the Royal Navy by Sir Harris Nicolas.

<sup>2</sup> From this signal originated the expression (a custom) of paying one's bills with a foretopsail.

most celebrated naval signals of modern times was Nelson's last signal, hoisted on board the *Victory* on October 21, 1805, on going into action against the allied French and Spanish fleets off Cape St. Vincent. The signal was "England expects every man to do his duty," the signal hoisted by Perry, on board the *USS Constitution*, on September 10, 1813, containing the words of the gallant Lawrence, "Don't give up," an expression which has passed into a rallying cry in the United States Navy.

Signals now in common use among sea-faring vessels are made by flags of various shapes and colors. Ten flags in one system represent the nine digits, and duplicate numbers, making ten as they are commonly called, and three colors.

Any number under ten thousand may be hoisted without having more than four flags. The lower flag of the hoist represents the units. Now if the signal-book, instead of this system, be arranged with words or figures covering every contingency likely to arise in navigation, and all numbered in regular order, it is very easy to see how two vessels, or a vessel and a signal station on shore, both being provided with the necessary apparatus, may freely communicate with each other.

Signal-books used by national vessels is a complete system of naval tactics, so that the commander has the means of communicating to his fleet the orders necessary to the management of all the evolutions incident to maneuvers or battle.

The International Code of Signals for the use of merchant vessels, which originated in England, is a very important step in the right direction. This excellent code eighteen consonants and vowels are used as intermediaries instead of letters just explained, the advantage being that all consonants are susceptible of so many mutations that seventy-eight thousand different and forty-two signals may be made by hoisting more than four flags at a time. As every country has the signal-book of this code in its own language, vessels of different nations can communicate with each other as easily as those sailing under the same flag. An advantage in connection with this system is the establishment of coast signal stations in various countries, which afford signal communication between ships in the offing and their owners on shore. France has one hundred and

twenty-four of such stations on her coasts. The United States has about five, and the establishment of these is due entirely to private enterprise.

One of the most useful codes of signaling, however, common to the naval or military service is that popularly known as the "Wig-Wag," otherwise called the Army Code, the invention of the Chief Signal Officer, General A. J. Myer, United States Army.

This code requires no signal-book, and scarcely any apparatus, though to make a skillful operator one should have a good memory and much practice. In almost every signal system there must be an intermediary lying between the sign and its signification. In the army code the intermediaries are the numbers 1, 2 and 3, the letters of the alphabet being represented by combinations of 1 and 2 to four places; and the punctuation necessary in this method effected by the 3. Having made up an alphabet of *ones* and *twos*, and determined on signs to represent each, we can, with an additional sign for *three*, spell out with a little practice long messages with tolerable rapidity and accuracy.

For example, let us represent A by 22, B by 2112, C by 121, D by 222, and so-forth. Then say that a full blast of a whistle, a motion of the right hand, or a wink with the right eye shall mean *one*; two short blasts of the whistle, a motion of the left hand, or a wink of the left eye shall mean *two*, and a prolonged blast, a movement of both hands, or the closing of both eyes shall stand for *three*. With these signs it is plain that the operator may indicate all the letters of a message, separating the words from each other by the sign representing *three*, and closing the message by a succession of *threes*. In practice the operator holding a flag staff to his front centre and in a vertical position, wags his flag (or torch at night), to the right to represent *one*, to his left to make *two*, and to the front for *three*; the flag or torch in each case describing a little more than a quarter of a circle.

The ease with which messages, transmitted by this system, may be read by an enemy has been urged as an objection to it. A curious case in illustration of this occurred during the late war, in the blockading squadron off Charleston, South Carolina. On one occasion the commanding officer of one of the vessels of the blockading squadron "wig-wagged" to the commanding officer of another vessel, inviting him to dinner, and

offering as an inducement the then uncommon delicacy of "roast pig and potatoes." This message was read (intercepted) by the Confederate signal-man stationed at Fort Moultrie, who, thinking possibly that "roast pig and potatoes" concealed some secret meaning, transmitted the message to the City of Charleston. But in its transmission to Charleston it was again intercepted by a Sergeant of the United States Signal Corps, stationed on Morris Island and by him entered in his journal, where it was subsequently found by the officer to whom the invitation had been extended.

Somewhat later the Chief Signal officer devised a very simple contrivance by means of which the symbols could be changed with every message, rendering it almost impossible for the signals to be interpreted by any one but the person for whom they were intended.

But the same objection may be urged against any system the key of which may be guessed or stolen. In the example already given of the Phæton making "the well-known signal of a fleet in sight," that signal was merely a ruse to make the French, greatly superior in numbers to the English, and who were known to be in possession of a copy of the English signal book, believe that Lord Bridport's fleet was in sight. The ruse was successful and the French retired.

From the foregoing description of the army code it will be seen that it is similar to that given by the Emperor Leo VI., who directed his son to signal "as the ancients did." And from the frequency with which "fire-signals" are mentioned in ancient history it is fair to infer that we also follow them in substituting at night the torch for the flag. Taken in a broader sense, and regarding

a signal as a mere sign, almost every one is able to recall instances of signals made by which have suggested themselves at the moment.

Blondel's simple lay signaled to the Hearted Richard, immured in a dismal A tower, that his faithful follower was near. mother, baring her bosom to her infant, p on the precipices' verge, made but "a signal recall," to draw her darling home; and the fisherman's wife who set fire to her own light the way to safety, her husbands' storm-bark, made a "fire-signal" more glorious ever lit a warlike Greek to deeds of arms. who can picture to his mind's eye without error that grand signal in the sky:

"Ho! my Comrades, see the Signal  
Waving in the sky!  
Reinforcements now appearing  
Victory is nigh!

Hold the fort, for I am coming,  
Jesus signals still;  
Wave the answer back to Heaven  
'By thy grace we will.'

Reference was made at the beginning to everlasting signs that were placed in the firmament of the Heaven, "when the morning stars together, and all the sons of God shouted for joy. From contemplating the signs of the firmament, Time, who can refrain from looking to the end, and thinking with awe of that last great day, we must all obey! when "the trumpet sound, and the dead shall be raised incorruptible, and we shall be changed."

"The dead in Christ—shall first arise  
At the last trumpet's sounding,  
Caught up to meet Him in the skies  
With joy their Lord surrounding!"

## A CHAT ABOUT THE DOCTOR.

BY MRS. B. F. BAER.

### IN TWO CHAPTERS.—CHAPTER I.

I WAS sick. We had just moved to the city, too ill to make any objection. So I quietly quiesced, and Dr. Hubner was called.

He came, and the moment he entered the story, an idyl, seemed to attach itself to his calm face, with its expression of pride and conscious power. Looking up at him, as he proceeded leisurely to count my pulse, I felt wondering what his life, his past life, had been;

I turned my head wearily. I was too ill to talk,

it had been passed; with whom it had been spent, and whether there was really a story connected with it.

Just as the artist holds his breath as a vision of loveliness flits before him—a vision of which he has been dreaming, for whom he has been sighing, hopeless it may be, despairing of ever finding his ideal, in order to transfer the glorious features to canvas—just so I felt that the man before me was a hero bearing an unwritten history in his palm.

The days wore on, and each day I found myself building air-castles about the doctor's past, and always overthrowing the last after his daily visit. He was fond of children, fond of fun, brimful of witty sayings, and running over with anecdotes which were so many means that he used to beguile the tedium of the sick chamber.

My illness did not prove ephemeral; and after a weary fight came the long, tedious hours of convalescence, when I came to see and learn more of the doctor, who had grown to be a friend with us as well as medical adviser. With my little daughter on his knee one day, he turned to my husband to inquire his age.

"Thirty years old," he echoed, "and such a family as this about you! Put seven years to your age, and you will have mine without wife or children."

"Never married?" asked my husband.

"No."

With that astonishing monosyllable every gossamer-castle I had ever built vanished into thin air. They had all, every one of them without an exception, culminated in a brilliant, happy marriage. I had pictured a home, a perfect home, wreathed with garlands of love, and festooned with evergreens of harmony. I had fancied his children climbing about his knee and nestling on his bosom, just as my little girl was doing at this moment, when lo! at one fell stroke the entire structure crumbled into dust.

I think something of the shock of surprise must have shown itself on my face, for I caught his questioning glance, and turned away my eyes to hide their expression. I don't know why I should have been shocked, but I was. It seemed to me that the gentleman, talking so pleasantly to my husband with the shady side of life almost on him, had made a great mistake; and my imagination at once began to suggest reasons for it. In all my experience I had never met one who appeared to appreciate home more than Dr. Hubner. His

respect for woman showed itself in the manner which he always used in speaking of her, and I had passed many a pleasant hour in sketching the one whom he had selected from the busy world to brighten his fireside and gladden his hearth.

I had not spoken a word since that amazing revelation, when he arose to go, and, looking at me with a genial, sunny smile on his lips, he asked:

"Do you ever read fiction, madam? I am afraid you think too much."

"Sometimes; quite often, in fact, I read works of fiction," I replied, wondering at the question.

"Then I shall bring you one or two good books to-morrow? Pleasant reading will do you more good than so much dreaming."

"Have you Longfellow's 'Hyperion?'" I asked. "You spoke of it a few days ago. I should like to read it."

"Then you shall. I will send it to you this afternoon. I must be off again, so good-by."

"I never was so disappointed in my life," I cried, as soon as his carriage was driven away.

"By what?" asked my husband, looking up anxiously.

"Because Dr. Hubner isn't married. I never dreamed that he was single."

"Is that all? Really, I thought some terrible trial had suddenly beset your path. I am most agreeably disappointed. But is it such a crime, this non-marital state?"

"Not a crime, certainly, but no more than two steps removed," I answered, with all the capriciousness of the invalid. "I have been drawing pretty pictures of a domestic temple, had installed him as its god, with a stately Diana offering sweet incense on his altar; dreaming on and on, only to find in the end that he is a consummate old bachelor. More than half his glory has departed."

My husband, with the merriest twinkle of his eye, was about to reply, when the door was thrown open to admit Jeanie, the housemaid.

"Here's the book, ma'am. The doctor says that he had to drive by the door, and just brought it along."

I took it with the least twinge of conscience. Here, I had been berating him soundly for what was none of my business, to say the least, while he, in the goodness of a good heart and in the midst of a thousand cares, had remembered my small wish sufficiently to attend to it at once.

I couldn't look up—I was crushed this time—to

meet the raillery in my husband's eyes, so I settled myself comfortably, and opened the volume in my hand running through the pages—a habit of mine, by the way—like a child toying with a piece of cake before biting it.

As I turned page after page, and noticed a paragraph scored here, and a sentence there, an Utopian idea flashed over me that I might read a part of the doctor's past from this book; that I might find in these scored paragraphs a reason for his being single at thirty-seven.

This curiosity added a new zest to the haste with which I turned back to the title-page—I lost no time in so doing—and confidentially, kind reader, I will tell you the result.

The first marked passage that met my view was the one where Longfellow, in describing his hero, Paul Flemming, says:

"In all things he acted more from impulse than from fixed principles; as is the case with most young men. Indeed, his principles hardly had time to take root; for he pulled them all up, every now and then, as children do the flowers they have planted—to see if they are growing."

Far enough from matrimony goodness knows! but yet I could, or thought I could, detect an element of the doctor's character in that scored passage. It took him back to his youth, when his principles were forming, his character perfecting itself, and his studies laying a broad foundation for a useful after career; all watched by a careful mother, who was ever ready to prune and reset the tender plants which adolescence and inexperience were constantly pulling up. I laughed softly to myself in the exultation of the moment, exclaiming: "Very well, my reticent doctor; I will solve the mysterious in your character before I finish this book, or I mistake me greatly;" and passed on, charmed by the author's style to a forgetfulness of my purpose, until I came abruptly on this sentence:

"One half the world must sweat and groan, that the other half may dream;" with a pencil-stroke drawn lightly across it.

"And he belongs to the first half," I ejaculated mentally. "He has been a close student; has left no means untried to perfect himself for his profession; and now, at thirty-seven, the silver strands sprinkled so profusely through his black locks attest that he has been no idle dreamer in this world of ours."

"My dear," said my husband, looking over my shoulder, "when do you propose to finish that

book? I thought you boasted somewhat of a rapid reader. You have been reading hours, and have only reached the twenty page, I see."

"Never mind! There's more on the than printed words. I am going to score doctor's past from it."

"I hope your illness has not left you deranged," he replied. "Pray, how do you expect to accomplish such an impossible scheme?"

"By means of the scored lines, true woman's wit to fill up the blanks. And please be kind enough to leave me to my proposed task," I pleaded. "It amuses me," I turned back to the volume on my lap, soon came across the following, heavily marked:

"Already the trees are bearded with snow, and the two broad branches of yonder pine like the white mustache of some old baron."

I could but smile at the quaint illustration while in fancy I saw my friend lying back in his chair enjoying a hearty laugh as the full force of the simile dawned on him; for no one could have given a witty answer or note a sharp saying so soon as he. And as I plunged deeper and deeper into this strangest of strangely weird books, I found myself wondering if the fascination that had held over him had been engendered by the loneliness of life, which was the inevitable result of his isolated state.

"O they do greatly err, who think that all the poetry which cities have," said I to his friend Flemming; and my friend's keen appreciation, had drawn his pencil across the lines. Further on, as the baron continued his remarks, another paragraph had met the same fate.

"The mind of the scholar, if you would have it large and liberal, must come in contact with the world. It is better that his armor should be somewhat bruised by rude encounter even, than forever rusting on the wall."

"Another element in his character," I said. "He couldn't pass that by without a mark." He is always ready to bare his breast to criticism, and to throw himself into the breach. I knew this, because, in an unusually committal mood one day, he had told me of his eagles in his profession, and how he was still climbing his way upward, his goal being the topmost rung of the ladder. I admired the firm ringed tones, and the firmer look of his eye; and

myself that the elements of success were not wanting. Bringing my musing to an abrupt conclusion, I read on to find another sentence ending thus:

"Moreover, in the cities there is danger of the soul's becoming wed to pleasure, and forgetful of its high vocation."

And then, without pausing to ask why I did such a foolish thing, I fell to picturing those early struggles in the student's life—struggles between study and pleasure, principle and vice; and it dawned on me most suddenly, that there was something in Flemming's character, some fancied or real resemblance to his own, that made Dr. Hubert such an admirer of "Hyperion."

This new idea lost no force as these penciled words rang out at the end of the next chapter:

"O, well has it been said, that there is no grief like the grief which does not speak!"

"If Flemming loved at all, if he comes across a heroine in these pages, I shall not have read in vain," I soliloquized; but the very next chapter, instead of a lover's tryst, proved a racy description of a Studenten Kneipe.

"What a baffling character!" I cried in vexation. "Will he never rouse himself from his student's dream-life to prove himself a man as well as a scholar?" I hurried on, impelled by a curiosity as singular as it was ungovernable, until I came to a paragraph that amused me no little.

"After all," said Flemming, "the old French priest was not so far out of the way when he said, in his coarse dialect, 'The dance is the devil's procession; and the paint and ornament, the devil's sword; and the ring that is made is dancing, the devil's grindstone whereon he sharpens his sword; and, finally, a ballet is the pomp and mass of the devil, and whosoever entereth therein entereth into his pomp and mass; for the woman who singeth is the prioress of the devil, and they that answer are the clerks, and they that look on are parishioners, and the cymbals and flutes are the bells, and the musicians that play are the ministers of the devil.'"

I think I hear my readers ask, "What has Paul Flemming's French priest to do with Dr. Hubert?" And I answer, nothing, only that I detect in the slight mark drawn about the paragraph, my hero's distaste for the stage and its belongings.

Very casually I had asked him once if he had

seen a theatrical star, who was holding the boards of the first theatre in the city.

"Madam," he replied, "I have been here more than a dozen years, and I think I have visited the theatre only six times. Then I sacrificed conscience to etiquette, which compelled me to entertain my guests. I have no taste for the drama as it is now, and wouldn't cultivate it if I had."

How vividly that conversation returned to my mind as I read the above-quoted paragraph; but I had no time to pause, so insatiable had my curiosity become.

Was there ever such a tantalizing book as this? The half is almost gained, and no heroine yet! A romance indeed! Was there ever a romance written without a woman figuring in its pages? Surely, oh, most gifted author, you stepped aside from the "beaten track" that we lesser lights hear so much about, when you dared such an innovation! But, softly; she may yet appear and prove the more a very queen of romance for her late introduction and brief reign, and I go forward to find her.

The next pencil mark inclosed the single word "God's-acre," and all the reverence of a grand mind for its Maker seemed to rise before me as my lips framed the little word, and I noted the tiny mark about it—another evidence that I had not erred in my intuition; and I thought I could trace in the stroke about the following, where the baron tells Flemming of the Frau Kranich, whose ambition had driven her into a marriage with a rich old banker, something of the contempt that led him to make the line.

"The gay lady has no taste for long evenings with the old gentleman in the back chamber, for being thus chained like a criminal under Mezentius, face to face with a dead body."

Again I found myself wondering whether there had been a Frau Kranich in the doctor's past—some beautiful woman more ambitious than wise, more mercenary than loving, more sordid than true to the young practitioner, struggling with life's stern waves. If there had been, the mournful memories were buried deep, and not so much as a scar from the "rude encounter" could be discerned now. Oh, no, such surely could not be the case! No man could so completely hide his grief from those about him; could not go through life with the light of a perpetual smile forever on his sunny face, while all within was midnight, shadow and gloom.

## NOTES AND QUERIES.

**Roman Architecture.**—The Rev. Dr. Blackwood's paper in this number cannot fail to interest readers of the MONTHLY; we have read it with even more than wonted gratification. Out of place in the article, yet interesting in connection with it,

games, and everything of the sort, nor was their what we should consider refined—their enjoyment of beast-fights and the like, for example.

At Pompeii, a fine, extensive theatre has been

view, and admirably restored," as seen in the engraving. In the "restored" view, also a good illustration of the old Roman theatre; the ruins are in good condition, and are, in some respects, unusually good. But the Roman even more valuable than the ruins in the theatre, are the warm baths; the main, or the best, of one of which is just as it is, in the engraving. In England several excellent examples of the theatre; on Strand Lane, a well preserved one. Lincoln is all the vast hypocaust, or terranean heat, land, too, the fine specimen of walls, arches, and space for but shows the Roman used in gates, and used as a "Gate," having a pair of but We shall, do further illustrations of this class hereafter.

ANCIENT ROMAN THEATRE (RESTORED).

we give herewith several engravings which, in a measure, explain themselves or are sufficiently explained by the Doctor. The Romans were a remarkably sedate people, and seldom, the upper classes especially, personally took part in dancing, or in theatrical or other amusements; but they have never been surpassed in keen enjoyment of sports, plays,

representative who shall not have attained to twenty-five years, and been seven years a citizen of the State, and who shall not, when elected, be an inhabitant of that State in which he shall be chosen." Now, theology of this paragraph strikes me as peculiarly susceptible of very different interpretations from the

and the twenty second? Moreover, a representative from Pennsylvania must, "when elected, be an inhabitant of that State; but, if he should, during the term for which he is elected, remove into New Jersey, is there any law forbidding

As your MONTHLY has furnished from time to time valuable information on the lives and characters of eminent men who have lived and died, leaving as legacies to the world the history of their origin, and the motives and principles which

guided them, and thinking it might be of interest to the many readers of your periodical, I inclose the following article on the "Origin of Great Men." THEODORE H. HEATH.

St. Andrew, apostle, was the son of a fisherman; St. John was also the son of a fisherman; Pope Sixtus V. was the son of a swine-herder—he was also one; Aristotle, of a doctor; Boecacio, of a merchant; Columbus of a wool-comber; John Basth, of a fisherman; Diderot, of a cutler; Cook, of a servant; Hampden, of a carpenter; Talma, of a dentist; Gesner, of a bookseller; Salvator Rosa, of a surveyor; Euripides, of a fruit-woman; Virgil of a baker; Horace, of a denizen; Voltaire, of a tax-collector; Lamothe, of a hatter; Fletcher, of a chandler; Masillon, of a turner; Tamerlane, of a shepherd; Quinault, of a baker; Rollin, of a cutler; Molere, of an upholsterer; Rousseau, of a watchmaker; Sir Samuel Bowditch, of a silversmith; Ben Johnson, of a mason; Shakespeare, of a butcher; Sir Thomas Lawrence, of a custom-house officer; Collins, of a hatter; Gray, of a notary; Beattie, of a laborer; Sir Edward Sugden, of a barber; Thomas Moore, of a swordmaker; Rembrandt, of a miller; Cardinal Wolsey, of a butcher; Napoleon, of a farmer; Lincoln, of a backwoodsman.

**Growth of Man.**—Among the disputed subjects, even in this enlightened day, is the *period* of the most rapid growth of man. Some able physiologists contend that the develop-

ANCIENT ROMAN BATH, STRAND LANE, LONDON.

the growth of an infant during the first year of once being about eight inches. The ratio of gradually decreases until the age of three years, time the size attained is half that which it is when full grown. After five years the success is very regular till the sixteenth year, be rate for the average man of two inches a year, sixteen the growth is feeble, being, in the follo years, about six-tenths of an inch a year, w eighteen to twenty the increase in height is sel one inch. At the age of twenty-five the grow save in a few exceptional cases. It has been that, in the same race, the mean size is a little the city than in the country, a fact which will be with doubt by many who have come to regard as the model man." We are, however, very fu mitting that a country or farm life is producti ter physical growth; and, most unquestionab tality tables confirm the idea of a greater longevi who reside in towns and cities, especially who cupation is equally free from mental anxiety as

ROMAN ARCH FORMING NEWFORTH GATE, LINCOLN, ENGLAND.

ment is more marked in and during the second period, known as childhood; while others, equally distinguished, maintain that the first, or infant period, is more decided in *physical*, though not in mental growth. With the hope of eliciting information from some of the subscribers of POTTER'S AMERICAN MONTHLY, and at the same time, perhaps, furnishing an item of interest, I inclose the following opinion from an authority of some note. DELHI.

"Observations regarding the rate of the growth of man have determined the following interesting facts:

The most rapid growth takes place immediately after birth,

AMPHITHEATRE AT VERONA.

**Domesday Book.**—Though not able to give the exact million desired by Elizabeth Oakes Smith, I take pleasure in making a small contribution in that behalf. Russell, in "Modern Europe," Vol. I., says: "The peaceable state William's affairs now gave him leisure to finish an undertaking, which proves his great and extensive genius, and does credit to his memory. It was a general survey of all the lands in England, their extent in each district, their proprietors, value; the quantity of meadow, pasture, wood, arable land, which they contained; and in some counties the number of tenants, cottages, and slaves of all denominations, who lived upon them."

This valuable piece of antiquity, called the "Domesday Book," is still preserved in the Exchequer, and contributes to the illustration of the ancient state of England.

The work was undertaken in the year 1081.

Mr. J. Noake, author of "The Rambler in Worcestershire," says of this work:

"In 'Domesday Book,' William the Conqueror 'took account of his newly acquired possessions, when, some eight hundred years ago, he won the crown of England. Being determined to ascertain the full extent of the value of his empire, he gave imperative orders for the most minute inventory to be taken of all kinds of property in every parish. As the late Saxon Chronicle states, 'So very narrowly did he make survey to be made, that there was not a single hide of land, nor—it is shameful to relate that which he thought to shame to do—was there an ox, or a cow, or a pig, and he, that was not set down in the accounts; and then these things were brought to him.'"

The writer, describing how the king looked after the survey, says that "he loved the tall stags as though he were a giant."

The minuteness of Domesday, although an evidence of the gloomy subjection in which the Saxon inhabitants of England were, and of the avarice of their stern conquerors, is, however, the chief value of this work, which, without any consideration, may be described as one of the most accurate and valuable national records that any country or age can introduce. William set about his work of acquisition in a very business-like way, and appointed a number of commissioners for every district. These commissioners were ordered to summon before them the sheriff of the county, the lord of each manor, the presbyter of each parish, the reeve or constable of each hundred, the bailiff, and the "villans"; this did not mean scoundrels, but holders of houses or land, whose property was at the will of the lord.

These commissioners were ordered to summon before them the sheriff of the county, the lord of each manor, the presbyter of each parish, the reeve or constable of each hundred, the bailiff, and the "villans"; this did not mean scoundrels, but holders of houses or land, whose property was at the will of the lord.

These commissioners were ordered to summon before them the sheriff of the county, the lord of each manor, the presbyter of each parish, the reeve or constable of each hundred, the bailiff, and the "villans"; this did not mean scoundrels, but holders of houses or land, whose property was at the will of the lord.

About ten or twelve years ago an exact *fac-simile* of this ancient record, free from all possibility of error, was taken through the agency of photo-zincography. The Worcestershire portion has been translated by W. B. Sanders, assistant keeper of her Majesty's records, edited by Mr. Noake, of Worcester, and published by Messrs. Deighton & Sons, of that city. The original Book is in Latin. There was made at one time an abridged copy in Latin, and there has been made an English translation.

Another writer says: "William the Norman caused a general survey of all the lands of England to be made, or rather to be completed (for it was begun in Edward the Confessor's time), and an account to be taken of the villans, slaves, and live stock upon each estate; all of which were recorded in a book called Domesday Book, which is now kept in the Exchequer."

STEBEN JENKINS.

**A Scene in the United States House of Representatives Fifty Years Ago.**—A large, fine-looking man, of commanding presence, is the Speaker, and arraigned before him, in the custody of the Sergeant-at-Arms, is a tall man of more than six feet and finely proportioned; in the prime of life, with personal advantages scarcely rivaled by any notable man of his day, dressed in faultless style, with not the least of defiance or swagger, yet with perfect ease, self-possession and calm dignity, the culprit stands at the bar of the House awaiting the reprimand which the House has decreed shall be administered to him by the Speaker. The House is a study: breathless silence reigns, the members are looking on in eager interest; the bearing of the culprit makes sympathy and everything of the sort impossible, while that of the Speaker makes it difficult in the extreme for some of the Representatives to restrain themselves from violating the decorum of the House by laughing outright; the Speaker is by far the most embarrassed man upon the scene, suggesting the idea that he is the one to be punished rather than the one to administer punishment. In a hesitating, perturbed manner, he at length tells the culprit that the House had ordered that he should be reprimanded before its bar by its Speaker; and he (the Speaker) begs him (the culprit) to consider himself reprimanded according to the said order; the culprit bows in a graceful and dignified, almost lordly manner, an almost audible smile spreads over the House, and the scene closes. The Speaker is Andrew Stevenson, of Virginia, and the culprit is Sam Houston.

A member from Ohio, named Stanberry, we believe, had accused Houston of defrauding the Government in a transaction with an Indian tribe upon the Tennessee border; the latter had demanded an investigation, but had been unable to obtain any satisfaction. Smarting under the charge and despairing of legal redress, he at last gave the accuser a severe caning within the precincts of the Capitol. Of course, the House could not do otherwise than arraign the caner, and a reprimand was the least penalty it could adjudge him.

AMBROSE B. CARLYLE.

**Errata.**—In the November MONTHLY, in the article "Faneuil Hall," page 323, it is stated "The Royal Exchange was founded by Sir Thomas Graham." It should be Sir Thomas Gresham. In the same number, page 339, "The Protector, the infamous Duke of York," should be the infamous Duke of Gloucester.

## CURRENT MEMORANDA.

**The "Crisis," the Electoral Commission, and the Verdict of the Commission.**—We have spoken very plainly and frankly in former numbers of the MONTHLY upon the questions which have since November 9th agitated the country. In our last, in speaking of the Commission scheme of allaying the "crisis," we said: "At the present writing, it is quite uncertain what conclusion the 'Tripartite Commission' will arrive at, but whatever it shall be, it seems beyond a doubt that it will be accepted by all parties as a just and equitable solution of all the real and supposed difficulties of the remarkable Presidential contest of America's Centennial Year." Our anticipation that the verdict of the Commission would be "accepted by all parties," the defeated as well as the successful, was based on the one hand, upon a positive certainty that the Republicans would freely and fully acquiesce in the decision, whether favorable or adverse to their wishes and claims, and, on the other hand, upon the fact that the Commission scheme was devised and specially favored by the Democrats, who were thus specially bound in honor, nay, in common decency, to accept unquestioningly its results. But later developments have shown that there are eighty-seven Democrats in the House of Representatives who cannot be bound by considerations of honor or common decency. We were not at all surprised when the "Hon." William M. Springer, "Hon." Alexander G. Cochrane, and a few others of their ilk, set themselves forward as enemies to their country, for they had before shown their utter want of patriotism, to say nothing of common sense and integrity, in the matter of the National appropriation to the Centennial Exhibition; our readers will recollect that the "Hon." Springer was the author of the infamous proviso which was designed to rob the patriotic stockholders in that great National glory, and the other person named was almost equally notorious in the same unpatriotic and dishonest direction; that these and their confederates in antagonism to the Centennial Exhibition were capable of achieving still greater infamy, in efforts to prevent the conclusion of the count, and thus invite the peril of revolution and anarchy, we could readily understand, and we could as readily understand the course of the Judas from New York, for he had sold himself for just such work. But we were surprised when we learned that there were eighty-seven Representatives of honest American constituents who could permit themselves to appear in so disreputable a light, and we were absolutely astounded when we read the list of names of the obstructionists and found among them Robbins of Pennsylvania, Walker of Virginia, and some others whom we have esteemed in the past.

Now, that the decision of the Commission was especially binding upon the Democrats in the Congress must be obvious in the light of the vote upon the bill creating the Commission; the aggregates in the two Houses were: yeas, Democrats, 182; Republicans, 56; nays, Democrats, 19; Republicans, 85. It is simply nonsense for the Democratic obstructionists to say "We were sold—we were betrayed," etc.; the vote shows

that if they were sold or betrayed, it was their own no regard chargeable upon their opponents.

But our purpose in referring to this matter now dwell upon the obstructionists and their unenviable much as to speak of the Hon. Samuel J. Randall, Fernando Wood and their noble followers in sub-law even when its operations were seemingly adverse party; this band of true Democrats and grand patriots to have their names forever remembered by all Americans—such a record as these men have made should beloved Republic is safe—it has a sufficient number of sons who love it and its life and prosperity supreme and beyond all party and selfish considerations, from the worst of foes, those within the National Union. The Nation can never be subverted or disrupted by the majority of the defeated party act as the ninety-two patriots have acted in the present instance. It is to note that forty-six, just one-half of the ninety-two representatives from the Southern States, and of the obstructionists forty-four were from the South and from the North; thus we see that the Democrats were almost evenly divided on the two sides, in number in responsibility we cannot but regard the Northern largest, and the Southern members upon the side of order and patriotism may justly claim special credit for their selfish devotion to the welfare of the Union.

The violent partisans of the defeated aspirant denounced the majority on the Commission for refusing upon a judicial investigation of the charges of wrong doings in Florida and Louisiana; but every interested thinker must see that, even conceding to Congress and of its Commission to "go behind" such a course was simply impossible without the very purpose for which the Commission was created; had they done so in the case of Florida and any single State, they could not have refused to take the same course in Georgia, Mississippi, New York, and other States. One month was the outside limit within which the count must be made, and six months would have been too brief for a thorough investigation of the doings on both sides. Hence, the whole outcry against the Commission for refusing to enter upon such an investigation is absurd if not dishonest. Any man in either House who says he favored the Commission scheme upon the ground that the Commission would undertake an investigation of the elections in the several States, thereby confesses himself too stupid or thoughtless to calculate the time requisite for such a labor, and knew, too, that the Commission could not make and declare the count by the 4th of March, and the latter involves the farther fact that he was himself a more pronounced seceder than would have us believe the Republicans of the South. He would have us believe the Republicans of the South would advocate a plan for counting and declaring the election of November last, knowing or believing that

would do no such thing, but would actually defeat the desired end by compelling a new election, would be scoundrelism the turpitude of which could not be exceeded by the worst Returning Board conceivable.

But the great contest is over and all, even his political opponents included, agree that the new President is a good, honorable, upright man. Some profess to believe that he will be in a greater or less degree controlled by the less-estimable, if not the bad, members of his party. Time must determine how far these croakers are mistaken; but time is not required to determine that they are altogether wrong in prematurely judging and condemning a man they admit to be himself a good, honorable, upright man, for yielding to bad influences before he has had an opportunity so to yield or to show just what stern self-reliant stuff he is made of.

**The Roll of Honor.**—During the later portion of the struggle in the House of Representatives over the Electoral count, the votes upon the various dilatory motions showed eighty-five or eighty-seven obstructionists to one hundred and twenty-five or one hundred and seventy-seven in favor of law and order. When the State of Vermont was reached in joint session of the two Houses, the most serious dilatory movement of the whole series was made: The President of the Senate had received but one electoral return from that State, but a certain Aldrich had constituted himself an Elector, had held an Electoral College on his own account, had cast a vote for Tilden and Hendricks, and had sent a "Return" of that remarkable vote; this was such a puerile attempt on the part of Aldrich to make himself the most conspicuous ass of the period that, but for the purpose of delay, not even the obstructionists would have taken notice of it. An attempt was made in Joint Convention to introduce this bogus "return," and induce President Ferry to receive it, but this failed, as he was cool and decided; had he but received the paper, it might have become necessary to send the case of Vermont to the Commission, and this would have defeated the conclusion of the count. After the two Houses had separated, a wild uproar arose—the obstructionists got in a perfect frenzy, and the patriotic wing of the Democrats were for a short time worried and confused. Mr. Caulfield of Illinois, through Mr. Poppleton, offered a resolution grossly insulting the President of the Senate, demanding that he should send the bogus "return" in the presence of the two Houses; a number of speeches followed, chiefly by the obstructionists. But one of these was noteworthy—it was by the New York John, who solemnly declared "If there were two returns from Vermont they should go to the Electoral Commission. He appealed," we are told, "to members to deal with the question, not as Democrats or as Republicans," etc. Mr. Knott came forward with a resolution, more temperate and civil in its phraseology and hence more dangerous; when the vote was taken upon this, it received so many more votes than the usual dilatory motions that the state of affairs was more critical than at any time before. The vote was 116 yeas to 148 nays. Mr. Hopkins then renewed Mr. Knott's defeated resolution with one clause omitted, and this was defeated by the same vote. The Democrats who defeated it in that and worst peril are so specially deserving of the Nation's warmest gratitude that we give their names; it is not

requisite to give the names of the Republicans who voted with these forty-six Democrats:

Arkansas: Gause, Wiltshire, Gunter.  
 Connecticut: Landers, Phelps.  
 Delaware: Williams.  
 Georgia: Candler, Felton, Hill.  
 Illinois: Le Moyne, Campbell, Stevenson.  
 Indiana: New, Haymond, Hamilton.  
 Kansas: Goodin.  
 Kentucky: Brown, Watterson, Durham.  
 Maryland: Swann.  
 Michigan: Williams, Potter.  
 Mississippi: Lamar, Singleton.  
 Missouri: Kerr, Morgan, Rea.  
 New Hampshire: Bell.  
 New Jersey: Cutler.  
 New York: Ward, Wood, Hewitt, Willis, Whitehouse, Lord.  
 North Carolina: Yeates.  
 Ohio: Neal, Payne.  
 Pennsylvania: Powel, Hopkins, Egbert.  
 Texas: Reagan, Throckmorton, Hancock, Schleicher.  
 Virginia: Hunton.

**National Reconciliation.**—Now that the great national political issue has been settled by Congress and the Joint Commission (whether wisely we do not propose at this time to say), it behooves every lover of his country and the great principles upon which it was founded, to accept, not necessarily cheerfully, but patriotically, the result.

The ballots which created the fifteen Commissioners—if given in good faith and by honest representatives of the people—proclaimed a willing and lawful acquiescence to their decision, whether it resulted in the placing of Mr. Hayes or Mr. Tilden in the Executive Chair.

The crucial test of sound statesmanship, as well as true citizenship, is in a prompt abidance by the judgments of legally constituted law-givers, especially when they represent the deliberations of courts of final resort. The tribunal, composed of five Senators, five Representatives, and five Judges of the Supreme Court of the United States, was not supposed at the time it was constituted to embody all the wisdom, nor all the justice in the aggregate, of the American people. Any city in the Union could have easily furnished a tribunal possessing as much knowledge, perhaps more wisdom, and doubtless, much broader statesmanship; but to immediately allay the the surging waves of the two great political and conflicting elements, was beyond the power of any tribunal, even if that decision be from a court absolutely infallible. The advocates and staunch supporters of either candidates, it could not have been reasonably anticipated, would be satisfied if the decision be adverse to the elevation of their favorite. The shadows and substance of defeat in all rival contests for place and power must inevitably fall somewhere. The Star of Hope to one party only can lead to a happy realization of the object sought for. As in natural philosophy so in the construction of a system of government, the same place cannot be occupied by two objects or persons at the same time. The pangs resulting from a failure to secure the coveted prize must be endured

on the one hand, while on the other, a greater or less degree of joy follows the attainment of the most exalted political station within the gift of the people. All this is natural in contests for the lower positions of life, but how much more so, when the power and place are perhaps greater than those held by any ruler in the Old World? It is contrary to the laws of nature that we should feel jubilant and clap the hands of rejoicing over our defeat. This, however, we are free to say, that *every true and loyal citizen* will abide by the final verdict.

The ship of state can only outride the storm as her crew hearkens to the voice and obeys the orders of her commander. This voice is now that of the Joint Commission created by the Representatives of the several States in Congress assembled. We believe that it will be heeded; and that the flames of party passion will succumb to a better judgment and loftier patriotism, and that for the ensuing four years Mr. Hayes will be recognized as that commander.

The popular vote of about a quarter of a million in favor of his opponent; the disputed States of the South, especially Florida and Louisiana which seemed to give the coveted—185—to Mr. Tilden—coupled with the great moderation and forbearance of the impoverished people of the South—will, we are confident, guide the new President into a consideration of the best interests of the whole nation, irrespective of party; that he will make a decided departure from the *republicanism of the present*, and use his best endeavors to effect a cordial reconciliation of all sections; that he will throw overboard the political pirates who have so imperilled the stability of the Republic. No other course can he consistently pursue if he would restore the shattered confidence of the people in the administration of national affairs. The people, who are more potent than any President, demand this of him, and they will not be slow to recognize and approve every step taken towards reform. Corruption and fraud must be unsparingly denounced, and FAITH restored to and among the true conservators of civil and religious liberty, who are the masses of the American people, and through whom only can we as a nation expect to live. Mr. Hayes's Inaugural Address (just received as we go to press) fully bears us out in these prophecies.

At the opening of the French Parliamentary session at Versailles recently, the venerable deputy, M. Gaultier de Rumilly took the chair in the Senate, by virtue of his eighty-five years, and when the house was organized stood up and read a short speech. The paper trembled in his hand, but the voice was audible, clear and firm. One passage was particularly well received: "In my long public career, extending over sixty years," he said, "I have seen every government fall which attempted to resist public opinion. I have also seen that the influence has augmented of every body in the State which acted in conformity with the expressed sentiment and will of the nation." At the close of this address, whose truth will be universally admitted, M. Jules Simon, the Prime Minister, who is President of the Council, affectionately embraced M. de Rumilly, literally hugging him to his bosom, and with swimming eyes kissing him on both cheeks. This effusion of sentiment, which generally takes place in France, particularly on public occasions, was applaudively received.

**No Credit.**—A curiosity of the statutes, says the *field Republican*, has been unearthed in a Boston case, showing that innkeepers and others are prohibited from giving credit to students, under penalty of forfeiting twice for which credit is given, provided anybody chooses to complain. The paragraphs referred to are sections 1 and 20 of chapter 88 of the General Statutes of Massachusetts. Section 18 provides that "no inn-holder, taverner, tailor, confectioner, or keeper of any shop or house for the sale of drink or food, or any livery-stable keeper, or carriage hire, shall give credit to any student in any incorporated academy or other educational institution in this State." The other sections provide that no person thus given credit shall be licensed for either of the following offenses named, and that whoever does thus give credit shall forfeit twice the amount, whether the same be given or not. If the term retailer applies in this statute according to its usual acceptation, it would seem that nearly every retailer is forbidden to give credit to students.

**A New Application of the Fourteenth Amendment.**—The *Albany Law Journal* refers to a case recently decided by the Supreme Court of Maine, in which the Court held that the *ex parte* determination of two overseers to send a woman to the House of Correction is not in violation of that provision of the Fourteenth Amendment which declares that no State shall "deprive any person of life, liberty or property without the due process of law." The opinion of the Court is that such action on the part of the overseers of the poor is not due process of law, and is, hence, a violation of the National Constitution. The Fourteenth Amendment was originally adopted to protect the colored people of the Southern States against unjust and oppressive laws in respect to their civil rights; yet it is so worded as to apply to all classes, whether black or white, and in every part of the country against all legislative, executive, or judicial action on the part of the States inconsistent with the rights to be guarded. In this respect it is universal in its application and limited only by its own terms.

**Pardons by the Governors of New York.**—There has been some discussion lately in the New York City press as to the too-free exercise of the pardoning power by the Governors of that State, some of them being unduly lenient upon the late Governor. The *Evening Post* has taken up the matter and finds that Mr. Tilden, though rather lenient in this direction for a "reformer," has been less so than some of his predecessors; the figures are as follows:

Morgan—First term, 184; Morgan—Second term, 297; Fenton—First term, 343; Fenton—Second term, 289; Hoffman—First term, 235; Hoffman—Second term, 269; Dix, 144; Tilden, 242.

**Mr. Lucas Nicholsky**, of the Russian Consulate, and Professor of the Mining School of St. Petersburg, was married recently, at the Russo-Greek Consulate, Second Avenue, New York, to Miss Roscalba H. Philadelphia. The bride was given away by her father, according to the Eastern rite. Mr. W. de Biedich, Consul-General in New York, and Mr. D. N. Basmajian, the same position under Greece, were witnesses.

## LITERATURE AND ART.

**T. Conrad and Others.**—In the valuable series upon "The American Drama," now in course of publication in POTTER'S AMERICAN MONTHLY, I notice some omissions which I feel assured have only occurred

"These two [2] plays, 'Jack Cade' and 'Aylmere,' are sufficient to preserve Conrad's name from oblivion, and they will always be considered, we do not doubt, an honor to our dramatic literature." Robert T. Conrad, first mayor of the

consolidated city of Philadelphia, "as a man of letters," as most pertinently remarked by Dr. R. Shelton Mackenzie, "did not write much, but he wrote well;" and he wrote but three plays, the earliest being completed while he was a student-at-law, about the age of twenty. He called it "Conrad of Naples," quoted by some bibliographical authorities by the title "Conradin." His next and most successful dramatic venture was "Aylmere, or the Bondman of Kent," written for Edwin Forrest, who immortalized the principal character, Jack Cade, and the tragedy is therefore most generally known as "Jack Cade." Mr. Lancaster has strangely failed to identify the *two* titles as really belonging to but *one* play. In 1852 Messrs. E. H. Butler & Co. published in one volume, 12mo, 329 pp., "Aylmere, or the Bondman of Kent, and other Poems," by Robert T. Conrad; which work the author poetically dedicates to his venerable father, John Conrad, Esq., formerly a well-known bookseller of Philadelphia, and a representative in Congress from 1803 to 1815. This honored gentleman died in the spring of 1857, aged eighty-three years; his distinguished son surviving him only thirteen months, departing this life June 27, 1858, before attaining his fiftieth year.

In his preface to the above-named volume, Judge Conrad says: "It is imagined in the play that the leader of the Commons was originally a *villain* (meaning bondman) of the name of Cade, afterwards a fugitive known as Aylmere," etc., etc. The

THE FINDING OF MOSES.

See page 315.

the revision and re-revision imperatively demand such exhaustive articles. The talented compiler of the interesting reminiscences states, on page 117, Volume May, 1877, in speaking of the late Judge Conrad of Philadelphia, that he was "the author of two of the plays ever produced in this country. We allude to 'Jack Cade' and 'Aylmere;'" and again, on page 118, Mr. Conrad corrects his somewhat singular mistake, thus:

scene of the tragedy is Kent and London, A.D. 1450, and the expressive and impressive lines quoted by Mr. Lancaster in the paper questioned, are spoken by Jack Cade in the assumed character of "Aylmere" in Act Second, Scene Fifth. Vastly different in conception is Shakspeare's idea of the insurrectionist, as depicted by the master dramatist, in the Fourth Act of the Second Part of King Henry VI. But Conrad estimates Cade historically in the same catalogue

as he is chivalrously placed by the eminent and caustic reviewer Leggatt, "among those glorious martyrs who have sacrificed their lives in defence of the rights of man." In addition to "Aylmere" Mr. Conrad wrote for Mr. Forrest a play called "The Heretic," but it was never acted nor published.

Referring again to Mr. Lancaster's literary lapses, the writer is surprised that no mention is made whatever of the meritorious American dramatists, Charlotte M. S. Barnes, George H. Boker and George H. Miles. The lady named, afterwards wife of the eccentric but excellent comedian, Edmon S. Conner, as early as November, 1837, produced "Octavia Bragaldi," which, under its dual title, "The Confession," was simultaneously brought out in England and America, and performed upwards of forty times. Subsequently (about 1844) she published in London "The Forest Princess, or Two Centuries Ago," an American drama, in three acts, dedicated to the Hon. Edward Everett. Competent critics have highly extolled this later play of Mrs. Conner's, but it is said to lack force in stage representation.

In 1848 our esteemed townsman, George H. Boker, Esq., published "Calaynos," which was eminently successful at home and abroad. Judge Conrad thus gracefully refers to the deserved popularity of the initial work of his fellow-citizen and contemporary playwright. "'Calaynos,' without any adventitious recommendation, immediately placed its author in the front rank of American dramatists." In 1850 Mr. Boker produced "Anne Boleyn," followed at short intervals by "Leonora de Guzman," "The Podesta's Daughter," "The Betrothal," "Francesca di Rimini" (his masterpiece), and "The Widow's Marriage," a comedy. His latest tragedy is "Königsmark."

My lamented friend and fellow-literator, George H. Miles, late professor of belles-lettres in St. Mary's College, Maryland, was the author of the one thousand dollar prize drama called "Mohammed, the Arabian Prophet," which was written for and accepted by Edwin Forrest, the most liberal and sagacious patron of American writers for the stage. This tragedy, in five acts, was published at Boston, by Phillips,

Sansom & Co., in 1850, but in regard to its public reception as an acting play I am not "French's Standard Drama" credits Mr. Miles with "Birthday," and "Senor Valiente." I remember the first performance of this latter play at the Holl Theatre, in Baltimore, some twenty years ago, and his work were most flatteringly received

JOSEPH'S MEETING WITH HIS FATHER.

and appreciative audience. If I mistake not, "Senor Valiente," upon its first production, held the boards one night, but I have no knowledge of its subsequent fate. Mr. Miles died in the summer of 1871, aged forty-seven.

H. CLAY

**Art applied to Scriptural Themes.**—I have been interested in the articles on "Rizpah" in the February, and on "The Hebrew Minstrel and the Harp" in the March number of the MONTHLY.

is a rule, is as much subject to imagination as the novelist; indeed a vivid imagination is essential to success in art. In the treatment of Scriptural themes, many of the greatest masters have been so largely under the sway of imagination that their works are valuable as sublime creations rather than

drawings engraved as illustrations of a beautiful little volume, called "The Proverbs of Solomon," published by James Nisbet & Co., London.

RODMAN J. SHEIKR.

REMARKS.—We copy herewith a painting of Mr. Millais, with a suitable poem from "Bible Pictures," by James Grahame, and three of Mr. Gilbert's drawings from the book referred to by Mr. Sheikr.

#### MOSES ON THE NILE.

Slow glides the Nile: amid the  
margin flags,  
Closed in a bulrush-ark, the babe is  
left,  
Left by a mother's hand. His sister  
waits  
Far off; and pale, 'tween hope and  
fear, beholds  
The royal maid, surrounded by her  
train,  
Approach the river bank; approach  
the spot  
Where sleeps the innocent: She sees  
them stoop  
With meeting plumes; the rushy lid  
is open,  
And wakes the infant, smiling in his  
tears,—  
As when along a little mountain lake,  
The summer south-wind breathes with  
gentle sigh,  
And parts the reeds, unveiling, as  
they bend,  
A water lily floating on the wave.

Mr. Hunt's picture of Hamlet, recently shown in Boston with perhaps twenty others by the same artist, was apparently meant for Mr. Booth as Hamlet, or—to adopt the popular witicism—Hamlet as Mr. Booth. It is not a portrait, but neither is it an ideal interpretation of Shakspeare's character; so that one is obliged to fall back upon its merits as a study in slate hues. But even in this aspect it fails to please: the nocturnal effect is an overdose of black lead, the battlements and towers are more insignificant than stage

DAVID'S CHARGE.

scenery of Bible scenes. There have been comparatively few who have been at all accurate in their essays in this direction. To the two mentioned by Mrs. Morris, possibly J. E. Millais, A. R. A., might be added, though in his paintings there is a perceptible play of the imagination. But I have been particularly impressed with the combination of the artist's genius and the Bible student's exactness in some drawings on wood by John Gilbert, of London; I presume others have regretted, with me, that Mr. Gilbert has not put some of his capital pictures upon canvas; I do not know whether he is a painter or not, but, if not, he ought to be, as his drawings could be. You will find a number of his

scenery, and Hamlet is merely an unappalling blackness in the midst of an unpicturesque darkness. From this one turned promptly to the landscapes and portraits, where Mr. Hunt could be found at his best. There was no pastoral scene among the landscapes which equaled *The Ploughers* of a year ago; but there was much that gave pleasure, as the two large studies of sylvan penetralia, with their consociation of swarthy boles and impleached stretches of green overhead, filtering the sunlight into tender tints, or that other instance of an immense, involuted cloud-pile steeped in hyacinthine atmosphere and seeming about to roll down upon and smother the quiet green landscape in the foreground. Some bathers in a river,

yellow-green with late sunset light, made a singular and rather inviting picture, though it was vexatious to have the plane of the river tipped decidedly downward toward the inner line of its curve. Another canvas was devoted to a naked boy mounted on the shoulders of a second who stood arm-pit deep in a quiet bit of water. This acrobatic bather was bodied forth with a hitherto, palpitant grace that fairly captivated the eye; the whole affair was beautiful in its rich and noble simplicity; it was summer, and youth and the joy of young life; the Yankee country lad (if you will) was in his beauty and unconscious nudity and sensuous delight as Greek as anything that ever lived. Altogether the most charming head was that of a little ragged Italian boy, which illustrated Mr. Hunt's best mood of a kind of ideal languor united with a keen realistic *verve*. The half-length of a lady, higher on the wall, draped in a shawl chiefly orange in color, surpassed this boy in energy of tone; and in fact each one of the human subjects had its especial merit.

**Rare Autographs.**—An extremely valuable collection of autographs, belonging to the late Sir William Tite, was sold lately in London. Among the most important lots, and those which brought the highest prices, was a long letter of Rabelais, in Latin, which was knocked down, after a spirited competition, for £62; three letters of Edward Gibbon, which realized prices from £3 up to £9 10s.; two letters of Robert Burns, which fetched £8 8s. and £7 12s., respectively, and the original MS. of his song "Scots wha hae wi' Wallace bled," which was knocked down for £25. A letter of Buckingham, the favorite of Kings Charles and James, who was assassinated by Fenton, fetched £17 10s.; an interesting letter of Lord Byron, speaking of the critics of the press, £18. A holograph letter of Charles I., one page folio, addressed to "My only deare sister," and dated from the Palace of Greenwich, also £18. A long letter from Boswell to David Garrick, mentioning Dr. Johnson, £17; a letter of "Kitty Olive" to "My dear Poppy," dated Twickenham, 1784, £11; one from Francis Bacon, Viscount St. Albans, one page folio, £21; a mere signature of Nell Gwynn, or rather only her initials scrawled at the foot of a letter indited by her to an

amanuensis as ignorant of spelling as herself, £28; two of William Cowper, £5 5s. and £7, respectively; of the Duke of Wellington to Mr. Wilson Croker, subject of the battle of Waterloo, £2 15s.; a portrait of Wesley, "taken by electricity," and accompanied by

SOLOMON AND THE QUEEN OF SHEBA.

See page 315.

of Professor Faraday and others, a curious specimen of a photograph which came before the rising sun of photography; a long letter of Jeremy Taylor, on the subject of Trinitarian and political affairs, £7 15s.; an unpublished letter of Voltaire, respecting his intended purchase of an estate at Ferney, £5 5s.; two letters of the witty Dean of St. John's, Jonathan Swift, £13 5s. and £18 5s.; one of Sir Isaac Newton, £5 15s.; one of Laurence Sterne, £13; a letter of Robert Southey, referring to his *Madoc*, £7 7s.; an Italian of Peter Paul Rubens, £7, one of John Dryden, another of the same, £17 10s.; one of Schiller, in C

£17 10s.; one of Richardson, the novelist, £4; one of Samuel Foote, £7 15s.; one of Matthew Prior, £4 6s.; one of William Cobbett, £9 5s.; two letters of Alexander Pope, £6 10s. and £11, respectively; one of Lord Nelson, addressed to Lady Hamilton, £5 5s.; two letters of Samuel T. Coleridge, £10 and £12 each; a speech of Thomas Babington Macaulay, evidently written out for the reporters, £12 10s.; a letter of David Hume, £18 10s.; one of Archbishop Leighton, £18; a letter of Charles Lamb, £14 5s.; the original manuscript of the "Dissertation on Roast Pig," signed "Ella," £34; a letter of Oliver Goldsmith, addressed

to David Garrick, which fetched the large sum of £60; a letter of "Marye, Queen of England," so signed in full, and dated in 1556, £7 5s.; a long holograph letter from the same Queen to her uncle, the Cardinal of Lorraine, on the international politics of France and England, which fetched £95; and, perhaps, the very best existing specimen of a letter of the Protector, Oliver Cromwell, addressed to Sir Edmund Bacon, giving details of some military exploits before Gainsborough, which was knocked down, after considerable competition, for £106. On the whole the bidding was quite spirited and the prices obtained very satisfactory.

## SCIENCE AND MECHANICS.

**Ocean Echoes.**—Professor Henry recently communicated to the National Academy at Philadelphia his latest researches on the subject of sound, and among them an explanation of the echo observed on the water. This echo he had formerly been inclined to attribute to reflection from the crests of the waves. Tyndall holds that it is due to reflection from strata of air at different densities. Professor Henry's present explanation is that this echo is produced by the reflection of the sound wave from the uniform surface of the water. The effect of the echo is produced by the fact that the original sound wave is interrupted. It has what the learned Professor calls a *shadow*, produced by the intervention of some obstacle in its path. Sound is not propagated in parallel, but in diverging lines, and yet there are some cases where what may be called a "sound shadow" is produced. For instance, the signal bell placed at or near water level on one side of an island that has a conical elevation. Then the signal will be heard distinctly by a vessel on the opposite side of the island at a distance of three miles. But when the vessel comes toward the island (the signal being on the opposite side), the sound will be entirely lost when the distance is reduced to a mile, and in any smaller distance it is not recovered. In the case the station of the vessel at the shorter distance is in the "sound shadow." The termination of that shadow is the point at which the diverging beams of sound, passing over the crest of the island, bend down and reach the surface of the water. The formation of the sound echo may be explained by this extreme divergence of the sound waves, for it is natural to suppose, that at a greater distance from the source of sound some of the dispersed waves will reach the water surface at such an angle as to be reflected back to the hearer. This was well illustrated by an experiment made to test Tyndall's theory. A steam siren was pointed straight upwards to the zenith, but no echo from the zenith was heard, though the presence of a cloud from which a few rain-drops fell testified the presence of air strata of different densities. But, strange to say, an echo *was* heard from every part of the horizon, half of which was land and half water. The only explanation of this fact is that the sound waves propagated upward were so dispersed as to reach the earth's surface at a certain distance, and at that point some of them bent back over and assumed a direction that caused their reflection back to the siren.

**Toughened Glass Making in Brooklyn.**—A reporter of the *New York World* has lately visited the works in Brooklyn where the manufacture of La Bastie toughened glass is now in active progress. The manufacturer states that, in June last, his factory was destroyed by fire, and the introduction of the glass into our markets has for that reason been delayed. Only one kind of goods, lamp chimneys, are now made, and the process is as follows: A workman, having in his hand a pole about eight feet long, with a knob on the end of the size of a lamp burner, fits a chimney on the knob and plunges it into the flame of a furnace. He withdraws it twice or thrice that it may not heat too quickly, turning the pole rapidly the while, and when the glass reaches a red heat quickly shoots it into one of a dozen small baths fixed on a revolving table, and seizes another chimney. A boy keeps the revolving table always in position, and as the chimneys come around to him, having been the proper time in the bath, he takes them out to be dried, sorted, cleaned, and packed. The bath has to be of just the right temperature, as, if it be too hot or too cold, the chimneys are liable to explode. In either case the process of annealing is imperfect. By working the tables at a certain rate, the baths are kept at the right temperature by the immersion of the red-hot glass. Oil or tallow is used in the bath. Any greasy substance will do, though tallow has proved most satisfactory.

M. De la Chapelle, the manufacturer, states that he has already sold \$150,000 worth of the chimneys. The toughened chimneys are about sixty per cent. dearer than those of ordinary glass.

**The New Bergen Tunnel.**—It has been decided by the Delaware, Lackawanna and Western Railroad Company that the new tunnel under Bergen Hill shall be arched with bricks throughout the entire length, 5200 feet. Of this distance the arching has been completed, except 600 feet. It will give an idea of the work when it is stated that 7,000,000 bricks have been laid in the arching. All the shafts have been torn down and will be rebuilt in such a manner that the ventilation will surpass that of any tunnel in the country. The cost of the additional arching will, in the opinion of Mr. Sloan, President of the Delaware, Lackawanna and Western Railroad, be more than compensated by the security against accidents from falling rock.

Several spans of young horses show good blood. Mr. Evarts has his best pair of horses in New York, no doubt competing as far as he may with Bonner and other horse fanciers in that city. Last, but not least, come the swine, twenty-five in number. Brick from the old Baptist church, bought by Mr. Evarts, furnished material for the walls of a new and convenient piggery, and the interior was finished with due regard to neatness, ease of feeding, and comfort to the inmates. One breeding boar, imported from Lancashire, England, is as near a perfect type of the hog as we have ever seen. The products of the farm average 200 tons of hay yearly. This year 2200 bushels of corn were raised on twenty acres, besides several acres to fodder fed to cows in the fall. Oats and roots of various kinds are largely raised.

**Reform.**—A politician was very ill. We are not sure that he had ever served on a Returning Board, or that he had even indulged in cryptography (alias "cipher despatches"). Becoming alarmed, he sent for a clergyman, who came to see him, and laid down the divine law to him with great faithfulness and emphasis. The sick man was much affected, and said, "Well, parson, I think you're right; I've made up my mind that if I get well I shall in the future live principally honest."

**The Art of Thinking.**—Too much stress cannot be laid upon the fundamental importance of perfect command over thought. How many a student finds a lack of this power the chief hindrance to progress! How many a page must be re-read, how many a lesson conned over and over to compensate for lapses of thought! In the possession or absence of this power over mind lies the chief difference between mental strength and mental weakness. Some men think as a child plays with a hammer, striking little blows here, there, anywhere, at any object within reach. The action of a strong mind may be compared to the stone-breaker's sledge-hammer, dealing stubborn blows successfully upon one spot till the hard rock cracks and yields.

The power to classify and arrange ideas in proper order is one that comes more or less slowly to even the best of minds. In proportion as this faculty is strengthened, desultory and wasted effort diminishes. When the mind acts, it acts to some purpose, and can begin where it left off without going over the whole ground again to take up the threads of its associations. Concentration and system are thus seen to be the chief elements in the art of thinking. To cultivate the faculty, constant watchfulness to detect the least wandering, and the immediate exertion of the will to call back and hold the mind upon the subject under consideration, should be vigilantly exercised. To secure the latter, the practice of analyzing and considering the different parts of a subject, first separately and in their relations to each other, is a discipline to which every young mind should be subjected, and which, we are sorry to say, is much neglected in most methods of instruction.

An old veteran says his experience at school reminds him of a one-horse railroad. It was all switches, with an occasional "turn-out."

Most of the shadows that cross our path through life are caused by our standing in our own light.

**Care of the Teeth.**—Desirable and beautiful as sound teeth are, there is no part of the bodies of young children that is so almost universally neglected, by parents. Scarcely one child in a hundred has regular sound teeth, and the proportion of those that are covered to a greater or less extent with an unpleasant-looking coating is equally great. A very little care on the part of parents would largely obviate this difficulty, but the misfortune is that few parents are willing to exercise such care. And this is especially the case in America, where dentistry thrives more vigorously, perhaps, than in any other country, and all because parents are neglectful of their children's teeth. The regular daily use of the brush, without any other dentifrice than pure white castile soap, and the removal of a misplaced tooth or two, would in most instances not only give pearly whiteness but regularity, both combining to greatly enhance beauty, whether in man or woman, and especially woman.

**The First of the 100,000.**—The Washington correspondent of the Atlanta (Georgia) *Constitution* advises that paper that "Mrs. Henry Watterson presented the one-eyed statesman whose name she bears with a son on Saturday night. This is the first response to Henry's call 'for 100,000 unarmed Democratic infantry to witness the inauguration of Tilden.' The balance of the needed force must be supplied from 'other counties.'" We presume that this method of securing the "100,000" is Constitutional.

**Noteworthy.**—Our readers are aware that Hon. Alexander H. Stephens, Member of Congress from Georgia, has long been very ill in Washington. We clip the following interesting little sentence from the *Press*, Philadelphia:

"Alexander H. Stephens, in his illness in Washington, is next door to the room in which Henry Clay died, and within a few doors of the room in which Daniel Webster died; four doors off is the suite of rooms in which Crittenden, the Kentuckian, dispensed princely hospitality, and next to that is the suite from which Luchanan went to his inaugural ceremonies."

**American Wives of Foreign Ministers.**—The Washington *Star* states that "The wife of M. Outrey, the new French Minister, is a New Yorker. Her maiden name was Helen Russell. She will not come to Washington at present, but expects to spend the summer with her husband at Newport. After her arrival there will be six ladies in the diplomatic corps natives of the United States, who are wives of diplomats stationed here. The others are Mme. de Hagermann, Mme. Mariscal, Mme. Dardon, Mrs. Plunkett and Mme. Baltazzi."

**A phrenologist** says the principal bump on George Washington's head is adhesiveness. He alludes to George's head on a postage stamp.

Said Lord John Russell to Hume, at a social dinner, "What do you consider the object of legislation?" "The greatest good to the greatest number." "What do you consider the greatest number?" continued his lordship. "Number one, my lord," was the commoner's prompt reply.

**Religious Notes.**—Father Keenan died in Lancaster, Pennsylvania, on the 19th of February, at the advanced age of ninety-eight. His death was not unexpected, as the good old man had been failing rapidly of late. Rev. Bernard Keenan was a native of Tyrone, Ireland, and landed in this country at Baltimore in 1820. He was soon afterwards ordained to the priesthood, settled in Lancaster in 1823, and has since been pastor of St. Mary's Roman Catholic Church in that city. For fifty-four years his untiring labors in every good cause won the love of every class and every denomination, and the announcement of his decease will spread sorrow throughout the community. The reputation of Father Keenan was national, indeed, for he was long known as the oldest priest in the Roman Catholic Church. He and the late Bishop Bowman, of the Episcopal Church, also a resident of Lancaster, were warm friends. As one of the founders of the free-school system in Pennsylvania, and as a shining exemplar of the great truths he taught, the memory of Father Keenan will ever be held in profound veneration.

The *Springfield* (Massachusetts) *Republican* truly says: "It was a very suggestive incident at the consecration of Trinity Church, at Boston, when Edward Everett Hale, James Freeman Clarke, Rufus Ellis, and other Unitarian clergymen received the communion from the hands of the Episcopal Bishops." Doubtless it was *suggestive*, but it was a flagrant disregard of the laws of the Protestant Episcopal Church. Not to cite the canonical requirements, we call to mind a strong sentence in the Prayer-Book *rubric* at the confirmation service: "And there shall none be admitted to the Holy Communion until such time as he be confirmed or be ready and desirous to be confirmed." We do not consider unlawful acts of this sort essential to charity and brotherly love; we even doubt whether they are conducive to genuine Christian brotherhood. The fact that there are fundamental differences in doctrine between the Episcopalians and the Unitarians needs not to be considered to show that the whole "suggestive incident" was wrong.

The latest statistics of Moravian missions show that there are 94 stations, 298 missionary agents, 1548 native ministers and helpers, and 22,051 communicants. Including communicants, candidates and baptized communicants, there are 67,413, distributed as follows: Greenland, 1562; Labrador, 1176; North America, 444; St. Thomas, 2199; St. Croix, 2055; Jamaica, 13,202; Antigua, 5812; St. Kitts, 3000; Barbadoes, 2612; Tobago, 2237; Mosquito Coast, 953; Surinam, 22,130; South Africa, West, 8105; South Africa, East, 1768; Australia, 131; Tibet, 27. Of the whole number, 2738 are Eskimos, 1397 Indians, 9873 South Africans, 53,247 of West African descent, and 158 natives of Australia and Tibet.

The Baptists of Illinois now number 66,322, having added 3539 in 1876. Eleven of the churches are German and seven Swedish. For the 915 churches there are only 447 pastors.

The Methodist congregation in the City of Mexico numbers 150.

The Methodist Ministers' Meeting of New York city recently voted to invite Miss Anna Oliver, a graduate of the Boston University and Divinity School and a regularly licensed local preacher, to preach the regular monthly sermon before them at a subsequent meeting. Some sharp opposition

was made, on the ground that woman's preaching was disorderly and that one of the bishops had decided that women cannot be ordained. Dr. George Lansing Taylor replied earnestly, and declared that, in view of the action of the Newark Presbyterians in "stringing one of their ministers by the gills" for allowing women to occupy his pulpit, it was time for Methodist preachers to speak in no uncertain tone. He wanted Miss Oliver invited, not to speak, but to take text and to preach. The proposition was carried by a large vote, although some thought that a woman was as much of place in a preacher's meeting as Lorenzo Dow thought she was in Heaven, when he preached from the text, *Psalm* 12: 1, "And there appeared a great wonder in Heaven unto a woman."

The Church of England has its old trouble with Ritualism in an aggravated form just now. A Rev. Mr. Tooth some time since prosecuted for violations of the Public Worship Act, and forbidden by the lawful authorities to countenance such violations. He persisted in his unlawful course and defied the authorities. Of course, he found himself very soon "a martyr," being imprisoned for contempt. The good Queen came to the rescue, and released the "priest." What will be the result of her Majesty's kindly and well-meant defiance of the law of her realm we can scarcely forecast, but we can readily see that there is but one way to get rid of such difficulties and perplexities, and that is to be found in severing the ties between Church and State. Let the Church deal with ecclesiastical matters precisely as the Presbyterian Church in England would in similar cases, and doubtless she would soon rid herself of this troublesome Tooth without casting him into prison. The extent of the Ritualistic mania may be inferred when we state that those infected have an organized society, yecept "The English Church Union," which boasts as members 7 bishops, 2501 "priests," 5502 members and associates, and 5925 women associates; in 1874, 14,225—a gain of 925 for the year. Besides this, there is the "Church of England's Workingmen's Society," which has 12,000 or 14,000 members; so that Ritualists claim 25,000 lay adherents and 3000 clergymen.

**Color Arrangement.**—A few simple rules in the arrangement of flower-beds will materially enhance the effect produced. Among these are:

1. Avoid placing rose-colored next to scarlet, orange or violet.
2. Do not place orange next to yellow, or blue next to violet.
3. White relieves any color, but do not place it next to yellow.
4. Orange goes well with blue, and yellow with violet.
5. Rose color and purple always go well together.

**Never put confidence in such as put no confidence in others.** A man prone to suspect evil is mostly looking to his neighbor for what he sees in himself. As to the pure things are pure, even so to the impure all things are impure.

**Fret yourself as much as you please about trifles, but do not fret your friends about them.**

No. 65.

## THE MONUMENTAL CITY.—BALTIMORE, OLD AND NEW.

By WILLIAM HENRY THORNE.

THE NEW CITY HALL.

BALTIMORE, like most places of note, seems to have got at its name, as at its reputation and power, only by slow degrees and through considerable tribulation—the good, staid, old way to all honor and glory worth striving for or possessing. It too, like most cities of any size, has had several aliases, and names of sections, which have at last been swallowed up in the one name by which it

is known to-day. It is a curious and interesting study to trace this cognominology, from the primeval forest cradles of giant cities through the generations of their growth in wealth and in varied culture and influence.

It seems, that, as a rule, a name must not only be euphonic, but like the ambitious politician, must have "money back of it" in order to "get the nomination or election;" and other things being equal, the name with the longest purse is pretty sure to win. For other reasons, however, than those of having a good name and a long

angels all the while, as the reformers of these days have done and will do. Verily, the world moves, as we moderns say.

It took our forefathers a good while to find out that the spot on which the City of Baltimore now stands, was the most eligible site for a great city to be found in the neighborhood of Chesapeake Bay; the spot most get-at-able by the largest number of tillers of the soil, and manufacturers and general laborers, and at the same time possessing more commercial advantages than any other locality in the State. They were not geese

enough in those days to fly around in oil-cloth balloons, either on voyages of pleasure or discovery, generally to come dangling down to mother earth with their necks broken; and they had not the fine railways, and perfect atlases to guide them, as, thanks to patient and faithful engineering, we have in these days; they had to find their chosen spots slowly. But nature helped the genius there and then as always, and gradu-

THE OLD CITY HALL.

purse, the Calverts, particularly Leonard and Cecilius, my Lord Baltimore, well deserved the honors of having the fifth city in "the Union" called after their name. They not only braved the swamps and woods and Indians that originally occupied "My Maryland," but, Roman Catholics as they were, established, as early as 1634, at the town of St. Mary's, free religious toleration, and instituted and practiced a system of "equity and humanity" toward the Indian tribes; and did not, as far as we can learn, burn witches, or drive off the Baptists, as the ultra New England Protestants of those days did; nor did they, as far as now appears, sell whisky and rifles by wholesale or retail, by government post-traders or other "republican institutions," to wild Indians, and then, with knavish idiocy, expect them to act like sanc-

ally it became apparent that not Providence—least Annapolis, or St. Mary's—but Baltimore, was to be the great city of the State, and in many respects destined in later years to be no mean rival of the greatest cities in the Union. With remarkable accuracy, and without any explanation of the discrepancy, it is stated in Appleton's "New American Cyclopaedia," in the article on Maryland, Volume XI, page 249, that "in 1729 Baltimore was laid out," and in the article on Baltimore, Volume II, page 548, just as positively, "On January 12, 1730, a town of sixty acres of land"—it would hardly be of water—"was laid out by the county surveyors and commissioners, west of Jones's Falls, and called Baltimore in honor of Cecilius Calvert, Lord Baltimore." At all events it was not until 1729, with probably a little of the work done in bot-

but the fates and the powers that be seized the fertile, well-watered, undulating and wooded acres, at a cost of about ten dollars and began in official earnest to plant and the City of Baltimore, now the solid, earnest, Monumental City of the Union; the home of reconciled national contradictions, possessing a most varied population of black and white, rich and poor, and in many respects the magnetic and attractive place in our whole

but evidently with ideas beyond the mere work of caulking, and not outraged with an ugly or common name, "purchased a tract" of land east of Jones's Falls, and called it Fell's Point, a name which, under many newer sectional names, the tract still bears. The growth of the city has always been what might be called slow and sure—that is, in comparison with some of our newer Western cities. In 1752 Baltimore contained but twenty-five houses and two hundred inhabitants—really a village—with a house here and there on the hills.

Early as 1662, a Charles Gorton, a merchant, possessing a valuable "practise," might have been perambulating the arms of the harbor with indications of a thoughtful planning under his characteristic broad-brimmed hat. He patented a tract of land on the Point, opposite the eastern section of the present city; but such actual labor of improvement in the soil does not clearly appear. An affliction to such a name as this, and of course

of the acres was ever called after this. In 1682 a David Jones, more favored of the ruling powers, and the first settler on the edge of the harbor, got his name attached to the stream which now divides Baltimore into "Old Town" and "New Town;" and as early as 1732, a new town of ten acres, in twenty acres "laid out" on the east of Jones's Falls, called Jonestown, in honor of said David, the founder. In a few years Mr. Jones had to change the name, however. Baltimore looked east as well as north and west, and in 1745 the town, now represented by the section known as Old Town, fell into the embrace of the more distinguished family name of the Calverts. In 1730 William Fell, a ship-carpenter of the period,

OLD CONGRESS HALL.

Twenty-one years later William Goddard, a printer from Rhode Island, began to publish the *Maryland Journal and Baltimore Advertiser*, the first newspaper in Baltimore. To-day the *Baltimore American*, the outgrowth of Goddard's enterprise, and *The Sun* rank among the best and most enterprising daily papers in the country, and *The News*, "the four o'clock News," as the ragged persistent newsboys yell right in your ears on the street and in the horse-cars, within two minutes after the town clock has struck that hour every afternoon, is a gossipy and spicy vehicle of the large and small talk of Baltimore and the world. Baltimore has several other luminaries of the modern political home and foreign talk and tattle; and if the Sultan of Turkey has the ear-ache, or

## THE MONUMENTAL CITY.—BALTIMORE, OLD AND NEW.

President of the United States has made a speech, the residents of the fifth city in the Union view it, and exult or mourn over it as soon as the sellers in New York or Berlin or London; so perfect in these days are our means for carrying the small talk and small doings of the world.

In 1769 a few public-spirited men bought the first fire-engine at a cost of £99, and the same year the first Roman Catholic church was erected on the site now occupied by Calvert Hall, a school of the Redemptorists, on Saratoga street.

In the same year that William Goddard began his newspaper, 1773, the Baltimoreans got a line of stage-coaches on the road, rough and rugged enough in those days, between their town and Philadelphia, and gave themselves two or three

years ago it was the very last house at the end. The spot is now in the centre of the business portion of the city.

Baltimore is situated on a crooked stream or feeder of the Patapsco River, 14 miles from Chesapeake Bay, 178 miles from the Atlantic Ocean, 38 miles by rail northeast of Washington, 97 miles southwest of Philadelphia, and 140 miles southwest of New York. The approach to the city by rail are comparatively tame at all times of the year, but particularly barren-looking in winter. To the left of the railroad, as you go on one of the hills near the city, is the almshouse. In this instance it has at least the advantage of high ground and such of the breezes as travel that way. The building

WILLIAM KNABE & CO'S PIANO FACTORY.

days in rickety, hard and jolting old wagons, called stages, to accomplish the distance which one gets over in these days, in the richly-cushioned, easy-spring railway coaches of the finely managed Philadelphia, Wilmington and Baltimore Railroad, in three or four hours. Now, the world does move in that line, without a shadow of doubt. In 1775 Baltimore contained 564 houses and 5,934 inhabitants; to-day, in 1877, the population is something over 270,000.

While the British kept possession of Philadelphia in 1776, Baltimore had the honor of being the seat of the National government, the place of meeting being Jacob Fite's building, located at the southeast corner of Baltimore and Liberty streets. According to John Adams, this temporary "Congress Hall" was in those times owned by "a Quaker, who built it for a tavern." A hundred

a pale, red brick structure, of abundant proportions, but like the inmates of a poor mixture of matter and of this most unattractive universe.

Before leaving the city line the locomotive is reminded by the black and four miles and highest speed through the so the

of the nineteenth century has to cover old stage-coach time as he enters the lines of our progressive temples of the cities of these new days. This slow abundant time to cast one's eyes become sufficiently impressed with the venerableness of the city of the C more has a venerable and proud poorer sections. It is a little so looking, too; the feeling that the fine old aristocratic names to maintain getting into the buildings and looking from all the windows and even more resembles Boston in general and appearance, more nearly an American city; and in some staid and aged look of such Liverpool and Manchester.

the Philadelphia, Wilmington and Baltimore Railroad escort you to the foot of President street, where the horse cars pick you up, and take you to almost any part of the city you may wish to go.

The impression one gets on entering Baltimore is that it is, as the facts prove, a city of considerable commercial importance. The shipping being massed in a bay, is more impressive to the eye than the same number of vessels would be if extended along lengthy river fronts, as in New York and Philadelphia. As it were in the midst of the countless masts of ships, two or three enormous grain-elevators lift their huge proportions, indicating that Baltimore seeks and holds a fair portion of that traffic which binds the prairies of the Western States to all the cities and homes of the Old World. Thus, even to the eye of the ordinary traveller, the harbor and its surroundings offer palpable evidence that Baltimore is a city of no mean standing and destiny. The mere reference to the annual statistics of its shipping and railroad business will confirm this impression, and show conclusively how rapid this city of the South is growing in

the material prosperity of the times. The following statistics of shipping, flour and grain receipts, etc., for the month of February, 1877, are worthy of perusal:

There were 90 vessels arrived from foreign ports, viz: Steamships 5, ships 4, barks 60, brigs

11, schooners 10; of which 34 brought cargoes, and 16 were under the American flag. The principal articles imported were 1,219 hogsheads, 74 tierces, 5,531 bags and 69 barrels sugar; 875 hogs-

MOUNT VERNON PLACE METHODIST EPISCOPAL CHURCH.

heads melado; 29,745 bags coffee; 15,260 boxes oranges; 2,525 boxes lemons; 1,296 tons, 5,964 sacks, 17,956 bushels salt; 1,270 tons iron ore; 370 barrels vinegar; 15,595 boxes tin-plates; 1,900 tons guano; 570 tons brimstone; 65 blocks Italian marble; 190 tons chalk; together with

# THE MONUMENTAL CITY—BALTIMORE, OLD AND NEW

als, glass, earthen- and iron-ware, etc.,  
ht in steamships and sailing vessels.  
ere were 122 vessels cleared for foreign ports,  
th cargoes, viz : Steamships 6, ships 4, barks  
brigs 15, schooners 12. The principal articles  
orted were 2,434,494 bushels corn, against  
13,035 bushels in January; 37,117 bushels  
eat, 37,927 barrels flour, 1,308,712 gallons  
roleum, 708,079 pounds lard, 601,099 pounds  
con; 2,108 hogsheads, 1,536 cases, 30,000  
ounds tobacco; 815 hogsheads tobacco stems,  
5,774 bags bark, 1,020 sacks clover seed, 152 rolls  
eather, 2,179 bales cotton, 3,373 tons coal,  
together with miscellaneous products. Total value  
of exports, \$2,839,627.

The comparative receipts of grain for the months  
of February, 1876 and 1877, were as follows :

	Wheat.	Corn.	Oats.	Rye.
February, 1876 . . .	93,856	2,719,138	64,025	3,574
February, 1877 . . .	116,849	2,299,040	35,063	10,422
Increase . . . . .	22,993			6,848
Decrease . . . . .		420,098	28,962	

The comparative receipts of flour, etc., for the  
months of February, 1876 and 1877, were as  
follows :

	City Millers Barrels.	Per Rail Barrels.	1,1 Pt. Delivered.	C'n Ml. Barrels.
February, 1876 . . .	23,223	68,862	10,119	3,636
February, 1877 . . .	23,356	77,106	8,140	2,295
Increase . . . . .	333	8,244		
Decrease . . . . .			1,979	1,341

Southern coastwise trade was in the usual vol-  
ume, exports comprising groceries, provisions, dry  
goods, etc., and imports including cotton, naval  
stores, lumber, tobacco, etc.

Receipts for duties in coin at the custom-house  
were \$284,518.45, and from all sources \$298,-  
456.02.

Another side of our "modern Christian civili-  
zation" is well represented by Fort McHenry,  
situated on a point of land between the harbor  
and the Patapsco. Here, in 1814, the English  
Britishers and the American Britishers (for there  
was hardly time in those days for real Americans  
to be born) felt called upon to pound and pepper  
each other with cannon-balls and red-hot shot,  
over the trifling questions that lay at the bottom  
of what is known as the War of 1812. The fort  
was bravely commanded, in those days, by a Col-  
onel Armistead, otherwise, like other millions of  
others, long since forgotten; and was success-

fully defended against the impru-

gantly, which is not say-  
mentary thing in the world.

By a necessary law of  
Baltimore, like most of  
from east to west and fr-

the pressure of the Old World toward the Pacific, and still on to India and the cradle of the race; like a hare started by the hounds, flies over the miles but seeks its lair toward the end of the chase and the evening of the day. It is the seeking of conquering races, on all spots, for the nearest approaches to the temperature out of which their fathers have come for all these thousands of years. "Old Town," where our friend David Jones perambulated a hundred years ago, the section of the

thoroughfare. Like most main business streets of great cities, Baltimore street, as by a law of nature, occupies a very central position. All parts of the city seem to flow into it. It is not like Chestnut street, Philadelphia, or Broadway, New York, but is a sort of mixture of Broadway and Fourth avenue, or Chestnut and Market streets. It has the usual display of empty trowsers, ribbons, and calicoes, with the usual crowds of admirers and purchasers. A few of the dry-goods houses are

YOUNG MEN'S CHRISTIAN ASSOCIATION BUILDING.

city now gone through by the traveller in the steam cars before he reaches the depot, is not the most beautiful neighborhood to be found on this planet. It has the air of faded respectability, and is mainly noted, in these days, as the section where the impulsive Baltimoreans flew at the Federal troops, from Massachusetts and Pennsylvania, while on their way to Washington, April 19, 1861; but many of the houses in this section still have the comfortable conscious look of old time gentlemen. "Up town" and "West," however, are the ways of wealth and fashion. Baltimore, formerly Market street, is the great retail business

very elegant and beautiful, both in their internal arrangements and external appearance.

To get a good idea of the city one cannot do better than walk or ride a mile or so through the business part of Baltimore street, then stroll or drive up Charles street to the Washington Monument, pay your fifteen cents, take a lantern and mount the dark spiral stairway two hundred and twenty-seven steps to the top of this fine marble Doric pile, erected by the people of Maryland to the memory of the immortal Washington. We believe in monuments in general, not so much for the good they are to the dead as the living, and

we believe in this Washington Monument particularly. It is a fine, clean marble column, one hundred and sixty-four feet high, with a good solid base fifty feet square, with inscriptions of important events in the life of Washington, wrought in iron letters on each of its four sides.

The view from the top commands the whole

of the four streets running east, west, north and south from the monument, has a little park in the centre, and the churches, public buildings and private mansions about them all indicate wealth and luxury. On one corner, at the base of the monument, is the noted Peabody Institute, a very substantial looking building of white

LORD BALTIMORE (SIR GEORGE CALVERT).<sup>1</sup>

situation, and the immediate vicinity of the monument is the richest, healthiest looking, cleanest and most aristocratic portion of the city. Each

<sup>1</sup> The founder and enlightened lawgiver of Maryland—born at Kipling, in Yorkshire, England, about 1582, was descended from a noble Flemish family of the same name. He was educated at Oxford University. By his talents and virtues he gained the confidence of James I., who appointed him, in 1619, one of the principal Secretaries of State. Bancroft says, "Calvert deserved to be ranked among the most wise and benevolent lawgivers of all ages. He was the first to plan the establishment of popular institutions, with the enjoyment of liberty of conscience."

EDITOR.

in plain Grecian style, with copper roof one hundred and seventy feet on Mount Vernon Place and one hundred and fifty feet on Lexington street. The Institute was dedicated October 1866. It has four separate departments, a reference library, a lecture department, a conservatory of music and an art gallery. The collection at this writing contains over sixty-two thousand volumes, selected with great care, and fairly represents the most valuable literature of the country. The Maryland Institute for the promotion of mechanic arts, the Academy of Science, and the Maryland Historical Society, are places of

latest, and are worthy of mention. On an opposite corner from the Peabody Institute is the Mount Vernon Place Methodist Episcopal Church, a well proportioned and beautiful, though somewhat diminutive looking Gothic structure, built of the new serpentine, or green stone, with facings and trimmings of brown and drab; steeple and all decorations of solid stone. As to its architecture, it is one of the most perfect little gems we have ever seen in any American city; but it does not look as though it amounted to much as a place for Methodist preaching, and looks altogether more like a thing of ornament than of any real religious utility.

The new building of the Young Men's Christian Association is, if anything, more pretentious looking than its sister institution in Philadelphia. It is at the corner of Charles and Saratoga streets, is a stories high, built of brick and drab stone, and presents a brilliant and imposing appearance; the style of architecture being what may be called the tall and loud one of this generation, a sort of

mixture of Roman and French and modern. But it is quite handsome as modern buildings go, and is a noble monument to the young Christian enterprise of this growing city. A little further east, on Holliday street, is the new City Hall. It is of white marble, in Roman and French style, with many features of real beauty and many defects, as is unfortunately the case

with most all our public and large buildings of these days, simply because they are mixed and mongrel in style, while expensive and elaborate in material and workmanship. A little further north, on Holliday street above Lexington, is the old City Hall, a very modest, worn and dusty old rat-hole, occupied in these days by certain boards

THE SUN BUILDING.

of review, etc., such as are always floating along the stream of political organizations. We recently climbed its rickety stairways to the trap-door in the roof. It is a place fit for owls and bats. Compared with it the new City Hall looks a shining palace of beauty and culture, and shows what strides in wealth and ambition the City of Baltimore has made in the last fifty years; and

no doubt the tax-payers here, as in other great cities, have a very keen and practical sense of the change. A city like Baltimore has of course a great many handsome buildings worthy of notice if there were time and space for the work. There are two marked features. The old churches and public institutions nearly all took the shape of a square sort of building with a low dome. It was the rage of a certain period. The University of Maryland, the Catholic Cathedral and the Unitarian Church, are cases in point; the new churches invariably run to the Gothic. The dwelling-houses are pleasantly varied by brownstone, plain bricks and bricks painted in various shades of brown and drab. The city is well supplied with buildings provided for public charities: The Hebrew Hospital, the Blind Asylum, Boys' Home, Methodist Home for the Aged, are a few of the most noted of these.

In point of social life and culture, Baltimore is to Maryland and a large portion of the South what Boston is to New England. It is *the* great Southern city. Neither New Orleans nor Charleston nor Richmond can compare with it; it is more intensely *South* in its temper and habit than Louisville, St. Louis, or Cincinnati. The home life has a rich dignity, with a little too careless luxury; and the queens and priestesses of the hearthstone and the home altars are simply among the gentlest, most elegant and charming creations to be found on this planet.

The Baltimoreans do not seem to travel much. In repeated visits to the city, we have remarked how comparatively few people, especially of the home people, were on the trains going into or leaving the city; yet Baltimore is one of the few great railroad centres. Next to the "New York Central" and the "Pennsylvania," the "Baltimore and Ohio" is certainly the road most talked about and best known east of the Mississippi River. It had a most dignified beginning. Charles Carroll of Carrollton laid the corner-stone, July 4th, 1828, and to-day, under the efficient management of Mr. John W. Garrett, its tracks may be counted by thousands of miles, and are connected with nearly all the prominent lines in the Middle, Western and Southern States. The "Baltimore and Potomac" is another road that one hears a good deal about in Baltimore, in these days. It was projected before the late war, but the work was not actually commenced on it till 1867. The "Baltimore and Potomac" was the first streak of nine-

teenth century civilization that the population "Prince George," "St. Mary's," "Charles," "Anne Arundel" and "Calvert" Counties, knew anything about. The road connects Baltimore with the Potomac River, and was opened Baltimore to Washington, July 2d, 1872. Philadelphia, Wilmington and Baltimore already mentioned, is one of the safest and best managed, and best-known roads in the country, a sort of backbone between the North and South, although more noted for its utility than for its beauties.

The Baltimore oysters are delicious and famous. Among the leading industries of the city may be mentioned, oyster packing; the canning of fruit and vegetables; and the establishments of W. Munsen & Sons, Kensett & Co., Mahoney & Co. give employment to thousands of people, and among the best-known houses of this sort in the city. From the Washington Monument there still to be seen one solitary shot-tower in the Monumental City; but for various reasons this trade is not as prosperous in Baltimore as in former years. Baltimore devotes a good deal of attention to the business of sugar-cleaning. The Calvert Sugar Refinery, the Maryland Sugar Refining Company, and the Baltimore Steam Sugar Refinery, are enormous establishments in this line. In Baltimore in 1871 the receipts from this trade were nearly two-thirds as great as the aggregate of Boston, Philadelphia and New Orleans. Among the hotels, the Carrollton is perhaps the most elegant and most modern—one of the most extensive and luxurious houses in the country.

Of course Baltimore has a Park, and the one chosen for it is the most poetical of any park in the country. The enthusiastic Baltimorean declares that "Druid Hill is the most beautiful Park in America;" but he probably has not spent much time in New York Central Park, and perhaps he has not been half-way over Fairmount Park, Philadelphia, really the most beautiful public park in the world; but Druid Hill is beautiful enough, and under the ambitious influence of the Monumental City will for many years rank among the handsomest pleasure-grounds in the country. In every sense of the word, Baltimore is a great city, having a great past of which it may well be proud, and destined to a much greater future toward which it may well devote the best energy of all its people.

## STAINED GLASS.

BY CHARLES STOKES WAYNE.

THE growing interest in all branches of decorative art, brings to our consideration the subject of stained glass; its style, manufacture, and æsthetic effect.

Although the ancients attributed to the Phœnicians the honor of originating it, yet careful research has shown conclusively that the art of its manufacture was known to the Egyptians as early as 1500 B.C., many years before its first appearance in Phœnicia. That of any shade, however, other than a pale blue, was not made in any degree of excellence until three hundred and fifty years later, when the manufacturers discovered that by a systematic use of the metals a variety of colors could be produced. With the increase of luxury and consequent growth of artistic taste in Rome, under the reign of Tiberius, glass began to be used not only in the shape of bottles, jars, and the like, but for inlaying the walls and pavements of palaces and public buildings. About the first century it came sparingly into use for windows, but it was not generally adopted for this purpose until many centuries after. For a number of years Venice was the principal seat of its manufacture, but some time later Belgium became the greatest glass-making country in the world. In the time of the Second Henry of England the people of the British Isles considered houses provided with stained glass windows magnificent. It was not until 1439 that these people began the manufacture of window glass for themselves, and for many years following they expressed a decided preference for the glass from "beyond the seas," just as Americans of to-day express a preference for European, and especially English, stained glass work.

That there are two principal kinds of colored glass, has become a generally recognized fact; and a few observations on the peculiarities of each may enable any one to discern the difference at a moment's glance.

The first method and the only one, which has any pretension to artistic excellence is called the mosaic method. In works formed by this process the various colors are represented by separate pieces of *pot-metal* glass, in which the whole

substance is permeated by the color. The only exceptions to this rule are as follows: *red* or *ruby* is invariably a coated glass, the coloring matter being so intense that were it made in sheets of the usual thickness, it would appear opaque.

A light transparent *yellow* stain, penetrating to quite a depth, is in some cases imparted by the use of pure silver. This color is much fainter than the intense pot-metal yellows.

A third exception results from the fact that blue and yellow form *green*. Thus, part of a piece of blue glass may be changed to green by the addition of the above-mentioned yellow stain. All *brown* and *black* parts, together with subordinate outlines and the shadows, are executed by means of the pigment *enamel brown*, laid on with a brush.

The process of preparing a work by this method is an exceedingly interesting operation. Having selected the design, the first thing necessary is to make a full-sized drawing of the window, representing the exact dimensions of the several parts. It is desirable to introduce the lead so that it will form bold outlines, and thus heighten the effect of the glass by plainly separating the figures from the background, and by giving a depth of shade to the folds of the drapery. If attention is paid to this, the lines, instead of marring the effect of the work by their prominence will add greatly to its beauty. From the first drawing a second one is traced, and is called the "cutting drawing," showing the shape and size of each piece of glass to be used. On this the artist marks the tints and colors he wishes, and the drawing is then sent to the glass-cutter, who selects from the various sheets of colored glass the tints desired. He then with a diamond cuts out the required shapes, and they are sent to the artist, who places them temporarily upon a glass easel, and paints on the minor outlines, the shadows, and the black and brown parts with *enamel brown*. The parts that he wishes to be stained yellow he covers with silver mixed with ochre or clay, and the pieces are removed to the kilns. Here they are placed on iron shelves and exposed to a heat sufficient to slightly fuse the surface of the glass, thus causing

the outlines, shading and yellow staining, to become permanently imprinted upon it. The brilliancy of the glass may be injured by a failure to stop the firing at the right moment, or by defects in the construction of the kiln. Great care is taken to allow it to cool very slowly, as by rapid cooling it is liable to crack. One firing, as a general thing, is insufficient, many of the parts requiring further painting, which being done, they are placed again in the kiln and receive a final firing. The "cutting drawing" having been laid on a large board or table, the various pieces are properly placed upon it, and are then joined together by means of leaden bands grooved on each side and bent according to the drawing. These having been soldered together at all their intersections, the parts are all united and the window or panel is made.

Enamelled glass, that in which the surface only is colored, is much more modern, and exceedingly cheaper than the manufactures of *pot-metal*, above described. The origin of enamelled glass was in the futile effort of glass painters to imitate nature more closely than was possible by the mosaic method. They wished to produce on transparent glass the same effect obtained by artists on canvas, and their endeavors were accordingly useless. All attempts at painting pictures true to nature on transparent surfaces are necessarily failures, and though the resemblance to the original may be better than in mosaic glass, the colors do not possess the depth and brilliancy of the *pot-metal*. Painted windows all sooner or later become dingy; and, as a writer has stated, "are not very much superior, as far as coloring is concerned, to the productions of the modern art of 'diaphanic,' or the transparencies displayed on the streets about election times." The mosaic method, as I have before stated, is the only process worthy of our consideration, and to that art I shall endeavor to confine the remainder of this article.

To the late Mr. Charles Winston, of England, we owe much, if not all, that we know of the different styles of English ancient and mediæval stained glass. As the late Mr. Rickman divided English architecture from the Conquest to the Reformation into three principal styles: the *Early English*, the *Decorated* and the *Perpendicular*, so he classified painted windows. So minute was his attention to detail, that we are now able to distinguish by the peculiarities of

drawing and coloring, the period in which a window was painted. In the following list of the styles, our principal authority is Winston's work on this subject:

THE EARLY ENGLISH STYLE may be said to have continued from the first introduction of painted windows until the earlier part of the reign of Edward I., or about the year 1280. The characteristics of this style may be summed up as follows:

The foliage is generally unnatural, and the artificial and ornamental scrolls of the early English stonework. The figures have an exceedingly flat appearance, there is no attempt whatever to make them appear in relief. There is an utter want of perspective in the canopies, which are generally low in proportion to the figures which they cover. The windows of this period are noted for drawing and disregard of anatomy in the representations of the human figure. There are many peculiarities in the glass itself, and in the method of its construction. The glass is not so transparent as that of later periods, and the colors are richer and softer than those seen in windows of a subsequent period. The windows of this period are noted for strong dark lines of enamel bordering a large quantity of lead work. The most early English examples are *white patterns*, composed of panels of white glass, on which is drawn a distinct foliated pattern.

The windows of the DECORATED STYLE followed the early English and flourished during the latter part of the thirteenth century, from 1280 to 1380, are characterized by more natural forms of foliage, the introduction of the before mentioned yellow stain, and the canopies, exhibiting quite an amount of natural detail. These have flat fronts, straight gables, and high spires and pinnacles, colored red, blue, or green. The glass of this period is less substantial than formerly, the lines less thick and less frequent, and the figures are more anatomically correct.

In the PERPENDICULAR STYLE, dating from about 1380 to 1530, there is a return to conventional forms of a peculiarly flat and delicate kind, and a dominance of yellow and white stain. After the middle of the fifteenth century the canopies are conspicuous for the first time for any attempt at perspective.

THE CINQUE CENTO, or sixteenth century, has for its distinctive characteristic the

naissance and Italian forms in the place sometimes the styles are mingled, and the Gothic is dropped entirely. It emerges and more varied subjects than any predecessors, and by some is considered the of the art of stained glass manufacture. ly considered, stained glass windows tive of the finest effects. In churches rals they seem to be most appropriate. rays of the glorious sun falling through aking of their rich colors, and withal em to impress the beholder with the the place. Thus must the poet Milton impressed when in his beautiful poem, so," he wrote these lines:

And storied windows, richly dight,  
Casting a dim religious light."

glass, from designs of a domestic has a rich appearance in dwellings. ndows of this material give an exceed-effect, and are by no means uncommon.

Stained glass windows to admit light to stairways are frequently used in villas, but for city mansions they are mostly inappropriate, on account of the gloom, as a general rule, caused by surrounding buildings. As fire-screens stained glass in frames of oak, ebony, walnut, or mahogany, is very pleasing. The bright glow of the fire shining through the rich dark colors of the *pot-metal* glass, gives a cheerful tone to the whole apartment. Stained glass medallions and panels hung in windows, are a very pleasant decoration. There are also numerous other ways in which stained glass may be applied to domestic purposes; and now that Americans are becoming more susceptible to the claims of art in household decoration, some attention to this subject, will, I trust, cause them to see its advantages as a beautifier of the home as well as the church.

The upper panes of windows in houses built in the Queen Anne style, are very generally filled in with stained glass, usually in heraldic designs, adding greatly to the beauty of the apartments.

## HOW THINGS MOVE.

BY MARY GRANGER CHASE.

g ago a lady was singing in a room andelier with many glass shades was The lady's voice was loud and strong, continued her song, her voice shattered glass shades to fragments. hat sounds like a strange story to you, but voices do and always have done, ings. There was once an inn-keeper to his earnings by letting his guests see drinking cups with his voice. In the e Jews' ancient book of laws, there is said about the reparation that should hen an article is broken by the voice estic animal. We are told that on the ain roads of Switzerland, the muleteers bells of their mules, lest the tinkling an avalanche. A dog can play the o far as to make certain strings vibrate; and, after all, vibration of the strings es all the music of the pianoforte.

is a moving to and fro as we see the f the clock do. All things have a

certain vibration, though it cannot always be seen; some things have a number of vibrations in their different parts. And when two things vibrate in time with each other, and are near each other, though it is only air that connects them, the moving of one is affected by that of the other. The lady's voice broke the shade because they vibrated in time with each other, and the motion of the voice so increased the motion of the glass as to loosen its particles and make it fall apart. When two clocks, with pendulums that have the same range of vibration, are in the same room, and the clock doors are open, if the pendulum of one is set in motion, the pendulum of the other will move too. This is the principle; every time the pendulum of the first clock vibrates, it sends a puff of air in the direction of the pendulum of the second clock; and these puffs, continued regularly, set the pendulum of the second clock a-going. When two pianos are in the same room, if the strings of one are struck, not only will they vibrate, but also the corresponding strings of the other

piano, provided that the forte pedal of the second piano has been depressed. And if you whistle a note into a piano, or violin, the strings of the instrument in unison with that note will audibly take it up.

In London boys carry milk about the streets in pails which hang from a yoke on their shoulders, and are held off from their bodies by hoops just below the waist. If these boys kept up a regular step, the vibration of their bodies would increase the vibration of the milk until that was spilled. The little fellows may not quite understand the philosophy of the matter, but they know they must change their step from time to time to keep their milk in the pails.

A strong gust of wind will uproot a majestic tree when it comes just in time with the tree's own swing, or vibration. Some years ago there was considerable annoyance in one of the mills in Lowell, because the walls and floors of the building were shaken on certain days by the machinery. At these times, a pail of water would be almost emptied of its contents by the motion of the factory. It was finally discovered that on the days of disturbance the machinery went at a rate in keeping with the vibration of the building, and the trouble was readily overcome, by making the machinery work either faster or slower than had been the custom.

The first iron bridge ever built was that at Colebrooke Dale, in England. While it was building a fiddler came along, and exclaimed, "I can fiddle that bridge down!" The workmen, little alarmed, bade him fiddle away to his heart's content. Whereupon the musician tried one note after another upon his instrument until he hit upon one in tune with the movement of the bridge, and then the structure began to quiver so perceptibly that the laborers begged him to cease and let them alone.

It is usual for a band of soldiers when they come to a bridge to stop music and walk over in broken file. Terrible calamities have occurred in cases where this precaution was not taken, as at Angiers, in France, where a suspension-bridge broke in under a body of soldiers marching over in file, and two hundred and eighty lives were lost. Robert Stephenson said there was not so much danger when a bridge was crowded with men or cattle, or when cavalry were on it, as when soldiers passed over keeping step. Indeed, if it were

possible to make a mouse walk back continuously over a bridge, keeping the vibration of the bridge, the mouse would eventually destroy the bridge.

When Galileo discovered, that by putting his mouth upon a pendulum each time it came away from him, he could greatly increase its velocity, he arrived at the important principle that a slight impulse, if regularly repeated, is of great consequence. On the same principle, a heavy bell that a strong man can scarcely move by one pull with all his might, can be set in violent motion by a mere boy, if the boy gives regular pulls at the rope, because each pull increases the bell's vibration. So in the case of a child, if a push is given every time the child comes back, he will keep going higher until he finally goes over the tree; but the sameness of the motion by giving a push every time the swing has come way back, and yanking it forward at the end of the swing.

Put a tuning-fork in connection with another tuning-fork of the same pitch, and its vibration will be increased. The same effect is produced by holding a tuning-fork over the mouth of a bottle. Apply one that vibrates in time with the vibration of the bottle. The sound, called the song of the bottle, that is heard when a shell is held to the ear, is the vibration of air in the shell. The vibrations of the mighty organ are caused by the vibrations of the pipes. Sound is the sensation we receive from vibrations that reach the ear. Vibrations are constantly passing through the air, and other matter may convey them. When a tuning-fork is felled, if a person slightly scratches the tuning-fork with a knife on one end of the tree, another person with his ear pressed at the other end can distinctly hear the sound, which in this instance is conveyed through the tree itself.

But what of the statement, that two vibrations create silence? At first thought, as suggested, it seems as absurd as to say that two loaves can make no bread. But when we remember that that sound comes from vibration of air, we can believe that when two vibrations unite, they sometimes increase, and, sometimes, just destroy each other, creating silence. It is with sounds, or vibrations of air, exactly as in the case of the waves of the sea. One wave may join another in such a way as to ride triumphantly on its crest; or it may

the other's trough, and so stop the motion of

At one point on the coast of Ireland is no tide, because the waves of the Irish and the Atlantic Ocean unite in the latter

has been found that the Davy Lamp, invented for miners to take into the mines, is not always a safety-lamp, for a very loud noise, like that of a gun in a coal mine, may cause such an increase of vibration that the flame and the outside gas meet. The effect of firing a pistol near a Davy Lamp was tried, and it was found that the shock caused the flame and outside gas to meet. At Manchester, in Massachusetts, there is a peculiar singing beach; for, owing to some peculiarity of form, the vibration of the sand on the beach is keenly musical.

There is also on the peninsula of Mount Sinai a hill called Gibel Nakus, or Mountain of the Bell, where musical tones are distinctly heard, and have excited much curiosity and given rise to various speculations concerning their origin. Some years ago a Lieutenant Newbold, of the Madras army, visited this curious hill. Setting off from Wadi Feiran, "after two hours' riding and a short walk of half an hour, he reached the place, which he described as a belt-shaped hill, from three hundred and fifty to four hundred feet in height. On the western side, which faces the Red Sea, is a slope of about eighty feet, covered with a very fine quartzose sand, varying in depth from five or six inches to as many feet, according to the form of the sandstone rock which it covers. This is the spot from which the mysterious sounds issue. Not the slightest noise was heard; but their Arab guides, desiring them to wait still at the bottom of the slope, began to ascend the slope, sinking

to his knees at every step. The travellers soon heard a faint sound resembling the lower string of a violoncello slightly touched; and being disappointed at the result, determined to ascend themselves, in spite of the intense heat of the sun and extreme fineness of the sand. On reaching the summit they sat down to observe the effect. The particles of sand set in motion agitated not only those below them, but, though in a less degree, those all around them, like the surface of water disturbed by a stone. In about two minutes they heard a rustling sound, and then the musical tone above alluded to, which gradually increased to that of a deep mellow church bell, so loud that it recalled the rumbling of distant thunder. This occurred when the whole surface was in motion, and the effect upon themselves, the travellers compared to what they supposed might be felt by persons seated upon some enormous stringed instrument, while a bow was slowly drawn over the chords. They descended while the sound was at its height; and soon after it began to lessen with the motion of the sand, until, at the end of a quarter of an hour, all was perfectly still again."

There are also what are called "singing flames;" for two or more flames burning within tubes will vibrate in unison as long as they are kept apart, and by means of them music can be produced that sounds surprisingly like that of the human voice.

If a tuning-fork, while vibrating, is held near a certain kind of flame its vibrations will be caught up by the flames, and by the aid of a special contrivance can be *seen*. This brings us to visible music, a real art now, and a highly interesting and enjoyable one, but we must not enter upon it in this paper.

### OH, SAY NOT LIFE IS DARK!

Oh, say not life is dark!  
There's brightness for us all;  
For you and me and every one  
The warming sun rays fall;  
The moon and stars at night thy path  
Illumine as well as mine,  
For you and me and every one  
The beams of pleasure shine.  
Oh, say not life is dark,  
Though fortune be not fair!  
The cottage of the toiling man  
May have a jewel there!  
Though wealth has never round its hearth  
Its golden circle bent,  
Perhaps the gem of love is there  
That hearth to ornament.

Oh, say not life is dark,  
Though poverty be there!  
Thou hast a heart within thy breast,  
A soul which is divine.  
Strive on, plod on thy humble way,  
And peace thy lot shall bless,  
The fountain-head whence issues all  
Of human blessedness.  
Oh, say not life is dark!  
There's brightness all around;  
How oft beneath a homely garb  
A noble heart is found;  
The laborer in his lowly cot,  
The beggar on the road,  
The miser and the millionaire,  
All have one common God.

## ARCHITECTURAL PROGRESS, AS SEEN IN THE RELIGIOUS EDIFICES OF THE WORLD.

By REV. WILLIAM BLACKWOOD, D.D., LL.D.

### IV. EARLY CHRISTIAN, ROMAN AND BYZANTINE ARCHITECTURE.

IN Greece, after the days of Alexander, the social condition of the provinces into which his empire was divided affected the condition of art; so, during the decline of the Roman power, archi-

When the Emperor professed the new faith, he caused certain of the buildings then existing to be devoted to Christian uses. It happened that some of them were so arranged that they could easily

itecture speedily began to show that the age of purity and unity of design had died out. Indeed, for several ages nearly all the buildings erected were an assemblage of incongruous elements, in which new forms were commingled with others that were Roman in character, showing that the palmy days of building had passed away.

Two great events contributed to bring about this change, which became broadly marked in the beginning of the fourth century. The first was the conversion of the Emperor Constantine to Christianity, and the second was the establishment of the Byzantine or Constantinopolitan empire.

be adapted to the purposes for which they were to be employed, and in consequence of custom and usage their form affected the style in which future edifices were built, when new places of worship were required.

In Rome, important causes united to influence the style of early Christian art. The Christians were not a distinct people, they did not constitute a separate nationality, they had no special art or artists of their own. As formerly stated, they had at first to use such edifices as they could procure, and when they were permitted to build, they had to employ such artificers as they found around

them, whether Greek or Roman. Then again, when the Ostrogoths and the Lombards poured over the Alps into Italy they brought no architectural style along with them. They were ready to accept such edifices as they found in their new homes, and hence the style of the Roman Christian prevailed not in Italy alone, but it was

throne of the Cæsars, and when the heathen priesthood gave place to the ministers of the Christian faith, it was found that the Basilicas presented the most convenient form for Christian use. These buildings combined the two features of an exchange and a court of justice. They were oblong rectangular buildings, with a semi-circular

RUINS OF THE TEMPLE OF FORTUNE IN THE FORUM AT ROME.

accepted and adopted among the Franks and the Anglo-Saxons.

No Christian churches of any importance were built at Rome before the time of Constantine, and by the time the Christians enjoyed the privilege of raising edifices of their own, their tastes and habits had been formed by their use of the heathen buildings which they had been permitted to occupy. The Roman Basilica became the model of the Christian church, for when Christianity emerged from the Catacombs to be seated on the

recess at the end, remote from the entrance. The interior was divided by two ranges of columns into three longitudinal avenues, the widest being in the centre. Across the end at which the recess was placed, an aisle or raised part was carried, and here the advocates and all who had cases to be determined took their places, while the judges on elevated seats occupied the recess. In very large basilicas the central avenue was open to the air, but the side aisles or avenues, which often had galleries, were open to merchants or spectators

interested in the proceedings of the court below. The illustrations herewith given, will enable the reader to understand the general form and appearance of the Basilica, better than any verbal description. It has been held that Constantine gave up his palace of the Lateran to the Bishop of Rome, in which an edifice of this kind existed, that the first church which he built was one over the tomb of St. Peter, and that he subsequently erected others, which were dedicated to the mem-

and the ministers who read the Scriptures and conducted the services, had to be provided for, and places were assigned to them in the central nave. The women were placed in galleries, or in the side aisles, and the altar or communion table was at the elevated spot which separated the nave from the apse or semi-circular recess, in which were the seats of the Bishop and the higher clergy; but afterwards the clergy were removed from behind the table to places on either side or

RUSSO-GREEK CHURCH, AT BUCHAREST, WALLACHIA.

ory of St. Paul, St. Lawrence, and St. Agnese. These edifices were built in the suburbs; for the central parts of Rome continued to be Pagan, long after the time of Constantine. Little is known of these churches which were built by Constantine; for they soon disappeared, and when Theodosius reached the sceptre, he had to rebuild them.

The heathen temples, if adorned externally, satisfied the populace without much internal convenience; but the nature of Christian worship led to the erection of spacious buildings, to accommodate the audiences and those who took part in the various services. The choristers who sung,

before it. In time also, though when it is uncertain, a cross aisle was carried out beyond the flank walls, and thus the transepts originated. The structure thus became cruciform in shape, and the term "Greek cross" was given to these buildings where the arms were of equal length, while the term "Latin cross" designated the churches where the nave was longer than the transepts, and the apse or choir which extended beyond the crossing formed by the four parts into which the whole was thus divided.

Though the Latin cross thus became the type of the Western Church, there were some buildings in which circular and polygonal forms were

ed. A round church was erected at Jerusalem by the Empress Helena, and in a short time, in Germany, England and France, the form was copied in a few places, out of which for the model in the "Holy City." When basilicas were erected, they were usually polygonal, as may be seen in the specimens that remain at Ravenna, Canossa, Parma, Bologna, Verona, Pisa, Volterra, Florence and Padua.

the sculptured architraves of old ruined buildings. The internal beauty largely depended on the rows of columns used to separate the central avenue or nave from the aisles, and as many of these columns had graced older structures of taste and beauty, they displayed a certain style; but, in many cases, the effect was injured by the juxtaposition of columns brought from different places and wanting harmony, while broken capitals were mended or

BASILICA CHURCH OF ST. JOHN LATERAN, ROME.

consequence of the low state of art, as well as of want of funds, the exteriors of the Roman churches were remarkably plain. They were built of brick. At the entrance end there was a low portico, which only rose about half the height of the building, thus showing utter want of the real use of a portico. Over the nave there were three round-headed windows were usually placed, and over them again was a circular window. In the flank walls, windows were opened up near the eave. The entrances were square-headed, the common decoration being taken from

rather patched in a style inconsistent with the original.

One of the Basilicas built by Constantine is known to have had a hemispherical vaulted roof; but it was quite common in early Christian structures to have open wooden roofs, and this custom has continued from age to age and from land to land, especially in those buildings which affect an adherence to the antique in style. After the reign of Constantine, little was done for some years in church architecture. The greatest product of the times was the Basilica of Theodosius, which

remained until 1823, when it was destroyed by fire; but it has been rebuilt on the old plan. This

LOMBARDIC ARCH.

finest of the edifices of the age was four hundred and twenty feet long by two hundred and twenty, the church having a central nave eighty feet wide with four aisles. The pillars of the Colonnade, which were fine, were taken from other buildings, the walls were resplendent with frescoes, and the doors were of bronze.

New dynasties and new varieties of architecture appear in the seventh century in Italy. The Lombards had risen to influence, and they were great builders. In the forms of their churches, as well as in architectural details, they combined many different elements. The Latin Basilica, the Byzantine Cupola, the polygonal and the circular forms were adopted by them. They decked their churches with striking features. Coming from northern regions through Germany, they had Pagan and Christian symbols blended together. Externally they used slender compound piers, which were carried up the fronts of the churches from the ground to the eaves. Small arcades followed the shape of the gable internally, rules and proportions were neglected, the pillar or pier rested on a simple base, and the arch sprung direct from the capital, while the decorative imagery was profuse and heterogeneous. The four beasts of the Apocalypse, the dove, the Paschal Lamb, the fish, the hart, the

vine, Daniel, Lazarus, David, Goliath, Theseus, syrens, serpents, eagles, dragons and other symbols were of common use. The imagery was confined to the portals, but was carried in by along the whole front. In time, however, Scandinavian elements of these symbols disappeared, and the ornamentation became more graceful. Thus in the districts of Italy where Lombard influence prevailed, such changes were introduced as led in time to the prevalence of style which has long been known as Lombard Italian, and which may be seen in the cathedrals and structures of the Peninsula; but the inhabitants of the capital still adhered to the Basilican style. North and west of the Alps, the edifices which were now erected for ecclesiastical uses had leading features of the Lombard style, inasmuch as the arches were carried from capital to capital, the arch being semi-circular, but the forms of ground plans usually adhered to the old method. Gradually a style was developed which, by the massiveness of the column, the elaboration of ornament on the curves of arches of doors, and of circular windows attained to a deserved celebrity. In Normandy and in England it reached the highest perfection of which the style was capable, and to it the next paper must be devoted.

Such was the early condition and its transitional history in "Old Rome." To the eastern part of

LOMBARDIC ARCH.

Empire and to the style which prevailed along the Bosphorus and in the East it is necessary now to

he was fully aware of the fact that the heathen priesthood over the populace, hence which vested interests in an old organized state can always exert, a formidable obstacle to any scheme would attempt to undermine or supplant national faith. Accordingly, the idea of founding a new capital

which any ruler ever attempted, and the capital thus founded survived by a thousand years the glory of the elder Rome; while its final fall was only affected by the appearance of foes far more powerful than those by whom Italy and Rome had been overthrown. Far different from the expectation of Constantine was the result of his scheme, for the founding of this Eastern capital contributed

BASILICA CHURCH OF ST. PAUL, ROME.

could be at liberty to carry out his but such opposition as he expected to Rome. Byzantium, the place which though a small town, was admirably No doubt he entertained the belief that dation of his power on the Bosphorus le him to hold the sway of the East er grasp, while the influence of the old id still uphold the mastery of the the West. Thus, at a single stroke, greatest measures was accomplished

very directly to the downfall of Rome. The sons and nephews of Constantine, by their quarrels respecting the provinces which had been assigned to them, weakened the central power; and the party which recognized Constantinople as the capital gradually became consolidated, and the Empire thus formed, became known as the Eastern, the Greek, the Lower, the Byzantine and the Constantinopolitan Empire.

A peculiar variety of architecture was developed in these regions, which spread eastward, southward

and northward, known as the Byzantine, the Arabic or the Moorish, and the Greco-Russian. The social condition of the East led to the prevalence of this style, which, in various forms and under different nationalities, was carried into Asia and Africa. It became highly enriched in the East and in Spain, in the hands of the professors of the faith and of the Prophet; but the limits of our space forbid an attempt at setting forth the

Ravenna, an Italian city, which continued under the rule of the Greek emperors for many years.

Until the time of Constantine, ecclesiastical edifices had usually been quadrangular in form. When a circular building with a domed covering such as the Pantheon, was attempted, the dome was placed on a circular, heavy wall; but the architect of Constantine and his successors adopted the bold device of rejecting the wall, and placing the

BASILICA CHURCH OF ST. AGNESE, ROME.

differences which obtained between the Moorish on the one hand, and the Russo-Greek on the other hand, in their divergence from the common forms of Byzantine art. All even that may be stated about Byzantine architecture itself, must mainly be devoted to a brief description of the grandest structure ever built in this style. Constantine erected an immense number of churches resembling each other in their chief details; but none of those which he or his immediate successors finished remain, except his great work in Constantinople and the Church of St. Vitale, at

Ravenna, an Italian city, which continued under the rule of the Greek emperors for many years. The device at once led to a great enlargement of the space that might be included in the building. It became possible, by placing the dome over the centre, to extend projections in the form of cross, and thus secure what in mediæval churches became known as the nave, the transepts and the choir. In the twentieth year of his reign, Constantine began his greatest work, the church dedicated to the Divine Wisdom—Santa Sophia—which was subsequently enlarged and beautified. It was burned in the year A.D. 404, rebuilt

Theodosius, then burned again; but Justinian resolved to rebuild it and to make it the "grandest monument ever erected by the hand of man." Marble from distant provinces, columns from ancient buildings, eight of white marble from Palmyra, and eight of green marble from the temple of Diana at Ephesus, were procured. The

piers sustain semi-circular arches, and by means of triangular vaultings known as pendentives, the means are obtained for sustaining the huge central dome, the diameter of which was about one hundred and twenty feet. A rectangular court paved with marble and surrounded with Ionic columns formed the approach to an outer vestibule, out

THE FAMOUS TAJ, ON THE WEST BANK OF THE JUMNA, INDIA.

expense of the structure was enormous. The wealth of the royal treasury, tribute from the provinces, gifts from the people and heavy taxes were all required to complete the vast undertaking; seven years being spent in collecting the materials, and nine devoted to the erection of this magnificent church. The building stood east and west, the ground plan, approaching a square, being two hundred and fifty-two long by two hundred and thirty feet broad. In the centre, four massive

of which five doors led to an inner vestibule and from it nine doors of cedar, adorned with ivory, amber and silver, led into the body of the church. The nave included the part under the dome, and the spaces east and west of it, and these were paved with green marble. A cornice of white marble ran around the base of the dome, while the dome itself was pierced with forty-four windows. Forty enormous columns separated the nave from several side aisles and compartments,

one of the latter being set apart for the Emperor, and a magnificent gallery in the second story being devoted to the Empress. As the sexes were early separated in Christian churches, the galleries in the second story north and south of the dome were assigned to the women, while gorgeous thrones were prepared for the bishop and the clergy in the space at the opposite to the entrance, and in the semi-circular apse at the extreme end was placed the altar or holy table. In order that the idea of reverence which Justinian entertained for holy things might be adequately displayed, he

churches in the West; but in the Byzantine church the eye was always arrested by the majesty of the central object, and carried upwards to contemplate the overshadowing dome. Still in buildings of the class which imitated the great work of Justinian, length was not despised; as the nave extended beyond the dome, and on the altar side had the semi-circular apse; but it was otherwise with all edifices which assumed the octagonal or circular plan, the dome then being the only attractive feature. Another point ought not to be overlooked. External form and picturesque effect

THE RUSSIAN PATRIARCHAL CHURCH, AT MOSCOW.

ordered that pearls, diamonds, gold, silver, platinum and iron should all be melted and mixed together to form the mass with which the table might be made. When reduced to shape, it was ornamented with gems, and supported on pillars of gold. Engravings of this great church will be found in the number of the MONTHLY for December, 1876. at pages 412 and 413.

The principle thus established became a rule in all Byzantine edifices, that domes should spring from a square, and that galleries should be provided for women, except on the altar side. Still farther, it soon became obvious that a lengthened internal vista and a pleasing apsidal termination at the east end formed the impressive features of

soon became recognized as an element in ecclesiastical structures of the West, while Byzantine edifices were always simple in the exterior, the desire for magnificence and ornament which has always existed in the East being displayed by costly internal adornment.

It is not the purpose of these papers to add at length to Moorish or Saracenic edifices, may suffice to state that the influence of Byzantium affected the East, and the style which prevailed on the Bosphorus became the basis for the work of Arabian architects, which presented different forms in the several countries in which Mohammedanism prevailed. It was rigid in Egypt, florid in India, and gorgeous in Spain. Re-

tations of men or of animals being forbidden in the Creed of the Prophet, the fancy and active imagination of the Arab mind found vent in erecting ornamental figures of minute and most complicated arrangement. The style reached its perfection when the Mohammedan power, reaching from India to Spain, became consolidated, and the best monuments of Saracenic art were displayed in the palaces and mosques which were erected in India, Persia, Syria, Egypt, Africa and Spain. Of these the Mosque of Cordova and the Alham-

bra are the largest, although there was a want of altitude, still the feeling of great wealth prevailed. To describe the Alhambra is beyond our purpose. (See pages 9, 10 and 11 of the MONTHLY for January, 1877). Volumes have been devoted to it. Its magnitude may be conceived when it is stated, that the flanking wall is two thousand five hundred feet long, and six hundred and fifty broad. This vast area, which was defended with towers, could contain forty thousand men. The interior was divided into courts, halls, porticos, galleries

THE GREAT ARCHES OF DELHI.

or Moorish palace at Granada surpassed all Saracenic buildings of the West. Originally, the Mosque covered an area of six hundred and twenty feet by four hundred and fifty. (See page 10 of the MONTHLY for January, 1877). Seventy gates opened into the building, and as there were vistas formed by nineteen ranges of columns the impression made on the spectator must have been exceedingly great. The illustrations given, of the Moorish column and the horse shoe arch which prevailed in this style, will serve to show that in all large Saracenic structures where these elements were multiplied until they covered a

large area, although there was a want of altitude, still the feeling of great wealth prevailed. Everywhere the slender column, the ornamented Moorish arch, the Mosaic decorations on the walls, the cooling fountains, and the endless details of this enchanting scene were calculated to overwhelm the mind with wonder and admiration. It is not strange that the most eminent artists of modern times have devoted years of study amid the ruins of the Alhambra with a view to exhibit to the world the glories of a palace and a stronghold which in the days of their perfection must have presented an appearance of enchantment to astonished beholders.

## THE AMERICAN DRAMA—ITS SUCCESSES AND FAILURES.

By A. E. LANCASTER.

## THE FOURTH PAPER.

DURING the past few years quite a number of plays have been produced, most of them in New York, which legitimately come within the scope of the present article. From time to time Mr. Daly has brought out at his own New York Theatre—the Fifth Avenue—those peculiar translations and adaptations to which he gave the not inappropriate title of dramas of contemporary human interest. It is detracting nothing from Mr. Daly's great ability to remark, that he is more a user of the good material provided by others than a creator. His experience of the demands and necessities of the stage, and his constant study of the public, have given him an experience that is not without value, and though he has never yet written a single play that can strictly be called original, he has shown great knack in adapting the works of greater writers. He is a most invincible manager, forever providing novelties, and reading promptly and punctually all plays submitted to him that he has the least reason to suppose may prove of use to his theatre. "Saratoga," produced at the first Fifth Avenue Theatre, in Twenty-fourth street, some years ago, was by Mr. Bronson Howard, and attained its one hundredth night. It is a bright rattling farce in five acts, and from time to time is reproduced and always proves attractive. During the last season or two Mr. Daly has produced no piece by an American author. His intention seems to be to limit the new plays he puts upon his stage to adaptations made by himself and his coadjutors. The recent success of "Lemons," a translation from the German, is an illustration of this.

Wallack's Theatre takes very little interest in the American drama. After a long apathy the management one year ago, and after the expectation of the public had been considerably whetted, brought out a comedy-drama entitled "The Twins," the joint production of Mr. A. C. Wheeler and Mr. James Steele Mackaye. Mr. Wheeler was well known as a journalist, the author of the brilliant and witty "Nym Crinkle," *feuilletons* which for some years had been appearing in the *Sunday World*. He had had many years experience as a dramatic critic, and was noted for the keenness of his analysis and the pungent

briskness with which he habitually placed his finger upon the weak points of dramatic construction. Mr. Mackaye was equally well known as the pupil and follower of Delsarte, the French expositor of what might be briefly described as the 'scientific school of acting. It was fair to conclude that the dramatic work of such a man would be either a popular or an artistic success, not both. "Twins" was neither, but it was handled with bitter and unjust severity by a considerable portion of the New York press. Its brisk repartees it contained were not bright, numerous enough for so sparkling a wit as that of Mr. Wheeler; the plot was obscure and involved, and most of the dramatic tableaux lacked point. At the same time "Twins" was a careful piece of work. It was veined by an excellent central idea; it contained more fine intellectual matter than most plays do which win noisy success, and a tone that certainly was not frank and amiable pervaded not a few of the criticisms of it. Both Mr. Wheeler and Mr. Mackaye possess such bright and brave ability, and such a knowledge of what excellence of dramatic composition consists in, that either a joint production or a separate play from each ought to be expected by their friends at no very distant day. Apparently the Wallack management has since abjured American playwrights, though Mr. Wallack professes his willingness to give any American play a trial, provided the American play seems to him to deserve one.

Thanks to the unwearied industry and discrimination of Mr. A. M. Palmer, and to the unhesitating liberality of Mr. Sheridan Shook, the Union Square Theatre is one of the most successful in New York. But three American plays have been produced at this establishment, namely "The Gilded Age" (now acted under the name of "Colonel Sellers"); "Conscience," and "The Two Men of Sandy Bar." "The Gilded Age" was a reproduction, and due reference should be made to it further on. The authorship of "Conscience" precludes my making any comments upon whatever merits or demerits it has.

<sup>1</sup>An original play, composed expressly for the Union Square Theatre, by A. E. Lancaster and Julian Magnus.

have. It was produced at the Union Square Theatre on the evening of May 9th, 1876, ran successfully until the end of the season, and has since been played with equal success, in most of the principal cities of the United States, with Miss Kate Claxton in the rôle of Constance Harewood. The authors have always felt indebted for their success to the exquisite manner in which their play was placed upon the stage by the management, and to the magnificent acting of Mr. Charles R. Thorne, Jr., as Eustace Lawton, in conjunction with Miss Claxton's fine impersonation of Constance, and commensurate impersonations by such artists as Mrs. Wilkins, Mr. Parselle, Mr. Robinson, Mr. Stevenson, Mr. Stoddart, and Mr. Theodore Hamilton. On the 9th of last October the same drama opened the regular season of the ill-fated Brooklyn Theatre, Miss Clara Morris creating a profound impression in the rôle of Constance, and the unfortunate Mr. H. S. Murdoch (who subsequently perished in the burning of the theatre) giving a very strong interpretation to the character of Eustace.

"The Two Men of Sandy Bar," Mr. Bret Harte's first attempt at dramatic composition—at least the first of which the public has any knowledge—was produced at this same theatre early last autumn, and drew fair houses for five weeks. It possessed excellent and picturesque material badly arranged. It presented phases of American life, however, that were novel upon the stage; and when Mr. Harte attains the difficult art of dramatic construction, or when he collaborates with some one who understands that art much better than Mr. Harte now does, he will bring forth a play that will keep the stage, and deserve to keep it.

The Park Theatre has been the home of several recent successes. Its first great success was that attained a year and a half ago by "The Mighty Dollar," by Mr. B. E. Woolf. Mr. Woolf may be described as a theatrico-journalist, having spent many years in newspaper life, and an equal number among the theatres. "The Mighty Dollar" is his first great success, and he abundantly deserves it; and this we say while remaining fully cognizant of the demerits of that play. Bardwell Slote is a disgusting and contemptible politician, and Mrs. Gilflory is a coarse and vulgar woman. In an artistic production two such characters could never have remained the principal ones. Such as

they are, however, they are just dashed with that extravagant spirit which is relished by a certain grade of American audiences; they are amazingly well acted by Mr. and Mrs. Florence, and a vein of coarse-grained satire upon "American institutions" runs through the piece and tickles the palates of the multitude. A still less artistic piece than this was "The Gilded Age," by Mark Twain, in which Mr. Raymond, as Colonel Sellers, made the success of his lifetime. During the present season, a very pretty little play, "Clouds," by Mr. Marsden, lacking any very strong element, was produced and ran a somewhat successful course of several weeks. The great success of the present season, however, is Mr. Leonard Grover's "Our Boarding House," of which Philadelphians know quite as much as any one in New York can tell them. It is a roaring farce, threaded with melodrama, and quite clever enough to encourage the expectation that Mr. Grover will some day soon offer another play still cleverer.

An entire chapter remains to be written upon the reasons why more plays by Americans are not produced. It is not so necessary that a good American play should be written, as that a good play should be written by an American. If a first-class drama be produced that is not only American in its subject, but also American in its authorship, so much the better. Almost every journalist in New York has an unproduced play in his pigeon-hole or his tin box, and we presume it is the same with most journalists in large cities. A great deal of vituperation is flung at managers for not producing more of these plays, but we cannot see that the managers are much to blame. They certainly cannot be very severely censured for putting upon the stage plays from which they think they will make money; and we venture to predict, that as soon as an American writes an original play as good as "Led Astray," or "The Two Orphans," or "Miss Multon," or "The Danicheffs," or "The Shagraun," or "Forbidden Fruit," or "Lemons," or "Pique," and succeeds in getting an intelligent manager to read it, his chances of ultimate victory as a dramatist become great. The art of successful dramatic composition is still in its infancy among the writers of the United States. In order to triumph greatly in that arduous sphere, we need, first, the dramatic instinct, then close observation, the study of the best models, patient toil and patient waiting.

## "THE SHADOW OF STRENGTH."

BY WILL WILLIS.

"You do not understand us, George. Women are naturally very sensitive, and many things appear to pass unnoticed, which, in reality, are treasured with many a heart-ache."

"Certainly, Laura, some women are very sensitive, but not all. Some little women are as easily shaken as the dew-drops, and their tears fall as easily as the summer rain. But there are others, like yourself, dear Laura, who can take the world something as we men have to take it, just as it comes, without allowing ourselves to waste any of that surplus strength, for which we always find need."

"Then you do not think that I am sensitive?"

"Certainly not."

"Then perhaps I only wear my mask well."

As Laura Clifton said this, she turned her face away, and the eyes that sought to look into her own with a quick, questioning glance, only saw two little restless fingers that beat upon the window, as she seemed to be peering out into the darkness.

For an instant there seemed to be a shadow creeping over George Wilmington's face; and then, laying his hands upon her shoulders, he wheeled her around facing him again. But it was only a smiling face that met his. And he kissed the sweet lips that seemed self-reliant enough, just now.

"Laura, darling, you are not one of the women that would imagine a man did not love you because he happened to go away after breakfast without giving you a parting kiss. You are so much the woman that you can live within yourself, and never find it necessary to borrow all of your life from those little outside blunders."

Laura received his proffered caresses, and only wondered if he had the least idea how many times this interpretation of her womanly nature had brought a sudden pang to her heart. But her face bore no trace of the wonder within; and the smile upon her lips reassured the somewhat doubting lover, as to whether he had understood the course of her woman strength.

"I shall certainly take the world as I find it, George; and I shall accommodate myself to what-

ever does not appear to be just as I would. But I am something of a woman after all."

"Yes, 'something of a woman,' with a little of a man's strength. Why, with all that boasted strength, I have envied you your calm exterior that seems never to have been unawares. Really, Laura, I am proud when I compare you with the rest of this fluttering mass of humanity called woman."

Laura's heart gave a great bound, for truly a woman in her love of approbation from the one she loved. And it was not only George Wilmington was thus enthusiastically praising her. True, since their first acquaintance he had always treated her with the utmost kindness and respect; and his eyes always followed her if he felt that she was truly a queen in her right. But since his first outburst of love, he had never said, "I love you," but only by his actions. Often he gathered her to his arms and held her there; but never until to-night, had he been so warm in his testations of affection.

Laura loved him with her whole soul, but she would have given the whole world to have changed a little of this distant pride which he regarded her, for a little of the humble devotion that would submit to be expressed in words. But she would not tell him. He was proud of her as she appeared to be—with more strength than feeling. So she gathered up her heart, and only laid her hand softly upon his, as she replied:

"George, I am glad that you are proud of me, for you are all—are all the—the—"

She was going to say, "all the world," but she glanced up into his face and saw a look, which her quick apprehension interpreted into misapprobation; and the words died upon her lips before they had been given utterance.

But when he gathered both of her hands into his own, and looked into her eyes with a searching gaze, she would have given anything to have been able to say: "George, I only tell you how deeply I loved you." But

not trust her voice to make another effort; so he only saw the old calm look, for which he had been praising her a few moments before.

He arose to take his departure, still imprisoning her little hands between his own; and a look of disappointment slowly crept over his features. He stood looking down at her for a few moments, then drew her up slowly until she was half encircled within his arms. But then, suddenly, as if something had stung him, he turned around abruptly, bade her good night, and went away.

Laura stood and looked after him, while the pain gathered around her heart. But the pain at her heart did not disturb the smile that rested upon her lips; for a life of peculiar trials had schooled her into making no sign. None but herself could have guessed that there was anything but calmness within.

She had been thrown upon her own resources from an early age. And there was a little romance mixed up in her early womanhood, of which not many knew; a fond lover, an enforced separation; and long years of cruel suspense, until the shock came, and he was dead; only returning to her a plain gold ring that had been a pledge of her enduring faith in him; telling her that the waiting was over, and the meeting could only be in Heaven. This she had borne and made no sign, because she must. And now, at twenty-seven, people called her cold and self-reliant! What wonder that her lover too had misunderstood her with the rest; she asked herself the question, as she sat and looked into the glowing grate. The busy thoughts kept turning themselves over and over again in her restless mind, and would not be quieted. But her hands were folded calmly together, as if in all the world there was nothing but rest.

So thought the one who stood and looked at her furtively, through the half-open door. It was only George Wilmington, who had returned to bid her a more lover-like good-night. Laura made a restless movement, and he started as if he would rush forward and clasp her in his arms; but she settled back with the old calm look, and he stood undecided. Then he turned away; he could not disturb her in that serene calmness. She had not even thought that he was unlover-like in his treatment! Ah! he heaved a quick sigh, and wished that she was a little more impulsive in her way. But the thought startled him; had he not, within

the hour, praised that undisturbed equanimity with which she looked upon all things? He went home and locked himself within his room, and paced the floor back and forth, with a restless movement.

"O, Laura! Laura! my darling! you have the man's strength, and I only the woman's! I have looked upon your brow that was calm and serene, while mine was bursting that I had not poured my passionate love into your ears. To-night, you turned me into a strange vein of thought. I almost thought that I detected in you my own unconquerable longing, but it could not have been. The smiling face that you turned toward me, covered no raging, stormy feelings. Laura, my darling, I worship your wonderful calmness; but I can never emulate it."

George Wilmington passed a restless night, and the next day looked nervous and worn; so much so that he would not trust himself to visit Laura as usual in the evening. The second evening came, and still he did not go; the third and he found himself somewhat constrained, when he presented himself before the woman he adored.

She had the same unruffled calmness, and he inwardly cursed himself that he must appear before her with anything less. He talked in a kind of random way, trying to drive away a seeming shadow that had crept between them; and she listened in the same old way, happy and smiling, until the man at her side grew almost desperate. But she could not see; could not know of this struggle within him. At last he could stand no more; and he went away, as upon the evening previous, with a suddenness that was almost startling.

The evenings came and went; and the ghost that had only been a shadow at first, grew to be real and weird in its presence. And the pleasant little calls that Laura had had from Mr. Wilmington every evening for several weeks, now ceased, sometimes for a whole week together. Everything seemed so changed, and yet no word had been spoken from which either could have said there was aught between them. That which stood between them was a shadow, but which neither could put aside. There was happiness which was not real; sorrow which could not be defined. There was calmness which, like Egyptian darkness, could be felt; and strength which despised its own greatness.

The weeks gathered into months, and still there was no change. They loved each other too dearly to part forever, and yet they could come no nearer to each other. Their very love stood between them. But this could not last forever; for even greatest strength must fail, when taxed beyond the power of human endurance.

Three months had passed, and George Wilmington again sat in the cozy little parlor, and Laura by his side. And the shadowy ghost seemed to have enlarged its proportions. Even Laura's feet beat restlessly upon the floor, though her voice was calm and even. But her words came in flashes; sometimes brilliant and charming, then sinking into the merest monosyllables.

There was something weird and changeful in the very surroundings. The winds roared angrily and threatening one moment, and then the next were as soft and musical as lover-like melody. The coals within the grate flashed up with enchanting brightness, and then died away in a flickering glare. This fitfulness in the air seemed to have entered their very souls; and the calmness that each was wearing as a mask, seemed almost ready to be carried away; and then it was drawn closer about them than ever.

George watched the little restless foot that beat upon the floor, and every movement seemed to strike upon his heart. He drew nearer, and again he imprisoned both little hands within his own. The propitious moment seemed to have come; Laura trembled. George did not look at her face, but his courage arose, and he burst forth in a passionate way:

"Laura! my darling! what is this shadow that has come between us? Is it that I have misunderstood you, and you me?"

Suddenly he stopped; the woman was as calm as death. There was no trembling now in the little hands that lay within his own. He looked into her face. My God! she did not understand him; she had no feeling, no soul!

With a quick bound he was on his feet, and flying from her. He reached the door; but a dull, heavy thud upon the floor caused him to turn and take one glance backward. What was that he saw in a dark heap upon the floor! He was back as quickly as he had fled away. He gathered her up in his arms, but the face that now met his was as white as marble. "She is dead!" he moaned despairingly, as he pressed her passionately to his breast.

"Yes, she is dead," said the anxious friend that came at his despairing outcry. And he sought to release her from the passionate embrace of her lover; but he did not hear them or them, and only rocked himself back and forth still holding her in his arms and repeating: "She is dead! and I wronged her in her last breath, thinking that the poor dead face had no feeling or soul, because it did not respond to my withheld adoration. Oh, Laura! my Laura!"

The hands they unclasped from her an hour afterwards were almost as cold and lifeless as her own. He was alone, and she was dead. The calmness which she had worn in his presence so long a time had taken her life. She wanted to be gathered up in his arms and loved as other women were. But she could not tell him so, her only effort to do such a thing had brought a shadow over his face that had forever altered it between them. He was satisfied with this sionless coldness, and she would die or else succeed in being what he wished her to be. Twelve months like this had passed, but when, this night, he pressed her hands in his own, they trembled like a dove that had been suddenly caught. She would have given worlds, if he would only tell her again that he loved her. But he should not see that she was weak; so she smiled softly as of old, and—she knew no more. The beautiful world had vanished. There was literally nothing. She was gone. She was a woman, strong in herself; strong enough to meet death, but not strong enough to meet her lover's displeasure. She could die, but she could not tell him this.

They clothed her in the soft white garments of death, and wrapped the snowy sheets around her. All was hushed, and nothing but the muffled tones and softly whispered words, told what was a calamity that had so suddenly befallen them.

Laura was beautiful in death. The same calm soft smile that had made her lover frantic, lingered upon her lips.

George Wilmington entered the room, and stood back, as knowing his the greater grief. His tender hand uncovered the beautiful face for him. He came and looked with a long, sad look. He bent over her and still stood looking. What did it that he saw? The people looked at him, and thought him mad. But suddenly they, too, stood still and looked. The snowy garments quivered, a soft white hand was raised, and a weak voice

ered softly, but distinctly: "It is only the  
w of strength! press me not too far. I am  
nan, only a woman, after all!"  
e white face that bent over her waited no  
r. She was again clasped in strong arms  
warmed and thrilled her back to life. The  
e that had been hushed, was now full of noisy

running to and fro. Warm blankets were brought  
and wines; and—But all was life!

Death had been very near, but did not claim a  
victim. It only broke through the shadow of  
strength, and bound two hearts together in their  
weakness. Thus with their experience came wis-  
dom, which is the foundation of all true happiness.

## COTTON SPINNING.

By EMMA L. PLIMPTON.

### PART II.

From what unutterable longing Slater must have  
sought of his old home in Derbyshire when, after  
flying into Pawtucket, Rhode Island, he first  
rested upon the miserable jenny with one card-  
er, which was dignified by the name of a mill!  
He had contracted to run for Almy, Brown &  
; but finding it literally good for nothing, he  
dismissed from memory to erect the Arkwright  
mill. He had not even a memorandum to  
refer to in the calculations, and was forced to make  
use of the tools wherewith to work; but, after  
much labor and attention he succeeded, and to the  
benefit of the whole nation made yarn which proved  
to be as good as the best made in England at the  
time, specimens of which may yet be seen at the  
Museum in Philadelphia.

This was the first mill in the United States  
driven by water-power. Encouraged by its suc-  
cessful operation others sprung up on all sides,  
among them one in Kingston, Rhode Island,  
which is still standing. Although no larger than  
a dwelling-house, it seemed in those days an affair  
of great magnitude, and a large stock company  
was formed to manage so vast an enterprise.

It was now thought that the factory system had  
been raised to the greatest perfection which human  
hands could effect, and no one dreamed that an iron  
engine would be added, which would never weary,  
and, driven by the force of steam, could whirl  
around two thousand spindles in a single machine.  
To employ steam to produce motion was first  
suggested by a Roman philosopher named Brancas,  
who worked a number of mills in Italy by means  
of steam blowing against the vanes of the wheels.  
This moved several Englishmen to construct steam-  
engines.

James Watt, a Scotchman, invented the one

now in use, and he is, therefore, numbered among  
that noble band whose fame has been established  
by the wonderful impulse they have given to our  
manufactures. Unlike Sir Richard Arkwright, he  
was well educated and a philosopher, the com-  
panion and cherished friend of the scientists of his  
day; and, to carry the dissimilarity yet farther,  
he was greatly aided and encouraged by his wife, a  
lady of intelligence and ability.

The destruction of Arkwright's models by his  
wife, mentioned in the first part of this article  
(published in the April number), interfered with  
his favorite pursuit, and caused considerable family  
contention; indeed, Arkwright never forgave his  
wife for this act. Subsequently it was the cause of  
their separation; after which he devoted himself  
with renewed zeal to his invention until it was com-  
plete. Thousands came then to look with jealous  
eyes at the "spinning engine without hands,"  
which his genius had constructed, and gazed with  
wondering faces at the successive pairs of rollers,  
which could draw out and twist into a continuous  
thread with the same dexterity as if the thumb and  
finger were applied. The spinning frame became  
so heavy by these intricate mechanisms that horses  
were employed to turn the wheel; but this power  
proved too expensive to be practical, and in Ark-  
wright's famous mill at Crowford water-power  
was used.

It is said that Mrs. Hargreave, in an evil hour,  
boasted of having spun a pound of cotton during  
a short absence from the sick-bed of a neighboring  
friend. However this may be, the extraordinary  
doings in her humble home were noised abroad,  
and one night a mob broke into the house and  
destroyed the jenny.

In the history of manufactures, we find that the

art (in its primitive forms) of spinning and weaving wool and flax into cloth was introduced by the Romans into Gaul—now France—and into Great Britain, before the Christian era, or about that time, yet the manufacture of cloth in these countries was extremely limited, until within the last two or three centuries. Flanders or Burgundy, now Belgium, was the first country in a high latitude and cold climate where the manufacture of cloth of any kind was ever carried to such an extent as to make it an article of foreign commerce and exportation. Though the Flemish seem to have been in advance, in the manufacture of cloth, of the English, French, Spaniards, and all the nations of Central and Northern Europe during the time of the Crusades, and for some centuries previous, yet they were behind the Venetians, and did not make very rapid progress in manufactures (and in fact it was impossible for them to do so) until the latter part of the thirteenth century, after the introduction of chimnies with flues, and glass windows in their houses and workshops. Flanders flourished and increased in population, wealth and power during the whole of the fourteenth and fifteenth centuries, and until the commencement of the religious persecutions and wars of Philip II. of Spain, and the Duke of Alva, about the year 1507, with greater rapidity than any other part of Europe, except Venice, prior to the discovery of America. Venice prospered by means of manufacturing industry, and commercial enterprise combined; but the chief source of the prosperity and increase of population and wealth in Flanders, was their extensive manufactures of wool, linen, laces, etc.

Coming down again to our own time and our country, the United States, we may remark that our factories generally, and the cotton manufactures particularly, have been much affected by the importation of foreign goods, caused mainly by too low a tariff on those importations. The facilities we possess for the manufacture of this staple line of goods should enable us to compete with the world. The United States are not only producers of the raw cotton, as well as of manufacturing goods, but we are able to make cotton one of the chief articles of exportation to all the commercial centres of Europe. Like breadstuffs, with which we are able to feed the inhabitants of the Continent and isles of the sea, in addition to meeting the demands for home consumption—cotton is a principal medium to regulate the ex-

changes between the countries, and turn balance of monetary values in our favor.

Again, as to manufactures, it may be a matter of interest to capitulate the extent of the cotton manufactories throughout the entire civilized world.

The number of spindles employed in various parts of the world, are 28,985,000. These are distributed as follows: Great Britain, 17,500,000; France, 4,300,000; United States, 2,500,000; Germany, 815,000; Russia, 700,000; Switzerland, 650,000; Belgium, 420,000; Spain, 300,000; Italy, 300,000. Of the 2,500,000 in the United States, 150,000 are in the Southern States, and 1,000,000 spindles in the Western States.

The immense amount of capital invested in the growth and manufacture of cotton, and the large number of persons employed, make this a subject of great importance. It must proceed and increase on measures must be adopted to regulate the system with freedom and good morals. We cannot ignore this vast community. Industry and talent must be called into action for the promotion of the best possible order in manufacturing establishments, such as will conserve best the interests of all identified with them.

Worthy of the consideration of capitalists in this connection, are the States of the South. The 150,000 spindles now there, are small in number to what ten years, or even five years hence will witness. The extinction of slavery by the war, and the necessity which has forced all classes to struggle for existence, together with the setting off of many enterprising spirits of the North into the South, taking with them their characteristic energies and inventive capacities, and no inconsiderable amount of capital, are all calculated to give an impetus to manufacturing interests. The hum of the Eastern States will ere long greet the traveller in the Sunny South.

"He'll hear the spindle twirl the slender thread,

He'll hear the shuttle fly to win the worker's bread."

Want of space forbids us from extending these observations upon a subject related so intimately to the growth of the inventive wealth of the nation as well as the domestic comforts of every household.

As we clothe ourselves in the dainty cotton fabrics now within the means of the poorest among us, let us give all honor where honor is due, to these great men who have brought this thing to pass, and furnished pleasant and profitable employment to the thousands in our land who may be found in the cotton factories of the United States.

## THE MYSTERIOUS BOX.

By T. M. S.

OUGH the morning had been bright and the sky became overcast towards noon, and shifting to the south gave indications of about three o'clock it began to fall. There help for it, however; I had lost so much along the picturesque ruins of Schauenburg was already doubtful whether I should arrive enau by daylight, unless indeed I should with a "fuhrwerk," under which generic suppose every possible kind of wheeled is included. "But if I should be," I thought to myself, "it will not be the e, and who knows what new experiences or res it may lead to?" So I walked on edly.

ing an angle of the road, I observed before an in a black surtout, rather short in the and skirts, as if it had been made for his rother, with blue trousers turned up about les, and a large straw hat. I soon overtook d greeted him in the usual German fashion. were cordially, and quickened his pace to e company. I slackened mine to accom- : him, and we entered into conversation. ke a little English, and told me he was "a ' and that his "sufferings" were at Ober-

It was not a pleasant thing to be a ic" he said; people sent for him at all of the night; they had so little consideration, e payment of the sufferings (as he rendered ents") was almost nothing.

ou are not obliged to go," I suggested.

cannot refuse," he answered; "I should ld responsible for any consequences that follow. There is not a greater slave in : than a German 'physic' in his own ry. This very morning I was called up at o'clock by a peasant ringing at the door antly. 'What do you want?' I asked."

A bottle of mixture for tailor Sneck.' "

Is he worse? "

I don't know; he told me to call for it.' "

mixed the draught, and made it pretty for I felt angry. When it was ready, I to the peasant. Would you believe it?—

it down and said he would call for it by-

and-by; he was going to a town some miles away, and should be passing again a few hours later! A physic is not treated so in England, I should hope?"

With such conversation we beguiled the way, while the clouds gathered overhead, and the first heavy drops of rain began to rustle in the trees around us. We were now passing through a thick forest; before, behind, on every side, the lofty pines arose, shutting out the twilight, and making our road darker at every step. I began to think of shelter.

"Shelter there is none," said my companion; "scarcely a house of any kind for miles; we must push on to Oppenau."

We pushed on accordingly three or four miles farther; but the clouds grew darker, the rain poured down heavily, and the night closed in.

"What will become of your patient?" I asked; for the physic had told me he was on his way to visit one.

"My patient must take care of himself; probably it was only sausage-indigestion, and he may be well again by this time. I shall remain with you and share your destiny to-night; I could not well do otherwise, for it is so dark that the road is almost as difficult and uncertain now to me as to yourself. We must creep into the first hovel that comes in our way, or wait under the trees until the moon rises and the rain clears off."

At that moment I observed a light—a feeble glimmer, at some distance from us; it was stationary, and came most probably from some cottage window. We went towards it, and found a low range of buildings surrounding a farm-yard; there was an open space beyond it, where the timber had been cleared and the land cultivated. The sign over the door, although we did not see it till next morning, bade us welcome to the Golden Pig; and the place was but a beer-house of the humblest kind, but we rejoiced in it no less than if it had been a "company's" hotel. The principal room in the house served for kitchen, guest-chamber, and other common uses. There was a fire burning on the hearth, to which the haus-frau added some dry logs and branches as we entered,

and sat down by it. The doctor took off his coat and hung it up in the chimney-corner.

"See how it smokes," he said; "I might be said *uvida suspendisse vestimenta*, as an offering to the genius of the house for our hospitable reception. I wish the genius may be propitiated by it for the sake of this good woman, who seems to have something very dismal upon her mind, judging by her sighs and exclamations."

The poor woman did indeed appear to be very unhappy; but she spread our table with the best provisions that she had, and wished us a good digestion, yet in a tone so miserable that it was more calculated to spoil our appetite than to improve it.

"What is the matter, dame?" the doctor asked her, kindly; "you seem to have something upon your mind."

"What is the matter?" she replied. "Ah, great things—I am in trouble; alas, my sirs! what a trouble is mine!"

"Tell me what it is about," said the doctor; "perhaps I may be of use to you."

"No one can be of use to me," she replied; "but kind words are pleasant. I am a widow. I lost my husband by an accident suddenly, three months ago or more. I have carried on this little farm and *schenke* since then by myself; but I shall have to leave it soon; they will take all my pigs, too, and everything I have, and I shall have no livelihood in my old age—Ach weh!"

After a pause she resumed. "My husband always paid his rent to the day; he never failed; we put it away in readiness for the steward, and never touched it for anything else, however badly we might want it. My poor dear man used to keep it tied up in a stocking in a hole behind the chimney. He was very close, and never told me, his wedded wife, where it was hidden; but I found it out by accident one day, and after that he chose some other place, I know not where. Oh, that I could find it! And the steward was a rogue, and ran away with all the rents; and the last half-year's payment which my husband made is gone with the rest; and now they tell me I must pay it all again."

"Who tells you so?"

"The new steward—a hard man—a cruel man; and I am a stranger to him."

"And have you no receipt for the rent paid?"

"I cannot find it. My poor, dear man is gone,

and cannot come back to tell me where he put it. And the money; that is lost also. I have searched everywhere, but in vain; and if they turn me out of this place, some one else, perhaps, will find it and keep it for his own. Ach weh! alas! alas!"

It was a hard case, certainly, and I felt sorry for the poor widow. But what could I do? Her constant sighing, her frequent sobs, and ejaculations, added little to the cheerfulness of the evening; and as the rain continued to fall down outside also, we resolved to go to rest early in the hope of starting again at daylight the next morning. In reply to the question of *bed*, the widow told us there was but one bed-chamber in the house—her own. We could have that. We climbed a step-ladder to inspect it. I am not very particular, but the doctor, I suppose, was less so; for while I hesitated, he said it would do very well, and prepared to take possession of it.

"The bed is large enough for two," he remarked, pointing to it, cheerfully.

It was with difficulty I persuaded him that I would rather lie before the fire in the room below upon some sacks which happened to be there; but, after a good deal of argument, it was agreed that I should do so. "The English were an eccentric people," he had heard, "and I must have my own way." The widow did her best to make me comfortable; she had a place for herself in a closet off the common room, to which she was accustomed to retire whenever her bed was wanted for a guest, which rarely happened, and she would be close at hand, she told me, if I should want anything. "But I hope," she added with a doleful look, "I hope you will not be disturbed during the night."

"Disturbed!" I exclaimed; "How should I?"

"Ah, no! of course not. How, indeed?"

But I saw plainly there was something on her mind, and was resolved to have it out.

It was not without some difficulty that I persuaded my hostess to explain the meaning of her dark hints about being disturbed in the night. It was a subject that she feared to speak of, although it was evident that she would gladly have taken me into her confidence if she had dared to do so. At length she told me, looking about her nervously, that some folks said—about her part, she believed it—that there were certain kind of fairies—little men, or *Knechte* (that was the name), which came sometimes

the night to houses where there was any trouble. They did no harm unless one meddled with them. She had heard strange noises lately in this room, which was just under where she generally slept, but did not come down to inquire into the cause, nor could she now have spent the night so near it unless I had been there also.

"If anything should come," she said, impressively, "don't notice it; don't speak; don't move. Watch it and follow it with your eyes; observe everything it does, but don't call out nor stir till it is gone."

She sat down by the fireside, shivering, evidently too much alarmed just then to leave the room, although her little bed-place was so near, and separated only by a screen.

"Hans, the miller," she said, "saw one of these people once; it used to come and sweep out the mill and oil the works at night, and do many a handy turn for him; and he used to leave a little milk in a wooden bowl, with a spoon beside it, on the table, and a chair placed ready; and every morning he found the bowl empty and the spoon in it, and nobody had been there but the cat, and of course she wouldn't use a spoon, you know—cats never do. So it was plain the manikin came there; and besides, Hans watched for him once, and saw him. And I remember hearing of a traveller," she continued, "who came as you might to the mill to ask for a night's lodging in the pouring rain, and because there was no other place for him, they gave him some sacks to lie upon in the common room, as you are going to lie this night. The traveller had his supper, too, as you have had; but he was not satisfied with that, and in the night he got up and drank the milk which had been left upon the table for the—you know what I mean. And after he had lain down again, and was just dropping off to sleep, he saw the door open silently and the—what I told you—entered. It had a big head and broad shoulders and short legs—quite a dwarf, but strong as a bear. And it went about the room, sweeping here and dusting there, and looking into all of the drawers and cupboards; and he saw it mend a table, which was broken, with some nails and a hammer, but the hammer never made the slightest sound, although he used it lustily; and I have mended the table myself, so it must be true. And when the—little gentleman had done everything, it went to the high chair, which was set

ready for it, and climbed up and took the wooden spoon into its hand and wiped its mouth with a duster, and was just going to drink the milk, when it perceived the bowl was empty. It looked surprised at first, but dipped the spoon into the bowl three times and took up nothing, and then dashed it down upon the table in a fury. At last it fixed its eyes upon the traveller, who was lying trembling upon the hearth, as you might lie, and down it jumped in an instant, seized him in its great, rough, bony hands; shook him as a cat would shake a mouse, then swung him around against the wall, dashed him upon the floor again, jumped upon him, and would have killed him, but just then a cock crew, most conveniently, and the little man, with a frightful grimace, rushed away around the chimney-corner, and was never seen again. The poor traveller was terribly bruised, and although some people would have it it was all a dream, and he had had too much schnapps—because there was an empty bottle in his pocket—and had fallen about and hurt himself, yet he stuck to his own story. And who was likely to know best, I wonder! So if anything should come, just take no notice of it; and if it looks for something to eat," she continued, glancing towards the table, upon which was half a sausage and a slice of bread left, as if by accident, "let it take what it will. Ach himmel! who knows where help may come from? Good-night, my sir; sleep well." With these words the old woman retired slowly and reluctantly, looking around her timidly as she went, and I could hear her sighs and exclamations in the closet long after she had closed the door.

I don't pretend to say how much truth there may have been in the conjecture thrown out as to the condition of the traveller in the good wife's story, his bottle, and his dream; but I can assure the reader most positively, that the circumstance which I am now about to relate was not a dream, and cannot be accounted for by any such hypothesis as that above mentioned. I had no flask with me, and had drunk only about a glass and a half of "*halb-bier*," and that was of a kind far more likely to affect the stomach than the head. There was a good fire burning on the hearth; and as the *uvula vestimenta* of my friend the *physic*, and my own overcoat, were still hanging up to dry, I put on two or three more logs, and sat for some time watching the flames leap up, and the

changing shadows of the garments on the wall, there being no other light in the apartment. At length, growing sleepy, I adjusted my knapsack and the other sacks upon the hearthstone, and lay down.

I slept soundly for two or three hours. When I awoke the fire was still burning, though rather low. The rain had ceased, and the moon, then nearly at the full, shone in through the window, and lighted up everything in the room distinctly, especially at that end of it where I was lying. I took notice of this, and began to wonder what o'clock it might be. My watch was on the table, and I thought I would get up presently and look at it, and also stir the fire; but I felt drowsy, and disinclined to move, and presently the wooden clock in the room began to whirl and creak, and then struck twelve. Turning a little on my hard resting-place, my eye fell for the first time upon a strange figure sitting within a few feet of me in the chimney-corner; its elbow rested upon a small round table, and it seemed to be gazing thoughtfully into the fire; it was quite immovable, and I could hardly persuade myself that I had not mistaken some piece of furniture, a chair, perhaps, with a coat thrown over it, for a human form; but a more careful inspection satisfied me that such was not the case. I raised myself silently upon my elbow, and watched the figure steadily for a long time. The face was turned away, but it was apparently the form of an old man, dressed in the garb of a German peasant. On its head was a red night-cap; it had knee-breeches unfastened at the knees, and thick coarse stockings, but no shoes; the coat was long and wide in the skirts, and of some dark material. All this I could see distinctly, and I had plenty of time to make my observations, as neither the figure nor I myself moved for several minutes. I reflected that there certainly had been no other person in the house at the time when it was locked up for the night, but the doctor, the old woman and myself; and it was equally clear that the house-door had not been opened since then, or I must have been aware of it. What then could this motionless figure mean? Whence had it come? and how had it obtained entrance? I thought of what the old woman had said about "you know what," and remembered her timid glance around the room every time she spoke of it. Could she have anticipated this visitation? and was this really a Kobold, or something else uncanny?

While I was meditating thus, with my steadily fixed upon the object of my speculation (I will admit it) of my vague and increasing alarm, it moved; it began to feel in its pocket if searching for something; each pocket-coat was visited in turn, but each appeared empty; the only thing produced was an old tobacco-box; and that was evidently not the object sought for, for the figure laid it down on the table with, as I thought, a gesture of perplexity and disappointment.

Presently the figure arose and walked slowly and carefully about the room, handling the chair-tables as it passed them. I could now see it more plainly, and my first impressions of it confirmed. Once it stumbled against a wicker footstool, but did not take any notice of it after walking twice around the room disappeared silently in the recess where the step-ladder which led to the upper floor. I thought I would follow it, but before I could do so I heard a movement in the widow's closet, and the moment the door was opened, and she appeared, falling forward into the room, with a gasping cry or scream. I ran to help her, and found that she had fainted, or was in a swoon. I lighted a candle, brought some water, and did everything I could think of to revive her; I remembered that there was a doctor in the village, and shouted to him. It was a long time before he heard me, but he appeared at last, and with his assistance the poor woman revived. As she had recovered consciousness, she exclaimed with a shudder:

"It was he—I saw him!"

"Saw whom?" I asked.

"My husband!"

She was greatly agitated, and could not be calmed or pacified.

"My husband!" she repeated; "I saw him, saw him!"

The doctor told her she had been dreaming.

"Dreaming!" she exclaimed; "but I was awake. I heard a noise; I got up and looked through the door, between the boards, and saw him—saw him! This good sir saw him too, were in the room with him," she continued, appealing to me, "and you must have seen him."

She then described the figure, its countenance, height, and general appearance, exactly as I had observed it.

"It was my husband," she repeated, "I

es; any one who knew him when he was  
ld have recognized him; and without  
too, just as he used to sit before the fire  
ay evening in that chair. It was he—I  
-Ach weh! it was he if I should never  
her word!"

ome considerable time she grew more  
Ah, well!" she said, "time will show.  
two hence perhaps we shall know what  
ition means; it did not come for noth-  
the gentlemen have been disturbed; I  
for it; it is my affair, not theirs; I will  
r little room. I beg the gentlemen's  
hey must not be troubled, but go to  
; only I will have my lamp lighted and  
the large one off the drawers. Think  
. I will pass the night waking, but in  
I will disturb no one any more."

gged her to come near the fire, and to  
company awhile, till she should have  
from her alarm, but she refused. She  
too troublesome already, she said. The  
rsuaded her, however, to take a few  
something good to compose her; and  
ne so, she went away to her little room  
the door. The doctor murmured some-  
ut "his usual destiny—called up, of  
nd ascended yawning to his bed-chamber  
left alone.

by the fire pondering over what had  
and looking from time to time over my  
with a creeping sensation, expecting to  
air occupied, as before, by the silent  
erious figure. Whenever I moved or  
noise, I fancied the sound was echoed  
d behind me; but that, of course, was  
gination. At length I turned briskly  
solved to shake off this morbid state of  
is, and looked about me; and now my  
was riveted instantly upon an object  
hitherto escaped my notice. There,  
little round table close to where I was  
lay the tin tobacco-box which the phan-  
taken from his pocket. I was quite  
at no such box had been there in the  
t of the evening, and that it had been  
re, as I had seen with my own eyes, by  
which the old woman had identified as  
of her husband. Was this the ghost of  
o-box, or was it a reality? I looked at  
feeling almost of awe, and put out my

hand two or three times before I could summon  
resolution to touch it. At last I did so. It was  
a very ordinary box, with the initials H. S. rudely  
engraved upon it. The late landlord's name was  
Heinrich Stoffel! This, then, had been his box,  
and here was tangible evidence of the strange  
visitation which I had witnessed. Had he come  
back from the grave on purpose to leave this box  
upon the table? It was empty; did he want it  
filled? Even that thought crossed my mind, for  
I was in a matter-of-fact humor, notwithstanding  
my nervousness; and I remembered the bread and  
sausage left by the widow for "anything" that  
might happen to come. The Kobold, too, had  
been particular about his milk—how about the  
tobacco? But no; graver thoughts returned quickly.  
Yet this box must have some meaning in it; the  
receipt for the rent—could it be in here? There  
might be a false bottom to the box! I examined  
it, and pushed and twisted it, but could discover  
nothing. I turned it over and over a dozen times,  
and searched carefully for some secret fastening,  
but in vain. The only thing I noticed was a kind  
of figure something like a gravestone, scratched as  
with the point of a penknife, upon the bottom of  
the box. The more I examined this the more I  
felt persuaded that it was no accidental scratch,  
but was intended to represent something. There  
was a mark across the middle, and at one side of  
this mark a sort of flourish like the letters J. S.,  
as if another of the Stoffels had placed his initials  
there; or it might be that these were numerals,  
instead of letters, intended to indicate the number  
18. I had almost left off conjecturing what these  
marks could mean, when my eye fell upon the  
hearthstone at my feet, and it occurred to me that  
the outline of this stone was somewhat similar to  
that of the figure on the box; there was a crack  
across it, too, which corresponded with the  
irregular scratch above mentioned. This set me  
thinking once more. I compared the two outlines,  
and was confirmed in my impression as to their  
resemblance; but there was no mark to represent  
the J. S. or the 18, whichever it might be. The  
floor around the hearth-stone was formed of narrow  
bricks placed on edge; I counted these, begin-  
ning at the crack in the stone, and found that the  
eighteenth was concealed by a large wicker basket  
containing fire-wood, which apparently was seldom  
moved. I moved it, however, and swept away the  
dust and dirt from underneath it. Again I

counted the bricks, and a very short inspection of the eighteenth in order showed me that it was loose. I lifted it; dust and rubbish underneath; that too I removed, and was rewarded with the discovery of a small jar containing some papers and a bag of coin. I cannot describe my feelings, as, without lifting the jar from the place of its concealment, I replaced the brick, covered it again with the basket, and sat down before the fire to watch till morning.

Soon after daylight began to appear the doctor came down; but I said nothing to him, for I felt that this was a matter which concerned the widow only, and that the less it was talked about in the neighborhood the better. He called up the old woman, spoke kindly to her about her indisposition, and departed, having as he said, "sufferings" to visit, who would be wondering what had become of their "physic." When he was gone, I drew the widow to the fireplace, showed her the loosened brick in the pavement, took out the jar, and bade her examine its contents. She recognized the bag in a moment; it was one which she had made for her husband. In it, among other papers, the receipt for the rent was discovered, an I O U from a neighbor for a small debt, and three or four pieces of gold. I afterwards showed her the box, and explained by what steps I had been led to the discovery of the bag.

"Ach weh!" she exclaimed; "my poor dear man! it was his box; he always carried it about with him; I found it in his pocket—his best coat-pocket, after he was dead, but it was empty, and I left it there. And he came back last night because I was in trouble, to show me where he had hidden the bag. Oh, may he rest well in his grave henceforth! I shall have a house over my head now, as long as I live. I hope he will have nothing more to trouble him, and bring him here again. Oh, it's an awful thing to have the dead coming to and fro in this way. But he'll never come again, I dare say, now his mind's at rest."

Soon afterwards she called me up stairs into her

chamber; there were her husband's coat breeches, the same which I had seen worn by the apparition, lying upon the bed. "See," she said, "he went to his own box to get them out; he knew where to find them; he couldn't take them with him when he went away again, but he stopped to fold them up. I always used to do that for him, and . . . it's like old times."

I left the house that day under a full persuasion that I had seen a ghost. But there was something grotesque in the idea of a spirit coming from the other world, going to his chest, and, with a nice sense of propriety, putting on his clothes, making his appearance in public, and then taking them off, and not stopping to fold them up, but putting them away. And as I walked on I could not help thinking whether the events of the past were capable of any other and more natural interpretation. I came to the following conclusion. The doctor, after retiring to rest, felt cold; he had left the greater part of his garments below before the fire; he got up and searched the chamber for some extra covering; the door which the old man's clothes were kept in was unlocked, and he drew them forth to lay upon the bed. During the night the old woman's dream recurred to him in his dreams; he got up, and went to sleep (being perhaps a little under the influence of opium, which it was evident he carried about with him), put on the old man's clothes as if they had been his own, and came down stairs. After a fruitless search in his pockets and about the room for something which he seemed to think had been mislaid, he went up to bed again, entirely unconscious of all that had occurred. The marks in the tobacco-box were a kind of *memoria*, which the old man had made for himself when he first deposited his treasure in the new hiding-place, and the production of the box itself was, of course, a mere accident arising out of the doctor's dream. The doctor was the "ghost." My explanation is not satisfactory, I can think of no other.

## MENTAL EXCURSIONS.

LOCKE, whom there is no reason to suspect of being a favorer of idleness or libertinism, has advanced, that whoever hopes to employ any part of his time with efficacy and vigor, must allow some of it to pass in trifles. It is beyond the

powers of humanity to pass a whole life in study and intense meditation, and the rigorous exacters of industry and seriousness appointed some hours for relaxation and amusement.

tain that, with or without our consent, the few moments allotted us will slide idly away, and that the mind will break in moment to its stated task into sudden fits. Severe and connected attention is needed for a short time, and when a man is set up in his closet, and bends himself to the discussion of any abstruse question, and his faculties continually stealing away to pleasing entertainment, and often find unreported, he knows not how, to distant thought, and return to his first object as if new, without knowing where he forsook it. long he has been abstracted from it.

When he retires to his apartments, shuts out cares and interruptions of mankind, and is alone to his own fancy; new images come up before him, one image is succeeded by another, and a long succession of images dances around him. He is at last drawn to life by nature, or by custom, and is drawn into society, because he cannot be alone to his own will. He returns from his excursions with a peevishness, though not with the edge of a student, and hastens again to his study with the eagerness of a man bent on the advancement of some favorite science. The habit strengthens by degrees, and, like the use of opiates, weakens his powers without any local symptom of malignity.

It is, indeed, that these hypocrites of time are in time detected, and convinced by the disappointment of the difference between the labor of thought and the sport of it. But this discovery is not often made, till it is late to recover the time that has been wasted. A thousand accidents may, indeed, draw these drones to a more early sense of their error and their shame. But those who are conscious of the necessity of breaking from this slothfulness, too often relapse, in spite of resolution; for these ideal seducers are ever near, and neither any particularity of time nor place is necessary to their influence; they come upon the soul without warning, and have often met with resistance before their approaches are perceived or suspected.

Perhaps, not impossible to promote the cure of this mental malady, by close application to study, which may pour in fresh ideas, and keep the curiosity in perpetual motion. But

study requires solitude, and solitude is a state dangerous to those who are too much accustomed to sink into themselves. Active employment, or public pleasure, is generally a necessary part of this intellectual regimen, without which, though some remission may be obtained, a complete cure will scarcely be effected.

This is a formidable and obstinate disease of the intellect, of which, when it has once become radicating by time, the remedy is one of the hardest tasks of reason and virtue. Its first attacks, therefore, should be watchfully opposed; and he that finds the frigid and narcotic infection beginning to seize him, should turn his whole attention against it, and check it at the first discovery by proper counteraction.

The first resolution to be formed, when happiness and virtue are thus formidably attacked, is, that no part of life be spent in a state of neutrality or indifference, but that some pleasure be found for every moment that is not devoted to labor; and that, whenever the necessary employments of life grow irksome, or disgusting, an immediate transition be made to diversion or gaiety.

After the exercises which the health of the body requires, and which have themselves a natural tendency to actuate and invigorate the mind, the most eligible amusement of a rational being seems to be, that interchange of thoughts which is practiced in free and easy conversation; where suspicion is banished by experience, and emulation by benevolence; where every man speaks with no other restraint but unwillingness to offend, and hears with no other disposition than the desire to be pleased.

There must be a time in which every man trifles; and the only choice that nature offers us, is, to trifle in company or alone. To join profit with pleasure, has been an old precept among men who have had very different conceptions of profit. All have agreed that our amusements should not terminate wholly in the present moment, but contribute more or less to future advantages. He that amuses himself among well-chosen companions, can scarcely fail to receive from the most careless and obstreperous merriment which virtue can allow, some useful hints; nor can converse on the most familiar topics, without some casual information. The loose sparkles of thoughtless wit may give new light to the mind, and the gay contention for paradoxical positions rectify the opinions.

## IN THE LIGHT.

BY MRS. L. S. MCPHERSON.

THE peculiar light in which Angelo lived, accounts for his excellence as an author and artist. Very few persons live in the light always, but almost every one approaches it some time in their lives.

Whether from this light, or from some other source, I will not pretend to say, but there are moments when the soul seems to rise into a clearer, higher atmosphere than usual, and with a strength unknown to it before, shakes off its shackles, asserts itself, and for the time is almost omnipotent.

History is everywhere studded with illustrations of the wonderful power of the human mind, when inspired to acts of heroism. Under the influence of some hitherto unknown power, men have performed wonders, startled the world, and rendered themselves famous for all time. Almost impossible victories have been won on the field of battle, where victory was wholly due to the inspiring force of a single man, whose magnetic presence was sufficient to thrill a whole army with enthusiasm, confidence and valor.

The inspiration of Napoleon Bonaparte rendered him more than equal to the combined forces of France during the hottest of "the Reign of Terror." And though one of this world's great ones calls him a

"Pagod thing of sabre sway,

With front of brass, and feet of clay."

he must add, perforce,

"Earth rocked beneath him to its base."

But it is not alone on the field of battle that man's great might declares itself. From the very lowest depths of suffering and sorrow, a single hand has sometimes been put forth, which has shaken a dreaming world from its slumber, led in a day of wonders, and renewed the cry of the Thessalonians, "These that have turned the world upside down, have come hither also!"

The single hand of a Luther, baptized in the font of eternal truth, was sufficient to tear away the subtle vail of superstition and deceit woven by a crafty priesthood, from the beclouded eyes of half a world, hurl the mitres from the brows of

priests and humble mailed princes in the d and, smiting the rock of delusion, he started out a divine current which has never ceased to flow.

The hearts of the world's poets have uttered themselves only in life's supreme moments. Hence a pathos so deep and tender as to leave a wound in tears; a grace and grandeur which lifts us above the pains and miseries of common existence, a beauty which has strewn the roughest paths of human life with imperishable bloom and unfading lustre; a delicacy which has touched and transformed the hearts of millions; a truthfulness which has made the world of literature a shrine for every truth-loving soul, and a sanctuary for every bruised and troubled heart, with ability to feel, and taste to enjoy.

Byron, Burns and Moore, though neither of them acknowledged their inspiration as coming from "God's peculiar light," nevertheless, writing from their hearts, touched a chord in the bosom of the universal brotherhood, which has never ceased to vibrate, and whose last echo will doubtless break upon the farthest shore of time. All the finest productions of art, statuary, painting, poetry and music, have been produced while the minds of the artists were elevated, energized and impelled by some latent or external force, and so prepared for their immortal labors. Raphael's last and best picture, "The Transfiguration," had its origin in a mind illuminated by divine grace, and inspired by a love which quickened in him an immortal impulse, and crowned him a master revelator of sentiment, as well as beauty, a high priest of a royal art, who, feeling his triumph just at hand while passing through the door of death, as it closed upon him, whispered back to his weeping friends, "Great is the light and beautiful the prize!"

All the grand oratory which has reached and thrilled the hearts of the people and wrought substantial changes in governments and societies has been but outbursts of irresistible feeling which, like jets from a live fountain, rose higher than their source, because impelled by some irresistible power.

## THE FAIR PATRIOT OF THE REVOLUTION.

BY DAVID MURDOCH.

ER XXVI. A MASQUERADE.

adventurer went out from the he Dominic, chewing the cud of e felt ready for anything that might way of escape. He was becoming eshes of a plot were drawing around

," said he to himself, "parson or executioner for that mock governor, d me over, through the other parson am fool enough to wait here till he t the rope around my neck."

oked up to the mountain, and saw at rose from the Indian's camp, sure of being well received; but o make his escape without exciting his quandary he began to whistle, assing him, whispered: "that air is this region." It was "God Save une that had become treason on the ie Atlantic. So Clarence, the brave d his breath as if he had been shot ir-pistol which was fired at George his way to Parliament.

, his eye was attracted to a strange-; who moved before him in the : China images of the London tea forward, yet shaking at every step, : the last before a fall. So interested of the creature before him become, tion was completely riveted. We t his astonishment was, when on his irst, there rose a sharp whisper, ," then on the left hand, a still 'Follow him, he has something to larence could not help looking on the speakers, but there were none ut led on as he felt inclined, he he dwarf to a bridge; when coming ght hand guard, a voice distinctly n Clinton!" Running to that side ssenger looked, seeing nothing, nor suaded, however, that there was a :etween the invisible whisperer and p, he through curiosity followed on o a small tavern, standing by a mill

surrounded by a few houses, built of red and yellow brick. The inn had a low *stoop*, which ran along its front, on which were forms for the lazy and the lame. A group of motley gossip-mongers were all around, made up of white, black, yellow, and other dingy colors. Dame Krouse kept the best of "Hollands imported," as she said on her sign-board; though her negro Tim, a great braggart, declared that he was a "better brewer than the bogs of Dutch lan' duced."

The different groups of men were engaged when Clarence came up to the tavern door, according to their tastes. The grave and gray men were discussing the late trial, and others were playing at quoits, and pitch the stone; while the boys were running at tag and leap-frog. It was a busy place considering the size of the small hamlet. Somehow a report had gone through the country, that an affair of moment demanded the presence of all who were able-bodied, and with the instinct of animal nature, they came where the carcass was. Sopus had been burned; Brandt was on the mountain; and Burgoyne had been captured, and something must be done at home to prove their interest in the public weal; even the young fry of the place were ranged under a captain of their own size as soldiers, following the sound of an old frying-pan, which a thick-set bare-headed negro, of the class simpleton, was beating with a club, in imitation of a bass drum.

Our adventurer stepped on to the piazza of the tavern, and mixed with the men who were engaged in discussing the affair of the church-meeting. It was plain enough that a difference of opinion existed outside the Consistory, notwithstanding the apparent acquiescence in-doors, concerning the precognition of the woman's case that morning; nor was the Dominic without his share of censure. The public mind, always severe at the time when treason is ripe and when fear has the ascendancy, was loud against the woman who carried such unmistakable evidence with her of being a spy, and of holding communication between Burgoyne's army and that of Clinton.

"Did na ye see the face o' the limmer when the minister put the question to her? she spoke up as

bardy as you like. Na, I thocht that the gude man himself was a wee bit bewitched, else he would na been sae easily bamboozled wi' the pawky quean."

This was said by a brawny Scotchman, who held in his hand a pewter cup filled with the strongest kind of cider-brandy, which he sucked up with a zest that showed his experience.

"Such stuff as that is gude enough to wet one's wizzan in this country, where you canna get better; but, man, if I had but a coggie of Glenlivet, how it would mak' me fidge wi' fainness. But anent, that action o' the minister's, he should hae sent the jade to Albany."

"Donald Grant, you are always finding fault with the powers that be; and even the Dominie cannot escape your rasping tongue."

This was said sharply by a small man dressed in silver-gray that fitted close to his body, and, though worn bare, was carefully brushed. His look and his manners bore evidence of his New England origin, and his pedantic speech spoke him to be of the pedagogue order, a class of men that have done much to leaven the west side of the Hudson with the love of learning, and who had, notwithstanding the repugnance of the Dutch to all the Yankee brood, found their way among them as peddlers, pedagogues and singing-masters.

"Noo, maister," said Donald, "you would tell me that men in authority should be respected, and my mither aye said that ministers were black crows to shoot at; and there's yoursel', for instance, in your schule, have a gude right to use the taws in makin' your words be enforced, but if you wranged my callant there, I would lick your hide out here till you were black and blue. Noo, as the Dominie himsel' says, you can mak' the application of this discourse at your leisure."

"I am not going to contend with you, Grant, when club-law is the rule; but law is law, and must be obeyed. The men that administer the law must be sustained, else where are we going to but down-stream? And for my part I do not value a man more than a tenpenny whittler who does not stand by the law. There, now, something is going on among that black generation. I must look after these imps of Satan."

"Mind, maister, I'll not let you interfere with a wee bit fun, for I like it o'er weel mysel'. You are king in your ain dominion, but here you are nae mair than a common man."

"Dat's true, Grant," said a rough-looking natin with as many capes on his coat as there are petals on a tulip, and whose whole exterior was homespun in a figurative and literal sense; "but de satting cannot pe said ov de Dominie, who is a gude man every place he goes."

"Oh, you need na mak' the man mair the mortel, Myndert Overpaugh. Sit him down on the rock, with a spoon in his han', and he will find little to sup as the smallest o' us all. Grant was determined to find fault, and his spirit was roused after he had drank a second cup of the cider brandy.

"That's a fact, Grant, the Dominie can be as well enough on the bench yonder, when he has got all the congregation to carry out his will; but I would like to see him in the woods alone, and see if he would be so strong as he pretends."

"Now," said Grant, "I will not let any man say a word against the gude man in his absence, mair especially against his courage. He is a strong bodie, and there, nae later than last Saturday night, that ne'er-do-well Bob Eltinge and crony the smith were determined to shoot the gude man between this and Coxsackie. They hid themselves behind a tree in the woods, and lay their guns ready primed; but the minute that they saw the white o' the Dominie's een, they fell down like shot doves and let him pass. That poor Bromie, whatever you may say to the contrary, that nae man should lift his han' against the Lord's anointed."

By this time the party had entered the mill, and were mounting to the loft, to which Clarence had ascended by the rear unquestioned. Sacks of grain lay around the large apartment, and on these sat a crowd of different kind of people who were enjoying greatly some sport going on at the upper end of the gallery. Bags of the wheat had been thrown together so as to form a platform above the mill floor. On these were nine other sacks, which served as seats, where were sitting as many black men dressed in their master's clothes, which they had borrowed without leave. The middle seat had been occupied by one dressed in the true outer garb of the Dominie. His cocked hat, but crushed in at the sides, was on his coat, but rusty, and a large towel tied around his neck fell down over his breast in square ends to imitate the Geneva bands. Four on the right hand, and as many on the left, represented the deacons and elders, while in the front stood

young negro dressed in woman's clothes. A faded silk gown, with a high bonnet held up, so as to look like the high knots of hair fashionable among high-born ladies.

"The black devils that they are," said the man of books. "What a faculty they have for imitation. Making fun they are of serious things. I must teach them Connecticut manners;" and here he was about to act the part of select man, when Grant spoke out:

"You'll do nae sic thing as stop the masquerade. Let them get their sport out. My certie, but they play it weel. Noo be quiet."

The mock Dominie called out in tones meant as imitation of the real voice:

"Dis Consist'ry come to order. Squia proceed."

The man called the "Squia" had on spectacles like his model, and pen and ink before him, as if prepared to take notes.

"That's intended for mockery of the Consistory," said the teacher, "and shows how the public mind is exercised upon that trial of the woman. Hear the sham Squire, how he questions the *female lady*, that had the cup in her sack."

"Ha! but see how the black gipsy tosses her head there, imitating the white limmer in the kirk, that we saw. Her curls swing finely. See how the blackamoors jump at the sight. It's perfect pleasure to them. But, man, what a noise they mak'. I could hear it frae Cladich to Loch Awe on a Halloween nicht." Here Grant was getting disgusted with the capers, and stepping forward himself into the midst of the den, he lifted up a stout fellow by the nape of the neck and the seat of his tubbs, and gave him a few slaps with his big hand, that made music of a kind that brought order out of confusion, as he said, "If we are to hae sport, let us have it, and na mair o' deviltry."

Here the president called out at the top of his voice, "Silends! proceed to furdur bis'ness."

"Call in de oder prisoner," said the mock Squire. A young, lithe negro was here brought forward, charged with stealing a horse from Nellius Wynkoop, being a spy, and as guilty of forgery.

"What can be the meaning o' that?" said Grant. "Naithing o' sic kind has come up that the public kens about."

"That is, you have not heard about it, you mean. Everything is not told to Donald Grant

that happens in the court of justices, or it would not be a secret very long after he got it."

"What do you mean with your jibs and your hints?" said Grant. "If you don't tell me all you ken about that business, I'll serve you as I did that black dog there a minute since."

And with that the rough Scotchman was about taking the cross-grip, when the man of letters sputtered out, "Let me alone, and I'll tell you all I know; and listen yourself for the conclusion of the whole matter." Here a full account was given in loud whispers of the appearance Clarence had made that morning, and of the trial that was to come off that afternoon. "See that Tom there, the Dominie's chief man, sitting in the middle. He has access to all his master's secret drawers, and generally can tell beforehand what disposal the reverend man intends to make of his cases."

Clarence, who heard all the account given to Grant, looked to the prisoner, and saw a fac-simile of himself in size and dress, to the very patch on the knee, pointed out before. There was no more fun in the play to him. A strange confusion of ideas was curdling up in his brain, like what he had often experienced in a dream. He took hold of his own arm, to be certain of his own identity. It seemed like phantasmagoria. He was recalled to his case by the mock Dominie crying out:

"My freen and Bruder Doll nebbber steal Nellius Wynkoop's horse. Me know nothink of dis letter; youd a spy, to be hanged at te cart tail."

Here the masque at the bar, cried out, "me no spy, but true man, seeking my sistern."

Here was such a clapping of hands and screeching that it seemed Bedlam let loose. All the dominoes on the sacks joined in the fun, forgetful of their mock dignity. Quiet being restored, the call was given to bring in the witnesses. When Caese, the old fiddler, stepped forward, and gave a rambling account of the frolic at Phœbe's Hotel, and of de man who came and spoiled de dance, in de middle of de fine tune, by de niggering of Nelly Wynkoop's horse.

"Wat says de prisoner to dat?" was the president's demand.

"O your reberance, me on de way to de mountains to seek ma sistern."

These words became the password to sport, all through the proceedings, and never failed to make the rafters ring with the echoes of uproarious laughter.

"Please zur," said the black squire, in mock gravity, "vats dat in de breast pocket? Constavel, help de prisoner to take out dose putty tings."

Here a stout fellow put his hand into the bosom of the accused, who screamed out, "Don't take dese tings away frob me, dey are for ma sistern!"

"Treason! treason!" was shrieked out as a pair of large horse pistols were laid upon the table. Those who did not know were actually taken by surprise, at the sight and sound, while those who did know, believed that the case which this foreshadowed was more serious than it had hitherto seemed; and the cry of "treason! treason! to the gallows with the spy," rang longer and louder than mere sport called for in a masquerade trial. Had Clarence been seized at that instant, he would have felt less surprise than he did at the farce itself. Indeed, he half expected something to happen, and was preparing his thoughts for the worst. Here was an evident thrust at him. His object was known. He was regarded by the lowest grade here as either knave or fool. An attempt was making to excite public opinion against him. "Let me try and escape," he inwardly said to himself.

The farce was about to proceed, when who should stalk in but the great man himself, with a long whip, that he could use at ten yards distance. Making it crack at the snapper like a pistol, there was such a scampering among white and black, as might well have employed the pencil of Hogarth, who has given us the Village School in an uproar. Loud natural squeals came from all sides, as the scourge took effect upon the hips of the retreating crew, who crowded out like a drove of hogs through a narrow gate, making the hindermost suffer for the sins of the foremost, while the Dominic sung out: "I'll learn you to make the venerable Consistorial Court of the Protestant Reformed Dutch Church of Holland, in these United States of America, now independent, the subject of fun. You blasphemous crew that you are! I never knew where Pandemonium was before now. You black imps, to mount up to the clouds playing your cantraps. Take that." And here another and another full swing of the stout pastor's arm made the court and the audience tumble out in mixed confusion, that soon exhausted the wrath of the avenger. Coming upon the fellow that had played the part of the female spy, all dressed

up in a full suit of the 'Yfvrow's own wardrobe curls, high-heeled shoes and all, he roared out loud laughter, that shook his big sides and stopped his whip hand.

The couple that stood beside Clarence had found their way out first, being close by the door. Grant coming up at the back of Clarence, gave him a hard clap with his open hand on the back, thinking that he was one of themselves, and saying:

"Frein, what do you think o' that kind o' play acting? I beg your paurdon, I thought 'twas our neighbor Charlie Forbes, the English officer. I never saw twa back sae like. But na offence I hope," said the garrulous Scot, putting his arm into that of Clarence, as if he had known him all the days of his life.

"Maister," continued the talking man, "I was just speerin' at our frein' here, what he thought o' that fun in the loft there."

"There is something about to go on here at the parsonage, that will explain all we have seen that darkness there," was the knowing reply the pedagogue, who prided himself on being acquainted with everything before it took place.

"Oh, aye," said Grant. "You mean that we have been looking on the shadow, and the substance is not far off."

"Or, to speak more classically, we have been observing comedy, and now for tragedy," was the pedantic language of the man of letters.

"As to its being mair classical," said Grant, "I'm thinkin' Norman McKenzie, the schoolmaster of Aberfeldy, would say the scriptural figures were the maist classical of the two; that's neither here nor there, at present. I'm ready to argue that question wi' you next Sabbath day, atween preaching; in the meantime, see you can get me in to hear that tragedy you speak of, since I have seen the comedy up in the yonder."

Here the two followed the stream of persons who were making their way to the parsonage, with an evident earnestness, that showed their interest in what was about to take place.

#### CHAPTER XXVII. A WHEEL WITHIN A WHEEL.

CLARENCE, in no better mood of mind after what he had witnessed, wandered away out of hearing, so that he might consider what would be best for him to do, surrounded as he was by

picion. The chief man here had his eye upon him, the clowns squinted at him, and the common blacks were making him their jest. Were he only certain of getting away, he would run all risks of escaping to the mountains. Where were these king's officers? Their parole did not prevent them from helping others, though it bound them by their honor to remain here till exchanged: "I shall seek them out," said the almost desperate young man; "I have just come from seeing my own shadow on the gallows-tree; I would be a fool to run my neck into the noose after the plain warnings given in some mysterious way."

Continuing these reveries, his eye rested on the same strange dwarf that he had followed into the loft. This time the singular creature made more attempts at arresting the notice of the stranger youth, who now became interested in the motions made to him. They had both got on the same bridge, when the call "Captain Clinton," coming from the right, drew Clarence there to look with haste, and with some perturbation. Seeing no one, he still remained intently fixed, with his head bent over, when the voice was on the other side, calling "Captain Clinton, follow."

Clarence, thinking that some mischief was intended, hastily ran forward seizing the dwarf, who merely looked up in the face of the captain with a dull smile, that meant nothing, good or evil. Clarence was ashamed of himself when he saw that he had been rough to a poor deformed negro, whose face showed him to be an idiot. Dropping the arm he held, he merely said to himself, "I wish I knew who calls me," when the same voice on both sides called out:

"Follow him as a brave man may."

Seeing that something was meant, he pointed to the dwarf, who went on, Clarence in his wake. Turning suddenly around as if going down to the creek to fish, for the dwarf carried a hickory pole, which might serve him either for a fishing-rod or a staff of defence, he led the way as Clarence followed. After walking, and sometimes crawling through a low piece of ground covered with hazel bushes, they reached a hut built of mud, and thatched with straw, entirely different from anything that Clarence had ever seen on this continent. The walls stood nearly four square, and rose a foot higher than a common man's height, with here and there a stick of timber set in to prevent the clay from settling. The roof rose

slanting to the ridge-pole, and after having been wattled with willows was stuffed with oat straw, over which was laid a covering of grassy turf, cut in squares from the meadow. Clarence thought upon the clachen of Cladich, in the Scottish highlands, where he had been with a detachment of his regiment, keeping the old adherents of the gallant Pretender in check. There was the same "midden" before the door, the kailyard at the end of the house, with the place for the crummy cow at the back window. "This," said the English youth to himself, "looks like the Scottish Highlands indeed."

But his surprise was still greater, when, after his guide pointed to the low door, which stood open, he was met by an old man in the very "garb of the Gael." The kilt coming down to the knee, met below by the cross-striped hose, tight to the leg above the *brown*, having round tufts which covered the buckles of the garters. The shoes were of the kind called brogues, wooden soles, and vamps of untanned leather. The upper part of the man's dress had a mixture of the Scottish and Dutch in them. The cloth of the coat was woven loose like a coarse blanket, and stained with the juice of the butternut, abundant in the region. An old soldier's stock was round the grim wearer's neck, and it only required the eye of a soldier to observe, in the upright form, the respectful bearing and the firm footing of the stranger, one who had marched through many countries, and was not to be startled, even now, by the sound of a trumpet. He stood over five feet ten; but, from his strength of limb and width of chest, he seemed to be of shorter stature; and though he evidently had put on his best attire, there was a roughness in his appearance, which would have made the tame citizen give him the path without further dispute.

On the entrance of Clarence, he put one hand by his side, and the other to his cap, which the young officer understood at once. Returning the salutation with evident pleasure, as he looked on the face of the stout old man, smiling, as he said with surprise when he saw on the breast of him before him a silver medal bearing the name of the wearer, and of "PLASSY" and of "ABRAHAM PLAINS."

"Sergeant McDonald, Seventy-first Regiment, Glasgow Highlanders! How is this that I meet one of the brave heroes who fought and conquered

with Wolfe on the Plains of Abraham?" was the eager inquiry of Clarence.

"I am still a true subject of his Britannic Majesty, and will continue to wear his colors while this head stands higher than the earth; and when in my grave, I have sworn my auld son Oscar to come every Sunday morning, when he must lay this medal aboon my heart, where it hangs now. On the fourth of June, his Majesty's birthday, they will fire a *feu-de-joie* near my auld ear."

"Whist! whist!" was whispered from a corner on the other side of the room, where sat an old woman who was busily engaged twisting a thread by a spindle, that hung between her finger and her thumb, though evidently ill at ease, as she listened to the outpouring of her husband's loyalty.

"Janet," continued the old soldier, "is wearing her life out, 'feared lest thae Whigs come in some day and put a string round my neck; and sorry am I to say, there are some of the ance gallant Seventy-first that would help them. But, sit down, till we hear the word, *advance*."

Clarence took a seat on a stool which stood on three feet, cut out of a rough block, which was the pattern of all the stools in the place. The visitor had time to examine the hut, and mark its resemblance to what he supposed had never crossed the Atlantic. The floor was the bare earth, hardened by the feet of the tenants. Round the centre was all the rude furniture, for there was the fireplace, built of rough stones, like an ancient altar for sacrifice. It stood about three feet high, and measured double that in breadth. On the sides were the vessels for cooking, while over the centre, where the fire burned, hung from a long chain the pot in which the dinner for that day was simmering, and sending out an agreeable flavor. Clarence looked for the chimney, but saw none. The smoke found its way upward, seeking the open air through those crevices which were left by chance in the simple roof.

"Come this way, he calls;" were the words of the old Highlander, and Clarence was pointed to a steep ladder in the rear of the hut. The adventurer had gone too far to hesitate, so, mounting up, he found a door which opened at his touch, swinging back again, so that he was shut completely in.

"By George, I'm caught again," were his first words, when he looked round him, seeing no one;

but he had hardly uttered the exclamation, when another person entered from the open door, who sprung forward seizing the hand of Clarence, stretched out, while both were speaking "Clinton! Crawford!" looking into each other's faces to be sure of not being mistaken. Clarence was the most surprised, from being wholly alone; the other being near, stood dumb, while Crawford said:

"I knew you at a glance, whenever I cast my eyes upon you. My fear was that you, by betraying my face, would betray yourself, and me at one and the same time."

"Where did you see me to-day? I was not but in one place all this morning, and I could not be without my discovering you among a thousand of these yellow boons."

"By George, as you said, Clinton, I have a fair skin and sweet voice that have passed through that ordeal. I must be a gentleman when I could deceive that shrewd fellow with his black keen eye, and yourself."

"Is it possible, Crawford, that you were a lady in that mongrel court, just now? I could have had a near escape with your head in the stocks, and still on your own shoulders. You always in fun called you Lady Crawford."

"No more of that, Clinton; you know I am a man. It does not sound too pleasantly to my ears, but the desperate condition of our country, and his brave fellows, could have tempted me, and now that it has failed in part, we must find a remedy the evil in the best way we can, and follow your counsel."

"My counsel," was the desponding answer of Clarence, "may be of some good to the world, but theirs may be to me; but the desperate condition of our own affairs engrosses my soul so much, that I could not get two connected ideas from my head, if this part of the globe were to sink and sink with it."

"You astonish me," said Crawford, "but you are one of those men of deep enthusiasm, who, in the heat of their tenance spoke more of levity than of gravity."

"I supposed that honor and glory, connected with your country, sat highest on the throne of your breast."

"These sentiments," said Clarence, "were not in my haste than he intended, 'are the scenes of my life; but after passing the scenes of this week already past, they

counteracted in a great degree by other sentiments no less powerful."

"Pray what may these be that tell so strongly on Clinton's mind?" was the rather bitter question of the other youth, who was evidently galling under some inward source of pain.

"Humanity for mankind in general, and affection for my sister Margaret in particular," said Clarence, with a firmness which cooled his companion down to something like patience.

"Your sister! Miss Clinton! What of her? It can't be possible that the report going round here is true, that she has been abducted from the ship, and that Colonel Clifford is at the bottom of the treason?"

It was now the time for the other to express his astonishment as to the way in which this rumor had got abroad, and of what reliance was to be placed in it. After telling and rehearsing all that was current, and which Crawford had heard from different sources, it appeared that letters had been dropped around the camp, at Saratoga, pointing evidently to this very event as about taking place.

They were written as from one of Clifford's intimate acquaintances; describing the plan and the probable consequences. Clifford and Burgoyne being bosom friends, and of a kindred feeling in pursuits of an evil kind, the secret letter did not excite any seriousness in the gay, lewd camp of the English general. It was different with another communication, which reached the camp of the commanding officer, no one knew how, when a plan of march was laid down so distinctly, for any bold adventurer, that it awakened in Crawford the desire of accomplishing—what was absolutely essential, in order that the Northern army should be saved—a communication with the army of the South under Sir Henry Clinton. A map which marked out two distinct routes was inclosed, giving decided preference to the route over the mountains, when the messenger would come under the protection of Brandt, who was engaged to be there at this time; "and"—what sounded strangely and suspiciously to Burgoyne—"Colonel Clifford would be on the mountain, along with the Great Mohawk, to lend his aid."

"You have seen," said Crawford, "how the most practicable of these routes has been closed against me, but I am determined now to attempt the other. Our brother officers here on parole have encouraged me, and I am just waiting for

your counsel in this matter. All the information sent to the general by that unknown hand has been confirmed since I came here. To-day a stranger, who could not possibly know me, has pointed out the dangers and the advantages of the enterprise; so that my mind is made up. Your account of your sister, Miss Clinton's, abduction corroborates the whole, making it, you perceive, to be your duty, from affection, to join me."

"And you would add," said Clarence, already half persuaded, "that honor and glory will go hand in hand. Before I can say yes to your proposal, I must see my way out of this confounded noose that I feel around my throat. I have learned caution as well as some others, where so many eyes are watching me."

"Why, my noble fellow," Crawford interposed warmly, "if the hangman be so near, are you such a fool as to wait till he puts the hemp on in a workmanlike manner? Sergeant McDonald below here has promised to guide me over the hills by midnight. He would take another under his care for the love of his king and country."

These arguments sank deep into the mind of the anxious brother when he reflected upon the necessity of promptitude in pursuit of his sister; and he all but said yes to the demand made upon his energy, when there was a slight tap at their door, which proved to be a call from Dame McDonald for the gentlemen to "take pot luck for their dinner."

"I dare not venture below," said Crawford; "but, Clinton, come back immediately after you have made the acquaintanceship of the gentlemen on parole. Some of them you know already. They waste out life here, and you will do them good in just showing your face among them."

Clarence descended the way he came up, and soon found himself seated at a deal-table without cloth, but white, being evidently scoured for the occasion. The old woman, dressed in what was known as drugget, had a clean *toy* on her head, which bore the marks of a carefully put on cap, in which the wearer was confident she looked well. The skirt of the gown was drawn through the pocket-hole to prevent its dragging on the floor, which, from its length of train, it would have done. She did not sit down herself, but served the company. Wooden plates, hollowed out of basswood, were ranged round the table; into these a ladleful of the broth, which stood cooling in the

tripod pot, was emptied; and the invitation given, "sit down, sir, and mak yourself at hame. Janet has been busy preparing some sheep's-head kail to put me in mind o' Kenmore."

Clarence had seen, when he was standing by the fire, the nose of some animal pushing itself up among the vegetables in the pot like a black hippopotamus among the reeds of the Nile; but he did not expect to make his dinner of the mess. However, now like a good soldier, he sat down with a ready appetite for whatever was coming, asking no questions. To his agreeable surprise, the soup was white as milk, though the head—it might be of a ram from its size—was there in a large platter, on the centre, without the horns, and the wool singed all off. Garden stuffs of all kinds known, and some only known to Janet, had been boiled for two full hours, with the head among them; so that it would have defied a French cook to tell the prevailing flavor of what McDonald called his dish of hotch potch. Barley bread, unleavened, baked upon a griddle, thin and tough as leather, was eaten to this soup; when at the close Janet put down a square bottle and a basket of oatmeal cakes alongside of a skim-milk cheese: all of which were intended as a dessert. The sergeant lifted a small dish made of narrow pieces of wood of different colors, hooped round, so that it seemed a Lilliputian milk tub. Into that he poured the contents of the bottle, drinking it off at a single draught, after he had, with great solemnity, given "the King, God bless him," as a toast. Clarence had the same put before him: and so it went round the table. The rest who were there seemed to be men who merely listened and looked. When it came to Janet's turn to drink, there was evidently something more expected of her than a bare toast. Putting on the table a crystal goblet, which, from the manner of her unrolling it, she deemed sacred, liquor was poured into it till it stood on the lip. Taking an egg into her hand, she broke it so that the yolk spread through the contents of the glass. Through this compound she looked with a curious eye, as if expecting to see something uncommon in the distance. Tasting of the mixture freely, she leaned her head on her knees, singing a Gaelic song, rocking herself, as she sang for a few minutes, during which the company sat in the profoundest silence, waiting on the will of the actor. When she lifted her head, it was to take

the goblet again in her hand, which she shrank sharply, and gazing intently, she laid it down if in fear at first; but lifting it up, one of the dark smiles came across her wrinkled features which recalls to the traveller's mind a gleam of sunshine on a Scottish sky.

"Tell us what you see, wife, and let us go," said the sergeant, evidently under the enchantment of the occasion. "We want the truth, Janet; the journey must be taken, weal or woe. What does the Brownie say?"

Janet, in a moaning tone, sang, "Smoke, and blood all the first."

"We are ready and prepared for them. You mean that the end will be successful. Let us go," said McDonald, "and see the gentlemen;" and with that he led the way through the low door of the mud cabin, taking the path that led up the bank of the creek.

On the way Clarence learned from McDonald that there were several families like himself, who were living among the farmers, and some had risen to be good landholders themselves. The most of them, however, were imprudent, and useless to the community and to themselves. They were divided like the country on the question of the present war, and "you may," said the sergeant, "as weel break a woodie wi' a windle strap as change a Hielan man, when he wants to go either up or doon stream."

The two had arrived at the door of a large stable barn that was snugly fenced round, and the interior swept and orderly, showing that the hands of a soldier had been in use here for some time. The door was opened by McDonald, who entered, leaving Clarence, hat in hand. The company, all expecting the visit, rose at once, and came forward with the dignity and the frankness of gentlemen and soldiers. The welcome was hearty and full of feeling. Already all had been made aware of the name and of the rank which belonged to the visitor. Of the object in his mind no one knew anything, nor was one of the ten gentlemen at liberty to ask him till he might reveal it himself. Of course they supposed public business alone could induce any one to venture into such a dangerous vicinity. Still as they had heard of overt acts being made to leading Whigs throughout the country, it was not sound strange when one of them, with a knowing look, whispered, "Sir Harry is cousin to the rebel General Clinton, and his brother the gen-

and the governor knows that these Dominies  
at men among the Dutch boors."

so the mission of Clarence Clinton was  
at without being sought out. The oppor-  
was now sought after by all to make them-  
agreeable, while the young soldier, feeling  
hy for them as a brother officer, in the same  
rofession, put forth all his character in their  
e, with promises of aid whenever he would  
to headquarters. Some of the number were  
uaintances, and the greeting between them  
rdial. The strangers were no less pleased  
visit from one who was so sure to report of  
ivations undergone on behalf of his Majesty.  
f promotion revived as they looked to the

nce cast his eye round the place where they  
et, and learned from them that though they  
o assemble here they were by no means  
d to any location. Some were lodged in  
le village, and others in the families of the  
s. For some days past they had been en-  
preparing for a hunting excursion to the  
ains. A pair of catamounts had been seen,  
who were inclined had the chance of put-  
rth their energies.

see," said Clarence, "you have all the  
provided," as he glanced round the place  
w the guns, the lances and the other articles  
ntsman's armory. "You are allowed great  
m when these are put into your possession,  
me given. I hope you have ample range and  
enough."

if that, sir, we have nothing to complain.  
ave been away twenty-four hours at a time,  
ave travelled to the borders of civilization;  
of us on a journey of pleasure, others on a  
if research, and myself have been to consult  
izard of the spook's den, as the people called  
en I went first. We are waiting for a message  
him to go on this hunting campaign. He  
sed to send us a special warning, so that we  
be there in time; and if I am not mistaken,  
comes the witch's imp at this moment.

urence looked toward the entrance to which  
in Willoughby pointed, who, from his rank  
ll as for his superior intelligence, was regarded  
ief, when he saw the same misshapen dwarf  
toward them, holding a letter in his hand,  
he gave to the officer who expected it.

That will do, Unga," said the captain. "You  
Vol. VIII.—24

may sit down till I send you with my reply;" and  
the creature stepped high and low as he moved to  
a settle near the wall where he stretched himself  
on his back, with his cap over his face.

"Just as I said," were Willoughby's first words.  
"The hunt comes off to-morrow, and if we wish to  
see it we must join the party by sunrise at the  
Round Top, keeping round by—— But see, here  
is a map of the region. Sergeant McDonald, see  
this and tell us if it be practicable. We must not  
trust ourselves in the hand of a spaeman."

The sergeant took the sketch, looking at it with  
the deepest interest, while all the gentlemen stood  
around him waiting for his verdict, which he gave  
briefly.

"You maun tak to the west o' that round hill,  
then climb the mountain as weel as you can, and  
when at the tap keep west by south, till you come  
to a waterfall that lies at the head of a deep glen,  
running to the east. The man that drew that is  
the same as he who drew another I have seen this  
morning."

"What do you draw from both, my worthy  
sergeant?" was the familiar question of the one in  
command.

Before an answer could be given, a voice, which  
seemed to sound on the outside of the building,  
called out, "Clarence Clinton!" That gentle-  
man looked suddenly in the direction, all eyes  
turned in the same way, when the same voice, but  
louder, called from the other side:

"*Captain Clarence Clinton, the Consistory of the  
Protestant Reformed Dutch Church demand your  
presence at this moment.*"

This, which was said slowly, excited some amuse-  
ment among the young men who ran out for the  
purpose of seizing the impudent fool who would  
so speak. But no one being seen, a singular  
tremor came over men who would have stood at  
another time in the face of death. Clarence, who  
had seen enough of that court of late to despise it,  
in his present condition took McDonald with him  
aside, making an appointment to meet him and  
Crawford in case he found it possible to free him-  
self of the presence of spies. To them he ascribed  
the voices he had heard all that morning.

Bidding his brother officers a pleasant adieu, and  
a successful time on the mountain, he hastily left  
for the parsonage, where that strange court was to  
be held, despising it in his soul, and yet forced to  
appear.

## WOODED AND MARRIED.

BY ROSA NOUCHETTE CAREY,

*Author of "Nellie's Memories," "Wee Wife," "Barbara Heathcote's Trial," and "Robert Ord's Atonement"*

## CHAPTER XXVIII. "QUI PATITUR VINCIT."

THERE are days which, in spite of all their sadness, we would give worlds to live once more.

Dym would have given a good year out of her life if she could have had that Sunday over again.

Life has such terrible surprises; now and then its mysteries are so cruel. If we could only lift the veil just a little; see the sand that is ebbing from the hour-glass; watch the clear steady strokes of the scythe, that is coming our way perhaps; "if we had only known, we should have done so differently," we say.

Ah, that is just it! We come down one morning a little listless, a trifle out of humor; the day goes on; we laugh and talk, we are moody or discontented, we waste our time in trifles, in looking up vacantly at passing clouds, and we do not know that the hours of one we love are numbered; that to-day, or to-morrow, or the next day, we shall say a good-by that will wring our hearts with the remembrance. If we had known!—if we had only known!

This Sunday rose with a misty brightness on it, a soft vaporous light, neither gloom nor sunshine; the pavements were washed clean, little gleams and hints of water glittered under hollow stones and down garden paths; the spring flowers were prematurely faded. William Elliott and his sister looked regretfully at the clumps of battered tulips and narcissus in the little three-cornered garden belonging to the sexton. St. Luke's bell was clanging out with a sturdy wiry sound; in the distance other bells chimed in, in various tones; a few young people were already gossiping in front of the Independent chapel; the minister, a great burly man with a red beard, came round the corner, swinging his arms like pump-handles, and nodded to Will. Will seemed to have a word of greeting for every one he passed—for a friendly omnibus-driver, for a couple of porters off duty, for the old man at the crossing; by and by he stopped to speak to a few loiterers in the Malden Road.

"If I were you, lads, I would not trouble those bells to ring for nothing," he said, halting and looking at them with shrewd, kindly eyes. One

of the youths, who was better dressed than his companions, blushed and looked at Dym.

"Mother goes to chapel," said another, sturdily.

"Church or chapel; but it is the dear old Mother Church that is calling to us all so loudly just now. Come, lads, six days for yourselves, and one for the God who made you." And, to Dym's surprise, three out of the four sheepishly followed them, and the young schismatic remained contentedly kicking his heels against the wall.

Will left Dym to show the boys to their places, after which she went to her favorite seat under the west window; the old blind man had long ago been gathered to his fathers, but a white-headed sweeper occupied his place. A watery sunbeam of two was shivering against the pillars, and kindling the violet and blue robes in the Evangelist window—the altar was in shadow—all dull reds and faded golds. Will looked shadowy and white as he came out of the vestry; the organ played on its sweet minor chords. Dym, standing up with her lips and wistful far-away eyes, suddenly remembered how a brown hand, with an odd-shaped Oriental ring on it, had in that very place been laid on her book, and how she had flushed up with surprise and pleasure, and left off singing.

Dym could not sing now, not a note, there was such a tangle of pain and weariness in her heart; the words came to her ears with a jangle of meanings and repetitions. "We have erred and strayed," prayed Will. Dym knelt in her place dumb and motionless. "Comfort him, only comfort him, and let little Florence live;" she blended this petition somehow with every response in the Litany, she sang it silently in every line of the hymn; "comfort him, comfort them all." Was there any other prayer worth praying?

"For all that are desolate and in trouble—perhaps, when she comes to that, she may think of me," sighed poor Humphrey.

Will read the prayers and preached. Mr. Benedict was away. There was to be a charity service in the evening, somebody said, and the chaplain of the almshouses was to deliver it.

Dym listened in a stupid sort of attention

she thought it odd that Will should be giving a funeral sermon, till she remembered that she had rather a sudden death that had taken place in the parish.

Will, comparatively young, had died, leaving six children motherless behind her; she was sitting in a pew to the right of Dym, with her two eldest children beside him; the eldest was looking at the crape tucks in her dress, and the younger had hold of her father's hand. Dym watched the little group she strove to keep in order and listen.

When she would have given worlds to hear that sermon, she could only bring up a few sentences—a word here and there. She had the sense of standing out on a mountain-top, was on tiptoe, giddy and breathless; a door opened, somewhere up above in the sky. Were those the white-robed multitudes Will was talking about? Was Honor among them? were those the wives in Paradise Row praying for their husbands?

"I cry, papa," she heard a little voice say.

A man's head went lower and lower, a broad forehead, not a brown curly one; broad and somehow reminded her of Guy, and shook in repressed agitation. "Now I am who is able to keep us from falling," said a strange falter from Will's lips, the organ of music to sad minor chords again, and the tears came out. Dym's veil falls over her face, and she sits in the empty church, listening to the music and watching a streak of lilac in the chancel; the widower has gone, and his little girl's hand still clinging to his. The crape tucks are crumpled already, though her face is quite fresh. She has a tender old face that lingers in Dym's memory.

"Are you ready, my dear?" says Will, limping with a tired face. "I have two or three miles to see on our way home."

Will, who is restless, prefers waiting for him sitting alone in the little parlor. She is limping down area-steps or stumbling on staircases with undiminished activity. "To-day is your hardest day; but I have never looked more weary," she says to him, when he had finished and turned his steps to Paradise Row.

Will is tired, too much so to eat, in spite of his dinner. He is getting a battered old Con-

queror now, he tells her. He says it with a sudden sweet smile that brings the odd feeling into her throat again. Dym sits dull and listless when he goes out to the schools presently; the sunbeams have gone in, the afternoon is full of gray neutral tints. Dym's pale face and gray gown, and Kiddle-a-wink's rough coat, seem all in unison. Some pallid sunset clouds are setting westward. "This is more like November than May," Dym thinks; and then she remembers with an inward shiver that this is Guy Chichester's wedding-day.

What is he doing? What are Mrs. Chichester and Humphrey doing? How far had they got on that weary journey of theirs? Dym's mind is travelling on with them while she sits by the little window in Paradise Row, gazing vacantly out on the passers-by. The children troop in by twos and threes from the Sunday-school. Little Dick Maynard clatters by on the pavement, and pulls off his old cap when he sees Dym. The children gather in bands and look slyly down the street; a slight bowed figure comes in sight, with a dying flare of red clouds behind him. There is a little commotion, a dropping of courtesies. Will comes up among them limping in his hasty way. Tired as he is, he has a word and smile for them. "Now, Dymples, a cup of tea, for I must be back in the vestry by half-past six; one of the choir-boys has got into mischief." And Will sinks into his easy-chair with a long sigh of relief.

"I have not had a word with you to-day, Will," said Dym reproachfully, as they hurried through the streets again.

Will suddenly turned and held out his hand to her.

"It is all in the day's work, my dear. But I have saved an hour out of it for you."

"But not to-night, Will. I am not so selfish as to ask you to talk to me to-night."

"I wish it, dear; it is the hardest bit of duty that is left for me yet. I want you to be brave and help me to do it."

"Help you, Will?"

"Yes, my child." But he said no more, and Dym went and sat for a long half-hour in the dimly-lighted church, wondering why Will had asked her to help him, and what he would have to tell her that would be so hard in the telling.

And the real truth never entered into Dym's head for a moment. Will read the prayers again, but a stranger preached; afterwards they had that

wonderful hymn, "The Pilgrims of the Night," which she remembered was Guy Chichester's favorite:

"Faith's journey ends in welcomes to the weary,  
And heaven, the heart's true home, will come at last."

Dym's mind was full of one poor weary pilgrim, when, looking up, she saw Will was not standing in his place, but kneeling low, with hidden face, and his hands stretched out on the desk before him.

Dym waited for him as usual in the porch; she was quickening her steps, for the evening was chilly, but he detained her. "Not so fast; there is no hurry, now. Look up there," and Will pointed to the dark sky above their heads, gemmed over with quivering points and sparkles of light. "I am so glad we can see the stars to-night."

"Why, Will?" Dym was for hurrying on again, but he drew her arm through his.

"I have an odd fancy for starlight on Sunday evening—those many twinkling eyes always recall to me 'the great cloud of witnesses.' I am glad, too, we had that hymn to-night. I wish Chichester could have heard it."

Dym's reply was scarcely audible.

"I thought of another little pilgrim while they were singing it, and wondered where her 'weary steps' would turn by and by. I have been thinking of you on and off all day."

"Of me?" There was certainly a little reproach in Dym's tones; she thought there were others of whom he might have been thinking to-day.

"I have not forgotten them, either"—as though he understood the implied rebuke—"somehow my heart feels large enough to take in the whole world; you will know presently why I think of you most to-day."

They were in one of the by streets leading out of the Malden Road, when all at once Will stopped, and she felt his arm press heavily against hers.

"What is the matter, Will?" for though it was too dark to distinguish his face, she could hear a quick pant, almost a groan. "Is it the pain again?"

"Yes; I must walk slower. Don't speak to me—not this minute, Dym. I shall be better directly." But Dym noticed that he leaned on her more heavily every minute, and that he could hardly drag himself up the few steps that led to their door.

"Dear Will, this cannot be your old pain," she said anxiously, as she watched him sink wearily into his chair.

Will shook his head, and motioned her to him a little bottle that stood near. A bad look had come over his face, and the lips the same dark color that had startled Dym yesterday. The breath seemed to come in heavy pants at each moment, and then the oppression left him; he opened his eyes and looked at Dym, kneeling beside him, trying to chase his color.

"My poor little Dym, I did not mean to see this. Give me a few more drops, and I shall be able to talk presently."

"You must not, Will; it will make you worse," and tears gathered slowly to Dym's eyes—she had never seen him look so bad as that.

"By and by," he repeated, and then he closed his eyes to doze.

Dym noiselessly fed the fire, and sat down to watch him. Tired! He was tired! He was himself out; the colorless face looked sharply cut and haggard against the dark wall. The mouth had its usual sweet look, but it was contracted and furrowed with pain. Dym wondered why she had never noticed that his hair was growing gray. His fair hair had a silvery gleam in it in the lamplight.

One thin hand lay over the side of his chair. Dym's lips twitched once or twice as she looked at him, with a dull ache and vague uneasiness in her heart. Was he ill? Was that what he was going to tell her? Anything but that! Will, Will, I could not bear you to be ill when I want you so! And Dym's head ached with the very thought.

It was quite late, almost midnight, when he woke and declared himself refreshed.

"And you have been watching me all this time! How kind of you, Dym, and how much you must be!"

But Dym did not feel sleepy to-night. She told him: "I am quite wakeful, too much for my own comfort. Do you really think I am better, dear?"

"The pain has left me," he returned, and as Dym put back the damp hair from his forehead, he said: "Dym, do you think it would be too late to get me some tea? I always wake so thirsty after these attacks."

"Too late? of course not." And Dym went off with some feint of cheerfulness. The kettle seemed always singing in the curate's kitchen; it quite bubbled over in its cosy content. Dym made the tea and brought it to Will.

is seems like old times," he said, looking ly in her face. "Are you sure you are 1? You must have some tea too. Do, to e, Dym;" and Dym made a great effort llowed some.

v put your head down here," drawing her ak hand among his cushions. "You art me, and I can talk better so. Tell me, have you any idea why I'm thinking of o-night?"

it, Will." Somehow his words seemed er with a sudden sharp pain; she put out d to stop him, but Will carried it to his

ould save my child from this if I could. ws I would willingly have gone on a little or your sake, Dym—only for your sake; l it is not to be, dear; you must make up d to part with your poor old Conqueror." er, never! What are you talking about? will not listen! Oh, Will, Will!" And etched out her arms to him with a piteous for him to stop.

rest, I must say it—it would be cruel to withhold it now. I know I cannot long, Dym."

o says so?—they dare not say so. I will eve it—I will not, I will not!" And rild words came through her clinched strange vehement tones. Believe that Will, could ever leave her? The girl's ing voice filled Will's tender heart with ad anguish.

ou want me to stay in this weary world," he said, almost reproachfully. "I think tting too weak and tired for my work. is it they were singing to-night, Dym

'Faith's journey ends in welcomes to y!' Would you deprive me of such a as that?"

i, hush! I want you, Will. Oh, Will, I so—I love you!" And the unhappy r her arms around his neck and held him antically.

is the hardest work of all," murmured l. "Oh, my child, be brave, and help ar it!"

not," came sullenly from Dym's lips. almost beside herself.

if it makes me worse to see you like this? o little strength, and this wastes it terri-

bly." And again the ominous darkness came to his lips, and the poor overworked heart labored and strained bravely to do its part.

"Some more drops," he said, faintly; "don't be frightened, I am better again; only we must talk more quietly; lay your head down again, I like to feel it there. When you were a child you always came to your poor old Conqueror to be petted."

"Will, you are breaking my heart!" She could not have helped that cry if her life or his had depended upon it. Perhaps he hoped to move her to tears by the tenderness of his words; perhaps he guessed at the spasm that contracted her throat, and knew the pent-up feelings must have some outlet. Already her breast was heaving with repressed sobs; she clung to him more quietly now, and the tears rained over his hands.

"That is right: cry, it will do you good, and by and by you will be able to listen to me—we must have some long talks together. Dym, darling, you know I love you too."

"But not so much as I do you. Oh, Will, not half so much, not half so much!"

"Do I not, dear? Nay, you are mistaken; you have been dearer to me than any one thing—except—but we will not talk of that. If it had been His will, I would almost have been glad to live a little longer for your sake. You believe this, dear?"

She nodded, as though words were impossible.

"When I knew that I had heart disease, my first thought was to keep it from you. I knew you would never be happy for a moment away from me. I thought I would spare you months, perhaps years of needless anxiety."

She left off sobbing to listen. Perhaps he was not going to die yet—not just yet.

"This is why I did not give you my reason for refusing to leave St. Luke's. There were other difficulties, but for your sake I might have conquered them; only I knew, I knew it would be useless pain to give up my work. You understand me, dear—you do not think I am wrong now?"

"Wouldn't it have made you better?" she whispered.

"No, my child," he replied, firmly; "dismiss that idea from your mind forever. The disease under which I am laboring admits of no human remedy; it is a worn-out heart, Dym, and nothing

will make it work properly, though Dr. Lever says I may live perhaps for years."

"Then why—why did you not come up there and rest?"

"Because I did not believe him. No, my child, there are no years in prospect for me. I have suffered too much, gone through too much. I shall not have to bear much more. Oh, Dym, try to be glad for me; I am longing so sorely for my rest."

She only shook her head and buried her face deeper in the curtains. Glad! how could she be glad, even for his sake? The welcomes might be sweet to the faithful servant, but death itself seemed so terrible to this poor child, stretching out her tender arms to detain the brother who was so dear to her.

"Will, do not leave me; pray that you may not leave me!" clinging to him with one cold little hand, and speaking in such a weary voice.

"Would it help either of us? Dear, I must go or stay, just at His bidding. I am ready to suffer a little more, or I am ready to go to-night."

"I always knew you were too good for this world, Will," exclaimed the weeping girl. But Will silenced her gently.

"Hush! you must not say that; you would not pain me if you could help it, would you? He is more merciful to us than we are to ourselves. He will not remember our failures. I have done so little, and He has done so much."

There was a moment's silence, and then he put his hand fondly on her head.

"Why do you keep your face hidden, Dimples? I want to see it again." Ah, the old pet name, the dear old childish name!

"I am sorry you cannot love Humphrey, my pet; he would have taken such care of you."

"Please don't speak of that to-night, Will."

"Very well" (holding the sad little face between his hands for a moment and looking at it with wistful tenderness); "I should like to feel somebody was taking good care of my child forever and always. But it can't be helped. I know Mrs. Chichester will always be your friend."

"Don't mind about me; nothing will matter then." Dym was feeling for words to-night, but her pain choked them back. He might talk to her, but in her anguish how was she to answer him? Even Guy Chichester faded from her thoughts in the prospect of this new trouble.

"It has all been so sudden. To-morrow God wills, we will talk of this again. To bed, my darling; it is nearly three o'clock."

"No, no," she implored; "I would stop with you to-night. I could not let me sit and watch you, Will, as I do. Only to-night—only just to-night."

"My precious child, it goes hard with me to refuse you; but indeed it is better not. I could sleep now myself, and your presence only keep me restless."

"Shall you go to bed, Will?"

"I think I must; my limbs ache so, and I am strangely weary. This has taken it out of me. You will be good and brave, and try to rest, Dym."

A faint misty smile answered him. "Bless my child!" was all he said; but he lingered tightly for a moment, as though he were unwilling to let her go, and in the silence moved as though he were invoking a blessing. But when she reached the door he called to him and blessed her again and again, and she hurriedly that she must be comfortable. And so he sent her away.

But when she had closed the door and bowed down heavily in his chair, and bowed his head upon his breast. He was tired, strange, and he repeated. This had been the hardest that he had had to do, and it had gone hard with them both.

As he sat there in the darkness—for the light was flickering low—the words "Oh, Will, love you so—I love you so!" seemed ringing in his ears; again he felt her girlish arms about his neck, and her tears wetting his breast, and her damp soft hair resting against his cheek. The merciful All-powerful, comfort my child, and some voice out of the silence seemed to answer, as it had done before. "Not now, but presently;" and, as if he himself heard within his heart, the tranquil peace found peace.

"I must lie down and get an hour's rest," he thought; but some strange torpor oppressed him, and he felt unable to move. "Watch the golden gate." I wonder if she will be his last conscious thought before he dies. The dying brands of the fire flared for a moment and smouldered to decay; the la-

tered and hissed, and finally went out; Kiddle-a-wink stretched himself on the rug with a low whine, as though some dream had disturbed him; but still Will slept on.

Up-stairs Dym was tossing and weeping on her pillow, and praying impotent prayers; outside the cocks were crowing, a faint windy dawn stirred in the quiet streets, the stars were paling and dying out, and the quiet figure still sat on in the darkened room below.

"Let us go, that we may awaken him out of sleep," said the loving friends of old. Alas, none but One could awaken William Elliott now!

Dym, waking out of the troubled sleep that had come to her from very weariness of sorrow, heard some strange stir and movement, that seemed to reach her in her dreams. Somewhere, far off, Dick was crying. A voice said, "Hush!" A man's footstep went hurriedly to and fro. Dym threw something around her, and ran down; some terrible fear was clutching at her heart; she would have called out, "Will!" but her voice failed her.

The little household, huddled together, saw her advancing on them, slim and white, and looking before her with the fixed dilated eyes of a sleep-walker; and honest Richard Maynard put out his hand, with something like a sob, to stop her. "No, don't go in there; my missis here wants to talk to you."

"I know," replied Dym, in an odd far-off voice. She put aside the brawny arm with a little cold hand and pushed through them. Dick fell over one of his crutches, and began to cry again; and Susan threw her apron over her head. "Ah, lackaday! the poor young lady, what will we do with her, Richard?" And Richard drew his rough sleeve before his eyes.

Know—did she know what awaited her? The blind had been pulled up; a May sun shone merrily into the window; Kiddle-a-wink was whining and smelling restlessly about the bowed figure that sat in the easy chair, with its thin hands clasped before it, and a smile on the white face that rested so peacefully among the cushions. There, where he had parted from her last night, there he sat, dead; but still she made no cry or sign that she understood. She bent over and kissed him with a face that was almost as gray and corpse-like as his, then closed the glazed eyes, and laid the heavy head upon her bosom. Dead! of course he was dead; and she was dying too.

It was Richard Maynard who saw the awful shadow in her face and caught her as she fell; it was he who freed the hands from their fond clutch, and laid the smiling face back on its pillow, and carried the girl up to her little room, and left her with Susan crying plentiful tears over her.

Dym's head was lying on the faithful creature's lap, when she woke from her swoon. Dym held out her arms to Richard Maynard to carry her down again when he came in next to inquire after her. "I dare not. You must help her, Susan; she bean't fit for anything but bed now."

"I must go to Will, and you must take me," answered Dym, in her feeble voice. "Good Richard, dear Richard, carry me down. Susan, ask him to do it. I cannot leave Will alone."

Richard fairly turned his face to the wall and sobbed, as the girl set forth her miserable little petition. She was hysterical after that, and Susan had her way, and tucked her up in her little bed, and drew down the blinds and sat beside her. Heaven only knows the anguish with which Dym lived through those first few hours. She lay staring at the wall with blank dark eyes, when Susan hoped she was sleeping. Now and then she would throw out her arms and bury her face in the pillow, as some intolerable remembrance came to her mind; then she would feel Susan's rough hand smoothing her hair. She wanted to be alone—she wanted it with a fierce longing that nearly drove her frantic—but she lacked energy to say so. When the doctor, a white-headed old man, came to her bedside and took her hand (he was an old friend of Will's), she drew it away almost angrily.

"What do you want? Who sent for you? who gave you leave to disturb me?" she said, in a quick vehement way.

The old man understood the girl's despair too well to take umbrage at it; he answered her with fatherly kindness:

"You are not well, my dear. These good people sent for me. You must be patient, and try and bear your trouble—we all must, you know."

"Can you do any more for Will? have you been to him?" pushing back her hair and looking at him with strained, bloodshot eyes.

He shook his head.

"No one can do any more for him, my child; he is beyond our help now."

"Then you can do nothing for me. I am well, quite well; only I shall want him all my life long," she said, bursting into tears and falling back on her pillow.

It was evening before they left her alone. Susan thought she had fallen asleep at last, and had gone down to sit with her husband a little; but Dym, who had been lying perfectly motionless watching the creeping shadows on the ceiling, suddenly sat up, and then began groping her way down the dark staircase. She had told them in a fierce sort of way that she was well; but as she dragged herself along she felt as though she had risen from a long illness; her limbs ached strangely; her head felt curiously light and confused; every now and then a faintness seemed creeping over her, and she clung to the crazy baluster with both hands.

The house was still—still as death itself, she thought; and yet the surging and noise in her ears went on. Once she thought Will was calling to her, "Dym, Dym, my dear!" She slid on to her knees and gasped for breath when she heard that, and, holding her hands tightly over her burning forehead, whispered out a prayer that God would be good to her and give her strength to see Will again.

She felt better after that, and turned the handle of the parlor door. Some vague instinct told her she should find him there, sitting with clasped hands and smiling white face, as she had seen him last, and she stood stupefied and dizzy for a moment, looking around the dark empty room, till the gleam of light from under the folding-doors recalled her.

They had taken him away; he would look different, somehow. She had scarcely strength to push the door open now; the lights, the whiteness, the awful straightness of the dim form under the sheet, the paraphernalia of the death-chamber, seemed to freeze her faculties and turn her into stone.

How long she would have stood there she never knew, only a little hunched-up figure, sitting at the foot of the bed, slowly shuffled round to her and slid a soft little hand in hers.

"Don't be afraid; there is nothing to be afraid of, father says. Come and look at him; he is smiling like one of God's dear angels he used to tell us about." And Dick drew her forward, and folded back the white covering.

"Smiling like one of God's dear angels."

Thanks, little Dick, for those brave words; the hot pain beats less fiercely in her tears that bring their own healing blood to her dear face again and again.

"Would you deprive me of such a word as that?" he had said to her. Ah, no question that welcome now! The furrow had smoothed out of that calm brow; the closely-folded lips and on the white canvas. There he lay, the young soldier of the day, called out from the battle in the very heat of the day. Some one had crossed his arms over his breast, and laid a cluster of spring flowers within the hands; and now they had got loosened and disarranged. Dym picked it up, and placed it carefully back again in the green rowan spray.

On the day of the funeral they brought his Bible, his gold Cross and pocket-book, and a lock of soft hair that Susan had cut off when he lay in his coffin.

Dym was forced to own herself ill; the strange fever and helplessness were still with her. Since the night when they had found him with her face hidden on the dead man's and her arms clasped so tightly round his that they had had some trouble to loose her, and had carried her back to her little room, she had never seen him again.

Sometimes in the night a sort of delirium came on, and she would try to go down and look at him. Little Dick saw her once standing with her hair and shining eyes in the middle of the room, her body swaying to and fro from weakness.

"Come, let us go to him," she said, and he took her out a hot hand to the boy. "What was said, Dick?—Smiling like one of God's dear angels?—yes, I remember. We shall find him, Dick, none of us; I only want to look at him and look at him again."

Dick called his mother, and they laid her down again. "Not to-night, dearie; you must wait till to-morrow." And Dym would cry out in his voice, "They are keeping me from you, Oh, Will, your poor little Dym!—your unhappy Dym!" and her hands would flutter weakly. Sometimes she would be quiet, and let Susan hush her to sleep; the father would rock the girl's head on her breast.

business overpowered her grief. Dym would not utter fragments of talk. Once she thought she was in her brother's arms again.

"Oh, Will, I do love you—I do love you so!" said, pressing Susan's rough hands closer to her.

Her cheeks were wet with tears when she awoke, but her face had a more peaceful expression on it.

It was the day of the funeral, but they did not come to tell her so till afterwards; the dog sat leaning on her bed half the day, and once he took hold of her sleeve and tried to drag her with his teeth. Dym was too dull and sick to notice the animal's restlessness; she lay torpid and half-dead, unmindful of the unusual sounds about the house.

Little Dick came in once with his eyes swollen with crying. He had just come home with his father, and had hung his linnet's cage with black. Dym heard the bird's chirping in a dismal sort of way, under the veil of premature night.

Richard Maynard had followed, and so had many of the parishioners. The old vicar of St. Jude's had read the service. Quite a crowd of women and children had followed the poor priest to his resting-place. Some navvies to whom he had done a kindness, and the elder lads from the night-schools, carried the bier. Not one of the friends he loved stood beside his grave; and yet there were no lack of mourners—the children he had baptized followed hand-in-hand, and flung little garlands of simple grasses and field flowers on the coffin as it was lowered from their sight; the tears ran down many a woman's face; the men and boys dragged rough sleeves across their eyes. "He was the poor man's priest; we shall never get such another," said one of them; and a

woman who heard it answered, "Ay, but he was too good for the likes of us; it is the best that is taken; there is not one of us women that haven't lost a friend."

Dym never spoke when they told her, only she turned very white; she clutched the things they brought her, and held them tight; that little worn Bible was dearer to her than anything else, except the lock of soft hair. Dym slept that night holding them still.

It was some days before she ventured to open the pocket-book. There were only a few simple memoranda, money accounts, a visiting list, addresses of parishioners who had lately moved; there was nothing but the dear handwriting to make it valuable.

Dym was closing it carefully, when a little folded paper dropped out of one of the pockets. She opened it; there was a withered flower—pressed carefully—and under it in Will's handwriting, "Given to me by Honor, on her wedding day, May —, 185—. *Qui patitur vincit.*"

Why does Dym suddenly flush up, and press the flower hurriedly to her lips and bosom? Why does she call out Will's name, in those troubled loving tones, as she kindles a light, and watches as the paper and its inclosure crackle into ashes? Has she found out his secret?

"It is all safe with me, dear; no one shall know. Oh, Will! my darling—my darling, to think of this!" And then she whispered softly through her tears, as though he could hear her, that it is so brave to die and make no sign; that she loved him all the dearer for it; that he was her own Will Conqueror still!

Ay, Conqueror; and how nobly she will never know. *Qui patitur vincit.*

"IT WILL ALL BE RIGHT IN THE MORNING."

When the bounding beat of the heart of love,  
And the springing step grow slow;  
When the form of a cloud in the blue above  
Lies dark on the path below,  
The song that he sings is lost in a sigh,  
And turns where a star is dawning,  
And he thinks, as it gladdens his heart and his eye:  
"It will all be right in the morning."  
When "the strong man armed," in the middle-watch,  
From life's dim deck is gazing,  
And strives through the wreck of the tempest to catch  
A gleam of the day-beam's blazing;  
Amid the wild storm, there hard by the helm,  
He heeds not the dark ocean yawning;  
For this song in his soul not a sorrow can overwhelm,  
"It will all be right in the morning."

When the battle is done, the harp unstrung,  
Its music trembling—dying;  
When his woes are unwept, and his deeds unsung,  
And he longs in the grave to be lying,  
Then a voice shall charm, as it charmed before  
He had wept or waited the dawning;  
"They do love there for aye—I'll be there as of yore"—  
"It will all be right in the morning."  
Thus all through the world, by ship and by shore;  
Where the mother bends over  
The cradle, whose tenant "has gone before;"  
Where the eyes of the lover  
Light the way to the soul; whatever the word,  
A welcome, a wail, or a warning,  
This is everywhere cherished—this everywhere heard:  
"It will all be right in the morning."

## A CHAT ABOUT THE DOCTOR.

BY MRS. B. F. BAER.

## IN TWO CHAPTERS.—CHAPTER II.

I PUT the Frau Kranich from me with an impatient shrug of the shoulders, and went forward to meet my heroine; but paused ere many pages were turned, to see what I could divine from this:

"Even as you say," replied the Baron; "but it often astonished me, that coming from that fresh green world of yours beyond the sea, you should feel so much interest in these old things."

"Now why had the doctor marked that paragraph, I should like to know," I said, bringing myself to an abrupt halt. True, I knew he had roamed amid Alpine scenery, had dined in German cities, and supped in German inns, perched thousands of feet above the level of the sea; I knew he had been where Paul Flemming had been; had seen what he had seen, but I could not bring myself to think that, like him, my friend had travelled, wrapped in the gloom of despair, with eyes forever looking "mournfully into the past." No, no, his youth was on him then, no silver stranded the dark locks about his brow; and veneration must have forced him to draw that pencil mark, and veneration combined with ideality guided his hand a few pages on, when he stroked these lines:

"Truly, every man has a Paradise around him, until he sins, and the angel of an accusing conscience drives him from his Eden. And even then there are holy hours when the angel sleeps, and man comes back, and, with the innocent eyes of a child, looks into his Paradise again—into the broad gates and rural solitudes of nature."

How that passage impressed me with its solemn earnestness! O, my friend, there are moments when such as you can go back to your lost paradise—moments when the avenging angel is lulled to sleep by the magic wand of Charity. It may be a little act—a kind word spoken in season—a sympathizing touch in the hour of pain, or it may be a few drops of medicine given to a sufferer, whose scanty pay hardly keeps the home board furnished. If such as you cannot, with the largest capacities for doing good that life presents ever before you, and the responsibilities of the noblest profession, I speak it reverently, that God has

given to man, on you, in Heaven's name, —  
us can?

With an awe inspired by the soul-stirring graph, I returned to my task, read a few more and found myself at the end of the second book

No heroine yet!

Paul Flemming, whose existence had merged into that of Dr. Hubner, to my vivid imagination at least, would sink into a contemptuous insignificance if the volume should close as it had begun and with fear and trembling (not originally) hastened toward the end, to pause in admiration before the author's description of the Glacier of the Rhone.

"It fills," says Longfellow, "the whole valley between two mountains, running back to the summits. At the base it is arched like a dome and above jagged and rough, and resembles mass of gigantic crystals of a pale emerald tint mingled with white. A snowy crust covers its surface, but at every rent and crevice the pale emerald ice shines clear in the sun. Its shape that of a glove, lying with the palm downward and the fingers crooked and close together. It is a gauntlet of ice, which, centuries ago, won the king of these mountains, threw down defiance to the sun; and year by year the strives in vain to lift it from the ground on point of his glittering spear."

The magnificent description thrilled me, I had never seen the Rhone, and I did not wonder that the doctor, who had seen it and drunk its beauty, should pause to mark the graceful emblem but instead, fancied that I heard him exclaim aloud, as did Flemming:

"How wonderful! how glorious!"

Suddenly remembering my purpose, I at once became predominant, and I spurred myself to find the following exquisite bit of humor:

"On the sofa sat a gentleman reading a gentleman of perhaps forty-five, round and with a head, which being a little better top, looked not unlike a crow's nest with in it."

Here I stopped short, exasperated

measure. "Put eight more years on your thirty-seven, and you will not be far from forty-five yourself," I exclaimed, shutting the book with a vindictive snap.

"You seem to be out of humor, Cary," said my husband, gently—he was always gentle now, in my moments of wilfulness and caprice because he knew that they were born of pain and weakness.

"I have no patience with this book," I answered. "It is called a romance, and yet no woman appears as heroine. I am trying to solve the mystery of Dr. Hubner's bachelorhood from the marked lines, and just as I think I have a clew to it I come across a paragraph like this"—reading the last—"and all vanishes in an instant. I see only the teasing, fun-loving man before me, instead of the disappointed swain; I have almost despaired of my task."

"And not yet through the book? It isn't like you to give up before the end is gained."

"I won't, either," I cried, nerved to fresh exertion by the implied sarcasm; and I plunged resolutely into the romance again to find—what? A heroine at last, dear reader; a real, living, breathing, genuine heroine. The work is redeemed in my eyes. Paul Flemming's character stands forth in enduring colors, since the "Tremulous Star," born of "the rich and glowing evening," has suddenly illuminated his horizon; and across the chasm of twoscore years I shake hands with the author, whose gifted pen wrought the beautiful creation.

More hopeful, more sanguine of success, I was aroused to enthusiasm by coming across another pencil mark:

"I dislike an eye that twinkles like a star. Those only are beautiful, which, like the planets, have a steady, lambent light, are luminous, but not sparkling. Such eyes the Greek poets give to the Immortals."

And such eyes I had given to the stately Diana, with whom I had graced my hero's home—a Grecian type of beauty with steady, luminous brown eyes. Can I ever forgive him for crushing the fair image with a single ruthless blow? But here was a drop of comfort—such had been his ideal at least—those marked lines declared it most emphatically; and, with a triumphant smile, I passed it by to happen on a paragraph that sounded like a funeral dirge:

"Then come the gloomy hours, when the fire will neither burn on our hearths nor in our hearts; and all without and within is dismal, cold and dark. Believe me, every heart has its secret sorrows which the world knows not, and oftentimes we call a man cold, when he is only sad."

Why, oh, why that heavy mark? Were there hours in the doctor's life when the fire burned neither on his hearth nor in his heart? Was there a past with dark memories, that haunted his solitude? It seemed so; for, following close upon the last, I discovered these words:

"Some feelings are quite untranslatable. No language has yet been formed for them. They gleam upon us beautifully through the dim twilight of fancy, and yet, when we bring them close to us, and hold them up to the light of reason, lose their beauty all at once; as glow-worms, which gleam with such a spiritual light in the shadows of evening, when brought in where the candles are lighted, are found to be only worms, like so many others."

"Then his feelings cannot be translated," I mused, letting the book fall to my lap. "From the far distance, and in the dim light of fancy, they are beautiful enough, but will not stand the test of reason. They put out the fire in his heart, and make him sad because the hopes they have engendered have proved only so many worms, eating into his very soul."

"Oh, who is the Mary Ashburton, that has cast such a shadow over the doctor's life?" I asked myself, as I looked out on the street bathed in a flood of soft silvery moonlight. I seemed to catch inspiration from the quiet panorama. It was no longer Paul Flemming wandering through sylvan groves and German forests by Mary Ashburton's side, but Doctor Hubner; and I do believe, that, when I resumed my reading, I unconsciously dropped the hero's name to substitute the doctor's instead.

Never can I tell with what breathless interest I perused the chapter capped "The Fountain of Oblivion." Just as Flemming wooed, I should imagine Dr. Hubner had wooed; just as he was rejected, the doctor had been rejected; just as he turned his back on Interlachen forever, I should fancy—did fancy—the doctor had turned himself forever from the spot, where he had laid down the richest treasure he possessed, as a tribute to the worshipped one of his dreams, only to have it

refused; and, like Flemming, he had turned from it with no anger in his bosom, no hatred, but with a mournful sadness, tenfold more dangerous than either.

"The hearts of some women tremble like leaves at every breath of love which reaches them, and then are still again. Others, like the ocean, are moved only by the breath of a storm, and not so easily lulled to rest."

I could readily understand the deep mark encircling those lines, as well as imagine the thought that guided the pencil. Like Mary Ashburton, *his* lady's heart was not easily or lightly moved. The storm of his passion had driven its seething breakers full upon her, and his own heart was none the less sore because of the recoil.

How I could have pitied him in that moment, if his manly face had not risen before me with its genial smile, which seemed to ask what there was to pity in its unbroken lines. No; I could not pity him, for that countenance would have rebuked me if I had. Whatever else he might be, the doctor was the last man to excite such a feeling, and closing my heart to anything like it, I rushed on to the end, to find the wealth of disappointed love in his bosom breaking out in the stroke about these lines:

"Alas and alas! Paracelsus of old wasted life in trying to discover its elixir, which, after all, turned out to be alcohol; and instead of being immortal upon earth, he died drunk on the floor of a tavern. The like happens to many of us. We waste our best years in distilling the sweetest flowers of life into love-potions, which, after all, do not immortalize, but only intoxicate us. By Heaven! we are all of us mad."

The death-knell of hope rang out clear in the last sentence. He had loved and lost, had worshipped and been rejected; and in the chagrin of the moment, unable to forget, feeling the burden more than he can bear, he bitterly reprimands himself, and says, in the pain of a sorely bleeding heart, "By Heaven! we are all of us mad."

No one looking at Dr. Hubner could impute to him such a storm of emotion, such a whirlwind of passion, as had swept Flemming's heart. He was thoroughly—my hero, I mean—self-possessed, calm as a summer's afternoon, polite and affable; but if he had never known a kindred feeling, why those pencil marks? I could not forget the old truism, that there is no calm so perfect as the one after a

storm; and thinking of it still, I turned to the next page to fall on the following significant passage:

"You are right," said Berkley; "there is nothing so good for sorrow as rapid motion in the open air. I shall go with you; though, probably, your conversation will not be very various; but but Edward and Kunigunde."

Like a flash—shall I call it inspiration?—came a thought of the three months spent by the doctor on the plains. Had he gone there to kill sorrow in rapid motion? Perhaps; and I could but fancy as I read further on that some friend, like Berkley, more zealous than wise, had borne him company and kept him continually in memory of that sorrow.

"Berkley's self-assumed duty was to console his companion; a duty which he performed like an ancient Spanish Despenadora, whose business it was to attend the sick and put her elbow into the stomach of the dying to shorten their agony."

"Who among us has not known such a friend?" I asked myself briefly; and so closed book the third. The clock had just struck eleven, and looking up from his paper, my husband said:

"It is growing late, Cary, and time for one so feeble as yourself to be in bed."

I answered nothing. I could not bear to have the chain of my thoughts broken by anything so prosaic; and to avoid conversation, at once sought my chamber. Most certainly I was infatuated, for I took up "Hyperion" the next morning as soon as I left the breakfast room, and plunged eagerly into the fourth and last book, feeling a consciousness that the end was almost gained.

"The shadows of the mind are like those of the body. In the morning of life, they all lie behind us; at noon, we trample them under foot; and in the evening, they stretch long, broad, and deepening before us. Are not, then, the sorrows of childhood as dark as those of age? Are not the morning shadows of life as deep and broad as those of evening? Yes; but the morning shadows soon fade away; while those of evening reach forward into the night and mingle with the coming darkness."

This was the first pencilled paragraph that met my view, and with the mournful sadness still existing in my heart, I could scarcely bring myself to think that my friend's hand had drawn that line—the words sounded so like the tolling of a funeral bell. Were the shadows of youth still lingering about him? Was the Past still haunting him?

the bitter memories and blighted hopes? Verily, yes; for an answer appeared on the very next page:

"As the moon, whether visible or invisible, has power over the tides of the ocean, so the face of the lady, whether present or absent, had power over the tides of his soul; both by day and night, both waking and sleeping."

"Oh, my friend," I cried, in a sudden burst of sympathy, "why not trample the shadows of noon under your feet now, ere they join those of evening and reach far into the night?" I saw him in that moment as Berkley did Flemming; and I smiled. I saw the mark drawn about the brusque old man's advice:

"Remember my parting words. Never mind the fies. In this world a man must either be anvil or hammer. Care killed a cat!"

Terse, brief words, spoken by homely lips, but words of wisdom nevertheless. Some of the sadnesses vanished from my mind. Hope sprang up in its stead—a hope that the hero would turn his head resolutely from the Past—that he would accept the situation as a manly man, and instead of vacillating resolution take upon him life's responsibilities; that, instead of wandering amid Alpine scenes or living in dim old mystic German lore, feeding discontent instead of crushing it, he would throw himself into the busy stream of action flowing through this practical world of ours, to do good in as he received benefit in return.

Would my hope be realized, was the unspoken question trembling on my lips as I hurried through; and I clapped my hands for very joy, as my eye caught the following:

"Look not mournfully into the past. It comes too late. Wisely improve the present. It flies; go forth to meet the shadowy future, without fear, and with a manly heart."

If that paragraph had remained unnoticed, this world never have been written, for the whole fabric, which I had taken so much pains to rear, would have crumbled away to dust. But it was marked; and so it is.

With the doctor's life before me, even as it had been from the beginning, I continued, feeling more keenly than ever that my thoughts had not strayed out of the right channel in unravelling the secret of his bachelorhood from this book. He had read and re-read the volume in my hand, for he had told me so, and I could not separate him

from the hero. I grew nervously anxious for the result. How would the book end? Would Flemming meet the "Dark Ladie" in the last pages? and would there be a joyful clash of marriage bells? I hoped it, and yet, if such proved the case, my character-reading would suffer; but for all that I did hope that, even in the last chapter, Mary Ashburton would relent, and in relenting, love.

In a perfect fever of excitement I turned the leaves, and came across the following:

"Thither will I turn my wandering footsteps, and be a man among men, and no longer a dreamer among shadows. Henceforth be mine a life of action and reality! I will work in my own sphere, nor wish it other than it is. This alone is health and happiness. This alone is life.

Life that shall send  
A challenge to its end,  
And when it comes, say, Welcome, friend!

Why have I not made these sage reflections, this wise resolve sooner? Can such a simple result spring only from the long and intricate process of experience? Alas! it is not till time, with reckless hand, has torn out half the leaves from the Book of Human Life, to light the fires of passion within, from day to day, that man begins to see that the leaves which remain are few in number, and to remember, faintly at first, and then more clearly, that upon the earlier pages of that book was written a story of happy innocence, which he would fain read over again. Then comes listless irresolution and the inevitable inaction of despair; or else the firm resolve to record upon the leaves that still remain a more noble history than the child's story with which the book began."

I could have laughed aloud in my joy on seeing the mark about these lines, but I did something vastly different. I cried. In that mark, I traced the record of my hero's vow. No listless inaction had been his. He had cast the Past behind him, and seized the Present with a determined grip; and could now look forward to the future without a fear. It held no terrors for him because he had performed his duty, was a man among men; and if the fires of passion had consumed half the leaves of his book, he was, day by day, writing on the remaining pages such a record that neither Ambition, Pride nor Passion could ever obliterate, because it was recorded in the golden characters of Truth, and stamped indelibly with Charity's immortal impress.

But I must away to find the "Dark Ladie." One more chapter, and I shall be done! Ten minutes after, to a second by the clock, I threw "Hyperion" down with a shock that I can never forget. The book fell to the floor with a crash, and I turned to meet two laughing brown eyes, regarding me with a strange mixture of mirth and gravity in their depths.

My hero stood before me, laughing at the great surprise written so plainly on my face. He broke the silence by asking:

"Is that the way you use borrowed books?"

"Such a book as it is!" I exclaimed. "I wish to goodness I had never seen it. I am so disappointed, so surprised at the ending."

"And who is not?" he asked, picking the volume from the floor, and turning the leaves caressingly. "That is one of its charms, and I love it. Whenever I feel particularly blue, and can steal an hour from my office; I like to throw myself down where I can hear the winds sigh, the raindrops—if there be any—patter against the window panes, and read 'Hyperion.'"

"And the blue ribbon—the book-mark—is a love token from some 'Dark Ladie,'" I hazarded, and the next moment I wished that I hadn't. A fierce expression crossed his face, as he laid the

book on the table, and his laughing eyes grew stern as he said:

"Your hand, if you please, madam. My time is limited this morning."

He had chilled all at once into the professional man, and I made no apology for the casual remark, because I knew that he was too generous to be unjust, and left it to time to withdraw the pointed but unintentionally aimed shaft. Yet, as I saw him drive away from the door, his face shrouded in a mantle of reserve, I felt more and more convinced that I had read his secret—that, instead of an ambitious Frau Kranich, a noble Mary Ashburton had impressed her image on his heart, the more indelibly because he could not turn on the angry waters of contempt to sweep her features from a too faithful memory.

Turning away from the window—away from the equinoctial blast moaning and sighing without—sometimes lifting its voice in louder strife—I sat down by the fire, and dreamed it all over again. I may be right in this, my first attempt at character reading by such a novel method, and I may be wrong; perhaps some day in the near or far off future I shall find out, and then, reader, in the strictest confidence of course, I'll tell you too all about it.

## LIFE WITH A KISS—A HISTORICAL INCIDENT.

By MRS. E. F. ELLET.

A RUDE wooden house on the Neva, in old Petersburg, is still shown to travellers as the abode of Peter the Great, Emperor of Russia, when he was building the city. His wooden arm-chair, the rude stool by which he knelt to pray, and the boat he made with his own hands, are exhibited in careful preservation. An incident related of the Czar has been as carefully preserved in the French chronicles.

In August, 1710, Peter was in this modest house with two of his officers. The elder, Captain Stopaus, was old and stupid, and very jealous of the merit of younger men. He hated particularly young Wladimir, who had risen rapidly in the Czar's favor, on account of his courage and rare qualities. Though but twenty-five, he was major of the regiment of Preobajinski, of which Peter was colonel.

The Czar stood by a narrow window, and was gazing at a medallion he had taken from the pocket of his uniform. In this medallion was framed the miniature of a beautiful young girl. Her long blonde curls fell on a neck white as alabaster; her blue eyes and perfect mouth seemed formed only for love, and their expression was exquisite. The name of this lovely creature was Ludmilla, and she was the orphan daughter of a wealthy merchant. The Emperor had seen her but once, when he had become desperately enamored of her. He was sure of her favor; but he wished to owe it to his personal merit; and when he visited her, he sunk the monarch in the lover. She was far from discouraging his passion; indeed he had little doubt that she returned it.

After looking rapturously at the charming miniature, Peter suddenly called Wladimir to him.

red it, asking what he thought of his innamorata.

The young man started back, and grew pale.

Controlling his agitation, though his mind rebelled sadly, he replied that the picture was fine.

He observed what escaped the eyes of the young man's emotion. In a few minutes Wladimir left the house. The captain bowed, bowing to the Emperor. He began to think if he had noticed the major's look when he stood on the portrait. The Czar answered him not.

He said Stopaus, "the original of that is the betrothed wife of Wladimir. Your father was at Ludmilla's house last evening. When you had left it the major was admitted; soon had risen before he departed from us."

"You sure of this?" asked Peter, calmly. "Quite sure, your Majesty."

"Well," said the Emperor, lifting the portrait in front of him, dashed it on the ground. Such violence it was broken to pieces. The only sign of emotion. Then, fastening on his caftan, he quitted the hut.

The young man had worshipped his beautiful betrothed and they were soon to be married. His father seeing her miniature in the Czar's hands was shocked. How could he doubt her unworthiness? He must have given the picture to Peter, encouraging his fancy for her. Was such a girl a wife for an honorable man?

He crossed the bridge of Tolstoi, leaving the city where the cathedral of Isaac rose in the distance, passed along what was afterwards the boulevard de la Perspective, and arrived at the house.

The house where Ludmilla dwelt was a small one, built in Tartar style. At a whistle a young man, a maid in red tunic and coif appeared at the door. He entered the presence of the young girl, his features expressing his profound grief, his eyes deadly despair. The young girl stood motionless at the sight of him, and pale as death.

The young man sat down, but repelled all the tender glances of Ludmilla. In a voice faltering and bitterness, he reminded her that he had sacrificed to her the truest, most passionate love. He laid his life, his fortune, his name, at her feet, and he had repaid him with treachery and in-

She had given him deceitful caresses

and false vows. He asked if the accusation were not true?

Ludmilla's crimson cheeks and a flood of tears, confessed that the charge was deserved. She sobbed unrestrainedly, while the young officer regarded her in gloomy silence. At length she lifted her head, pushed back the ringlets from her cheeks still burning with her shame, and asked to be heard in her own defence.

She owned that she had deceived her lover, that she had given her picture to the Emperor, when he came to woo her. But she had not encouraged his passion from coquetry. When she saw how ardently he loved her, when he continually met her in the street, when he came to visit her and declared his love, she was afraid of him. The least suspicion that she might have given her heart to another, filled him with ungovernable rage. The wrath of a monarch was so terrible! In his flashing eyes she read a sentence of death for any rival. How could she own her love for Wladimir! She dissembled, in her terror for him! She allowed the royal suitor to think he had gained her affections. She gave him the miniature. "But I have been true to you, Wladimir," she sobbed.

The young officer felt her arms clasped around his neck, her tear-wet cheek pressed to his; and her lips uttered broken and passionate words of love. He forgave her; while she protested that she would never have stooped to dissimulation to save her own life.

While the reconciled lovers talked, another man had silently entered the dwelling. The old servant had tried to stop him; but when he threw off his hat and caftan, she saw it was the Emperor, and dared not oppose him. He strode on to the apartment where Ludmilla sat clasped in Wladimir's arms. At sight of the Czar, she started up with a terrified shriek, and fell upon her knees. The officer half drew his sword; but, recognizing his sovereign and superior officer, stood with his head bent, his eyes on the ground.

Peter's flashing eyes gleamed from one to the other, muttering, "a double treachery!" The young girl implored pardon in piteous entreaty.

But the monarch could not pardon such a crime. After a struggle with violent emotion, he became calm and cold, as he ordered the Major Wladimir to go and surrender himself a prisoner at the fortress.

He was soon restored to liberty, as the Emperor

could not imprison for such a cause one of his bravest and best officers. But he gave orders that he should preside at the head of his regiment, at the public punishment of Ludmilla, who was accused of having betrayed certain political secrets to the Swedish agents, and was condemned by the Senate to receive twenty blows with the knout at the Place de la Moika. Peter himself had preferred the false accusation.

The regiment of Preobajinski, ranged in two lines, extended along the banks of the Moika canal to the bridge terminating at the Opera house. That termination was the place appointed for executions. The executioners were armed with the long plaited leather strap called the knout, a few blows of which had sometimes caused the death of culprits.

The officers were in uniform, and Major Wladimir was pale and haggard, but full of inflexible resolution. He had spent hours in prayer by his father's grave in the cemetery of Smolank, and was determined to meet his betrothed, and save her from shame and torture by plunging his dagger in her breast. Then he would immolate himself!

The Emperor had spent the night in anguish, remorse, and alternations of fierce passion. He had traversed his chamber foaming like a chafed lion, beating his breast, and dashing the furniture to pieces. At dawn he called his attendants, and dressed himself in his uniform as Colonel of the Preobajinski, passing around his neck the band of the Chevaliers of the Order of St. Andre.

He went to the house of Menzikoff, overlooking the Moika canal. There he could see from a window all that passed. But his imagination drew a picture that drove him well-nigh to frenzy. He

seemed to see the beautiful, timid young girl he had loved, dragged as a spectacle before a curious, insulting crowd; her bare head with blood, her white shoulders torn by the lash of the executioner!

Unable to remain still, the Czar entered a boat and conveyed to the opposite bank of the canal, where he stood with the tumultuous crowd.

The horrible procession advanced. The Czar walked with a firm step, leaning on the arm of the sergeant of the regiment. Her blue eyes distended with terror, and wandered through the crowd; her white lips moved with silent sounds. Her long golden curls floated about her neck of marble whiteness. The sight of her beauty and youth exposed to insult and torture, was enough to move the hardest heart.

She passed slowly across the bridge to the fatal spot. Her lover waited to receive the mortal blow.

Just at that moment, when she was about to step from the Bridge de la Moika, she burst through the crowd into the open air. Her lover, threw off his mantle, and advanced towards the young girl, placed his hands on the sides of her head, drew her towards him, and impressed a kiss upon her forehead. She was saved!

It was the privilege of the Chevaliers of the Order of St. Andre to save the condemned by a kiss, and to prevent the hand of the executioner.

The young girl sank backward in the arms of her faithful lover. When consciousness returned she found herself folded in the arms of her faithful lover, who were looking thankfully upwards.

## FOOTSTEPS AT THE DOOR.

BY MRS. E. M. CONKLIN.

THE day is done, and swift draws nigh  
The twilight hour, serene and sweet;  
The busy crowds go hurrying by  
With steady thrud of thronging feet.

In many a home glad watchers wait,  
As they have waited oft before,  
To hear a hand upon the gate,  
And well known footsteps at the door.

Some list for feet that still and cold  
No more the paths of life will tread,  
And miss the strong arms' loving fold—  
The tender words so often said.

Alas for such! the desolate,  
Who half expectant, as of yore,  
Still chide the foolish hearts that wait  
To hear the footsteps at the door.

Still pass the thronging myriads by,  
Nor heed the mourner, watching  
The babes, who for the father cry;  
The wives whose light of life is gone.

And some their sadder vigils keep  
For living lost ones, mourning sore,  
And listening fear, and waiting weep,  
And dread their footsteps at the door.

## NOTES AND QUERIES.

gent Order of Rechabites.—Will the Editor of the AMERICAN MONTHLY favor a number of readers the undersigned, with something concerning the "Order of Rechabites?" concerning which they have obtained nothing satisfactory. The "Order"

upon the

to their

has been ascertained, it is very interesting. From this we learn that they were the descendants of the son of Reul or Reguel, Moses's father-in-law, called Kenites. They appear to have been much loved at that early period, by the Israelites, and invited by them to come and dwell among them; and certain that they never afterwards deserted each other, the scattering of the Jewish nation. Indeed, the tribe seem to have held high stations among the Israelites. Isaiah speaks of them, in his prophecy, as "a tribe, who built their nest upon a rock." In Chronicles they are mentioned as being "Scribes," and are called "Kenites" who came of Hemath, the father of the house

of the son of Rechab, also, it would appear, was a king of the kings and princes of the land, and was the slayer of the whole house of the wicked king Ahab. It was he who gave his sons that memorable command, "Drink no Wine," the obeying of which procured for them a peculiar blessing from God—which remains to their posterity even to this day,

VIII.—25

as was proved by Wolff, the noted traveller, who met with the tribe, and describes them as still obeying in all things the commands of their father; and although their former allies are scattered about over the whole earth, yet do they remain in the neighborhood of their ancient homes, enjoying all

ARAB FAMILIES HALTING ON A JOURNEY.

their ancient privileges, and worshipping their true God; and are now, according to the same authority, about the finest men in the world.

From this peculiar, favored people, the name of the "Ancient Order of Rechabites" was taken, because, like them, the members of the Order abstain from all that can intoxicate.

This Order spread over the whole kingdom of Great Britain, and it was necessary, for its better government, to divide the country into several parts, or districts, each consisting of an indefinite number of Societies, technically called Tents, each having the entire management of its financial affairs; yet each acknowledging the superior authority of the District Council, the Executive Council, and Annual Movable Committee of the Order, in all cases of disputes or differences, and explanations of the laws; and, in short, regulating their general conduct as Members of the Order.

At this day there is a tribe of Arabs who claim to be the direct descendants of the Rechabites. In our illustrations are shown this peculiar people in their roving and tent-life character.

AN ARAB FAMILY ON A JOURNEY.

**Prophecies on Sneezing.**—Curious and interesting are the sayings and prophecies concerning the significance of sneezing. Though everybody is personally familiar with the practical details of the subject, it may please the readers of the MONTHLY to become more fully acquainted with the theory, art, physiological and mental laws upon which it is based and by which it is governed. While as a custom it dates back to the origin of man, and hence is a very ancient custom, and one that has been continually and universally observed, and according to Blackstone in his learned "Commentaries on Law," it must be "a good custom," and as a sequence, sound law whether in the Written Statutes or not.

Aristotle, in the Problems (XXXIII: 7), inquires why sneezing is considered as emanating from God; to which he suggests, "because it comes from the head, the most divine part of man."

"Athenæus," says Potter, in his "Archæological Græca," "proves that the head was esteemed holy, because it was customary to swear by it, and adore as holy the sneezes that proceeded from it." [Gauged by this latter standard, it would hardly be accepted in our day of false registrations and "bogus returns," though under the sacred seal of an oath.] The same writer also says: "Persons having the inclination but not the power to sneeze, should look at the sun, for reasons he assigns in Problems (XXXIII: 4)."

Plutarch, on the "Damon" of Socrates (§ II.), states the opinion that some persons had formed, "that Socrates' demon was nothing else than the sneezing either of himself or others." Thus: "If any one sneezed at his *right* hand, either before or behind him, he pursued any step he had begun; but sneezing at his *left* hand caused him to desist from his formed purpose." To this he added a remark about the several kinds of sneezing. For instance, "to sneeze

it happened that three beautiful captives were taken, and at the same time the fire burnt clear and bright, and a sneeze happened on the right hand. Thereupon the soothsayer, embracing him, predicted a probable victory which was afterwards obtained by him."

From the above observations and extracts, it is inferred that sneezing was always a prophecy of good or evil. The signs of the constellations, it was considered as under the influence and control of circumstances. The hour of the day or night, and the season of the year, regulated the good or evil that was to come from a sneeze. Some sneezes foretold good luck; others indicated misfortune. A sneeze between midnight and the following noontide was fortunate; but from noontide till midnight a sneeze was an omen of misfortune. If a man sneezed at the table while the cloth was being removed, or if another happened to sneeze on his left, it was un-

twice was in Aristotle but once than twice common."

if on the right hand, fortunate. If in undertaking business, two or four sneezes occurred, it was a lucky omen and gave encouragement to proceed; if more than four, it was neither good nor bad; if one or three, it was unlucky, and checked them from the business contemplation.

If two men were commencing any business, and sneezed together, it foretold prosperity in business operations.

Being already lengthened our remarks on sneezing, we close by observing that the subject has developed into quite marked as national characteristics, and very different social in their tendencies. The Scotch proffer of

of snuff is a social evidence of regard, having in it the sentiment of "God bless you," sneezer! The French, Spanish, and representatives of other nations tender sentiment, "May you attend you!" when passing the friendly comrade the snuff-box. May the spirit which accompanies the pleasant custom continue, even if the use of the well-known powder be not encouraged.

But the Editor hope to receive some information and news relative to the origin, use and effect of Snuff? Whether it is an excitant or sedative? as opinions seem concerning the subject.

**Your P's and Q's.**—From the department of NOTES AND QUERIES, I have culled many items of interest and pleasure elsewhere, and hence take pleasure in manifesting my recognition of this instructive feature of your MONTHLY. I feel sure that many of your subscribers will derive equal benefit from this department. If not too tedious, I would thank you to give light upon a subject which several friends and I have had a lengthy discussion of the origin, and correct meaning of the familiar terms

P's and Q's. There are various explanations given, all of which seem plausible; but there can be only one correct source from which the terms first grew into use.

LANDIS P. NORTH.

In answer to our inquirer, we would state that the expressions are derived from a custom quite ancient: hanging a slate behind the door of an ale-house on which was inscribed or written P. or Q. (*i. e. pint or quart*) opposite the name of each customer, according to the quantity which he had taken, and which was not expected to be paid for till the ensuing Saturday night, when they received their wages.

The expression so familiar to school-boys of "going tick," is traceable to this, a *tick* or mark being put for every glass of ale.

Others have thought that this phrase was originally, "mind your *toupes* and your *queues*"—the *toupe* being the artificial locks of hair on the head, and the *queue* the pigtail of olden time.

A very plausible explanation, however, of the origin is the following, by Charles Knight, published in a book called the "Milledulcia," who says:

"I have always thought that the phrase, 'Mind your P's and Q's,' was derived from the school-room or the printing-office. The forms of the small 'p' and 'q,' in the Roman type, have always been puzzling to the child and the printer's apprentice. In the one the downward stroke is on the left of the oval; in the other, on the right. Now, when the types are reversed, as they are when in the process of distribution, they are returned by the compositor to his case, the mind of the young printer is puzzled to distinguish the 'p' from the 'q.' In sorting *pi*, or a mixed heap of letters, where the 'p' and the 'q' are not in connection with any other letters forming a word, I think it would be impossible for any inexperienced person to say which was which upon the instant. Mind your 'p's' and 'q's'—I write it thus, and not 'Mind your P's and Q's,' has a higher philosophy than mind your *toupes* and your *queues*, which are things essentially different, and impossible to be mistaken. It means, have a regard to small differences; do not be deceived by apparent resemblances; learn to discriminate between things necessarily distinct, but which look the same; be observant; be cautious."

**The Hawaiian Language.**—Prizing highly the varied points of interest gleaned from the NOTES AND QUERIES columns of POTTER'S instructive MONTHLY (if not too much trouble), the Editor would gratify me by giving the name of the language, where used, and the interpretation of the following: "Na he ahua e hoomaikai mai e oe, a mau loa ahu."  
W. O. I.

Inquirer is informed, that the above words are in the language spoken on the Sandwich Islands, known as the Hawaiian, familiar to not only the natives, but many English and American residents of Honolulu. The words translated, signify: "May our heavenly Father bless and protect you, and keep you in the hollow of His hand." The expression is a most beautiful one; but the language itself is peculiar—and as will be noticed, abounds with vowels,

as most every word ends with one. More remarkable, however, does the language sound when heard spoken, which the Editor has frequently had the pleasure of hearing. As Congress has recently ratified a "Commercial Treaty" with the Sovereign of these Islands, with a view of augmenting the commercial relations and traffic between the United States and the inhabitants of those Pacific Isles, it is hoped we may soon become better acquainted with their language, customs and habits.

**William Cobbett.—The Open Polar Sea—Wager of Battle and the Ordeal of Touching a Dead Body in the United States.**—Mr. Steuben Jenkins, in NOTES AND QUERIES in POTTER'S AMERICAN MONTHLY for March, writes: "William Cobbett was an Englishman of the most inveterate type, who hated and detested everything French, and I am confident that, as well from that as from his defective education, he was never a French teacher." From the second letter in a volume bearing the title, "A French Grammar, or Plain Instruction for the Learning of French. In a Series of Letters. By William Cobbett," I make the following extracts: "How did it happen then, that I, who had every disadvantage to make head against, who began to study French in the woods of North America in 1791; who crossed the Atlantic Ocean twice between that year and 1793; how did it happen, that I, who had never had a master to assist me but one single month in 1792, should in 1793, write and publish, in the French language, a grammar for the teaching of French people English; which grammar, first published at Philadelphia, found its way to France, and has long been, for the purpose for which it was intended, in general use throughout all the countries of Europe? . . . When I afterwards came to teach the English language to French people in Philadelphia, I found that none of the Grammars then to be had were of much use to me. I found them so defective, that I wrote down instructions and gave them to my scholars in manuscript. At the end of a few months, this became too troublesome; and these manuscript instructions assumed the shape of a Grammar in print, the copyright of which I sold to Thomas Bradford, a bookseller of Philadelphia, for a hundred dollars, or twenty-two pounds, eleven shillings and sixpence; which Grammar, under the title of *Maître d'Anglais*, is, as I have just observed, now in general use all over Europe." Whether Cobbett was ever "a French teacher of note" in Wilmington, I do not know, but that he was such in Philadelphia, his own declaration fully shows.

In Mr. Janvier's admirable paper, "Some Forgotten Arctic Explorers," in the March number, much interesting and valuable historical information is gathered together in an attractive form. I propose to add this NOTE to his list of Forgotten Arctic Explorers, and it is simply the fact, that an open polar sea was claimed to have been discovered previous to 1662. When the Royal Society was first instituted, it was customary to send questions to any traveller who chanced to be in England, after having been in parts of the world which were not commonly frequented. In the year 1662-63, Mr. Oldenburgh, the secretary of the society, was ordered to register a paper entitled "Several inquiries concerning Greenland, answered by Mr. Gray, who had visited these parts." The nineteenth of these queries is as follows:

"How near any one hath been known to approach the pole?"

Answer, "I once met upon the coast of Greenland a Hollander, that swore he had been but a half day from the pole, showing me his journal, which was also of his mate; when they had seen no ice or land but water."

After this entry Mr. Oldenburgh adds, as from Gray, "This is incredible."

In Hall's *Portfolio* (June number, 1824), is the account of a "Wager of Battle in New England" between conflicting claims of two towns in Connecticut—Lyme and New London—to certain lands, once gave rise to a controversy for adjusting the title, of which we apprehend no trace is found in the common law or the codes of the civil law. The land, says Dr. Dwight, though now of considerable value, was then regarded as a trifling object. The expending of money for pointing agents to manage the cause before the law was considerable, and the hazard of the journey was small. In this situation the inhabitants of both towns agreed to settle their respective titles to the land in controversy, by a combat between two champions to be chosen by each for that purpose. New London selected a champion of the name of Picket and Latimer; Lyme chose a champion of the name of Griswold and Ely. The champions met and fought, and victory was declared in favor of each of the Lyme combatants. Lyme then quietly took possession of the controverted tract, and held it undisputed to the present day." Can any reader give the date when this appeal to arms took place?

In the *Gentleman's Magazine* for November, 1776, a strange event noticed thus:

"The following extraordinary attestation of the genuineness of the body of one Nicholas Tuers, then lying dead in Bergen County in New Jersey, was communicated by a gentleman of such credit, as leaves not the least doubt of its being genuine.

On the 22d day of September, in the year of our Lord 1767, I Johannes Demarest, Coroner of the County of Bergen and province of New Jersey, was present at the body of one Nicholas Tuers, then lying dead in the house of the said Nicholas Tuers, then lying dead, with the Jury, which I summoned to enquire of the cause of the death of the said Nicholas Tuers. At that time a Negro named Hany, belonging to Hendrick Christians, was suspected of having murdered the said Tuers; but there was no proof of it, and the Negro denied it. I asked him, 'I am not afraid to touch Tuers?' He said No, he was not afraid to touch Tuers. He then went to the body of the said Tuers, and immediately came up to the corpse, and laid his hand on the said Tuers's face, and then he said, 'I am not afraid of him,' and stroked the dead man's face with his hand, which made no alteration in the dead man's face, and (as I did not put any faith in any of these things) I ordered the Negro to touch the dead man's face with his hand, and then I heard a cry in the room of the said Tuers, saying 'He is the man,' and I was desired to touch the dead body; and was told that the said Negro Hany had laid his hand on Tuers's face, and that the blood had run out of the nose of the dead man Tuers. I then ordered the Negro to rub his hand on his face, and ordered the Negro to rub his hand again on Tuers's face; he did so, and immediately

of the said Tuers's nose at both nostrils, near a spoonful at each nostril, as well as I could reupon the people all charged him with being ; but he denied it for a few minutes, and then he had murdered the said Nicholas Tuers, by him on the head with an axe, and then driving in his ear; though afterwards he said he d time with his axe, and then held him till he

was done struggling; when that was done he awoke some of the family, and said Tuers was dying, he believed.

JOHANNES DEMAREST, COR."

I would like some of your readers to inform me whether this case is noted in any of the State or County Histories of New Jersey, together with any further particulars of this strange occurrence they can supply.

H. G. ASHMEAD.

## CURRENT MEMORANDA.

et.—The President has nominated and the ed the following gentlemen, who are to form et of the nation :

State, William M. Evarts, New York.

, from the same State as the President, has esented his State in Congress, and though or himself in connection with the disputed orts from the Southern States, at issue in the tation not to be envied by any patriot, it is

hoped the costly experience gathered by his unwise course there pursued, will serve to make him wiser in the future. Experience is a grand educator, even in private life, but how much more so, when the scrutiny and gaze of a whole nation are centred upon the public functionary, to applaud or condemn the words and acts which are to live in history, either to the shame or honor of the public actor.

The West is represented in George W. McCrary, of Iowa, and Richard W. Thompson, of Indiana; the former as head of the War, the latter of the Navy Department. Both of these men are comparatively unknown to the new generation, yet both bring to their high offices reputations for character and ability commensurate with their duties. Mr. McCrary's antecedents point towards conservatism and peace. Mr. Thompson's early life was associated with the great questions which kindled the fires of a Henry Clay in the Whig times of the "long ago." While he borders on seventy he gives signs of the mental freshness of youth, which coupled with his large experience, cannot fail to increase the wisdom of the Cabinet.

The South is pacified in one if not in both of the members designated as representatives from that section.

Mr. Carl Schurz, the creature of education and circumstances, rather than the statesman of convictions, holds the portfolio of the Department of the Interior. The ungraceful somersaults made by Mr. Schurz since his bold proclamation from "Fifth Avenue" in behalf of reform as opposed to both parties, we trust, as with Mr. Sherman, will have imparted to him wisdom to guide him into safer waters.

General David M. Key, of Tennessee, will direct that gigantic branch of the government known as the Post-Office Department. He brings to his office a record of independence in politics, and while an exponent of the principles of the Democratic party, he never allowed himself to be made the willing instrument or aid to fraud. Mr. Hayes, in making this selection, recognizes the rightful claims of the South, and by it infuses a healthy spirit into the Cabinet as a collective body.

We have thus given considerable space to the elements which enter into and constitute the counselors of the nation through our chief Executive.

The President's Address, in itself, gives no evidence of a comprehensive and broad statesmanship, nor even of ability to grapple with the great national questions which

must come up under his administration; it does not even touch upon many of the "all-important subjects" which are the arteries of the nation's life. The document is mainly devoted to the interests of the Southern States, and the new order of things resulting from the late war. As to the principles which are to guide him, he indicates that they are embodied in his letter accepting the nomination. The general tone and spirit of the paper, however, is conservative and patriotic, and foreshadows that it will be his aim to serve the best interests of the country, rather than that of party. The antecedents of President Hayes's civil life lead us to anticipate a peaceful administration during his rule.

One measure alone in the civil service—the retention in office of those who have shown themselves faithful to public trusts—will save a vast amount of discord and personal dissension. No greater evil ever afflicted a people than practically carrying into effect, in civil life, the doctrine, "to the victor belong the spoils," to the entire exclusion of the true and tried servants of the nation. This is especially so in the Postal and Revenue Departments of the Government, where many years are essential to thoroughly understand the duties pertaining to the offices.

But after all, gracefully rounded periods and winning principles and measures as laid down and outlined on paper, or as eloquently sent forth by human voice, are only as the "sounding brass and tinkling cymbal" until they are baptized in the living waters of life; until they breathe as vital acts. The *deed* is what gives force to all measures and principles. Reform comes not alone from thought; it grows out of a complete regeneration of the inner springs of existence, whether applied to nations or individuals. The fountain head must be made pure by inletting from the non-corrupted streams of a higher and better morality and intelligence. The high moral excellence attributed to our new President gives birth to reasonable hopes for the future of the country. The selection of his Cabinet—given elsewhere—marks a step towards a higher plane to which the nation is destined to surely move.

**Suicide Statistics.**—A curious and suggestive table of statistics has recently appeared in France, which will doubtless prove of much value in the hands of students of psychology and nervous mental ailments. It relates to suicides; and the conditions, etc., of the people who made away with themselves in 1874 in France are taken as the basis of the figures. In that year, 5,617 suicides occurred, the largest number ever known in any one year in the country. Of these, 4,435, or 79 per cent., were committed by men, 1,182, or 21 per cent., by women. In spite of the careful investigations of the police, the ages of 105 people could not be determined. The 5,512 others are divided as follows: 16 years, 29; between 16 and 21 years, 193; between 21 and 40 years, 1,477; between 40 and 60 years, 2,214; exceeding the last mentioned age, 1,509. About 36 per cent. of these unfortunates were unmarried, 48 per cent. married, and 16 per cent. widowers. Of those which constituted the last two classes, nearly two-thirds had children. More than seven-tenths of the suicides were effected by strangulation or drowning. The crime was most frequently committed during spring, when 31 per cent. of the whole

number destroyed themselves; during other seasons percentages were: in summer, 27; in winter, 23; in autumn, 24.

Included in the tables are the results of the 500,000 requests, showing the professions and callings of the 6,000 suicides. About 33 per cent. were farmers, 30 per cent. mechanics, 15 per cent. merchants or business men, 16 per cent. of the liberal professions, 4 per cent. servants, 26 per cent. had no known calling. The table even analyses all but 481 people, the motives which caused the deaths. Thus we are told that 653 killed themselves because of reverses in fortune, 701 through family troubles, 474 drunkenness, 243 through love, debauchery, etc.; 1,000 to avoid physical suffering, 59 to avoid the penalty of capital crimes, 489 for unclassified troubles, and 1,600 clearly shown to have been afflicted with some disease.

**Infectious Disease Propagation.**—The following by the *British Medical Journal* are wholesome warnings. "There are three common ways by means of which infectious diseases may be very widely spread. It is a very common practice for parents to take children suffering from fever, measles, etc., to a public dispensary, in order to get advice and medicines. It is little less than crime to take children in the streets of a town and in the crowded waiting-rooms of a dispensary, children afflicted with such complaints. Persons who are recovering from infectious disorders should not row books out of the lending departments of public libraries. These books, on their reissue to fresh borrowers, are of very great danger. In all libraries, notices should be posted up informing borrowers that no books will be lent to persons who are suffering from diseases of an infectious character; and that any person so suffering will be permitted to borrow during the time of his illness. Lastly, the habit of spreading by tract distributors. It is the habit for some unmeaning people to call at a house where a person is suffering from a disease, to leave him a tract. In a week or so the tract is called again, another left in its place, and the old one is left to another person. It needs not much imagination to see with what result to health such a practice will lead if the person be in scarlet fever or small pox."

Dr. Hutton offers "a warning on the reckless manner in which parents allow their healthy children to run about the houses of acquaintances who have members of their families suffering from scarlatina, etc., and states that he has seen infection thus carried from the patient, and several persons attacked."

**Losses by Fire.**—In an address recently delivered in Chicago, Mr. J. B. Bennett stated that "The destruction of property by fire in the United States is calculated to be \$1,000,000,000 per annum. The entire gold product of the country during the last twenty-seven years, annually, only \$100,000,000. In 1874 and 1875 it was under \$100,000,000. Since 1850 \$2,000,000,000 of the wealth of this nation has been annihilated by fire (a sum sufficient to pay off the national debt), besides accumulating this wealth without any estimate being made for its compounding or calculating for credit equal to every dollar of capital burnt up. Such is the past. What of the future?"

ation of President Hayes.—As chroniclers of truth, we give the inaugural address of President Hayes, matters relating to the new administration, have greeted most of our readers, through the weekly journals, prior to their appearance in the

This is unavoidable, as our forms go to press month, that we may get out the edition in season to many subscribers in distant sections of the country. It is our aim to make record, to the very latest of all subjects worthy of note; and that we may in consecutive and chronological order notations of a future reference, the valuable State paper and alluded to, are given place in our columns. We Address will not lose interest nor significance on

March 5th, the new Senate was called to order. President William A. Wheeler in extra session, President Grant and President Hayes were notified that the new Senate was ready to receive them, and accordingly they appeared. The body then proceeded to the portico of the Capitol, where in presence of an immense audience, President Hayes administered the oath to President Grant, which he delivered, from manuscript, to great applause.

#### THE INAUGURAL ADDRESS.

CITIZENS:—We have assembled to repeat the ceremony begun by Washington, observed by all my predecessors, and now a time-honored custom, which marks the beginning of a new term of the Presidential office. In the discharge of this great trust, I proceed in common with you to announce some of the leading principles and subjects that have chiefly engaged the public mind, which it is my desire to be guided in the discharge of these duties.

I do not undertake to lay down irrevocable principles or policies of administration, but rather to speak of the motives which animate us, and to suggest certain important principles to be maintained in accordance with our institutions, and the welfare of our country.

One of the questions which preceded the recent Presidential election, it seemed to me fitting that I should lay down my sentiments in regard to several of the questions which then appeared to demand the attention of the country.

In the eminent example, and in part adopting the course of my predecessors, I wish now, when every misrepresentation has passed away, to repeat what I said before the election, trusting that my countrymen will weigh and understand it, and that they will find that the sentiments declared in accepting the honor of the Presidency, will be the standard of my conduct. The path before me, charged as I now am with the difficult task of carrying them out in the administration of the government, so far as they relate to the constitution and law, on the chief executive duties.

The permanent pacification of the country upon such terms as may be secured by such measures as will secure the complete enjoyment of all its citizens in the free enjoyment of all their rights, is now the one subject in our public mind. All thoughtful and patriotic citizens regard as of paramount importance. Many of the calamitous effects of the revolution which has passed over the Southern States remain. The immeasurable benefits which will be realized, sooner or later, its hearty and generous action cannot be over-estimated.

The legitimate results of that revolution have not yet been realized. Difficult and embarrassing questions meet us at the threshold of this subject. The people of those States are still impoverished, and the inestimable blessings of wise, honest and peaceful self-government are not fully enjoyed.

Whatever difference of opinion may exist as to the cause of this condition of things, the fact is clear that in the progress of events the time has come when such government is the imperative necessity required by all the varied interests, public and private, of those States. But it must not be forgotten that only a local government which recognizes and maintains the rights of all, is true self-government.

With respect to the two distinct races, whose peculiar relations to each other have brought upon us the deplorable complications and perplexities which exist in those States, it must be a government which submits legally and heartily to the constitution and the laws—the laws of the nation and the laws of the States, accepting and observing faithfully the whole constitution. Resting upon this sure and substantial foundation, the superstructure of beneficial local government can be built up, and not otherwise.

In furtherance of such obedience to the letter and the spirit of the constitution, and in behalf of all that its attainment implies, all so-called party interests lose their apparent importance, and party lines may all be permitted to fade into insignificance. The question we have to consider for the immediate welfare of those States of the Union, is the question of government, order and all the peaceful industries and the happiness that belong to it, or a return to barbarism.

It is a question in which every citizen of the nation is deeply interested, and with respect to which we ought not to be, in a partisan sense, either Republicans or Democrats, but fellow-citizens and fellow-men, to whom the interests of a common country and a common humanity are dear.

The sweeping revolution of the entire labor system of a large portion of our country, and the advance of four millions of people from a condition of servitude to that of citizenship upon an equal foundation with their former masters, could not occur without presenting problems of the gravest moment to be dealt with by the emancipated race, by their former masters, and by the general government.

That the act of emancipation was a wise, just and providential act, fraught with good for all concerned, is now generally conceded throughout the country. That a moral obligation rests upon the national government to apply its constitutional powers to influence and to establish the rights of the people it has emancipated, and to protect them in the enjoyment of those rights when they are infringed or assailed, is also generally admitted.

The evils which afflict the Southern States can only be removed or relieved by the united and harmonious efforts of both races, actuated by motives of mutual sympathy and regard; and while in duty bound and fully determined to protect the rights of all by every constitutional means at the disposal of my administration, I am sincerely anxious to use every legitimate influence in favor of honest and effectual local self-government as the true resource of those States for the promotion of the contentment and prosperity of their citizens.

In the effort I shall make to accomplish this purpose, I ask the cordial coöperation of all who cherish an interest in the welfare of the country, trusting that party ties and the prejudice of race will be freely surrendered in behalf of the great purpose to be accomplished.

In the important work of restoration of the South it is not the political situation alone that merits attention. The material development of that section of the country has been arrested by the social and political revolution through which it has passed, and now needs and deserves the considerate care of the national government within the just limits prescribed by the constitution and a wise public economy.

But at the basis of all prosperity for that, as well as for every other part of the country, lies the promotion of the intellectual and moral condition of the people. Universal suffrage should rest upon universal education. To this end, liberal and permanent provision should be made for the support of free schools by the State governments, and, if need be, supplemented by legitimate aid from national authority.

Let me assure my countrymen of the Southern States, that it is my earnest desire to regard and promote their truest interests, the interest of the white and colored people, both; and to put forth my best efforts in behalf of a civil policy which will forever wipe out in our political affairs the color line and the distinction between North and South, that we may have not merely a united North or a united South, but a united country.

Looking for the guidance of that Divine hand by which the destinies of nations and individuals are shaped, I call upon you, Senators, Representatives, judges, fellow-citizens here and everywhere, to unite with me in an earnest effort to secure to our country the blessing, not only of material prosperity, but of justice, peace and union—a union depending not upon the constituency of force, but upon the loving devotion of a free people, that all things may be so ordered and settled upon the best and surest foundation; that peace and happiness, truth and justice, religion and piety may be established among us for all generations.

**Annual Report of the Patent Office.**—The annual report to Congress of the Commissioner of Patents, for the year 1876, has made its appearance.

The amount received on applications for patents, reissues, designs, extensions, caveats, disclaimers, appeals, trade-marks, labels, copies, etc., was \$757,987.65. The amount paid for salaries was \$425,930; other expenses, \$226,612. Total payments, \$652,542.

Number of applications for patents during the year 1876.	21,425
Number of patents issued, including reissues and designs.	15,595
Number of applications for extension of patents.	2
Number of patents extended.	3
Number of caveats filed during the year.	2,697
Number of patents expired during the year.	814
Number of patents allowed but not issued for want of final fee.	3,353
Number of applications for registering of trade-marks.	1,081
Number of trade marks registered.	959
Number of applications for registering of labels.	650
Number of labels registered.	402

Of the patents granted there were to—

Citizens of the United States.	16,239
Subjects of Great Britain.	511
Subjects of France.	104
Subjects of other foreign governments.	172
Total.	17,026

**Postage Stamp Frauds.**—The *Scientific American* says: In reply to a paragraph recently published in these columns, suggesting the importance of discovering some new invention by which the fraudulent washing of postage stamps can be prevented, we have received many replies. A variety of novel plans for accomplishing the desired end have been presented to us, together with several very old ideas. For the benefit of those of our readers who may still be studying upon it, the following plans are old, and time spent in their reinvention as well as the expense incurred is wasted:

1. The printing of the postal stamp in ink that when moisture is applied to the face of the stamp, cellation of the stamp by means of indelible ink. 2. Cancellation by means of a cutter stamp that cuts the stamp. 3. Coupon stamps, one portion of which is attached to the letter envelope, while the other portion or flap is torn off as a cancel in the post-office. 4. Lustrous stamps gummed upon the face, and secured upon the envelope, so that, if the stamp is removed, the ink leaves the stamp and adheres to the envelope.

**More Body Guards.**—The class of 1877, numbering one hundred and twenty-one students, was graduated from the medical department of the University of Pennsylvania at the usual pleasant commencement ceremonies in the Academy of Music, Philadelphia, at noon March 12th. The ceremony of the newly-made doctors began on the grounds of the University, where the graduates assembled at 10 o'clock, donned their cerulean badges, that looked to the spectators at a distance like so many blue-glass medals of honor. At the Academy anxious mothers and sisters, by securing front seats, were waiting, bouquets in hand, as 10 o'clock. A half-hour later the doors were opened, and from that time until nearly 12 the graduates danced around to the "Mignon," "Flirtation," "Juive," of Hassler's Orchestra, daintily touching noses and broadcloth and directing visitors to parquet in the theatre. A corps of bouquet-bearers, under the direction of a professor, were busy passing to the stage flowers, bouquets and eye delights, unique fruit baskets, perfume boxes and small, suspicious-looking boxes that contained sweetmeats, but were possibly filled with enough to mark the hours of an Æsculapian cure. Students who were not to graduate with '77 sat in the gallery and hammered out reliving theses from memory with their canes, indulging in remarks that were as to cause the grave doctors on the stage to shudder. At the meridian precisely Provost Charles J. Stillé, LL.D., presided, by the professors of the faculties, the members of the Board of Trustees, many distinguished physicians and the graduates of the class entered and took the seats assigned, occupying a portion of the parquet. After the presentation of the diploma, the graduates received the applause and "tigers" of the irrepressible young men in the upper gallery, Rev. E. R. Beadle, D.D., presided over the ceremonies with prayer for the "temporal and eternal health" of the men about to go out into the world for the world's good.

**Hampton and Nichols vs. Chamberlain and**

—Right at the threshold of the President's address, the great civil suit as to who shall be the Governor of South Carolina and Louisiana comes up for settlement. The significance is not so much as to who shall be the Executive? as whether the Constitution and law be sustained, and State Government represent the people. A withdrawal of the troops from the Southern States would show where that voice is, and the moral and moral forces behind it. A difficult and delicate question can thus be easily adjusted, and we believe only policy which will ensure peace in the South and public confidence of the whole country.

## LITERATURE AND ART.

**Domain of Literature.**—Unlike all other departments of culture, this is not hemmed in as the rich man's is guarded by gatekeepers who dispute the right of entry to the favored few. It is rather more like the breezes and wild forests, over and through which the winds roam free as the air of heaven, and resembling it in its all-pervading influences. This domain is world-wide, embracing all latitudes, climates, nationalities, and tongues. It is bound to no creed, sex, color, or condition of life. In it the peasant and peer; the king and waiting maid; the princely merchant and the tradesman; the artist and student; the mechanic and the manufacturer and mill-hand; the weaver and the man of letters and his scribe; the office-boy and his clerks—and, indeed, all those in both the higher and lower walks of life are interviewed and studied, in the quiet and the placid, as well as the boisterous seasons of life's voyage. Here, in the literary world, we are brought into contact with them in their sunshines and their shadows, in their joys and sorrows, their heart-burnings and moments of exaltation: all these are made social, intellectual, moral, and spiritual food, in the domain of literature. In this domain we think, feel, speak, and write without fetters or restraints. We learn here to know the thoughts and emotions of all human kind, and are able to send back responsive answers. History, Biography, Romance, Art, and Science, when developed through human experience, ingenuity, and imagination, are made the open letters of introduction to the members of the one great and universal family. Whether dead or living, those mighty levers—the Pen and the Printing Press—enable us to hold communion with those of the past, that once were, as well as those that now are, part of a bodily organism. "Homer's Iliad," "Milton's Paradise Lost," "Pope's Essays on Man," "Shakespeare's Plays," "Moore's Melodies," "Byron's Poems," "Goethe's Faust," "The Human Understanding," and the list of a thousand others, in prose and verse, have not only instructed, charmed, but even kindled in us a love for the Divine Power; and by the golden chords of the heart of a universal brotherhood and sisterhood, they have entwined us together as one.

In our excursions in this domain, we are led beyond the limits of logical thought and action in human history, and find ourselves fascinated as we wander along the paths of the fabled literature. Any allusion to the heroes and the gods and goddesses who in ancient periods embodied the emotions, forms of worship and adoration, and to awaken strange conjectures and excite curiosity about them. The supernatural power attributed to their characters induces us to give our readers in this domain briefs and illustrations of some of the more prominent divinities. May they lead to a better understanding of the mythology, so frequently interwoven with the life of the present day. There Wisdom, Light, Youth, and Love, are personified in Minerva, Diana, Hebe and

the child Jupiter. There we see, as here we know, that the great "problem of life" was unsolved, and, as now, a mystery. The mind-soarings and heart-yearnings knew no

THE GODDESS OF YOUTH.

bounds; both claimed universal liberty; it was then as now—*libertas vita literatura*.

As bearing directly upon our train of ideas, we add the following from the *Literary World*, which will be appreciated:

"The domain of literature is broad. Here our reverence for God, our love of country, our philanthropic sentiment toward mankind, may have free scope and exercise. Here are no sects, no parties, no schools, which can command our thought or action within narrow limits. Here we can look around the whole circle of the world, and take note of, and feel the liveliest interest in, all the intellectual, religious, moral and secular life of humanity. Here we can think and feel and live with the noblest and best of our race; and here, also, we can approach and enter into the joys and sorrows, the common lot of all our kind. The far and near, the ancient and modern, the Christian and Pagan, the wise and less wise, here draw near and speak with us, and invite us to become acquainted with experiences which are as universal as life itself. Here our minds and hearts are not narrowed, but broadened; and here our sympathies are challenged, not by a portion, but by all of our fellow-men.

The thoughtful and just man feels lonely everywhere but in literature. He desires relations with his kind, and would not be solitary or cynical, but large-minded and large-hearted. Yet in the ordinary walks, pursuits, and ambitions of men his constant experience is of being thrust back upon himself, repelled by the aims and *animi* of the company he tries to keep. In scrambling and competing crowds, men never think their best thoughts, never breathe their noblest aspirations, never perform their highest deeds: it is when they are alone with themselves, alone with God, alone with those sweet, pure, true souls that ever have been set in life and history to shine as the stars with tranquil and unfading lustre—it is then that they best can listen to and obey those voices which prompt to divinest things, and grow and ripen in the privacy of the heart and spirit.

THE GODDESS OF LIGHT.

We plead, then, for the greater and more common of literature. Let our youth be trained to reading of those books which the best minds and ages produced, and which stand the test of time. Let them be forced to live in the midst of secular activities, market, the court, the public place, the scene of strife and competition—let all such, as they value the development of intellect, conscience and heart, cultivate the capacity of enjoyment in 'breathing the still air of delightful studies.' We sincerely believe that we can render no truer service to our countrymen, in these intense and noisy times, than to urge them to the acquirement of literary tastes and habits; to the securing of that 'sweetness and light' which are to be found in the calm walks and ways of literature."

**Hebe.**—We are told that Hebe was the daughter of Jupiter and Juno, and that she was regarded as the Goddess of Youth. The "Iliad," however, gives no account of her parentage. Homer mentions that Ganymede was carried off by the gods as a cup-bearer, and afterward mentioned Hebe as servant in this capacity. Her position upon Mount Olympus appears to have been that of a waiting-maid at the banquets of the gods, without any degree of degradation in connection with it. When Hebe was carried to the skies, Hebe was given to him in thus uniting the venerated sun god to immortal youth. The goddess is represented in the arts as a charming young woman crowned with a wreath of flowers, her dress adorned with roses, and holding in her hand the cup in which she brought the nectar to the gods. An eagle is sometimes represented as standing by her side and receiving her carresses.

THE GODDESS OF YOUTH.

**The Greek Diana—Goddess of Light.**—*Diana* (from the root *di*, the name of a female deity among the Greeks and Romans, and under other names venerable in the East). Among the Romans she was the Goddess of Light. Her name contains the same root, "diēs"—day. Diana was also the God of Light, as Diana was represented as the moon.

ates of the Greek goddess were attributed to the  
ana. 2. She was a great divinity among the Greeks,  
died Artemis. She was reputed to be the daughter  
of Leto, and the twin sister of Apollo. With her  
arrows, she sent plagues and death among men and  
especially sudden death among women. Like Apollo  
was a healing as well as a destructive god, Artemis  
offerings of mortals; she was the protectress of

and of

on affairs. According to Hesiod she was classed  
among the ocean nymphs. Pindar calls her  
of Jupiter, and says she was one of the destinies.  
shipped at Thebes, where she held the emblem  
in her arms. In Italy, among the Etrurians and  
this deity received great honor. In our day  
many who believe that some supernatural being  
and directs their destinies.

**Minerva—The Goddess of Wisdom.**—  
Mi-nerv'ah), the Latin goddess corresponding to,  
ded with the Grecian Pallas or Athena. She

was fabled to have sprung in full  
armor from the forehead of her  
father Jupiter. Minerva was wor-  
shipped as the Goddess of Wisdom,  
and the patroness of industry and  
the arts. Athens, to which she  
gave name, was her favorite city,  
and there her worship was cele-  
brated with great splendor, and the  
magnificent temple—the Parthenon  
—was erected to her honor. She  
was also worshipped at Rome with  
peculiar veneration, and two great  
festivals were held in her praise.  
Three temples were dedicated to  
her—one on the Capitol, which she  
shared with Jupiter and Juno; a  
second on the Aventine, and a  
third on the Coelian Mount. The  
origin of the name has long puzzled  
etymologists, but it is most probably

MINERVA.

derived from "Menrfa," the popular Tuscan name of the  
goddess.

**John Milton** (Mil'tun), the author of "Paradise Lost,"  
was born in London, in 1608. At ten years of age he had  
already composed verses, and in 1620 he was sent to St.  
Paul's School, whence he entered Christ College, Cambridge,

DEAN SWIFT.

in 1625. His great  
works in prose and  
poetry have made  
his name immortal.  
In 1667 appeared  
the great epic which  
stands alone in our  
language, in unap-  
proachable preëmi-  
nence, "Paradise  
Lost," for which he  
received the sum of  
five pounds.

**Dean Swift.**—

As appropriate to  
this department, on  
account of his won-  
derful success as a  
satirical, political,

and literary writer, Dean Swift's scholarly face is here given.  
He was born at Dublin, in 1667, and in his early life was  
left to the care of his uncle. On reaching manhood, he  
became distinguished as a writer, and among the books he  
published was one under the title of "Tale of a Tub,"  
replete with humor and wit.

**Professor Louis Jean Rudolph Agassiz.**—This emi-  
nent naturalist was born in the Parish of Mottier, Canton  
Freiburg, Switzerland (not far from Neuchâtel), on the 28th  
May, 1807. In 1846 he came to this country, and at the time  
of his death, on the 14th December, 1873, he was a non-  
resident Professor of Cornell University, at Ithaca, New  
York. His valuable services to science and the students of  
natural history, are too well known to need recapitulation  
here.

As the anniversary  
of the birth of this  
most eminent scientist  
occurs on the 28th  
of this month, it is  
fitting that we should  
give space in this  
issue for the follow-  
ing tribute to his  
memory. The natu-  
ralness, ease, and mu-  
sical flow of thought  
which so happily  
blend with sadness,  
give a marked beauty  
to the stanzas. They  
are a graceful offer-

ing, and well calculated to keep green the good works of the distinguished dead.<sup>1</sup>

#### THE GRAVE OF AGASSIZ.

The wind, gently breathing,  
Is lowly beseeching  
A peaceful repose over Agassiz's grave,  
And rare birds are bringing  
Their tributes of singing,  
And in the pure sunbeams their plumage they lave.

The sky may seem redder,  
Yet nature is sadder,  
And in the low West is a sorrowful tinge;  
The twilight is brighter,  
The daisies are whiter,  
Yet glistens a dew-drop upon each fair fringe.

All things that have living  
Seem mournfully striving  
In blessing his mem'ry, their voices to lend;  
No animate creature,  
No object in nature,  
But seems full aware of the loss of a friend.

But then, can we wonder,  
Above us and under;  
The birds of the air and the fish of the sea  
All mourn the departed,  
And seem sadder-hearted,  
And miss his near presence as fully as we?

May nursed him in flowers  
And evergreen bowers,  
And taught him to love all the works of God's hand;  
The earth yielded pleasures,  
The ocean her treasures,  
Till death brought him bliss on Eternity's strand.

Thus Time will bereave us,  
And great men must leave us,  
And those that they loved and were kind to on earth  
Will linger in sorrow,  
While trying to borrow  
A shadow of comfort from thoughts of their worth.

The birds are still bringing  
Sweet tributes of singing,  
Which plaintively undulate, wave upon wave;  
And tho' we feel gladly,  
We'll drop a tear sadly,  
And step very softly o'er Agassiz's grave.

The flowers are purer  
And happiness surer,  
That ever will rest on his radiant brow,  
For God's Angels meet him,  
With welcome to greet him,  
Rewarding him there for his kindness below.

**The Past History and Present Resources of Baltimore**, by George W. Howard, 3d edition, must command public attention, especially to those interested in the early history and almost marvelous growth of what has been designated as "The Liverpool of America."

In this connection our leader in this number, "BALTIMORE OLD AND NEW," can scarcely fail to instruct and please the readers of the MONTHLY.

<sup>1</sup> See PUTTER'S AMERICAN MONTHLY, Vol. IV., page 39

**The Illustrated Hand-Book to all Religions**  
600 pages. Philadelphia: JOHN E. POTTER.

This work groups together all the Christian denominations from the earliest age down to the present time, in order, and contains nearly *three hundred* illustrations. A somewhat critical examination leads us to believe that it fills a gap long open of religious and historical literature. It is in a liberal and impartial spirit, and in the interest of organization nor collective body of Christians admirably guards the sacredness of the views of each, free from bias or a warping tendency. In this respect cannot fail to make it win favor. A reference it must prove invaluable to all seeking relative to the origin, growth and development of any particular sect or creed. The author in his Preface a compendious volume on the history and doctrines of various religious denominations of the world, and, as far as possible, in an impartial spirit, has wanted. The value of such a work will at once be known by those who have sought for information in matters of ecclesiastical history in the countless writers, intricate and antiquated, or deeply and imperfectly informed. An ecclesiastical history, under the name, and suited to the wants of the age, a presumption to say, has not yet been written; and the labors and difficulties of the enterprise, that, for fear, likely to be undertaken by competent hands, as he says, "The author has endeavored to place the situation of a candid member of the church of the story was before him, and to avoid distortion and coloring. The facts have been drawn mainly from authors in each denomination, and their own given, unless when opponents have denied the facts. Where the matter is controverted, the statements of both sides are, in general, placed before the reader, and he is left to draw his own conclusion."

From the extracts above given, it will be seen that a true Catholic spirit has guided in the preparation of this volume. As we finger the leaves of the publication, not only attracted by the illustrations, but imbued with the idea that it typifies most forcibly the union of a complete harmony, bound together in cloth, if not in Christian fellowship. May we not, right here, expect that as all diverging opinions on matters of fact and doctrine find a common converging centre, so may the pages tend to break down the barriers to a broad and universal Christianhood more universal in conception, and more harmonious in character.

**The Popular Science Monthly**, Edited by E. S. Youngmans, for April, comes as usual, filled with original articles, from some of the best minds of the age.

**Polar Colonization and Exploration**. A memorial to Congress by Henry W. Hawgate, a report to accompany bill, on the subject of "Exploring the Arctic Seas."

**Part VI. of the History of the City of New York**. Mrs. Martha J. Lamb, A. S. Barnes & Co. publishers. It does not lessen in spirit and attractiveness.

## SCIENCE AND MECHANICS.

**Knowledge in its Monetary Bearings.**—In visionary schemes, and almost herculean efforts to into projects, if not of a questionable character, aimed and hastily considered, it is refreshing to see evidences that real scientific knowledge is generally diffused among the masses. And stilling to see that this knowledge is being made to upon the practical affairs of everyday life. collect all the money worse than squandered utilize useless ideas and conceptions on art, mechanics and manufactures, it would form a e than mountain high. Hence, it deserves our en we find such minds as that of J. Thackray gland, at an annual meeting of the Birmingham d Institute, engaged in the discussion and n of the monetary or commercial value of sciendege. As chairman of that meeting, he enunllowing upon the relations such knowledge has pursuits, which must command the consideration : of the MONTHLY:

ly of Science we do not mean study in its highest se, a search after knowledge for its own sake, ount of study which is undertaken for the gives in competition with other manufacturers als, and with other nations. As a nation we kers, producers; we cannot afford to wander y-ways of learning for the mere pleasure of wledge; we must, or the great majority of us he broad roads already graded and laid out by kers, picking up all the information we can, in orderly fashion in our mental wallets for use

Others amongst us—a gradually increasing l strike out paths for themselves across untrodden ek for new treasures with more or less of success. ll make researches and experiments, nor are we the work; but we can all learn something of wn already, and so prepare ourselves to take and utilize the discoveries of scientific investi-ry artisan in the kingdom can, if he will, make untied with the principles on which the practices he is familiar are based, and there is no and no industry in the country which would ed by such knowledge on the part of its workers. rs now a considerable portion of our workers who are more or less well grounded in theory; ving a technical education, and when they enter the industrial army they must, in the natural ings, occupy prominent places. Even now holars, at present a comparatively small number, ay readily to the front, and in competition with humb men gain an easy victory. This patent rly make an impression on the artisan world, years we shall see that technical education will as a necessary part of the training of our d other workers.

readily understood how important is the posh theoretical and practical knowledge by the while the scientific man is capable of pointing nents in processes, he is so placed in the ases that he is unacquainted with the methods on the other hand, the practical man, looking

upon his processes as trade secrets, and being unacquainted with their defects, never seeks the aid which a knowledge of Science places at his disposal." Many instances of a persistence in wrong methods or in wasteful processes might be collected, but one alluded to by Mr. Bunce will sufficiently indicate the commercial value of a knowledge of Science.

"Birmingham, as is well known, reckons amongst its most important industries the manufacture of jewelry, and in the processes of coloring and refining gold and silver considerable waste of the valuable metals was, and probably is still to some extent, incurred. In the process of coloring gold articles a minute portion of the valuable metal is washed off; but owing to a want of acquaintance with the chemical processes involved, only a percentage of the gold is recovered from the washing waters. Thus, in recovering silver from the liquor, the usual process is to throw it down as chloride by means of common salt, but the workmen and the employers being unaware of the fact that an excess of salt redissolves a portion of the silver, have for years been throwing away a considerable quantity of silver. On the authority of Mr. Woodward, the Professor of Chemistry in the Institute, it is stated that one firm has effected a very material saving in this process entirely by the knowledge gained by one of its members while attending the classes of the Institute. Here we have a definite instance of the commercial value of a knowledge of Science; but, if the proposition were not obviously true and required to be demonstrated by evidence, many instances might be gathered together."

The commercial value of such knowledge is being still more remarkably exemplified in the utilizing of the "Blue Glass" theory—now the engrossing theme all over the United States. In a subsequent issue of the MONTHLY, we hope to give our subscribers a sketch of the wonders said to have been performed and cures effected by Blue Glass.

**Ornamental Iron Work.**—Professor Pliny E. Chase, of Haverford College, delivered the second lecture of his course on "Lessons of the Centennial," at the Franklin Institute recently. Beginning with a historical account of iron industries he referred to Tubal Cain, "an instructor of every artificer in brass and iron," about 3700 B.C.; chariots of iron and the giant Og's bedstead of iron, about 1450 B.C.; saws, axes and filters of iron, 1030 B.C.; iron work in Britain, A.D. 120; iron pillars in India over 1,500 years old; the importations of steel from China and Powticia in the times of the Roman Emperors; the common use of steel arrows by the soldiers of William the Conqueror; the mediæval iron work of Quinton Mutsy's and various unknown smiths, and the revival in England about the time of the first International Exhibition of the ornamental treatment of wrought-iron, which had nearly become one of the "lost arts." The process of pressing, punching, inlaying, mosaic, electrotyping, enamelling and repousse may be applied to iron and steel as well as to the precious metals, not only in the ornamentation of armor or personal decorations, but also in nearly every variety of vase, terra, plate, casket and in many household implements. In cast-iron ornamental work there is abundant

taste of design and merit of execution which are worthy of almost unqualified praise, and the structure of the Main Exhibition Building showed much commendable architectural effect from the judicious combination wrought in cast-iron. Prosper Schroyer's door, in the Belgian department, with its wrought-iron vines, grapes and bunches of climbing flowers; the grilles, altar rails, standard English fire-dogs, in the Loan Exhibition in the Pennsylvania Museum; the Hartford Cathedral screen, and the Centennial exhibit of Hart, Son, Peard & Co., show that the strength, plasticity and elasticity of iron fit it for a wide range of the most satisfactory decorative uses. The lecture was illustrated by ornamental specimens, both of cast- and wrought-iron, by lantern pictures and by an exhibition of the mechanical processes of snarling (or repousse) and chasing.

**Physical Phenomena.**—The *Honolulu Gazette* contains an account of a remarkable submarine volcanic outbreak recently, in Kealakenakauaby, near the terrace to the harbor. The natives report the eruption occurred at 3 o'clock in the morning, appearing like innumerable red, blue and green lights. In the forenoon several boats visited the place of the eruption, cruising over the most active part, where the water was in a state of peculiar activity, boiling and appearing as if passing over rapids, or very much like the water at Hell Gate, New York. Blocks of lava, two feet square, came up from below, frequently striking and jarring the boats. As the lava was quite soft, no harm was done. Nearly all the pieces on reaching the surface were red hot, emitting steam and gas, strongly sulphurous. Rumbling noises were heard like those made by rocks in a freshet, caused no doubt by the eruption of lava from a submarine crater, which is supposed to be a crack or line of rupture extending at least a mile from shore. Another rupture, doubtless a continuation of the submarine fissure, was traced inland from shore nearly three miles, varying in width from a few inches to three feet. In some places water was seen pouring down into the abyss below. A severe shock of earthquake was felt by those living at Kaowaloa and Kell during the night of the eruption, which must have preceded the outbreak. It was quite severe, but no damage was reported.

**Comparative Weight of the Brain.**—Although we do not consider the *weight* of the brain as of much consequence in comparison with the *quality* and discipline of the brain, still as disseminators of the scientific theories of the age, we give the following from a recent publication of Fowler & Wells:

**Comparative Weight of the Brain in Men and Women.**—As a contribution to social science, and as a curious illustration of the principles of psychology taught by Gall and Spurzheim, the latest results concerning the relative development of the various centres of nervous activity in men and women, may not be destitute of interest. Professor Jacobi, of Berlin, whose great work on the "Evolution of Society" is in its second volume, has made a most careful and exhaustive investigation on this subject as respects the Germanic races. He finds that the spinal marrow in women is appreciably smaller in transverse section than it is in men, and

that the development of the anterior horns of the gray matter is less marked; showing, as concerns the instinctive centres, a decided preponderance in favor of the male. It is true of the mammalia, as a class, and indicates an enormous capacity on the part of the male to endure muscular exertion. The contents of the spinal canal stand for the two sexes in the proportion of 100 in the female to 115 in the male. The frontal lobes of the brain in the male are to those of the female as 113 to 100. In men the idea-motor centres are to the rest of the brain as 51 to 100; in women, as 45 to 100. The temporospheroid lobes are as 114 in men to 100 in women; the vital centres as 107 to 100; the lobes of the cerebellum as 108 to 100; the occipital lobes as 111 to 100. The posterior parietal region preponderates in the female and is to the same region in the male as 105 to 100. The anterior parietal region preponderates in the female and is to the same region in the male as 105 to 100. The upper parietal region shows an average equality in both sexes. The lumbar section of the spinal marrow is as 105 in the female to 100 in the male. The relative weight of the brain in the two sexes during the forty years of active life, from 20 to 50 years of age, is as follows in grammes:

	Men.	Women.
20 to 25 years old . . . . .	1394	1394
25 to 30 " " . . . . .	1414	1414
30 to 40 " " . . . . .	1404	1404
40 to 50 " " . . . . .	1379	1379
50 to 60 " " . . . . .	1365	1365
Average during active life . . . . .	1389	1389
Relative proportions . . . . .	111	100

Dry as these data seem, they constitute such valuable materials for the comparative psychology of the sexes as enable the man of science to indicate the relative sphere of the two in active life. The distinction of sex comes into play, indeed, in the very first processes of fetal development, previous to any distinct traces of organic structure, the predominance of the serous over the mucous layer, or of the mucous over the serous; so that a practical physiologist would be able to state with proximate certainty whether a serous predominance in the first that the still-born embryo will produce a male, and from the mucous predominance in the last that a female will be the result.

**Captain Eads's Success.**—Captain Eads has completed the first installment, five hundred thousand dollars, of the States bonds, on account of the payment for his jetties, which have proved, as we always predicted, would, a grand success. The United States ship *Albatross* has passed through the line of jetties at low water, the first war-vessel to traverse the new channel. She required sixteen feet of water, and the least depth found in the channel was eighteen feet. The passage of the upper jetty required the ship under full steam-power in eight minutes and sixteen seconds. Between the jetties there is a channel four feet deep and two hundred feet wide. In the South Pass there is a minimum depth of two feet. On the charts of 1873 the last mentioned channel was fifteen feet; and at the mouth of the Pass, at the lead showed but three, four and seven fathoms.

## GOSSIP AND NOTE BOOK.

**The Bright Side of Life.**—More than half of the troubles of life are purely imaginary—and no small proportion of the other half made worse than they really are, by brooding over those that are already here, and anticipating those that have not yet come. The poet truthfully says:

"Where ignorance is bliss, 'tis folly to be wise."

Yet notwithstanding this, it is remarkable how much mental effort is put forth in order to ferret out and fasten upon some evil to befall us in the near or far future. Many a weary hour is spent in endeavors to penetrate the unknown, and work out some complex problem not yet visible to the physical eye. The midnight oil oft is consumed in vain efforts to lift the curtain which shuts out the time and vicissitudes of a life not yet born. With youth the "looking forward" is most always to the bright side, for then the pulsations are more active, the blood warmer, and hope brighter; then, bounding thoughts and swelling aspirations leap upward and onward toward the heart's wish rather than the mind's real reality. And, well that it is so. Their ignorance is joy; their life is happiness. Loth, indeed, should we be to change the order of Providence. God's wisdom is made manifest in thus rendering invisible to the young the shadows and dark spots of this checkered world. It is manifest in the ringing laugh and merry bound of childhood; it is reflected in the sparkling eye and implicit faith of our loved ones at home; it is crystallized too plainly in human history everywhere to make us desire to alter or change it had we even the power.

But what does it teach us? Does it not say, to those in more mature years, look at the bright side of life? see the silver lining which gilds the dark cloud? see the dawning springtime (now near at hand) with its buds, blossoms and flowers? Yea! more than all this—it tells us by the voice of inspiration that there is a beauty and a pleasure to be drawn from all things; that there is "good everywhere."

To send a ray of this light into each household where the MONTHLY finds a friend, is the object of this department. Little flashes or sunbeams, caught now and then, or gathered here and there, it will be our aim to cheer you with, and make many an hour, otherwise lonely, one of joy. May we not, in our editorial labors, receive responsive echoes from our readers in good words "fitly spoken" in our behalf!

**Celery.**—Celery is the greatest food in the world for nerves. Persons doing much brain work find it invaluable. In cities, where the brain and nerves are called to severe exercise, people hunger for it, and the demand for it grows so that ignorant people cannot understand why it should be so. It seems as though nature, in her quiet way, finds and materializes out of herself food or recuperation for all parts of the system that are exhausted in the demand for progress. Where people work their muscles more than their brains, beans, corn, meat and such food are most in demand, and celery is not in much demand. But in cities, where brain and nerves are overworked, appetite clamors for something that will repair the waste and do the weary parts the most quick good.

G. W. Davis, in a recent *Semi-Tropical*, says: "We have often been requested to name twelve varieties of our

THE ROSE OF SHARON.

roses which in our judgment were the best for amateurs to begin with in starting a flower-garden; and, although it is difficult to choose, where all are so lovely, yet we shall not hesitate to name the following varieties: America, Bon Silene, Chromatella, Empress Eugenie, Hermosa, Isabella Sprunt,

ROSE OF JERICHO.

Lamarque, Louis Philippe, Marechal Niel, Queen of Lombardy, Sufrano, and Zelia Pradel. These comprise varieties from each class, all the colors and shading, and the best in regard to vigorous growth, perfection of bud and flowers, and we believe will give general satisfaction."

**How to Rejuvenate an Old Rose-Bush.**—Never give up a decaying rose-bush till you have tried watering it two or three times a week with soot tea. Make the concoction with boiling water, from soot taken from the chimney or stove in which wood is burned. When cold, water the bush with it. When it is used up, pour boiling hot water on the soot a second time. Rose-bushes treated in this way will often send out thrifty shoots, the leaves will become large and thick, the blossoms will greatly improve in size and be more richly tinted than before.

**Known by his Walk.**—A tutor in one of the Oxford colleges who limped in his walk, was some years after accosted by a well-known politician, who asked him if he was not the chaplain of the college at such a time, naming the year. The doctor replied that he was. The interrogator observed: "I knew you by your limp." "Well," said the doctor, "it seems my limping made a deeper impression than my preaching." "Ah! doctor," was the reply, with ready wit, "it is the highest compliment we can pay a minister to say that he is known by his walk, rather than by his conversation."

**What is Fortune?**—What dost thou mean by fortune? If mere chance, then to envy the lot of others, or murmur at thine own, is folly; if Providence, then it is impiety; for whatever goodness, guided by unerring wisdom, doth, must be so well done that it cannot be mended; and whatever is merely in the power of a blind, giddy and inconstant humor (which is the notion by which men choose to express fortune), can neither be prevented, fixed or regulated.

"**Woman is a delusion!**" exclaimed a crusty bachelor to a witty young lady. "And men are always hugging some delusion," was the quick retort.

**The Human Face.**—The countenance of every nation defines the characteristics of its people. Every human face indicates the moral training as well as the temperament and the ruling traits of its owner, just as much as every human form indicates the quality and amount of its physical exercise. This is proven by the variety of human faces everywhere visible. Those whose lives have been given to physical labor, unbrightened by an education of ideas, have always a stolid, stupid expression, even while their limbs and muscles are splendidly developed. The more savage the people, the uglier they are in facial development. The very features of their faces are disfigured by violent and ungoverned passions. People whose employments are intellectual, have invariably a large, clear gaze, a bright outraying expression, as if from an inward light shining through a vase. Where a fine organization and a deep sensibility accompany the practice of intellectual pursuits, often the features take on a transparent luminous look. Persons endowed with powerful sensibility, however plain their features, always have moments of absolute beauty.

**May.**—Pleasant, indeed, are many of the social observations observed in various sections of the country, appropriate and coupled with the seasons. We all know of the anticipations as well as the happy realizations which about Christmas and New Year, when long absent friends renew their annual greetings around the festive board at least, the shadows of the past are forgotten, sparkling embers, and still more sparkling eyes as hearts speak of the silver linings and budding new life. The origin of many of these beautiful customs far back into antiquity, and to tradition mainly indebted for most of them.

The first of May is so called in England in connection of the festivities which, from a very early period and still are observed on that day. Many of the customs, such as plucking branches of trees, and adorning with nosegays and crowns of flowers, dancing around garlands, had no doubt their birth in the observances at this season in honor of "Flora," the goddess of fruits and flowers. Elsewhere we find that the first of May was typical of a young woman:

"The fairest May she was that ever went."  
Again, it signifies the early part of life:

"The May of youth and bloom of heartiest."  
It is the time when the hawthorn blooms, and the apple invites to the shady and emerald groves. It signifies *Maia*, so named in honor of the goddess, a fair daughter of Atlas, and mother of Mercury by It is the fifth month of the year, and, it is said, May dew falling on linen makes it a beautiful white. Indeed, many are the benefits conferred by this month upon the young and the old. "I shall be of the May," denotes the honor and delight which is regarded. Its observance is certainly a very beautiful custom, and we hope it may long continue.

**The Company will Pay for the Bees.**—Thank you, a thousand of them, to that unknown genius who cut a trunk, with a hive of bees in it, to the tender mother of Syracuse baggage-master, the other day. The company will pay for the bees, and the doctor thinks his patients around again in a fortnight or so.

**Knowledge and wisdom** far from being one and the same. Have oftentimes no connection. Knowledge dwells in heads replete with thoughts of other men; Wisdom in minds attentive to their own.

**It Might Melt.**—"Ah, parson, I wish I could melt with me," said a dying man to his pastor. "Melt," was the consoling answer.

**An Original Returning Board.**—Pettingill's first "Returning Board" of which he has any recollection was a shingle in the hands of his father. The third son and shingle—used to hold frequent committees in the back shed, but the returns came in so swift and fair count was impracticable.

A glass-blower has recently died, at the age of 80 years. His great age is another proof of the truth of the old glass theory.

## THE MORAVIANS IN THE REVOLUTION.

BY CHARLES H. WOODMAN.

MORAVIAN SETTLEMENT, BETHLEHEM, PENNSYLVANIA (FOUNDED IN 1741).

As seen from the Union Depot.

One gloomy night in September, 1742, two Shawnee left the Susquehanna's shore, and crept stealthily through the forest to slay the first intruder from beyond the great waters into the Valley of Wyoming. With tomahawk in hand, and scalping-knife between their teeth, they drew near the lighted tent. Hitherto their hunting-grounds had been inviolate, and their hearts burned with hatred of the white man who had dared to spread his canvas in these mighty woods. Noiselessly they approached their victim, and drew softly back the heavy blanket-door. Within the tent a man still young reclined upon a couch of dry weeds. His rich, brown hair lay in tresses on his shoulders; his fair and shaven face was filled with a light new to Indian eyes; his hands were clasped, his lips moved in prayer. Awe fell upon the savage hearts; a breath from

the Great Spirit descended on them, and they paused. The tent was pitched against a large sycamore, at the foot of which burned a dull, low fire. While the Shawnees were held in the grasp of awe, a large rattlesnake, roused by the heat, unwound its coils gleaming in the red light and crawled out from the hollow trunk. Raising its glittering eyes, it looked around, then dropped its head and glided toward the praying saint. It crept across his limbs, lifted its crest and looked him in the face. The Indians held their breath. The unconscious saint prayed on, nor knew his two-fold danger. The reptile forbore to strike; it glided quietly back to its den. Overpowered by a feeling they could not name, the Shawnees turned and sped away to their village. They called the tribe together and told them that the white man was the best beloved of the Great

Spirit. With hate now turned to reverence, the tribe brought the stranger to the village, and asked to hear of the God who loved his children so well.

The man so miraculously saved was Nicholas, Count Zinzendorf. Patron of the Moravians, and their brightest light, he had come to America to visit the missions. He pushed his way into the Valley of Wyoming and pleaded with the Indians to accept the Man of Peace. But the savages could not believe that a white man would cross the great waters out of simple love for their souls. They suspected he was a spy, who would soon lead an army into their forests. A council was held, and two of the bravest warriors were sent to take his life. But God caused the wrath of man to praise Him; the attempt to slay the preacher ended in the establishment of a mission, and the salvation of many souls.

The Moravians were a peculiar people, with a peculiar history. A few years before this, these poor, oppressed followers of John Huss, wandering in the German forests, came to the estate of Count Zinzendorf, in Lusatia, and were allowed to stay. The young nobleman was so moved by their simple piety and purity of life that he became a disciple. Ardently devoting himself to God, he gave henceforth his time and wealth as a Moravian missionary. The village of Hernhutt, whence the sect has its name of Hernhutters, quickly arose on his estate. The body spread through Bohemia and Moravia, and soon began that wonderful foreign missionary work in which their pure Christianity has always shone so brightly. They crossed the sea and carried their godly lives and preaching into the depths of the American wilds. From forests which had heard naught but war-songs and the whoop of savages, now rose the hymn and prayer. Around the Forks of the Delaware they built five settlements, giving them the sweet names of Judea or of Fatherland—Bethlehem, Nain, Freidenshal, Gnadenhal and Gnadenhütten. In

Georgia they went up a lovely stream to Savannah, in 1736, and founded the settlement of Ebenezer, which remains to this day. Another body of the *Unitas Fratrum* went to another tract of one hundred thousand acres, near Dan and the Taden, in North Carolina, and their domain Wachovia, for an estate of Count Zinzendorf in Austria. When they went to war with the Spaniards, the Georgia Moravians refused to bear arms, being subjected to persecution, many of them followed George Whitefield, who had been preaching among them, to Pennsylvania. A Moravian preacher chose a site ten miles from

and named it Bethlehem. He began to build a large house for negroes. The Moravians of Bethlehem bought it, and finished, called it for Moravia. It still stands in the eastern part of the village.

The Moravians were peculiarly friendly among the Indians. They were harmless in

A HISTORIC BUILDING—"THE SUN INN,"<sup>1</sup> BETHLEHEM, PA.  
Erected in 1758.

never were found in arms; never sold to the poor savage; never defrauded of land. They met with great success among untutored red men, in some cases entirely changed the character of a tribe. The place was called hütten, or "Tents of Mercy," was built for such Indians as became Christians. During the French and Indian war these settlements were greatly benefited, and Gnadenhütten was a special refuge to the unregenerated savages. In 1782, occurred the fearful massacre of three hundred Christian Indians by white

<sup>1</sup> It was long and favorably known as "The Sun Inn," and was the first house of entertainment for the Brethren within the limits of their earliest settlement in Pennsylvania. During the eventful period of 1780 it was the frequent stopping-place of many of the great and military heroes of the day, a record of which has been carefully preserved and forms part of our history.

pretext that they were about to attack the settlers. Shikellimus, the great Cayuga chief, father of Logan, whose touching speech on the massacre of his family has been preserved to us by Jefferson, was one of the Moravian converts and lived a godly life.

At the outbreak of the Revolution, the Moravian settlements in America were very prosperous. The brethren in North Carolina and Pennsylvania were wealthy, being thrifty tillers of the soil. At Bethlehem, especially, they had become a powerful

party, and they performed this office with impartial Christian love. Their sympathies could not help appearing, of course, but their acts were governed by the principles of the good Samaritan. They possessed a fifteen hundred acre farm at Bethlehem, besides outlying lands, about ninety buildings, all of stone; while the members of the community numbered six hundred.

While the smoke of battle still drifted over these forests from the Brandywine, one day in September, 1777, a heavy carriage drove up to

THE EAGLE HOTEL, BETHLEHEM, PENNSYLVANIA (1876).

influence. There they were delightfully situated in a fertile country. The scenery around the village was charming to the highest degree. A vast and beautiful plain stretched out toward the Delaware, whose two streams lay like shafts of light among the forests. Out of dense woods, on a noble height, the massive stone buildings of the Moravians rose into the air and looked off toward the Blue Ridge, the Wind-Gap and Water-Gap, the Kittatinny and great Broad Mountains. It was an earthly paradise, and the loving hearts of pure men had cultivated a patch of heaven among these wild hills. Although they were mainly patriots at heart, they took no active part in the struggle, holding principles of peace; but their situation made them often the hosts of each

the Moravian Inn and stopped. The outriders lifted from the coach a slight, pale lad of twenty and bore him up the broad stone steps. His youth and evident suffering opened wide the hearts of the tender Moravian sisters, always eager as they were to succor the distressed. In the sweetest and cleanest of beds the young soldier was laid; deft hands soon filled the room with the odor of wild flowers; and when the heavy curtains were drawn close, the delightful quiet after the roar of battle charmed the sufferer into slumber.

This was the Marquis de Lafayette, just twenty years of age and a Major-General in the American army. Fighting splendidly at the battle of Brandywine, determined to win the command which Congress had bestowed upon him as an honor,

he leaped from his horse where Cornwallis's cannons were mowing their cleanest swath, and called the flying patriots to rally and charge the guns. At this moment he received a fearful wound, his leg shot through. Reckless of this, he dashed off to the rear, barricaded the road and stationed a strong guard at the bridge to prevent the panic-stricken troops from crossing. Then he yielded to loss of blood, and was carried to Philadelphia, and thence by Henry Laurens, President of Congress, to Bethlehem. For two months the young hero remained in these kind hands, nursed in the tenderest manner by the pure-hearted sisters. When, finally, he set out again for the army, he had finished a chapter in his life which he was wont to say was one of the brightest and happiest.

While yet the young Marquis was in the pious Moravian hands, another noble-looking man came to the village and in broken English inquired for the wounded officer. It was Count Pulaski, who came to strike hands with his friend. The Pole's wonderful history was well known to some of the Moravians, who had even received, on their estate in Germany, some of his scattered followers. His majestic bearing, his high-bred courtesy and gallant manner, completely won the hearts of the simple sisters. He had commanded the cavalry in the late battle, but was now on the way to Baltimore to raise the legion which afterward fought so nobly under his lead. When his intention became known in the Moravian community, the nuns determined to make him some expression of their reverence, both for his personal qualities and for his services in behalf of liberty. Their deft fingers were soon at work upon a fabric which has won eternal fame. A field of double silk was made twenty inches square. On this glowing crimson ground the sisters wrought devices in yellow silk, shaded with green. On one side were the letters, "U. S.," and circling them the words, "Unita Virtus Fortior"—*united valor is stronger*. On the other side, in the centre, was the omniscient Eye, in a triangle within a star; thirteen small stars surrounded this device, and around all shone the legend, "Non Alius Regit"—*no other governs*. A heavy green bullion fringe adorned the edges of the banner. It was a beautiful piece of work; many beautiful hands and lovable hearts were employed upon it; and unnumbered, but not unanswered, prayers were woven in with the golden threads. Doubtless many unwhispered loving wishes also hid them-

selves within the seams and scrolls; women never saw such distinguished manners in their paradise as the Count revealed, and the charming courtesies pressed their hearts. They sent the general with their blessing, and no greater could befall a man than the benediction of these brave-hearted women. The Count was delighted and displayed the liveliest gratitude. The banner was carried standard through many bloody scenes, and still it lay last beneath its widened folds.

Not alone, however, by the fame of his deeds, but by its immortality been secured; for many members has woven around it a charm which memory young. Some of Longfellow's beautiful lines are in his "Hymn of the Nuns at the Consecration of Pulaski's Banner."

"When the dying flame of day  
Through the chancel shot its ray,  
Far the glimmering tapers shed  
Faint light on the cowed head,  
And the censor burning swung,  
When before the altar hung  
That proud banner, which, with  
Had been consecrated there;  
And the nuns' sweet hymn was heard  
Sung low in the dim mysterious aisle."

As the holy sisters chant, they wear a habit for mercy which well expresses a strong sense of their faith and natures:

"Take thy banner. But when night  
Closes round the ghastly fight,  
If the vanquish'd warrior bow,  
Spare him—by our holy vow;  
By our prayers and many tears;  
By the mercy that endears;  
Spare him—he our love hath shown;  
Spare him—as thou would'st be thou."

Take thy banner; and if e'er  
Thou should'st press the soldier's spear,  
And the muffled drum should beat  
To the tread of mournful feet,  
Then this crimson flag shall be  
Martial cloak and shroud for thee;  
And the warrior took that banner proud  
And it was his martial cloak and shroud."

For two years this consecrated banner was carried from the lance-head 'mid battle-smoke. It received the last glance of Pulaski as he was giving the charge upon Savannah, flag and banner were struck down by a cannon-shot. A lieutenant seized the banner and rushed

too, fell, riddled by fourteen shots. But with a few faithful soldiers he contrived to drag himself and his commander from the field. Nor was the banner left behind. The poet has taken some license with the facts. The noble Pole was buried by his lieutenant beneath a mammoth tree on St. Helen's Island; but the banner was not "his martial cloak and shroud." Lieutenant Litomiski, after closing the hero's eyes, gave the standard to Captain Bentalou, who, after bearing it in other fights, took it home

with him to Baltimore. In 1824 it

glory of battle which have made it sacred forever.

Two years passed on, and Bethlehem "saw another sight" in the way of distinguished foreigners. In the early fall of 1779 a private coach stopped at the inn-door, and a German officer handed out a lady of charming loveliness and several little children. The Baron and Baroness de Riedesel were on their way north, expecting to be exchanged. They were among the surrendered of Burgoyne, at Saratoga, and had been living with the other "Convention prisoners" at Colle, Virginia. Their stay now was brief, however, and the simple Moravians watched them curiously as they departed, thinking how near to their own old fatherland home they were returning. The Baroness, who seemed always to belong to the army as much as her husband, for she had shared his battles and marches, was in high spirits and

left behind her a ripple of the world's joy in the quiet nuns' hearts. She speaks of the country as one magnificent and richly cultivated, and says one district was called the "Holy Sepulchre," and another the "Holy Land." But the roused curiosity of these secluded dwellers was yet to be better satisfied. The German family, with General Phillips and two other English officers, reached Elizabethtown and confidently expected to cross over to New York the next morning, and be

THE LEHIGH VALLEY AT FREEMANSBURG, PENNSYLVANIA.

restored to liberty. As they sat at dinner, talking happily of approaching freedom, the door suddenly opened and an officer from General Washington delivered a letter, ordering the party to return again to Virginia, as Congress had refused to ratify the exchange. General Phillips received this with a paroxysm of rage; but the brave little Baroness choked down her grief and indignation, and soothed the irate Englishman. Although this best and dearest of women was so situated as to sorely need the advantages of the city, she turned about with the rest and took up the backward journey toward the wilderness without a murmur. Hers was a rare soul, and with German frankness she pours it out in her letters and journal. In these pages are found a sweet, child-like trust in God and submission to His will, seldom if ever excelled. Her letters, published

not long since, are among the most charming on record. And God rewarded her trust. They were forced to go no farther than to Bethlehem. Here the party remained six weeks. Madame Riedesel had ways of irresistible winsomeness, before which the simple Moravian hearts melted like snow. The children, too, were their mother's own, as charming and lovable as children can be. Children were not numerous at Bethlehem, for the Moravians were mostly celibates—forgetting that through the holiness of maternity came the light of the world—and now the little strangers were as sunbeams in some dim cathedral aisles where the joyous out-door light has been kept too softened. The little witch, Caroline, but three years old, was quite out of sorts with a cough, but nothing could repress her mischief-loving, merry-making spirit. General Riedesel himself was also ill there, and experienced the sympathetic, skillful nursing of the Moravians. He had been sun-struck in Virginia, and now suffered greatly with his head. In her peculiarly charming way, Madame Riedesel tells us how she won him to lay aside his pipe for the snuff-box, when he became relieved. The little lady entered into all the joys and sorrows of the nuns, chatting with them of Fatherland and of their own peculiar life. She bought "magnificent embroidery and other beautiful handiworks," taking them across the sea and cherishing them all her life. She was especially surprised at the factory for dressing leather, "which was as good as that of England and *half as cheap*." "All sorts of manufactories were there;" and "very clever cabinet-makers, workers in steel, and excellent smiths." She speaks with delight of often attending church and of "the splendid singing." One sad sight she saw, which deeply impressed her tender heart. The minister's wife died while she was there, and the good man was left alone, far from kindred and the dear home of their early life. The Baroness saw the body laid out in a barred enclosure, away from the dwelling, awaiting burial, for the Moravians never kept a dead body in the house.

But the party found that "Satan came also" even into this holy community. The Baroness speaks very indignantly of the extortion practiced upon them by the inn-keeper. They supposed him to be an honest and reasonable man; "and the more so," she adds, "as he belonged to the community of Moravian Brethren." The party

consisted of sixteen persons, besides four slaves. There were also about twenty horses. A windfall for the landlord, and he seems to have made the most of it. He treated them with hospitality when they first came there, and naturally turned to him now on their second visit. He would not make any definite agreement with the board, which pleased the officers, for none had money at the time. They liked their host more and more as the weeks rolled on, but weeks had passed, and they were to leave for New York, he brought in a bill of thirty-two thousand dollars, in American paper money, or about a hundred guineas in gold! The entire party could not produce so much, and they were in distress. But a wealthy royalist passed through the village at this crisis, and from him they were able to obtain what they needed, exchanging *piastre for eighty dollars*, so anxious was he to get hard money. These were the times of "depreciation of the currency." Aubrey, a British writer who was charmed with the Moravians at Bethlehem, says, in his "Travels," that his reckoning at a tavern in Frederick amounted to £732 sterling, with about forty half guineas! A curious reminiscence of the "Convention troops" occurred in New York a few years since. In December, 1866, a man of that city received from a German hotel a hundred dollars in *Continental* money, with a request that it should be placed to his credit. It was probably some of the money which the German troops of the king carried home with them after the war.

The inn where the royal officers expected such kind hospitality and such extortionate demands, was a spacious stone building, erected by the Moravians, and stood at the entrance to Bethlehem. It was a noble structure, of generous proportions, and pronounced by the British to be the best of English inns, which it resembled in all its appointments. It held famous guests in those days, the highest officers of both armies stopping there on different occasions. It was the one where Lafayette had spent months of happy convalescence, and where he had been his guest. Its table was richly laid, its *ménu* very appetizing to the gourmet and the glutton. The translator of "De Chateaubriand's Travels" speaks enthusiastically of its fare, and he experienced about this time. His party

taining men of national fame now, Pierce Butler and Charles Pinckney, "were constantly supplied with venison, moor game, the most delicious red and yellow-bellied trout, the highest flavored wild strawberries, the most luxuriant asparagus and the best vegetables, in short, I ever saw; and notwithstanding the difficulty of procuring good wine and spirits at that period, throughout the Continent, we were regaled with rum and brandy of the best quality, and exquisite old Port and Madeira." Certainly, however abstemious the pious Moravians were themselves, they knew how to provide luxuriously for their guests.

The Marquis de Chastellux himself came here in 1782, and has given us the best account we have of the settlement at that time. De Chastellux was a major-general in the French army, commanding the first division. He travelled extensively through our country, and has left us the liveliest pictures of its customs and condition during the war. His work is rare and of great value. This noble officer, on his journey southward, turned out of the great highway to Philadelphia for the purpose of visiting the Forks of the Delaware and the Moravian settlements. Before entering the village he rode to the Moravian mill, "the most beautiful," he says, "and best contrived I ever saw." This is high praise, from so accomplished a traveller, bestowed upon a mill in the depths of an American wilderness. But his account of the wonderful things it did, fully justifies his words. He found the cultivation of the fields and every branch of industry carried to a high degree of perfection. At Nazareth was a famous gunsmith, where one officer bought a brace of pistols of most exquisite workmanship. "Nothing can be more enchanting," adds his translator, "than these establishments; out of the sequestered wilderness they have formed well-built towns, vast edifices of stone, large orchards, beautiful and regular shaded walks in the European fashion, and seem to combine with the most complete separation from the world, all the comforts and many of the luxuries of polished life." Riding on through the majestic

forests between Nazareth and Bethlehem, the party were astonished with the delicious sounds of music. They turned aside and entered a house whence the harmony came. They found here only common workmen, who had taken up their instruments a few moments for their own amusement. The Marquis found, afterwards, that many of the brethren's rooms had violins and wind-

Near where Moravians were massacred by the Indians in 1755.

pieces hanging on the walls, and that this pious people were superb musicians. Surely here is a picture of a true Arcadia!

From the mill, the Marquis visited the church, not yet in the village, and which he thought was like the Presbyterian meeting-houses, with the exception of containing an organ and some religious paintings. The people seemed to regard the pictures with a feeling approaching to idolatry. Pressing on to Bethlehem, he took lodgings at the famous inn. The landlord was a retired seaman, and appears, as we have seen, to have shown a sailor's liberal spirit, at least in his charges. The Marquis could extract no information from him,

## THE MORAVIANS IN THE REVOLUTION.

at himself on a tour of inspection. It was to the House of the Nuns, or even; for in those days the Moravians were divided into classes, each class occupying a separate establishment. This house was of wood and of stone. The superintendent showed him through the premises—Madame de Saxe, a Saxon lady of rank and of elegant manners. She appeared quite pleased with the

beds, even in the hottest weather, and the visit to Bethlehem suffered much in this respect. Each nun had a separate bed, kept beautifully clean. They had one good sanitary principle; for fresh air was allowed in the sleeping-room, which was high and airy, with a large ventilator in the ceiling. The nuns dined at the refectory, had a good table. They paid into the treasury six pence per day for board. They had also to

The leader of the first Moravians, who settled in America in 1733.

illantry of the Frenchman in offering his hand, whenever they went up and down stairs. Her attendant was "a very mild, pretty-behaved Englishwoman, who had been a follower of George Whitefield." Wonderful lives many of these quiet people had led, and marvelous tales they could tell, if they would! The edifice had many large chambers, heated with stoves, in which the nuns were working; some on coarse work, like hemp and wool, others in dainty tasks of embroidery, or on "pocket-books and pin-cushions." The present peculiarly American habit was in full vogue even then; for the Marquis complains that the Americans were remarkably fond of soft feather-

beds, even in the hottest weather, and the visit to Bethlehem suffered much in this respect. Each nun had a separate bed, kept beautifully clean. They had one good sanitary principle; for fresh air was allowed in the sleeping-room, which was high and airy, with a large ventilator in the ceiling. The nuns dined at the refectory, had a good table. They paid into the treasury six pence per day for board. They had also to

for fire and light; beyond this they had earned. The "Sisters' House" had a parlor used only for evening prayers, as all attended church on Sundays. Still there was a chapel in the chapel, and several instruments hanging on the walls. The "House for Single Men" was situated near the nuns. A primitive but very effective method for awakening any brother in the morning was in vogue. Each bed was near the door was hung a slate. If a man was awake at five, he simply wrote on the slate the number and the figure 5; the morning seeing this, went to the bed at

There was also a "Widows' House," however, the wary Frenchman wisely abstained from visiting.

Superintendent of the "House for Single Men," a German, as, indeed, were nearly all the brethren. The Marquis found him in his study, playing music. He began a conversation on the subject, and found he was not only a musician, but also a composer. The superintendent sat down to the piano-forte and "disseminated excellent music," producing delicious and grand chords, *impromptu*. From the Marquis we learned the peculiarities of the sect, and in the Moravians, indeed, they are devoted to their studies in Germany. Officers from the army had visited the missions, and the practical Moravians were very friendly to the Germans, and a concourse with them, and nothing of the kind across sea, after. The

brethren advanced the sums necessary to support any mission, which then sent back all the surplus beyond what was required for self-support. When a person bought a tract of land for a mission, it was always on condition that he withdraw from the sect or emigrate, and the land should revert to the mission, and he paid back the original purchase-money. They had no creed; but their opinions were more liberal than Calvinistic. They, however, collected music and pictures to their churches, and themselves passionately fond of both. The Marquis says they had no bishops; which is a novelty, since they have had bishops from the beginning.

These dignitaries, however, are not powerful, and do not exercise an authority comparable to that in other sects.

Their discipline was monastic; recommending

celibacy without enforcing it, and keeping the sexes apart. Owing to this custom marriages were not frequent, and their numbers increased slowly, chiefly from converts. They discouraged marrying from inclination. If a young man felt moved to take a wife, he must first show that he was in a condition to support well a family. Then he applied to the commissary and asked that a girl should be given him. If he was not satisfied, he could refuse her; but he could not choose for himself.

The Moravians in North Carolina had no such pleasant war-experiences as befell their brethren by the Delaware. The Moravian town of Salem, with its outlying villages, was on the great highway through the Carolinas; and the war in the South was waged with remarkable bitterness. It became a civil, as well as foreign, contest; and every man's hand was against his brother. In this condition of things the Moravians had additional inducements to remain quiet and

BISHOPTHORPE SCHOOL, BETHLEHEM, PENNSYLVANIA.

neutral, besides their well-known peace principles. The slightest decisive act would have brought vengeance upon them, and it would have mattered not what side they chose, as their villages were occupied by both armies, rushing back and forth through the country.

When Cornwallis was pursuing Greene, in 1781, the Earl passed the shallow ford of the Yadkin on the 7th of February and struck at once into the Moravian country. Notwithstanding his wholesale plundering of the regions he had come through, his army had fared poorly, and their eyes looked greedily on the great barns that rose in the distance before them. The fierce Tarleton, in his entertaining history of the Southern campaigns, says, speaking of the Moravian country, "the mild and hospitable disposition of the inhabitants, being assisted by the well-cultivated and fruitful

plantations in their possession, afforded abundant and seasonable supplies to the king's troops during their passage through this district ;" but he abstains from informing us of the way in which these supplies were "afforded." Some mouldy old documents in the Society's archives, however, partially tell the story. During the three days preceding Cornwallis's passage of the Yadkin, companies and straggling bands of half-starved Americans passed through the village, but molested nothing. On the 9th, about noon, the Earl reached Bethany, now called Hausertown, and encamped with the whole British army. The men immediately spread through the village, while the officers entered the houses and began a term of most disgraceful rioting. The officers first seized and sent to the camp whatever was of use. Three hundred pounds of bread, all the flour that could be found, and one hundred gallons of whisky were taken. Sixty head of cattle, and innumerable sheep and poultry came next. The officers demanded twenty horses, but there were not so many in the place. The officers then threatened to burn the houses and destroy the settlement. The peace-loving "brethren" looked on in stupefied amazement; and the poor nuns were forced to conceal themselves in their homes to escape grossest insults. There were large quantities of liquor in the village, and several distilleries in the neighborhood. The officers, overjoyed to reach a land flowing with rum and corn-cake after such desert marches, gave themselves up to revelry. Of course, the men followed suit. The result was, that the whole army got so royally drunk that five hundred determined patriots could have bagged them, officers and all. So say the village records; and Cornwallis's "general orders" for the next day recognize the unusual flow of liquor.

During this "spree," some officers proposed to make every man in the village drink the health of King George. The Earl fell in with the wild scheme at once; hoping thereby either to get the men committed, or at least humiliate their pride. The leading brethren were dragged from town to headquarters, just out of the village. The head man was a German, Hauser, after whom the place was named. Cornwallis began with the old man; telling him he must drink the health of King George, he handed him the bottle.

Hauser flatly refused. No coaxing could prevail. An officer, then becoming angry, drew his sword

and swore he would run the patriot through did not drink at once. The honest old man was flanked; dogged obstinacy would do no more. A score of enraged, half-drunken officers surrounded him. Slowly stretching out his hand, he took the bottle from Cornwallis and said, "den, here is to de heilt of King Chorge." He raised the bottle to his mouth, tipped it enough to make it gurgle without discharging a drop, at the same time pretending to drink. Then, his lips unmoistened, the victorious Moravian handed back the bottle and, turning to his friends, whispered to his friends, "And he is na better for dat!" These others, catching the cue, drank the King's health in the same way. The Earl and his officers were too drunk to suspect the deception.

The effects of their debauch appear again in the evening orders, which appoint seven o'clock in the morning as the hour for marching, instead of six, as usual. On the 10th, then, the British army left Bethany and passed through Bethabara and Bethany ten in the forenoon. Here the Moravians were grievously maltreated and despoiled. A fine oxen among other things were seized. The British troops had taken seventeen noble horses at Bethany, and here they captured more. At Bethabara they entered Salem, occupying it for several hours in passing through. Cornwallis and his staff visited the Moravian establishments. As the head man was a royalist, the depredations were not so severe. But if the head man was a royalist, the cook was not. He was a Whig. Cornwallis wished for dinner, and the obsequious superintendent hastened to the kitchen. Here the cook bluntly refused to get a dinner for the invaders. The head man, Marshall, intervened and threatened. Then came Cornwallis and his staff, likewise coaxing and cursing. But they could move the sturdy Moravian patriot no more. He folded his arms and coolly told the Earl that he thought of the British King, his government, his army, and objects. Then, turning on his heel, he left the royal officers to ride away hungry.

This simple and pious folk endured hardships throughout the long war, and at its close were considerably impoverished; the communities suffering the most by far. After returning peace they flourished anew; and in the nation's progress they have maintained an ever pure influence. And yet, as we look

the Moravian fields in our country, we are by the extreme smallness of increase since the revolutionary period. This has been owing to an inherent to the system. The Moravians have maintained Spener's idea of *ecclesiastical* *simplicity*. But while they sought not to make a departure from other Christian faiths, they also did not slowly within their folds, owing to the principle of discouraging marriage. Their

This devout and earnest Christian sect has no creed, no confession of faith. Their doctrines are embodied in a catechism and service called, "Easter morning Litany," and used on the morning of Easter. They are very liberal and charitable in judging those who differ from them. There is no fanaticism or harshness in the Moravian heart. Their practice can be best described by the famous words of Augustine, "In essentials, unity; in non-

LECHAUWEKI SPRINGS, BETHLEHEM, PENNSYLVANIA.

regarding the holding of property have likewise been a drawback to their growth. In the last three decades have wrought many changes in this simple sect. The General Synod at Herrnhut in 1857, remodelled the constitution and took measures for a more general development of the churches and missions. There are three provinces, the Continental, British, and American. These govern themselves in all local affairs, but regarding doctrines and discipline they form one church. In the United States there are two districts, called "North" and "South," having their principal seats at Bethlehem and Salem. The American Moravians have become like all other bodies of Christians in the world. The system of seclusion and exclusiveness has vanished; there are no more "Brethren's" and "Sisters'" and "Widows'" Houses.

essentials, liberty; in all things, charity." No people ever displayed more of Christ's spirit of self-sacrifice and love to man than the Moravians have shown since their origin. The history of their missions beneath the equatorial sun and amid Arctic seas, is more wonderful and thrilling than any romance. Their religion has been a peculiarly warm-hearted one. A century ago, under the old *régime*, these fervid natures poured out, in their hymns and prayers, that glowing ecstatic love for Christ which is the inevitable outgrowth of a pure monastic seclusion. One of the hymns sung at Bethlehem when De Chastellux was there, sounds like the Canticles in mediæval robes:

"And she so blessed is,  
She gives him many a kiss;  
Fix'd are her eyes on him;  
Thence moves her every limb;

And since she him so loves,  
And only with him moves,  
His matters and his blood  
Appear her only good."

With this rapturous mysticism, however, were joined the utmost diligence in good works, and strong practical thrift in daily life. This passionate expression of the spiritual love, too, has now nearly disappeared.

The part taken by the Moravians in educating the young was begun very early in their career; for during the Revolution we find the son of General Joseph Reed, the incorruptible President of Pennsylvania, receiving his education at Bethlehem. To-day there is scarcely a large town in our country but holds in its bosom the fruits of the thorough and noble training which is given by Moravian teachers near the lovely Forks of the Delaware.

## AN ADVENTURE IN THE BLUE RIDGE.

By MARVIN HALL MARSH.

DURING the winter of 1855 my wife's health rendered life for her in Baltimore impossible. I determined to locate for a few months in that famously healthy region, the Blue Ridge, in Virginia. Tolerable fishing was to be had, and very fine shooting; besides, Harry Forrester and his wife, being our sworn friends, determined to join us. We were a happy party, just enough and none too many.

Mrs. Forrester was a perfect slave to her pencil and color-box, and often took long rambles alone for sketching purposes, whilst my wife, as an invalid, was compelled to remain most of her time indoors, Harry Forrester and I fishing, shooting, or exploring, as fancy prompted us. Our retreat was quite in the heart of the mountains, and the inn at which we stayed was a real old-fashioned Virginia inn, our host a quaint gentleman of the olden type.

Of course a winter in the mountains must necessarily be spent mostly indoors by ladies, and yet there were days, yea, often weeks, of fine weather, which we enjoyed to the uttermost. When shut up within doors we whiled away the time with books brought from the city. My wife's health improved rapidly under the pure, invigorating air, whilst the grandeur of the scenery compensated her in part for the loss of society.

Monday, the 8th of February, was Mrs. Forrester's birthday, and Harry on that morning presented her with a beautiful little pistol, which he had procured at one of the nearest stores, saying, "Jenny, dear, it may be silly, but I should feel more comfortable when you are rambling alone, if I knew you had this trusty friend in your belt or pocket." "Oh," she replied, "I don't sup-

pose I shall ever meet anything very dreadful, or I shouldn't go alone." "Well," said I, "it is a beauty, certainly! Take care you don't shoot yourself, that is all;" and with a laughing promise on her part to "try not," we went our different ways, to prepare for our usual expeditions. We were all eager to take advantage of the fine weather, such as is sometimes seen in February.

What blind moles we were! How little did any of us dream, that before another day drew to its close her life would hang on the way she used that revolver; that in a few hours she would meet that "something dreadful," so lightly spoken of to conquer it or die one of the most horrible deaths! On the day in question, Forrester and I started together with Mrs. Forrester; but the latter left us at the entrance to a valley or ravine in the mountains, which ran at right angles with the country we were to shoot over. She had often fancied that fine views were to be obtained from this gorge, and was determined to take advantage of the beauty of this day, to have a good day's work there. We bade each other a merry farewell, only Forrester insisting that his wife should take her revolver and plenty of ammunition; laughing she called back to us, "perhaps I shall bag a giant or two before I return."

At this point, though, I had best give place to Mrs. Forrester, and let her tell her story in her own words, as she told it to us long afterwards when she was in some measure recovered from the effects of that terrible day.

### MRS. FORRESTER'S STORY.

"The weather was so fine and so bracing, the scenery so grand and majestic, that instead of

stopping to work, I wandered on, always believing that the next ridge climbed would cap the present view. Thus one led to another, and yet another, and I only just began to find out how far I had strayed, further than was at all safe at this season, even though I had a pistol, when I awakened to the fact that the sun was sinking behind the high mountain crests to the west, and that did I not hurry, moonlight would be the only light by which I could return.

Of course drawing was now out of the question, and I looked anxiously around, to see what landmarks I had passed in the morning. Luckily, though long, the ravine was straight, and I could see far off the opening which I had entered at noonday, and which I knew by a very high rock which jutted from the mountain side, and overhung the entrance; but the road back was rugged, and precipitous in many places, though for the last half-mile it would be tolerably good. I judged this rock to be distant at least three miles, and I was now conscious of considerable fatigue, yet I calculated that two hours at most of steady walking would bring me at last to open country, when our inn would be not more than a mile distant, and where I flattered myself I should at last find some of you coming to meet me. Off I started, therefore, and walked with a will. In a very short time the sun went down, and then for a while darkness, the darkness of the forest, closed around me. To press on not minding the stumbles or falls, and to keep as brave a heart as I could, was all that was possible; and I had reached nearly the last bridge, close to open ground, and could see my rock looming through the dim light, now pierced by the first rays of the rising moon; then I thought I heard a sound behind me, and I paused for a moment to listen, thinking it probable some other person might be belated like myself. *For only a moment, though;* the next, I was rushing along as fast as terror could drive me, throwing away, as I ran, my sketching books, cloak, umbrella—everything which could impede my flight; for, in that one moment, all the tales told us on winter nights of the ferocious packs of starved wolves which sometimes infest these mountains, flashed through my mind, and I knew by instinct that the cry I had heard came from one of them as it had stumbled upon my trail, and that the whole pack would be down on me long before I could reach the inn.

For some moments as I fled wildly along, I never remembered my pistol; but as the hungry howling drew nearer and nearer, the horror of the death before me roused a courage in me such as I had never before known, and remembering my revolver, I determined to sell my life dearly. At this moment I gained open ground; the moon in its full splendor lighted up the scene, and brought into strong relief the frowning rock, not now far away, and which I thought, O! if I could reach it I am safe, for I knew that if I clambered its sides I could from thence climb one of the trees which grew near it, and which otherwise I could not even reach. I pulled my revolver out, hardly abating my speed, slipped the safety-stop and made for a thicket of pines some fifty yards in front; the cruel howling sounded closer and closer, and seemed as though hundreds of hungry wolves were at my heels; if I could not gain a little time I must be torn to pieces in a few moments. Suddenly facing them, as I reached the thicket, and instinctively remembering your directions, Harry, to aim low, I fired each barrel in quick succession, then rushed on again. I had killed some, at all events; I knew it by the howling and fighting over the dead bodies; I knew that these wolves never leave the mountain fastnesses unless driven by starvation, and that under these circumstances they do not hesitate to devour their dead or dying comrades; so on I ran, reloading as I ran, my hope being that I might gain time by firing amongst the troop. How it was I do not know; I suppose every one has felt the same when the first brunt of any danger is passed, and one is still safe, but a reckless determination, so to speak, not to be killed took possession of me.

On I went, my pace a little slackened, for I feared my strength would not hold out, and I was congratulating myself upon the precious moments I had gained, when I heard a horrible bark or howl so close behind me, that an agony of terror put my courage to flight for the moment, and I almost felt paralyzed with fear, as turning my head I saw two glaring eyes within a yard of me. In less time, however, than it takes to tell it, I revived again, fired, and waiting only to be sure the creature was disabled, struggled on once more, and now only a few more yards from the friendly rock with trees growing below it; I was looking to see which would be best to make for, when the pack came on in full cry. Alas! no friendly

thicket was near for my defence, and I knew all was lost if they once got to close quarters. I turned and fired, giving them all my barrels, though pretty much at random; then making the last effort I felt to be possible, I reached the rock and trees. How I scrambled up one of them I never have known, or what became of me for a while afterwards. I know only that when I came to myself and looked down on that sea of glaring eyes 'twas more than I could endure. Yet I saw they could not reach me, leap as they might; and all stories of animals gnawing trees down to get at their prey I believed to be pure fiction, so that I had only to sit still to be safe. But for how long? I had only two loads left; I could not count the wolves, but was sure there were over one hundred, and I did not know whether they would leave even at daylight. But even should they stay long, which was not probable after they found it useless, I suddenly thought that my husband would come to look for me, would come to this very entrance where we had parted, and probably come without arms and alone; if so, nothing could save him. This was the worst of all, and as I sat thinking of it, the cold dews of horror gathered on my brow, and I put back the whistle I always carried when walking alone, and which I was about to blow, for fear it should be too true an index to my place of refuge.

How long I sat crouching in those branches I know not. It must have been hours, for the moon had travelled far over head, when from the gorge before mentioned there came a shout! I knew the voice well, Harry, and would not answer lest I should lead you on to certain death. The few moments of suspense that followed were more terrible than all. But soon there came other shouts and at the same moment torches appeared with voices speaking together, whilst a large body of men turned into the valley. The relief was too great; I tried to shout too, but my voice died away in my throat; I tried to blow my whistle, but the sound I made was too faint to be heard. At last I remembered my revolver, and fired off both charges, and then—why you know what happened better than I do myself."

What happened to Mrs. Forrester was as follows:

As we neared the rock so often alluded to, and to which we were directed by the sound of the pistol as well as by the barking of the wolves, the pack left their useless pursuit and rushed *en masse* upon us. But we were prepared for them,

and they received two or three volleys so tell that after coming at us once again, they bet themselves to the shelter of the forest. I saw were prepared for them, for returning home our expedition about an hour before, we met a laborer who told us that "he and some one had seen the largest pack of wolves that which had been seen in these parts for forty years. They were descending the high ridges to these detached spurs, and as they were not far he "wondered we were not afraid to be so late in so small a party," for these wolves desperately savage when driven to it by starvation. We asked him in what direction they had gone with a view to a day's sport. Judge of our happiness to be told that it was the very valley where Forrester had been sketching. He pointed to a peak just above it as the point where he had seen them. Ere he had ended his sentence, we were hurrying home at full speed, hoping to find no fears groundless, when we reached there; it was hours later than she usually stayed out; our hearts sank as to our quick question of "Where was Mrs. Forrester?" my wife replied, "I do not know; she has not come in; I thought she was with you."

Instantly the alarm was given; all the people of the inn turned out each with a gun, and we went on our way to the entrance of the valley, silent with fear of the fate which ere this had probably befallen her. After the rout of the wolves had hastened to the tree and climbing it, by the aid of our torches, lifted Mrs. Forrester down. She was quite insensible, though unhurt. Except for a few and tears from falls and thorns, there was not a mark of teeth upon her at all events. We took her home and used every effort to restore her to consciousness; but, alas! the horrors she had undergone had been too great, and it was many, many days before she recovered enough to give us her account.

As soon as Mrs. Forrester was well enough to travel, we determined that we had seen enough of life in the Blue Ridge, and set full sail for Baltimore. Mrs. Forrester still treasures her day gift, and looks upon it as the chief blessing under Providence, of her life; but we, who had heard her tell her story, thought the pistol would have been useless, had it not been for the woman's pluck and incredible courage which bore her through hours of danger more appalling than any that falls to the lot of man to endure, much less that of a lady.

## LEGEND OF A WESTCHESTER (NEW YORK) HOMESTEAD.

BY CHARLES PRYER.

On the shores of the Sound, about two miles from the village of Mamaroneck, stands a large old house in which I spent my boyhood. It was built many years before the Revolution, and was the scene of several stirring events that occurred during that struggle, and I give the following tale on the authority of an old proprietor, whose mother is the heroine of the story.

One evening, during the time of the "old war," a young girl was seated in the library of the house referred to, waiting for the return of the family who were absent with some neighbors. While she sat watching the sun set, she thought of the fearful tales about the murders and depredations of the Skinners, that had been current of late, and wondered if they could be true.

Just as she began to get nervous about the protracted absence of the family, she was startled by a loud rapping at the front door, and before she could open it a number of armed men entered the room. They were all powerful, ill-looking fellows, with an appearance that clearly denoted the desperado, and were dressed in a half-civil, half-military costume, that was characteristic of those irregular foragers. Their leader walked up to the now trembling girl, and after questioning her as to the whereabouts of her father, and finding he was out asked, "Where does the old man keep his money?" The girl either not knowing or not caring to tell, replied with some spirit, "I do not think you have any right to know, and I shall not tell you."

The Skinner at this broke out with a volley of threats and imprecations; but not thinking it worth while to waste more time with the girl, left her in charge of one of the gang, and proceeded with the rest to search the house in quest of valuables. While the party was gone with their leader, the man left on guard entered into conversation with his prisoner, and told her that if his companions were unsuccessful in their hunt for treasure, her life was in great danger if she

refused to inform them where what they desired was to be found; but she still remained silent, and when the captain returned in a fury from his fruitless search, to question her again, she gave him no more satisfaction than she had before. Ordering one of his men to procure a rope and lantern, he caught the girl by the arm and half led, half dragged her to a large barn that stands a short distance in the rear of the house, where he proceeded to go through all the preliminaries of an execution. He passed the rope over one of the great oaken rafters of the building, and made a noose in one end, while he gave the other to one of his men, and told him to be ready to pull when he gave the word. He then got a barrel on which he placed the terrified girl, passed the noose over her head, and said, "I will give you one more chance for life; tell where the old man keeps his money and you shall be liberated; refuse, and you die."

The girl stammered out something about not knowing whether he had any or not, but still refused to say anything definite, one way or the other. The Skinner captain now ordered the execution to proceed, and the barrel was about to be shoved from under his victim, when a shot sounded upon the night air, and the robber leader lay dead. The next instant the barn was filled with British soldiers, and the girl was immediately released from her perilous situation. The soldiers had been brought by the owner of the house, who had returned home a few moments after the marauders had taken possession, and seeing how matters stood, left immediately for the British camp, which fortunately was not far distant. The commander at once despatched the squad of men that arrived so opportunely. It is hardly, however, to be supposed that the Skinners really intended to hang the girl (as that would have done them but little good), but merely thought to intimidate her into giving all the information she could about her father's affairs.

# ARCHITECTURAL PROGRESS, AS SEEN IN THE RELIGIOUS EDI- OF THE WORLD.

By REV. WILLIAM BLACKWOOD, D.D., LL.D.

## V. NORMAN ECCLESIASTICAL ARCHITECTURE.

LAST month, it was observed that the features of Lombard churches appeared in ecclesiastical buildings on the north of the Alps, and in process of time the ecclesiastical edifices of Gaul and of the region about the Rhine presented a marked type, which combined elements indicating an Italian origin, associated with others that were local in their origin, the result being the development of the style known as the Norman. The Lombard influence extended to the North and to the South. In Sicily it produced a singular combination, inasmuch as it became mixed with the Oriental style which the Saracens had introduced into that island. When

Charlemagne brought Bavaria, Saxony and Lombardy to yield to his sceptre, it was natural to expect that in architecture, as well as in other matters connected with civilization, the less cultured lands would receive an influence from those in which the arts and sciences had prevailed. On the death of his father Pepin, in A.D. 768, Charlemagne succeeded to the sway of Austrasia and Neustria, and in A.D. 771, on the death of his brother Carloman, he became master of all the dominions of his father. Saxony and Lombardy were subjugated, and in A.D. 800 he was crowned at Rome by Pope Leo III. as Emperor of the West.

He was a great builder of churches, and of religious edifices; and thus owing to connection with hardly a powerful influence passed ward over and became in all the land which his and the other vikingian men ruled.

About the ninth century a fierce tribe, the Danavians, appeared in the north, succeeded in conquering the north of France. The over which secured an empire was named, die, or the people, afterwards the Normans speaking

INTERIOR OF WALTHAM ABBEY.

kingdom, but a duchy held as a sovereign of the rest of France; the dukes of Normandy managed to gain of kingly sway until about the beginning of the thirteenth century, when the duchy was added to the French crown. It was during this time the Normans also established themselves under William the Conqueror, and to submit to Norman sway. They might have been expected from sea rovers, as soon as they had come down in their new lands, they began the arts of peace. In the middle

They accepted the style which they found had been prevailing in their adopted country, and they did not hesitate to employ such builders as were available, in the erection of churches, in the restoration of others that had been desolated by the wars, and in raising the castles and great strongholds on which their chieftains relied as central points in the consolidation of their power. Still, in their church architecture they did not slavishly follow the Italian or Roman styles that they found around them, for in Normandy proper, in Sicily and in England a style of building began to appear which assumed a distinctive character, usually called by the same name; but in these different regions presenting such peculiarities as authorize writers to speak of English Norman, Sicilian Norman, as well as the style which was developed in the Northern province of France. The last-mentioned class of churches present their claims for notice before advertent to the others. When Norman taste began to influence the character of architecture, the churches in different parts of France were overloaded with ridiculous figures and imagery of a debased character. This practice had prevailed to such an extent that the original features of the Roman style had been obscured; but the Norman builders cast aside the monstrous figures and the absurd imagery which a vitiated taste had sanctioned, and relied for grandeur of effect on the mass, the solidity, and the elevation of their buildings. Instead of aiming at great effects by meretricious adornment and overloading of minute details, they sought by a severe simplicity and correctness of outline to satisfy the judgment and to elevate the mind. Then again, in reference to a feature of great importance which gave character to Norman churches, and which also became prominent in successive styles, it is well observed by Mr. Gally Knight: "The Normans had the boldness to insist upon an addition to their churches, which is admitted to be the grandest feature and chief ornament of ecclesiastical buildings—I mean the central tower. Towers had fortunately become an integral part of churches before the Normans began to build in Neustria (the former name of the district of France afterwards called Normandy);

but the few towers which at that time existed in other parts of France only adorned the western end; and to this day scarcely anything deserving the name of a central tower is to be found in France beyond the limits of Normandy. No one will be prepared to deny that the effect of a cathedral as a whole, and the fine play of its outline, are chiefly produced by the central tower. Take away the central tower, and in situations where the whole fabric can be seen at once, how tame the cathedral becomes!"

INTERIOR—WHITE CHAPEL, IN THE TOWER, LONDON.

Great solidity formed a leading feature in Norman edifices. The walls were rubble in their character, that is, the centre was made of stones of different sizes and forms held together with a plentiful supply of coarse, strong mortar, while the outer face was composed of smoother stones so as to make a regular wall. The mortar was often cast in while quite warm, and as the walls were thick the whole mass soon became united together in a firm bond, and no buttresses were required to sustain them; though at an early date the bald and plain appearance of the surface was relieved by incipient projections or buttresses which stood out a little so as to break the flat uniformity of the wall. Little need be said touching the Norman castle. Generally, the houses of the Normans were built of wood; but the barons, fully aware of the danger of unsettled times, took care to

shield themselves in fortified strongholds. On an eminence, or on the verge of a precipice, the great structure arose, with dungeons underground, the walls of immense thickness, the windows few and narrow, the entrance high up and reached by a staircase, commanded by those who were within and above. The keep or stronghold was enclosed in one or even two courts, and by means of flanking walls every contrivance was adopted which the military science of the age could devise, to resist aggression from without and shield the inmates in

semi-columns were attached to them, so as to enable the arches to spring from their capitals. It would seem that the piers with the semi-columns attached, are later than the single column, the thickness of the pier being no doubt required by a desire for strength and safety when larger buildings began to be raised. In all cases where pillars were introduced, capitals are used, and at first they were quite plain; but after the commencement of the eleventh century they were ornamented with leaf

of a peculiar character, which are easily recognised as characteristic of this style. Even when foliage was introduced, the architects aimed at retaining as much as possible of the Roman element; in the use of semi-columns attached to the piers and in the case of small columns at the jambs of windows, a practice obtained which was directly opposite to the Roman custom, inasmuch as the Normans set the pillars back into the recesses while the Romans projected them, and this custom obtained so generally that it became a

THE CRYPT OF ST. PETER'S, OXFORD, ENGLAND.

their home. Even in these castles, so far as windows, the heads of doors and the jambs of openings are concerned, the ornamentation was similar to that which prevailed in churches, and indicated that both were from the same hand and belonged to the same age.

The Norman church in plan was a Basilica, with a semi-circular apse which served as a choir. In large churches transepts and aisles were introduced, but in village or rural churches the building was small, in form a parallelogram, with the apse at the eastern end. In edifices where there are aisles, the arches which divide the aisles from the central nave either spring from Norman columns (of which a description will be given further on) or as frequently was the case, piers were built and

Windows were semi-circular or round-headed and they were undivided by any perpendicular horizontal bar. Small columns were placed at the external jambs of the windows, and from their capitals mouldings were carried around the heads of the windows. Like the windows, the doors were round-headed, and on either side columns were placed increasing in number in proportion to the magnitude of the building. The great thickness of the walls enabled the builders to place these columns on a splay line, so that when two or four or more stood on each side of the door, the arches rising from them overhead formed an embayed porch of a most effective character. Doors and windows in Normandy were never ornamented with the same degree of richness as the English

builders produced in their churches; and it is worthy of note that Norman builders still adhered to the plain column instead of being led away into the very questionable practice which prevailed

INTERSECTING ARCHES,  
From the Cathedral of Lincoln, England.

in the twelfth century in other parts of France, and which is so conspicuous at the entrances of the great Cathedral of Chartres; where statues and figures in different forms are made to occupy the place of columns, in violation of an obvious principle. The column is for support, while the statue is for honor and for ornament, and it may be placed in a niche or under a canopy; but the departure from principle among the Greeks in the use of caryatides can form no valid apology for a similar violation of propriety and taste in later times.

In Normandy a great degree of plainness, even in many cases extending to baldness, characterized the smaller churches; while in England the type was carried out with more adherence to style, and the enrichment of windows and doors was often of an exceedingly florid character. The different kinds of ornament introduced by Norman builders

will be better understood by an examination of the illustrations than by any mere verbal definitions. They have been known as the chevron, the zigzag, the rope, the billet, the star, and in late specimens the dog-tooth was introduced; while in foliage, the ivy, the vine and other vegetable forms were used. In the early period of Norman art there was little or no ornamentation, and the bands which were carried around the arch from pillar to pillar were quite plain; but eventually the style

ARCADE, NORTH TRANSEPT  
OF NORWICH CATHEDRAL.

became affected by influences from other provinces.

In very early Norman churches, the roofs of the main building were of wood, but the apse was vaulted with stone. In time, the side aisles were vaulted, and the nave being wider had a wooden roof; but in the middle of the twelfth century vaulted roofs became common, at first being without ribs, and made of small stones held well together by a strong band of good mortar. In a few cases only, dome-vaulting was introduced over the side aisles. The reign of this style in Normandy lasted from about A.D. 900 to the year A.D. 1100; but of all the earliest buildings few specimens remain. According to Mr. Knight, the Abbey Church of Bernay is the

DOORWAY OF BARFRESTON CHURCH, KENT, ENGLAND.

oldest Norman building of any consequence which remains in its primitive condition. Like other structures of that age it is quite plain, but it acquires dignity from its size. At Jumièges and

Cerisy the abbey churches, portions of the Cathedral of St. Goreu and of the Church of Mount St. Michael, belong to the first half of the eleventh century, while two churches at Caen date from the second half of that century.

Until the age of Duke William, who subjugated England, the Norman style was exceedingly plain,

CHRIST CHURCH, HAMPSHIRE, ENGLAND.

but a love of ornament began to prevail in his reign, and by the beginning of the twelfth century it had widely extended and a florid character of architecture was firmly established. As an eminent architectural critic has said, "When the love of ornament prevailed over a more lofty sentiment, the vicious consequences soon appeared in an admission of the singular ornaments in which other parts of France had long rejoiced. From the corbels under the eaves, the monsters descended to the portals, from the portals they forced their way to the capitals of the interior; till in the end no

part of the building was undisfigured by this heterogeneous and mis-shaped brood." The rage for this species of ornament continued for nearly fifty years, but it was greatly abated at the close of the twelfth century. In Caen there are two churches, one of them being built by William the

Conqueror and the other by Matilda his queen, the churches of St. Etienne, and of the Holy Trinity. They are good specimens of the age. The west end of the Church of St. Etienne, the whole of the body, and the interior with the exception of the choir, are nearly in the state in which William left them. The building is in the form of a cross with an apse at the end of the nave and one at the end of each aisle. Half columns attached to piers uphold the arches that divide the nave from the aisles. The capitals are enriched with simple foliage. A clerestory lights the centre and there is a triforium over the aisles. The groining of the nave is evidently of a later date; but this plain church of Duke William is characterized by a substantial dignity and an aspect of solemn repose. The church of Matilda—the Holy Trinity—is much more ornamental. The doorways in the western façade are enriched. Internally the piers are light and lofty; the pillars and capitals have more foliage than in the other church, while in the apse there are two rows of pillars, one row above the other, and underneath the choir is a crypt of which the roof is supported by a great number of pillars. The taste

and munificence of the royal foundress is still further displayed by an embattled fretwork which is carried round the arches of the nave. No better specimens of the architecture of the age can be seen than these churches present, and they are easily accessible to all our citizens who enter France by way of Havre and Rouen.

The effect of the Norman conquest in England was as powerful in the department of architecture as in any other sphere of social life. The followers of William, who had distinguished themselves in the field, were forthwith endowed with fair lands

manors. They became feudal lords and  
 in great castles which they were  
 erect for the main-  
 their power, and these  
 as at Newcastle-on-  
 wich, Rochester, Lon-  
 elsewhere over the  
 all bore the impress  
 the style. Their walls  
 immense thickness, so  
 lead, that, as at New-  
 yne, a monarch could

 and all these struc-  
 ated the age in which,  
 the race by which,

built. These doorways were a chief  
 all these buildings, and their great rich-

ness still impresses the modern beholder, while  
 they display the taste of a rough and daring age.

ROUND CHURCH, CAMBRIDGE.

LITTLE CHURCH, OXFORD, ENGLAND.

The windows were narrow, but the splay on the  
 inside was so great that considerable light was  
 admitted, for the narrow part of the window  
 stood at the outer face of the wall.

In ecclesiastical buildings, attempts had  
 been made to introduce Norman forms into  
 England from the time of Edward the Con-  
 fessor, and builders were beginning to  
 abandon the rude Anglo-Saxon style; but  
 when Duke William brought over the clergy  
 who were settled in important abbeys and  
 rich dioceses, they began to build with  
 amazing industry, and the country soon bore  
 witness to their energy and zeal. English  
 Norman was an importation from France;  
 but it is a fact that in England the style  
 was displayed in much purer forms than in  
 the province whence it came. And so deci-  
 dedly is this the case, that even a non-  
 professional eye can detect the difference.  
 There is a majestic grandeur, combined  
 with a feeling of unity, that appeals to the  
 spectator with a power which is never ex-  
 perience in the French Norman building.  
 In the latter there is a mixture of styles which  
 indicates a want of taste; but in the portions  
 of those English Norman edifices which  
 remain, there is a unity apparent, which  
 shows a decided apprehension on the part

FRONT OF ROCHESTER CATHEDRAL, ENGLAND.

of their builders of what a style should be. In the Anglo-Norman churches, the piers, pillars and capitals are all remarkable. Some pillars were octagonal, some were ornamented with a spiral band, and some had a cable moulding carried around the shaft. The arches were semi-circular, and they were frequently embellished with the ornaments of the style; especial attention being given to the arch between the nave and the chancel. In early specimens, a flat boarded ceiling with painted ornaments covered the nave; but in cathedrals and large churches the naves were vaulted with stone, and in process of time groins with

decorated ribs were introduced. The Norman tower was low and dumpy, usually little more than a diameter above the roof. The tower walls in small churches often had blank semi-circular arches intersecting each other ranged along the walls, with a single light window in the lower story, and a double light opening in the upper story or belfry. The walls of the tower had a horizontal finish, and the embattled parapets which are now seen on old Norman buildings are of later date. The tower was placed at the west end in small churches, but in cathedrals and large churches it rose above the crossing of the nave and the choir by the transepts. In England, many of the early Norman churches have quite changed their appearance, because in all cases where parts of them were destroyed by fire, the restorations were made not in the original style, but in the style which then had come into use. Hence, at Durham, that majestic pile which crowns its lofty site with one of the most really magnificent specimens of church architecture in the world, shows the nave, the western towers, the transepts and the choir in massive Norman; while the eastern end of the choir is crossed by the beautiful transept known as the Chapel of the Nine Altars, in Transition Early English. The great window of the northern transept is in the Decorative period, while in the additional story

NORMAN, SHOWING ZIGZAG ORNAMENT.

the work of Gundulph, brought from Bec near Rouen. He was consecrated by Lanfranc, in A.D. 1077, who aided him in procuring the means of building this cathedral. All who look on the nave of Rochester see the oldest part now existing of any of the great English churches. It retains nearly all its original features; the western window only being changed and the roof of the nave being raised. Then, again, the work of Bishop Walkelyn at Winchester, in the two transepts and the huge central tower, still remain to attest his undoubted skill; for like William de Carilepho, of Durham, he built for all future ages. Peterborough is also justly proud of its far-famed nave. It was finished in A.D. 1143, by Martin de Vecti, but the roof appears to have suffered, as Abbot Benedict made certain restorations as late as A.D. 1177. Then, again, the nave and choir of the first-class Cathedral of Norwich, together with the Castle, have borne testimony for centuries to the vastness of the

NORWICH CASTLE, SOUTHWEST VIEW.

conceptions and the energy of the men who founded them and who carried these enormous edifices to completion. Fine specimens of this style may also be seen in the nave, aisles, transept and west front

RECESS OF WEST FRONT OF ROCHESTER CATHEDRAL.

of Tewkesbury; the nave and west front of Malmesbury; Wimborn Minster, Dunstable; St. Cross at Winchester; Romsey in Hampshire; and in many of the remains of the early larger "religious" houses. In other cathedrals, the style is displayed in the nave of Ely; the western towers and nave, choir and round part called Becket's Crown at Canterbury; the nave and choir at Hereford; the Chapter-house at Ches-

ter; the nave at Gloucester; the prebendal and other parts at Chichester; but the limits of our space forbid any attempt at details. The illustrations given in this paper will amply suffice to indicate to the eye the peculiar features of this most impressive style. Parish and rural churches of the eleventh and twelfth centuries, of great beauty, abound in England, and they all bear the impress of their Norman parentage; but as most things human change, so the features of the Norman began to

INTERSECTING ARCHES From the Abbey of Croyland, Lincolnshire.

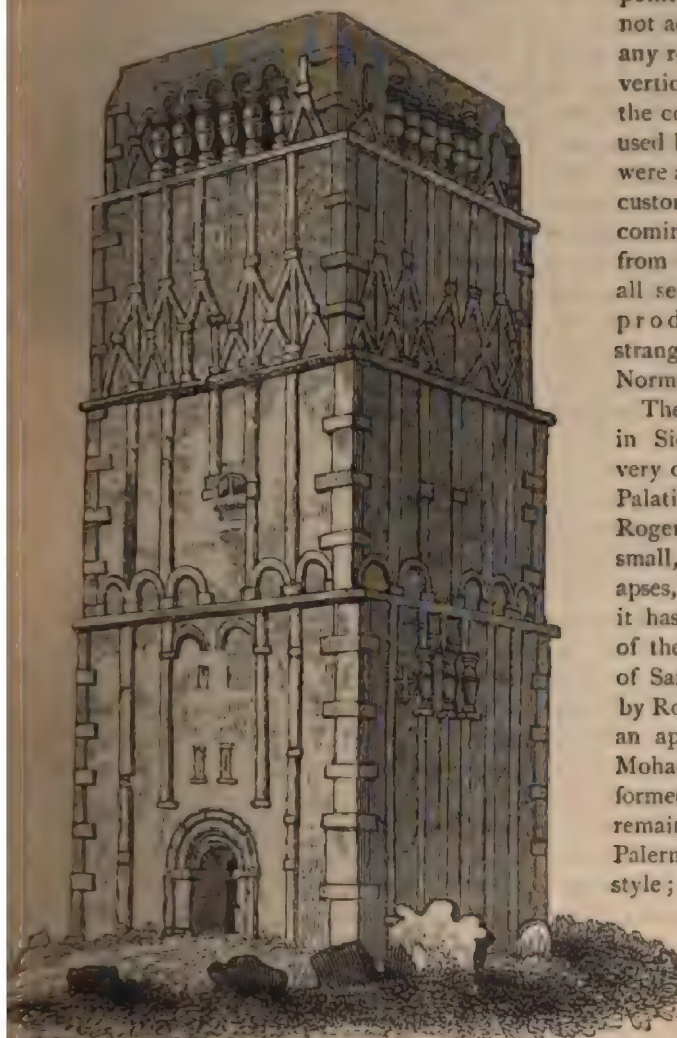

place to a different, and in many respects a later and more impressive style, which in another paper remains to be described.

NORMAN CAPITAL OF NORWICH CATHEDRAL.

Touching the Norman-Sicilian style, it may suffice to say, that in Sicily the Normans produced a style which is not seen in any other country. It was Saracenic in its arches, Roman in its pillars and capitals, Byzantine in its cupolas and mosaics, and Norman in its enrich-

THE TOWER OF EARL'S BARTON CHURCH.

ments. Even in the forms of the churches a change obtained. The kings and chiefs adopted the Latin form, thus showing an adherence to the faith which they professed; but the body of the people adopted the Greek form which had been familiar to the inhabitants from ancient times. In this mixed style there seems to have been no prevailing principle, for the pointed arch was not adopted from any regard to the vertical principle, the columns were used because they were at hand, and custom or usage coming down from former ages all seem to have produced the strange medley which was recognized as Norman in this island.

RECESS OF EAST FRONT OF ROCHESTER CATHEDRAL.

There are three or four Norman churches in Sicily which illustrate this mixed style very characteristically. One is the Capella Palatina at Palermo. It was built by King Roger, and finished A.D. 1132. Though small, it has a nave, side aisles and three apses, the form being an oblong, and yet it has a Byzantine cupola over the junction of the nave and the transept. The Church of San Giovanni degli Eremiti, also built by Roger at the same period, has so Oriental an appearance that it might be taken for a Mohammedan mosque. It has five cupolas formed of stone, and four of them yet remain. The Church of La Martorana, at Palermo, is another specimen of this mixed style; and the Norman Cathedral at Monreale, four miles from Palermo, is quite gorgeous, and rich in mosaics. Sicily presents the best specimens of this strange hybrid style, but examples may be seen at Cerini in Cyprus and at Toledo in Spain.

## ANGLING FOR A PRIZE.

BY LETTIE ELLIOTT

YES, I belong to that much-abused sisterhood, and it seems to me that considering our important position in society, we deserve a little more respect, and a little less persecution; for I would like to ask the gentlemen where in the world they would find wives if it were not for the prospective mothers-in-law? But, no, we are considered lawful targets for all the shafts of wit and sarcasm that are flying recklessly about, and not one magnanimous soul ever takes up a pen in our defence. Indeed, the mother-in-law is greatly to be pitied—all the family disputes, quarrels, and misfortunes, are laid at her door, and her mission, according to the popular theory regarding her, is told in a very few words. After angling adroitly for years to secure a matrimonial prize, she succeeds at last in obtaining one for the guileless maiden of perhaps thirty summers, and then she immediately sets herself to work to create a disturbance in the family, even to the extent of causing a divorce; for a man would much rather blame the mother than the wife, because even if he has ceased to care for the latter, he hates to believe that she would willingly and of her own accord separate from a delightful creature like himself.

Being a mother-in-law, I am, of course, sensitive. I had one daughter, Elinor, and a pretty, winsome darling she was too, although she had plenty of fire and spirit in her nature. At sixteen she began to have lovers, but she did not seem to care for any one in particular, and so she rejected, in her gentle, deprecating way (that made them love her more than ever), one man after another, until she was twenty-three years old. Then Charles Cramer appeared, cultivated, handsome and fascinating. I saw that she was pleased from the first, but I soon understood his character, and knew that he was not the man for her; for, although generous and affectionate in disposition, he would be exacting to the last degree—a very tyrant. So when I saw that he was trying his best (and successfully) to win my darling's love, I sent for him, and begged that he would desist from visiting her. He looked at me in utter amazement. "Mrs. Elliott," he said, "I love your daughter, why do you object to my suit? Am I not a gentleman?"

"Certainly, Mr. Cramer," I replied, quietly, "and most women would feel proud to receive you into their family, but you and Elinor will be happy together."

"Why do you think so? I will try to make her life a pleasant one—I can gratify her every wish—I am rich, and you surely do not think niggardly."

"Far from it—I know that you are generous and not at all fault-finding."

"Then tell me why you object."

"Because I understand your disposition well, Mr. Cramer; you will make a tyrant of a husband; Elinor is very high-spirited, and although she may submit at first, it will not last."

"You do me great injustice, Mrs. Elliott," I assured him. "I love her too well to make unreasonable demands, and I have flattered myself that she returned my affection."

"That is what I feared, and so I sent for you to beg that you will let the matter go no further, and that you will cease in your attentions to my child."

"I cannot make any such promise, Mrs. Elliott. I cannot give her up. You will not try to seduce her against me?"

"Certainly not; it would only incline her more to take your part. She would be more devoted to you then, for a little opposition renders an affair of this kind ten times more interesting. So having gained nothing by my appeal to her, I determined to take Elinor as my wife. She objected at first, but she was never a selfish girl, and finding that I was really very anxious, she made the necessary preparations, and was married to me the very next day."

But we had not been in Springfield long when one morning Elinor came in to me, looking very pale, with cheeks, eyes and face all aghast. "Oh, mother," she cried, "whom do you think I have seen? But you will never guess. It was Mr. Cramer; and, mother, he asked me to be his wife."

"And you have accepted him?"

"Accepted him? Why, mother, I am a girl that would not feel proud to be married to any other man."

My heart sank, but I tried hard to look pleased, and not chill the heart of my child in her young happiness.

"Are you angry with me, Mrs. Elliott?" he asked, when I saw him afterwards. "I could not help following her, life seems so dark away from her. You will forgive me?"

"Oh, yes, I forgive you, but I tremble for the future." They did not seem to have any misgivings, however, and as there did not appear to be any object in our staying away now, we in a few days went home, accompanied by the persistent suitor.

They were married in six weeks, and left me all alone; and after a long bridal tour, they went to housekeeping in a pleasant village several miles away, and although they both wrote urgent and affectionate letters, inviting me to make my home with them, I thought it best not to do so. But I sent for an orphaned niece, a bright, intelligent girl, who proved a great comfort to me. For the first six months the newly-married pair were very happy; Elinor wrote me that she had the kindest husband in the world, and he also pronounced his wife quite perfect—I hoped that it would last. After they had been married somewhat over a year, Charles told his wife that he was going to Boston to spend several months, and wished her to accompany him. They were to board at a fashionable hotel, which was not at all agreeable to Elinor, and she begged her husband to take rooms in a private boarding-house, but he refused very decidedly, without giving his reasons for so doing. "Charley," she pleaded earnestly, "I dislike being in a hotel so much; let me go and make mother a visit, while you are in Boston."

"I prefer to have you with me," was the concise reply.

"Why, Charley," she said, "how odd you are to-day!"

"Odd, because I desire my wife's society?" he asked, and she said no more. They went to Boston, and one evening after they had been there a few weeks, a lady requested Elinor to go and try the piano in the parlor of the hotel; and she, being a fine musician, consented at once. Her voice was remarkably clear and sweet, and she soon had a large and delighted audience. Suddenly her husband appeared beside her, and in sarcastic tones whispered, "Had I not better pass around the hat, now?"

"Certainly, if you wish it," she replied, commencing another air.

"I wish you to go up to your room at once," he continued, in the same low voice.

"I have promised," she said aloud, "to sing two songs for Mr. Arthurs, then I will go up stairs, if you desire." So she sang the songs, chatted a few moments with the company assembled, and then sauntered slowly up to her room. She had never seen her husband so furiously angry before, and she looked at him in amazement. "Well, Mrs. Cramer," he inquired, "how often do you intend to perform for the gratification of a mob?"

She opened her eyes to their full extent, and with a sudden gesture of disdain, replied, "You are angry, Mr. Cramer, and I must say that it makes you very absurd."

"Absurd, or not, I will have no more such exhibitions."

She closed the book that she had taken up and answered coldly, "You insisted upon bringing me to this hotel entirely against my own wishes, and now that I am here, I certainly shall not make a prisoner of myself. I have done nothing improper. The mob of which you speak, consists of the ladies and gentlemen to whom you have introduced me, and I am happy to have given them pleasure."

"It seems to me that a modest woman would confine her audience to a smaller number."

"If you will mention the exact number that may listen to my singing without derogating from my reputation as a modest woman, I will try to have all others kept out of the parlor when I perform."

"Well, I wish no more of it." Elinor did not go into the parlor again, but at the table where they sat there was a very agreeable Parisian, with whom she was in the habit of conversing in his own language. One day her husband demanded that she should cease her conversations with the polite Frenchman. Completely out of patience, she turned upon him indignantly, saying, "Mr. Cramer, I shall go now as I first proposed, and make my mother a visit."

"I forbid your going."

"Indeed! you forget that we are living in the nineteenth century; I shall go home to-morrow." And she came back to me, hurt, indignant, and angry. "Why did you let me marry him, mother?" she exclaimed.

"Oh, my darling," I said, as I tried to soothe her, "this will not last; we are all unreasonable sometimes; you know Charley loves you, and now that he is alone he will regret his churlishness I hope."

"He would make me his slave."

"Oh, no, this will be a lesson for him, Elinor; if he pleads for forgiveness, you must not be obstinate."

"He will *never* do that." And at this moment, Janet, my niece, entered the room, and in her sweet, cheerful way, drew Elinor into a lively conversation, that made her forget her troubles for a time at least. Janet was not a brilliant girl, but she had an exquisite tact that was almost a talent, and we loved her dearly. Five weeks or more passed away, during which my darling received several letters from her husband, amusing, careless letters, such as any good-natured acquaintance might write, and I frequently saw the tears in her eyes as she laid them away. At length he came himself, greeting her as if nothing unusual had passed between them, but said that he was going to take her home. "Charley," she replied very quietly, but firmly, "I wish to remain here a few weeks longer, then I will go back, if you desire it." I saw an angry look come into his face, but he said nothing. "Oh, Aunt," Janet inquired of me a few moments afterwards, "why does not Elinor go back with her husband?"

"She thinks it wisest to remain here a short time longer; Mr. Cramer has made some unreasonable demands, Janet."

"But, Aunt, is it not a wife's duty to yield to the wishes of her husband?"

"Of course, my dear, she should do so generally, but you do not know how much Elinor has been tried."

"I know that it's not any business of mine, but I do feel so sorry for them both, and Mr. Cramer is such a splendid man."

"Elinor is worthy of any man living."

"Yes, Aunt, but"—Of course the child did not see with my eyes.

Mr. Cramer went away, and about a week afterwards my darling took a severe cold which ended in pneumonia. I saw that there was no hope of her recovery, and sent at once for her husband. He came with face all drawn and pale with mental suffering, and seizing my hands, exclaimed, "Oh, mother, is this my work? Am I to blame?"

"It would have happened just the same," answered, "if she had been the happiest in the world." She died in his arms, with her head in mine, and he begged that he might stay with me. I could not bear his presence then. I told him to go away and travel for a year, if he still wished it, to return and share my life. He seemed to consider his mother-in-law the best friend he had. That year passed away the darkest, saddest year of my whole life, and he returned. I knew how it would end; I forgave all; Janet was very lovely, and she had proved to him from the first the most delightful man of my acquaintance. Before six months had glided by, I knew that those two loved each other more than their own lives, and still they did not confess their love. It was very hard for me; it wrecked the life of my Elinor, and now he has my sweet Janet, who had been like a daughter to me ever since my darling's death, but resignation is a necessity in this world. One day I saw the young girl sobbing in her own room and my heart would break.

"What is it, Janet?" I inquired; "tell me, child."

"Oh, aunty, he is going away," she said.

"You mean Mr. Cramer, of course, dear; does he go?"

"Oh, I cannot tell you that," she murmured, hiding her face.

"Where is he now? I will speak to him myself. I soon found him, looking pale and aged. "Why are you going away, Charles?" I asked at once.

"I dare not tell you, mother," he replied, "I have darkened your life sufficiently already; I will go away now, and not cause you any more trouble."

"You love Janet; is it not so?"

"Yes, mother; how could I help it?"

"And she loves you in return?"

"I have not asked her that."

"Why not, if you love her?"

"And would you give her to me? I dare not entrust her happiness into my hands."

"Yes, Charles, I think that you would be a better husband to her than you ever were to poor Elinor. She is yielding, gentle, and loves you with her whole heart. You will not take an unfair advantage of her gentle disposition; you could not bear at first to see their happiness

cruel; but then it was very natural. I said that no man wanted a mother-in-law. Janet's reply was, "but you know." And so they settled the matter. Now there is a little dark-eyed Elinor about the house, who upsets my work-

basket, raveling my yarn, and will not let my cap remain straight upon my head, and she is the very image of my own lost darling. Charles has become a kind, devoted husband, and when inclined to exercise the old dictatorial spirit, he says that all he needs is one glance of warning from the eyes of his mother-in-law.

## IS IT EDUCATION OR TACT THAT WINS

BY HORACE PLATO SPENCER.

observer there is a marked difference in progress among the moving throngs in the great thoroughfares. Those who are out of doors loiter at the more attractive shops, and make a sort of holiday on the occasional stand still and gossip with old acquaintances whom they chance to meet, and are impediments to the more active pedestrians.

A certain number press right on as if nothing but the object in view, which is their destination in the least time possible. Of course, they could make greater speed in a car or a cab, but in either case some expense would be incurred, and therefore, unless the necessity be very great, they trust to their own means of locomotion and power of endurance.

It is not a miniature view of the world at large, everywhere, humanity presents the same conditions, though in degrees made variable by place, and circumstances. In general there is a hurrying as if some important issues were to be decided by bridging space with accelerated speed; but amidst this conspicuous haste are clusters of individuals who, despite their business and responsibilities, loiter on with complacent indifference, make life a mere amusement, spend means and time idly, and as they age find themselves drifted high and low in conditions that are absolutely pitiable, which they have themselves alone to blame. They cannot eat their bannock and still complain. That is a commonplace, but nevertheless a truth. An old proverbial philosophy is as much. Nor was it ever until now that there was anything wrong in the more rapid economical getting ahead of the lazy,

the loitering, and the indifferent. The new doctrine, propounded, we regret to say, by a minister of State, amounts to this: That in the general struggle of life, one has no right to use his best endeavors to surpass his fellows. Or, to revert to our simile, the more active pedestrians in the street are, as an act of justice and propriety, not to outdo the feeble or sluggish, who prefer to take things easily, without a thought as to the probable consequence of their lethargic movements. In short, all must go at a decorous funeral pace; no one is, on any account, to strive to get before another.

This is the new philosophy that was set before an assembly of students at Edinburgh on the subject to which studies should be directed. The Earl of Derby did not seem to object to what he termed a *wholesome* emulation, but somewhat contradictorily opposed any one trying to do his best in the rivalry of his fellows. "I am not blind," he said, "to the advantages which a State gains by the existence among its citizens of a strong feeling of social emulation; but personally I am not a believer in what has been called the 'gospel of winning.' It is a gospel which can only be preached to a small minority. To be successful in the world's sense, means to have got over your neighbor's head; to be rich, as the word is used, means to be richer than your neighbor; and by the very nature of the case, these are results which, if everybody aims at them, involve failure and disappointment to nine out of ten. We all start in life with the notion of beating our equals in the race; it is a useful stimulus at the outset of a career; but I think I have noticed that as they go on in life, most men who are worth their salt think more and more of

doing their work as it ought to be done, and less of the return in fame or gratified vanity which it is likely to bring them. College successes no doubt give a good start in life, and are a useful preparation for that keen professional competition which, whether we like it or not, is inevitable in most employments. I do not assuredly undervalue them in that respect. But if we are to look at the naked truth of the matter, I do not think I could honestly tell you that the highest literary, artistic, or scientific culture always leads to what the vulgar call the substantial prizes of life. Many very illiterate persons have accumulated large fortunes by their own energy and sharpness. Even in the most intellectual professions many men have risen high, and filled considerable posts and enjoyed widespread reputations, who knew but little outside the range of their professional work, though no doubt they knew that thoroughly well. Do not understand me as denying or doubting that habits of industry and mental training are an advantage for active life; they are an advantage, and a very great one; but what I would urge upon you is that devotion to study, if it be real and sincere, must rest on motives far stronger, reasons more conclusive than can be drawn from a calculation of chances in the great lottery of the world. Culture may disappoint you, if you seek it for what can be got out of it; it can never disappoint you if you seek it for itself. Say what we like about the lessening of social differences there will always be a gulf not easily passed over, a difference which must make itself seen and felt, between the cultivated and the vacant intellect. The man who has read little and thought little, to whom history has no meaning, and for whom literature has no existence, may prosper in business, but he prepares for himself a dull existence and a melancholy old age. There are many such; and sometimes you see them toiling on to the last, determined, as they say, 'to die in the harness,' not because they have any further need to work, not even because their work continues to interest them, but because they have no other interest and nothing else to turn to. I hardly know a more miserable alternative than for a wealthy and prosperous man either to exhaust his last years with needless labor,

Bankrupt of life, yet prodigal of ease,  
or else to sink into that vacuity and *ennui* which, to an active temperament, is often worse than even acute suffering."

These views are in the main sound, if from the standpoint and plane of life occupied by his lordship, or those in affluence and idleness, which form but a minor or small proportion of the world. They are practicable only with a state of independence, or such as are free from the necessities of winning their subsistence. The horizon is not sufficiently broad to take in the *greater* number which goes to make up the world, the nerve, the talent, genius, muscle and forces which move and control the great systems of States and nations. With the men those who are dedicating their best efforts to the acquisition of knowledge, there are and must ever be men who are entirely independent of the inherent good which such knowledge gives. Nor is it at all true that these incentives should be of a superior or worthless character. Fame and reputation, in themselves mere bubbles, are even worth the pursuit, if they are to be found in the things they sometimes are, upon honest efforts in the pursuit of truth and right. Nothing, indeed, can be as pure metal, no matter where found or by what means coined. It will stand the ordeal of both public and private scrutiny. True greatness is a thing of other words, none the less great because the discoverer's name is on every tongue, his achievements spread far and wide. Thus built, both fame and reputation are to be regarded as prizes worth working for. They inevitably, as time wears on, bring as their sequence, what might almost be inseparably associated with happy life, Honor. For this many of the noblest spirits recorded in the world's history have lived, and died to win. To gain the world's esteem, men and women in all ages have consecrated themselves to their ideal. History, Art, Science, Literature and Religion have been wedded by indissoluble bonds in early, middle and mature life to thousands who saw first in the pursuit of Honor as one of the principal rewards of life, and toil.

And in contradistinction to the opinion of the Earl of Derby, what shall we say of wealth as an incentive to education? While it is true that history is sparse in her names of those who have acquired riches as the outgrowth from literary or educational labor, still that compared to the many that have made fortunes by accumulating worldly possessions, have even

and stimulated students while gathering wisdom, and by the potent and living illustrations of success, they have been able to climb over barriers and surmount difficulties which without these forces might never have been accomplished.

Weakness of the views advanced to the effect is still more apparent when we consider the condition of the mind of youth. Young man sees but dimly the *inherent* good; he does see (as he thinks) clearly the profits of worldly sense which must flow from his grasp. Money and the influence it gives, are means ignored by him. Gauged by any standard you choose as to its intrinsic worth, "Tact," he says, "carries with it power." We all know that this power is coveted by no insignificant proportion of mankind.

This leads us to consider education as a *winning* of what we call *success*. If success be defined by the ability to accumulate money and to gain influence, we may well ask how does education meet the required ends? To question better, we inquire, how far does the present system of what is called a scholastic education qualify for that success? If the chief objects of mental training are money, to what degree of perfection are the products of our colleges fitted for the work which is upon them? Measuring this success in the light we speak of, are we not forced to the conclusion that the major portion of those engaged in classical or literary pursuits are miserable failures? While the mind has been disciplined (the chief objects in view), and the memory stored with knowledge as gleaned from the curriculum of the college course, have these not been at the cost of a sacrifice of individuality and the everyday-world-wisdom, in many instances equal to or more than the benefits derived from our present course? Weaned as the student is not only from the bustling world for a period of six or eight years, at the very budding of life, does not his loss of daily contact with the real world and matter as they move up and down the ever-shifting tides and ebbs of the business-world, more than counterbalance the advantage of purely theoretical book-learning? These are questions of the highest importance, and they demand the consideration of the best minds of

the plowshare is brightened only by constant

use and contact with the soil, so, we believe, the mind can be made really bright only by continual contact with men and things. What the world calls TACT is that brightness which penetrates the very thoughts and emotions of men.

This Tact is the one thing needful, in addition to knowledge, in order to succeed. Independently of each other, we may well ask which is the most valuable as a factor to success? Which would win, Education or Tact, in a fair race for the prize, success? With these interrogatories might be placed another, Does not the educative process in our colleges weaken this power?

While we do not in this paper propose to answer all of these queries, we are free to say that we believe that Tact will win nine times out of ten, in the race for success. The disciples of our present system of education would find, on such a trial of strength, that their representatives failed in the struggle. The history of the business world shows this. Here and there the world is dotted with those who mainly through the strength and capital of an education have carved out wealth and influence; but almost everywhere are the foot-prints seen of men and women who have won the golden prize through that intrinsic capital called Tact. In civil life, Tact sees the time and opportunity to strike and the men and things that are to guard and protect the actor. In war, it meets the unexpected emergency, supplies the breach in rank, and fills the gap at the opportune moment. It is said,

"There is a tide in the affairs of men

Which taken at the flood leads on to fortune."

Tact seizes this tide at the flood and utilizes its power. It captures time and opportunity by the forelock, and appropriates their offerings to individual aggrandizement. Every practical man knows its worth. As a factor or element of success it is indispensable in almost every department of life. The banker, broker, manufacturer, merchant, and man of commerce, base their prosperity in a large degree upon tact. Nor is it the less valuable even to the professional man. The lawyer, physician, minister and teacher are indebted to it for a large share of their prosperity. As a commodity in the commercial, financial and literary world, it is always marketable, never at a discount, but most generally draws a premium. As its value is generally conceded, we are led to inquire (1), Is it a teachable faculty? (2) Does our present college system of education develop

it? Tact is defined by Webster as *touch, feeling, faculty, peculiar skill, nice perception*. Now, to educate is to draw out, unfold, discipline, and store the mind. If the definition of tact we have presented be correct, it is certainly clear that in a large degree it is a teachable faculty. Keeness and quickness of perception are in a great measure the result of the *using* of this faculty. Peculiar skill is one of the fruits of *individual* training. It is evident that we are able to answer affirmatively the first question, "Is it a teachable faculty?" To the second interrogative, "Does our present college system of education develop it?" there comes no response at all satisfactory; but on the contrary we are compelled to acknowledge negative if not positively opposite results—whether these be from pursuing the strict class system, or severe memory-tax method of instruction so general in our higher institutions of learning, we are not fully prepared to say. It needs no great stretch of comprehension, however, to enable any one to understand that our present system of education is decidedly defective. It fails to give us a graduate fully equipped for the battles of life. Our common-school system also, though much boasted of, most lamentably fails in many of its pretended achievements; and in lieu of turning out young men and young women armored for both the aggressive and defensive duties which crowd upon them, it gives feeble and vacillating crops of both

every year. The technical departments of education, where the hand and head, the eye and brain, the muscle and mind, are schooled together—one to *think*, the other to do—the first to see, the second to feel—give to the world much more of what the world calls for. Many of these institutions are private, and the instruction is largely *individual*. This personal education does not deaden the native force and talent of the pupil, even if it fail to arouse latent power and genius. Our truly great men and great women are never imitators; they mould and carve from nature's own creations. The minds of such move not always with public opinion or the great current of thought; but more frequently they are the opposing forces—waging war upon error and ever holding aloft the banner of truth and right. It is to be regretted that our FREE SCHOOL system has crippled and even driven out of the field such a large number of our private schools and seminaries. With their retirement individual instruction is greatly diminished, and with its decrease a very conspicuous aid to tact-training disappears. For it matters not from what standpoint we view it, we find that success is based in an eminent degree upon what the world calls *tact*; and to it more than education in its general sense, is due the credit of achieving many of the greatest victories over mind and matter. It is the sure courser that wins in the long or short race of life.

## SEA DRIFT.

BY THOMAS S. COLLIER.

SMALL, moss-grown fragment from some hidden wreck

Now lying in a far-off ocean cave,  
How long have the winds tossed you at their beck,  
Hither and thither on the rolling wave?

Through what old argosies of other years  
Did you float upward to the light of day?  
Were their dead guardians armed with shields and spears,  
'Or dark mouthed cannon frowning for a fray?

By what strange lands have you been journeying?  
Did you come far through the bright orient seas,  
Where dainty flowers their fragrance rich out fling  
From unknown islands, crowned by patriarch trees?

Ah! what sad scenes have you been witness to,  
When the dark waters rose in dreadful might,  
And loud the storm wind sang, white pale and blue  
The phosphor flame shone buried in the night.

Then, when the staggering ship swept madly on,  
With torn sails fluttering like spectres gray  
From spars that bent and broke, till all were gone,  
And she rolled shuddering 'mid driving spray,

What wild eyes gazed despairing through the storm,  
That never more will see the land-loom rise  
Which tells of home, and kisses sweet and warm,  
And the glad glory of bright love lit eyes.

You saw them, and then drifted swiftly on,  
Past reefs that echoed with the breakers' roar,  
And met the day, like a ghost sad and wan,  
Stealing up toward a cold and wreck-strewn shore.

Strange company you've had. The albatross  
Has shadowed you with his ne'er tiring wing;  
And sportive dolphin in your track would cross,  
And huge whales o'er you foamy sprays would fling.

And now you lie here on this shining sand,  
And fill the soul with many a vague surmise  
Of the strange sights you've seen on sea and land,  
That never can be shown to mortal eyes.

Moss-grown and water-soaked you lie at rest,  
No more the waves will toss you in wind-glee;  
And while you moulder here, some foam-crowned crest  
Sweeps on with a new message from the sea.

## MISS WARREN'S MISTAKE.

By Miss M. C. HOLMES.

ALONE in her cosy sitting-room, half-hidden in the depths of a sleepy, hollow chair, sat pretty Helen Warren, lost in reverie; her hands were folded idly in her lap, and the tips of two dainty slippers resting on the fender added to the *dolce far niente* attitude of the attractive figure momentarily revealed by the firelight's sudden flashes.

"I will have to give a decided answer to-night," soliloquized the young lady, frowning in deep thought and mechanically smoothing out the wrinkles with her fingers. "Ned demands it, and deserves it, and I must make up my mind to accept or dismiss the boy without further hesitation. If I'm in love, the real feeling certainly differs from the ideal I have had, but Aunt Hannah may be right in denouncing all such thoughts as romance and foolishness; certainly at twenty-three one should be sensible. Well, I'll leave it to Fate!" And having thus divested herself of all responsibility on the subject, Miss Warren reluctantly arose and obeyed her summons to the parlor.

"How could you keep me waiting such an eternity!" exclaimed the visitor reproachfully, advancing to seize her extended hand as Helen entered the drawing-room door; "It was positively cruel! here I've been waiting a full half hour, enduring most horrible tortures of suspense."

"You are mistaken, Ned," calmly replied the young lady, languidly glancing at her watch; "it is precisely six minutes since you entered the house; one should not exaggerate, you know." And Miss Warren wheeled a chair in front of the glowing grate, sank comfortably back in its cushions and serenely folded her arms.

"You'll thaw, if you get so close to the fire!" and with an irate glance toward his placid companion, Ned threw himself pettishly on a sofa in the furthest corner of the room. "I never did see such a girl as you are, Helen; one day all smiles and dimples, the next, a regular ice queen; a fellow can't come anywhere near you without danger of being frosted; you've nipped me in the bud already; I am utterly blighted; now Nellie, come," he pleaded, melting into a softened state and subsiding into an ottoman at her

side, "do have a little pity on me and be good to-night; you know I'm half frantic when you treat me coldly; put away your teasing and give me some satisfaction; it would be so easy for you to make me happy, Nellie!" and Ned captured the white hand nearest him and patted it softly, not daring to make any further demonstrations.

Miss Warren's dark eyes grew a shade deeper in hue, and the little tremor of her lips proved she was moved. Hers was a lonely life, without father or mother, brother or sister. Suitors she had had, but all failed to interest her, and at length she became convinced that the love of which she dreamed existed only in imagination.

When but twelve years of age she had been left an orphan, and her life from that time until her twenty-first birthday was quietly spent in the seclusion of an old-fashioned boarding-school; her wardship then expiring, and finding herself mistress of a very comfortable income, Helen furnished a house in the city, and invited a widowed aunt to superintend it, determined to live no longer without a home. Caring little for general society, she depended chiefly upon the companionship of a few old schoolmates who were congenial in mind and tastes, and through one of these friends she had first become acquainted with handsome, impulsive Ned Harding.

During Miss Warren's reverie, Ned had the prudence not to interrupt her train of thought; so, holding the one hand fast between his own, he watched the shadows of changeable feeling chase each other over the fair face before him, and felt a dim consciousness that there were depths in this nature he never yet had fathomed.

Suddenly Helen leaned toward him, and placing her other hand on his, said, softly, "Ned, do you truly love me, and if I promise to be your wife are you sure, very sure, you will never regret it?"

"Regret it, Nellie! how could I?" was the rapturous reply; "and do you really promise?"

"Yes, I promise, for I sincerely like you, Ned, and in time my feeling may grow stronger; are you content to accept the regard I can give, such as it is?"

"Content! I am in Paradise! and to tell the

truth, Nell, I believe you care more for me than you think you do;" with which encouraging remark Mr. Harding encircled his lady love's waist with his arm, and pressed a kiss upon her passive lips.

"There, that will do!" exclaimed Helen, drawing back with a start and a slight blush. "Fold your arms and be sensible; I am going to catechise you, so be honest and answer truly. How many times have you been in love in your life?"

"Never before," replied Ned, with an injured glance, and a tone of decision; "as for imagining myself so afflicted, that was a different thing; but the delusion always passed away in a very few days."

"And, please, how long does your lordship think this attack will last? until you meet another new face that strikes your fancy? It is only two months since our acquaintance began, Ned; remember that."

"It is more than enough time for a man to learn his mind, Nellie, and if I'm satisfied you should be. In a day or two mother will send you a letter asking for a visit, and we'll have a jolly lark; you will like my mother, she's a regular trump, and admires you hugely already; she is only waiting my permission to congratulate you, for I told her three weeks ago we were as good as engaged."

"How dared you take so much for granted, you conceited boy! At that time the idea of marrying you had never entered my mind; and as for your mother's congratulations, pray for what am I to receive them? Is your honor's offer such a brilliant one?" And an amused smile parted Miss Warren's lips, and slipped out in a silvery laugh.

"Don't be sarcastic, Helen, it isn't comfortable;" and the young man rose and moved farther away. "Hear what my venerable brother says about you, and recover your amiability," So saying he took a letter from his pocket and proceeded to read aloud: "If you have seriously decided that Miss Warren is the woman you desire to marry, I wish you happiness and success; but by all the powers that be, Ned, I beg of you"—"Oh that part is stupid and won't interest you," remarked Mr. Harding, carelessly turning the page; "we'll skip it and begin the next sentence." "Miss Warren is certainly a woman in a thousand; one worthy a man's thorough respect and love; and if she promises

to be your wife, my brother will be proud of Fortune's favorites." "There's a catch for you, Miss Helen! John will make a poor brother, for you're just a girl after his own kind—dignified, sensible, and generally superior. He never cares a snap for pretentious women like Annie Conway, who can do nothing but dance divinely and sing ballads like a nightingale. As for your old classical music"—

"Hush, Ned!" exclaimed the young lady with heightened color; "be silent on a subject so grand for your comprehension. It is time to go now, and I insist upon one thing—tell your family of our engagement it is all in confidence, not another soul must suspect it. We are more than commonplace friends; please me in this?"

"Of course, if you say so; but for how long?" exclaimed the young man, petulantly. "Give your ring a week ago, and want to see it."

"What blissful self-confidence! Never mind the ring; there's a whole lifetime before us for the present our engagement must be a secret. So saying, Miss Warren ushered her lover to the street-door, and with a sisterly clasp of hands bade him good-night.

For some time Helen was obdurate in her refusal to spend the Christmas holidays at the house of her lover; and having exhausted all her resources in argument, and his patience in listening, Ned was finally surprised by his lady's sudden capitulation in the moment of victory.

"You would be so awfully dull without me," he urged.

"Oh, indeed! do you really think so?" quired Miss Warren, elevating her eyebrows and smiling a slight smile; "perhaps since I've had the assurance of your society every evening during the three weeks of our engagement, I might be able to sustain a few days separation."

"Impossible, Nell; you haven't the fortitude," returned the young man, suppressing a yawn; and with the injunction that she must receive only the moderate degree of attention to a guest of his mother's, Mr. Harding, with Helen's promise to go with him the next afternoon.

The following evening was cold and bleak, and Helen was nearly carried away by the storm when she stepped from the platform of the car.

now-crusted ground, on her arrival in New England village of Arlington. She took among the sleigh-ropes and closing the door fell to wondering about the people she had seen, wishing the ordeal over; for, with John Warren's seeming self-possession, she had a considerable dread of meeting strangers.

As the sleigh stopped, and Helen was a flood of light pouring from the open brilliantly illumined windows of a large, old, comfortable stone house; another door opened and her inside the hall being unwrapped and dried by the nimble fingers of a bright-haired, sweet-faced old lady, who affectionately, rubbed her cold hands, and then Helen laughed so cheerily, that Helen had known the kind little woman a

few years, you may have just ten minutes to come to the sitting-room and you are awaiting you;" and leaving Helen at the door of her chamber, the old lady rejoined

"perfectly charming, Ned," was Mrs. Warren's comment upon their guest; "at first her greenishness is a little overawing, but she is so simple and unaffected as a child; and so beautiful!"

"True," assented Ned, complacently; "she has stunning eyes. My! don't they show she is angry! and he emphasized the remark with a soft whistle. "I'm proud of you; and when I thought she wouldn't be so was the most cut up fellow you ever saw." which pathetic remark the young man made as he stood with his mother around the waist, waltzed her round, then ran up stairs three steps at a time. Harding looked after her boy with a sad smile, walked down the hall and entered the kitchen.

A few moments passed before Helen, rather hasty toilet, entered the sitting-room finding it unoccupied, stood thoughtfully gazing into the cheerful fire, her elbow on the mantel and fell into a reverie. A sudden movement of the curtains in the bay-window caused her to look up, and as she saw a lover leaning against the sash, apparently of her presence, Miss Warren went behind him, and laying her hand on his shoulder, softly, "Your description of your mother does not half do her justice, for she is the

very loveliest woman I ever met; you don't begin to be worthy of her, and I shall marry you purely for her sake;" then looking up with a smile full of mischief, Helen met the quiet glance of two dark brown eyes that she certainly had never encountered before.

"You are right, Miss Warren," replied the mother, the owner of these orbs, quite calmly; "she is a wonderful woman, and neither of her sons deserve the privilege of such a mother; the older I grow the better I appreciate her character; but no one can fully do her justice."

Helen by this time had nearly recovered from the confusion occasioned by her mistake, and mentally thanking John Harding for his tact in relieving her embarrassment, she succeeded in conversing with a moderate degree of composure until Mrs. Harding summoned them to tea. The old lady's exclamation of surprise at finding them so well acquainted, was met by John with the quiet explanation that they had been forced to introduce themselves, since no one was present to perform that important ceremony for them; and Helen, with a burning face, kept her eyes on the floor, and was silent.

The first evening passed pleasantly with music and lively talk, the bright old lady proving herself an adept at entertaining. Helen was a thorough musician, and loved her art with her whole soul; so when Ned advanced, with a bow and a flourish, to escort her to the piano, she arose without hesitation and complied, surprising and delighting John's cultivated taste, with her exquisite renderings of Schubert and Beethoven.

Ned, the incorrigible, declared there was no music like the Strauss waltzes, which was perfect bliss with Annie Conway for a partner; then turning to his mother he plied her with questions concerning the neighborhood girls, and was jubilant over the information that Miss Conway had called in the afternoon with invitations for a dance at her house on Christmas eve.

The following morning John Harding returned from a walk to the post-office with an expression of irritation in his usually serene eyes, and the shadow was not dispelled by the pleasant picture that met his view as he entered the door of the cosy sitting-room. Helen, looking contented and happy, was ensconced in a large chair before the fire, daintily assorting a perfect rainbow of delicately tinted zephyrs.

"I suppose it is useless to ask you for one of

those letters," she said, with a smile of welcome, nodding toward the package he held in his hand; "I am too lately arrived to be so favored; do prove your magnanimity by reading yours immediately that I may cease to be tantalized."

"Thank you, I will do so," was the smiling answer, "and when the duty is performed you must reward me with a game of chess; it is not often I meet with an enthusiast like yourself."

Helen gave a willing assent, and laying aside her worsteds, removed the books from a small inlaid chess-table, and proceeded to arrange the pretty ivories upon their respective squares. The last letter was read and replaced in its envelope, and John took his seat opposite Helen, merely smiling as she indignantly refused the advantage of the first move, and bade him choose between her two hands for his black pawn.

The game was fairly begun, when Mrs. Harding's cheery voice in the doorway asked, "Where is Ned?"

A frown contracted John's smooth forehead, and he was silent for an instant, then without looking up, he said, laconically, "at Annie Conway's."

"I suppose he considered it his duty to call soon for old acquaintance sake," apologized the mother, a little anxiously; "he won't stay long, I'm sure." Then with a change of tone, "Queen Helen, if I'm needed as umpire in the course of this game, you will find me in the kitchen up to my elbows in pastry; and the only plea I can offer in extenuation of my cruel desertion is, that I am a New England housekeeper, and this is the week before Christmas."

"Are Ned and Miss Conway very old friends?" asked Helen, meditatively, as she checked her opponent's king.

"They were inseparable as children; but have met seldom the past year," was the careless reply. A few moves were made in total silence.

"She is very charming and pretty, is she not?—I mean Miss Conway—now Mr. Harding, in two moves you will be mated."

"Profoundly true," said John, at length, after attentively studying the board; "Is Miss Conway pretty? Yes, by many people she is considered so. I resign," he added, immediately; "deliver myself up a captive, vanquished in fair fight. Pray, what will be your Majesty's sentence upon her prisoner?" and rising he stood before her

with bowed head and folded arms, the picture of manly submission. Queen Helen was merciful; and on receiving his oath that he should have a game of chess every day during his reign, the captive was released on parole.

Dinner-time arrived, but Ned did not appear; time passed, but still no word from the truant. His absence was not remarked upon, but a great relief took the place of anxiety on Mrs. Harding's face when her son's step finally crossed the threshold. Ned seemed to think no explanation of his conduct necessary; talked freely of the fun he had during the day, and was enthusiastic in his praises of Miss Conway, who had "improved most wonderfully in the past six months."

Helen listened to this discourse with eyes fixed on her work, and when Ned expressed a desire that she should see this fascinating young lady, quietly, she would "be most happy to meet her." Miss Conway, indeed felt quite anxious to do so.

During the days until Christmas eve, Ned was almost a myth in the family circle; from breakfast until tea-time he was always absent, and did not return until the household were in bed. His mother made the excuse that he had been called on friends to visit, but still she seemed much troubled, and John, grown strangely nervous and restless, observed Helen closely to discover the cause upon her of her lover's inattention. The lady, however, seemed serene and cheerful, and became intensely interested in a series of chess contests, and apparently enjoyed with her heart the daily sleigh-ride given her by John. He exerted every means in his power to supply the deficiencies of his brother's neglect by his own kindness and attention to their guest.

The evening of the party at length arrived. Helen, truly lovely in a silk of delicate color, entered the sitting-room to await the rest of the family.

"You look magnificent, Nell," approved Ned patronizingly, as he walked around her for a careful survey; "all you need is some white buds in your hair, and here they are, fasten them, thought they would be becoming, and save me the trouble of better get them for you."

"Your brother is very thoughtful, and so is he," was Miss Warren's quiet reply, as she turned to the glass and fastened the flowers among her heavy braids. This remark called for no answer, so Ned very judiciously made none. The

made his appearance to announce and the young people soon found on the steps of Mrs. Conway's brilliant house.

Others left her at the dressing-room and, carelessly, "Shall I wait and take Nell?"

"No, if your brother will do me that and she turned to John with a smile of affection.

"You for the permission," said Mr. Ned with a sudden flash in his brown eyes.

He was playing "The Blue Danube" as he stood on her escort's arm, entered the room, and the first familiar figure that met his eyes was Ned dancing with a young lady, whose face and form, so airily light and graceful, Helen could not subdue her admiration. "How lovely! how perfectly bewitching!" she murmured in a low tone, to her companion; "who she is!"

In the direction of Miss Warren's gaze, Helen looked, then looking her straight in the face, "Miss Annie Conway."

And of the waltz Helen received an invitation to her fair hostess, and was greeted with a smile, and a bashful pressure of the hand. Turning herself to Ned, she brought forward half a dozen gentlemen, stood for a few moments, and then leaving them surrounded by this group, she again took her arm and took her own place in the quadrille.

During the round dances; so, during the evening had much opportunity for quiet observation. Especially was she interested in one gentleman who were seldom seen apart; pretty little Annie was induced to honor her partner, Ned stood in the corner with Helen, and never once removed his eyes from the captivating little creature until he was at her side. Helen saw everything; she talked and entertained so brilliantly and constantly surrounded by an admiring throng. Twice, on glancing at the door of the room, she met John's keen gaze fastened upon her, as though reading her very soul; for the strange union of this engaged couple apparently interlarding not a little.

Near the close of the evening, just after

Helen had declined Ned's first invitation to dance, good-natured Mrs. Conway rustling to her side, sank comfortably into a chair, and with folded arms and a sigh of satisfaction, proceeded to talk volubly of the sweetness and prettiness of her "dearest Annie."

"Yes, I think that will be a match," she whispered, with a sly smile, nodding toward a deep window near by, wherein Ned and Annie, half-hidden by the long curtains, stood in earnest conversation. "The dear children were always devoted school friends," she continued, confidentially; "and they were as good as engaged when Ned went to the city to live, six months ago; poor Annie nearly broke her heart over the separation, and has not been herself since, till she heard the boy was coming home for the holidays; its all right between them now, I fancy, for the child is as happy as a lark, and sings from morning till night without stopping. Excuse me, dear, I must go talk to old lady Martin and find a partner for her ugly daughter, or my character as a hostess will suffer to-morrow." Then for one brief moment Helen was left alone.

As soon as the first movements of departure were made, she pleaded a headache, and gladly accepted John's offer to take her home; and during the lonely ride in the cold moonlight neither of them spoke one word.

The remaining week of the holidays was merry with sleighing parties, dances and tableaux. Helen was as gay as the gayest, and won the hearts, not only of all the gentlemen, but (a much greater proof of her fascinating powers) of the ladies also, both old and young. Her manner to Ned when they chanced to meet was so serenely kind and self-possessed that Mrs. Harding and John were thoroughly puzzled, and could only wait wonderingly for the *denouement*.

It was New Year's eve, and Mrs. Harding's parlors were bright with the happy voices and pretty costumes of young people in fancy dress. The hour to unmask had come, and a brilliant Queen of Night, glittering with stars, entered the conservatory leaning on the arm of a Capuchin Monk; they, too, had vainly tried to penetrate each other's disguise, and both were unwilling to acknowledge their attempts foiled. Pausing a moment in their stroll to admire the beauty of a large magnolia laden with blossoms, a low sob from the depths of the shrubbery near by broke

the silence that had fallen upon them, and a voice filled with tears falteringly said: "But day after to-morrow you will be gone, and then I may not see you for another six months."

"What can you think of me, Annie, darling?" was the tender exclamation, in a low and impassioned tone. "Though I have never said so in words, you must see and feel that I love you. Six months ago I was blind, and did not realize what you were to me; but my eyes are opened now, and I cannot live without you. Trust me for a few days, until some important business matters are arranged, then I can formally ask your father's consent to our engagement."

With a slight shiver the Queen of Night slipped her hand through her companion's arm, and turned silently away toward the drawing-room door.

"Now will your Majesty remove her mask?" demanded the monk, with his hand upon her own.

The lady dropped her silk disguise, and looked up with a tremulous smile into the flashing eyes of John Harding.

"Helen Warren, what manner of woman are you, to have heard that conversation unmoved!"

Miss Warren's head drooped, and a tear fell on her cheek, as she answered in a low tone: "I am not unmoved; I tremble to think of the misery I might have caused little Annie." Then dropping John's arm, Helen left him, nor was he able to exchange another word with her that evening.

The following morning dawned fresh and bright and Helen came down to breakfast with a face like the morning, wraps in hand, prepared for her early trip to the city. At the table John was silent, and Ned looked grave; and even cheery Mrs. Harding talked without animation, and their guest was the only one of the group whose spirits maintained their even tenor. As the sleigh drove to the door, tears filled the old lady's eyes, and she took Helen to her heart with such warmth of feeling that the young girl's lashes were also moist: a kiss was her only answer to Mrs. Harding's softly-expressed hope that she would soon return, then giving her hand for an instant to John, without lifting her eyes from the floor, she took her place in the sleigh and in ten minutes more was steaming away to her city home.

When the carriage stopped at her own door Miss Warren said, quietly, "I won't ask you to come in now, Ned; but will you give me half an hour's conversation this evening?"

"Certainly, with the greatest pleasure," the gentleman, his eyes on the ground.

"Very well, I will expect you," and gave her hand a friendly pressure, Miss Warren entered her house.

Ned threw himself back in the soft cushion with knit brows and compressed lips gave himself up to his own reflections.

Scarcely was he seated in Miss Warren's room that evening, before the rustling of silk stairway announced the young lady's approach. With a pleasant greeting and a reassuring smile she spoke at once of the experiment they had tried.

"You see Ned, we did not know ourselves each other; my feeling for you developed nothing but sister—friendly, regard, and yours for me; and we are fortunate to have our eyes opened to the truth, before we were miserable for life. We will always be friends, will we not?" she said in conclusion, rising and extending her hand.

"Indeed, we will," answered the young man heartily; "you are a noble girl, Helen; with such men as I, and if you will let me, I will be a brother to you the rest of my life;" and, noticing the flush on Miss Warren's cheeks, he shook both her hands warmly, and departed.

Three days had passed away, and Miss Warren's visit to the Harding family began to assume the unsubstantiality of a dream; she seemed, however, very contented and happy, indulged in her habit of reverie, and so betrayed a slight impatience at being reminded of the realities of life.

Enconced in her favorite chair in the parlour on this stormy January evening, she was indulging in pleasant dreams, if one might judge by the smile on her lip and the vexed expression it gave to her brow, when the door opened and Janet made her appearance on the threshold. "A gentleman has come to see you, Miss Helen."

"On such a night!" she exclaimed in surprise, as a gust of rain and sleet dashed against the window. "What name did he give?"

"Mr. Harding, ma'am."

"Oh, very well, ask him to come up," said Miss Warren. And leaning back in her chair, she listened to the approaching footfalls, wondering that Ned should care to see her again so soon.

As the steps entered the room she held out her hand without looking around, and said:

"My dear boy, what consideration could have brought you out in such a gale as this! you must have something very important to tell me."

"I have." The voice, and the strong pressure of the hand that clasped hers, made Helen start to her feet dyed in blushes. "I thought it was Ned," she faltered, trying vainly to regain composure.

"The second time you have mistaken me for him; but is Ned's brother to have no welcome? will you not say you are glad to see me, Helen?"

"I am glad to see you of course, but you must not expect me to say so until I recover from my surprise. When did you reach the city, and why did you come?"

"An hour ago, and I came because I have some news to tell you; an engagement to announce."

"Ned's!" and Helen leaned forward, and looked up in her companion's face, with eyes full of interest and amusement.

"Yes, Ned's; he came home the night before last, and astonished the family just as we were sitting down to tea; he would give us no satisfaction as to the cause of his return, and was preparing to leave the house in the evening, when I took him by main force into my room, and demanded the whole story. Knowing he was going to see Annie, I sat up to congratulate him; and congratulate him I did, with my whole heart. Now, Helen, you know what I came for to-night, do you not?"

"Yes," replied Miss Warren, demurely; "to tell me of Ned's engagement."

"Not entirely," said John, with a tender smile, as he arose and leaned over her chair. "I came to tell you that I love you; did you guess it before? look into my eyes, Nellie, and answer."

"I did guess it before," was the soft reply.

"And the reason Ned's behavior did not affect you, Nellie, was because you loved me, was it not? Say it was because you loved me."

"Yes, it was because you loved me;" and Miss Warren's long lashes fell, to hide the mischief and happiness dancing in her eyes.

"In spite of this wicked enjoyment of your power, Queen Helen, you are at my mercy; for you have promised to marry me, and that too before I asked you to do so. Never shall I forget our first *tête-à-tête* in the bay-window at home."

"Don't, please don't," cried Helen, burying her face in her hands; "that was such a dreadful mistake."

"Indeed it was," said John, taking possession of the hands in one of his, and with the other raising the crimson face. "And now, since you are to marry me, is it for my mother's sake, or for my own? I insist upon knowing this before it is too late. No, you shall not have your freedom until you tell me!"

"Tyrant! to take such base advantage of my weakness!" then, with a shining light in her uplifted eyes, she said, "I marry you purely for yourself, John."

## HISTORIC LEGEND OF THE CEDAR OF LEBANON.

THIS ancient legend, the dream perhaps of a Syrian hermit, shows that the Cedar of Lebanon, the timber-tree of the temple built on Zion, was held in the highest estimation, and exercised the fancy. The story relates that Seth received from the angels three seeds of that tree which he beheld still standing on the spot where sin had been first committed, but standing there blasted and dead. He carried the seeds home, placed them in the mouth of the dead Adam, and so buried them. Their future history is curious. Growing on the grave of Adam in Hebron, they were afterwards most carefully protected by Abraham, Moses, and David. After their removal to Jerusalem, the Psalms were composed beneath them; and in due time, when they had grown

together and united in one giant tree, they, or it—for it was now one tree, a Cedar of Lebanon—was felled by Solomon for the purpose of being preserved forever as a beam in the Temple. But the design failed; the king's carpenters found themselves utterly unable to manage the mighty beam. They raised it to its intended position, and found it too long. They sawed it, and it then proved too short. They spliced it, and then found it wrong. It was evidently intended for another, perhaps a more sacred office, and they laid it aside in the Temple to bide its time. While awaiting for its appointed hour, the beam was on one occasion improperly made use of by a woman named Maximella, who took the liberty of sitting on it, and presently found her garments on fire. Instantly

she raised a cry, and feeling the flames severely, she invoked the aid of Christ, and was immediately driven from the city and stoned, becoming in her death a pro-Christian martyr. In the course of an eventful history the predestined beam became a bridge over Cedron, and being then thrown into the Pool of Bethesda, it proved the cause of its healing virtues. Finally, it became the Cross, was buried in Calvary, exhumed by the Empress Helena, chopped up by a Church, and distributed.

be said to extend about eighty or ninety miles in length, and from fifteen to twenty in breadth; though, of course, in estimating the breadth and length of such a range, it is not easy to give a precise measurement. The two ranges were well known to classical writers as Libanus and Antilibanus; and though this distinction is not directly brought out in Scripture, yet it is not unlikely that Lebanon, "toward the sun-rising" (Joshua 13: 5), is meant to indicate Antilibanus.

Looking up the slopes of Lebanon from the

DISTANT VIEW OF THE LEBANON MOUNTAINS.

Our illustration shows the mountains of Lebanon in the distance—a double range known in Scripture as to the north of Palestine. Lebanon signifies "white," or "exceeding white." It takes its name from the brilliance of its snow peaks, not, as some conjecture, from its gray limestone, which gives to so many parts of Palestine a faded appearance. Lebanon does not rise in groups or clusters like the Alps, or in one long ridge like the Apennines, but in two parallel ranges of very unequal height, running nearly north and south—the western sloping gradually down, by many subordinate ridges and spurs, to the maritime plain of Phœnicia; the eastern, by a similar series of descents, to the sandy flats of ancient Aram that encircles Damascus.

According to the usual reckoning, Lebanon may

maritime plains of Phœnicia, one is not struck with the fertility of the district; but when we ascend the barrenness disappears, and we find ourselves among cultivated slopes and terraces covered with both fruit trees and forest trees. Many parts of Lebanon are verdureless, but others are rich in verdure. The heights are often barren, but the valleys are clothed with all kinds of trees—pines, oaks, mulberries, olives, and even figs and vines. The cedar is not so plentiful as it was three thousand years ago. There are allusions to several ridges or peaks of Lebanon in Scripture, but the identification of these with any modern name is difficult. The thunder storms of Lebanon are terrific; the thick clouds, the dashing rain, the wild mountain blasts, and the rapid lightning gleams, make up a scene of terrific grandeur.

ient the door inside was shut and Tom side, the rogue gave a wink to the which nearly upset their gravity This acting between the false and the true eresting not to excite attention, and

caused more than common anxiety concerning what was going on. The domini in the loft, conducted as these were known to be by the Dominie's private secretary, prepared the minds of the public for a real case of treason; and the manner and the name of the stranger were gradually producing that intensity of feeling which always followed secrecy and hints; so that pretty loud murmuring was beginning to show itself by those who were debarred admittance to the tribunal. The design of Tom was working out. He had vowed revenge on Clarence for what he supposed him guilty of—informing his master of his late peccadillo; and so he was accomplishing the end.

The prisoner, for now he was so in reality, found the court in session. He, by this time, was becoming acquainted with Consistorial forms of investigation, and knew already the strong and the weak places, of which he was determined to avail himself. There was the chief man in his canonicals in the centre, and the same Anthony Van Bergen in the threefold capacity of elder, squire and clerk.

"Mr. Clarence, I think your name is?" said the questioner.

"Clarence Clinton, at your service," was the answer. At the same time he stepped forward, and half demanded the authority of this court to put him through an investigation. He saw plainly that it was a mongrel court, which did not differ much in his esteem from the mockery in the mill. For one moment his mind was so confused that he almost imagined himself standing before the other cocked-hat on the wheat-sack.

"You are charged here, sir, with stealing a horse from Cornelius Wynkoop."

"I deny the charge," said the prisoner, with great warmth, and almost starting forward to punish the insulter.

"Call the witnesses," was the cry of the squire; when the door opened, and in stepped the same old negro, telling exactly the same story, though with less palaver.

"Vat says de prisoner to dat?" said the squire, glancing aside to his chief.

"I say," was the reply, "that all the old man

says is true; but it does not show that I stole the animal. If the reverend gentleman will look at the letter I put in his hand this morning, from a worthy brother of his own, it will account for what is here produced as evidence."

"My dear sir," said the Dominie, "I have reason to believe that the letter you produced to me is a forgery. I am quite sure that my good friend and brother, whose name is here, never entered a barn at midnight, to take even the loan of a horse, for—for"—he hesitated to say the other word, but it came out "in short, for a spy."

At this word the accused felt as if nature was giving way. The scene in the mill was all present with him, but there was no laughter here. These were earnest men, looking cold and determined.

"You be a spy," said the Squire, "and will be thrown off at de cart tail."

By this time the door was open. Tom had purposely left it so, and a crowd gathered up close to where the accused young man stood, whose faces did not show any sympathy with him. Remembering what he had been warned against, and feeling that if the worst came upon him at the last, he would suffer more in feeling afterward that he had told untruth, than the fear of death could bring, he resolved to give a full account of the whole, omitting only the fact of his being at the Sopus burning.

He began by saying in a hesitating tone, for he actually felt the influence of the farce still: "I came to these mountains in search of my sister." He continued giving a brief and touching account of her romantic character, of how she had been abducted, and of where he believed her to be, and concluded by saying, that if he must die in the manner threatened, he would die a true man, and no spy. For the moment, they believed him to be under some hallucination, and they were sensibly touched with his account. The grave Dominie's features were relaxed into uncertainty, while Grant was wiping his eyes, as he said to the pedagogue, the "fule has made me greet." Tom, who stood behind his master's chair, and had fixed his mouth for the general guffaw at the usual watchword, hid his teeth, wondering that "white folks neber joyed any funny ting at all."

When all had recovered themselves sufficiently for business, the Dominie said, "Young man, your story is too unlikely to be believed anywhere; and even though we did receive it as true, there are others to whom we are accountable who would

laugh at our easy faith in these times, who name you give is so obnoxious through all the to-day." These allusions moved the spirit young British soldier, and raising himself up haughtily, he answered: "If you are amenable then, to higher authority, I prefer to be tried in a regular court of the country."

This was unfortunate, since it insinuated a want of due authority in the court where the judge was always the law, and sometimes executor. Drawing himself out of his large seat, he rose to his feet, saying, with a force and a manner which might have suited the church if they had been that morning:

"You must understand, Mr. Clarence Clarendon, this is not the mill loft; nor is this Consistory Court of the Protestant Reformed Dutch Church of Holland in these United States of North America, a mountebank, but has had its existence ever since the sitting of the Synod of Dort; and be it known to you that they have sufficient power to try you, or any one else of the king's slaves, that falls provisionally into their hands. A mongrel court, indeed! You are thinking of those blasphemous grims who dared to mock me and my court, almost my face; some of them will have to take stripes save one."

During this speech, every man, white and black, was quiet as a mouse. The sly fellow behind the chair looked down and pretended to wipe his eyes.

Just at this point, when all seemed to be against the accused, to make the matter still more so for him, some one suggested that the prisoner be searched for arms. Now Clarence, remembering again the scene at the mill, saw that he was indeed, and immediately produced his pistol, and laid them on the table before them, saying:

"You may be sure, gentlemen, that I am a man on a mission like what I say I am upon, and I dispense with the use of arms; and here they are at the disposal of the legal power."

"We have the legal and the moral authority together in this house," said the president with more than his usual severity; "and as there is great doubt concerning you, there is no business but to keep you in custody till these doubts are cleared up."

Clarence bowed low; when some one at his elbow whispered, "produce your sealed letter." This recalled to his mind what he would then have forgotten, the letter he received just as he was

the horse. Putting his hand hastily in his bosom, he took out a small package addressed, "To those in authority, given by the hand of Clarence C—."

The Dominie cast his eye over the superscription, and saying hastily, "I am—at least, *we* are the men here in authority," and breaking the seal, he read to himself, all the time changing color; looking first to the outside, then again on the inside, while his eye every now and then was turned on the face of the prisoner. At last he drew the Squire and other two into a corner for consultation.

During all this time every one was still as death. Something real was now before their eyes, and a *denouement* was about to take place, as was evident from the whole demeanor of the chief men. Even Clarence was ignorant of the contents of the package, and was in as great a quandary as the spectators. At last the court again took their seats, when the Dominie, not being willing to trust his aid in this business, took up speech himself.

"We have come to the conclusion, sir, that this is another forgery, only it is of a more heinous nature than that already committed by you. The other was only the name of an obscure minister of the Gospel—as great a sin in the sight of God as could be committed; but this, in addition, is a sin against the highest authority in this State. The name of George Clinton, the chief-magistrate, in which he is purported to say, 'allow the bearer, Clarence Clinton, to pass and repass unmolested.' Now our decision is, that you be retained here till evidence can be produced from headquarters of the genuineness of this document, or till you give such security as will satisfy this court."

Clarence replied: "After what you have declared, no affirmation of mine will avail. Of the manner in which the first letter was got I know something; but how the Governor of this State, as you call him, should have given me that letter, I am ignorant; and as there is no one here who will be security for a stranger lying under such charges as you prefer, I must be resigned to my fate."

At this point of interest, a slight movement was observed in one corner of the room; and after the Dominie had said, "Then you have no cautioner to give us," there stepped up to the table by the side of Clarence, the tall bearded man he had seen in the crowd that morning, dressed in a still more fantastic manner; and throwing down a small card

on the table before which the Dominie sat, he demanded "if that would be of sufficient assurance for the accused." The person to whom this was addressed arose in a moment, gave a glance at the paper, and as he handed it back, said, bowing in a most respectful manner, "Your own word would be enough;" and turning to Clarence, remarked, "you are at liberty, sir."

Clarence, before whom all this was acted, looked around for the man who had changed the whole from darkness to light so suddenly; but he was gone, and turning to the chair again, he said:

"Reverend sir, did I understand you aright? Am I at liberty?"

The president repeated his words in the most respectful manner; leaving Clarence and the whole auditory in far greater wonder than he did when he entered the mill, whip in hand, to chastise those negro actors. He seemed to those who knew him as if he were the one who underwent the scrutiny of a pair of eyes more penetrating than his own; and that toward the late prisoner he became obsequious. A kind of amazement held all in silence, waiting for something, they knew not what, when a stir among the crowd at the door attracted the eyes of the court. The children in the yard below were screaming through fear, and even the inexperienced men grew a little pale when a tall young man entered dressed in the costume of the mock Indians of the region. It was evident that he was meeting but a doubtful reception. The men around were seen handling their hidden weapons, for all expected a tribe of Mohawks certainly to follow.

"No occasion for alarm," said the intruder. "I am a messenger of peace and one of your own friends, though for the present obliged for good reasons to wear this disguise. I am now on an errand of deliverance." The president on his feet answered:

"Teunis Roe, when we see the garb of the cruel Brandt stained with blood, you can hardly expect that the man who wears it should receive a friendly welcome."

"That is true, Dominie, but you preach yourself, 'judge not according to appearance.' Safer to meet an angel in the garment of Satan, than Satan in that of an angel of light; I am alone. Hear me and then judge," said Teunis, for it was our friend the young Boerman of the Flats who spoke.

"You have given us a new rendering of that Scripture, and something like a new doctrine upon it; but see that you do not wrest it to your own destruction. But what have you to say about that fire raising and midnight marauder; that heathen and scalper that has torn up the nests of our best folks, and left so many weeping and wailing below on the Vlatts, while he, like the hawk, sits up there looking down into their yards."

"Do not fear that I am not come to help the bloody crew, so be at rest."

"Teunis," said the aroused Dominie, "we never knew fear. 'A good conscience is always brave.'"

"No one," said the youth, "ever questioned the Dominie's courage; and it is for that reason I am here at the risk of my life; and if you will here my story you will not be long sitting there on your soft chairs while your brethren of the Grand Consistory are up yonder chained to the rock."

"Hearken to Teunis Roe," said the Dominie, striking his large fist down on the table with a force that made Tom jump a foot high, and put all the rest into silence.

"My tale is soon told," said Teunis. "You know that Elder Abiel and Martin Schuyler are in the hands of the Philistines; and Brandt says he is only waiting till he gets a few more, and the Dominie himself, and then he will go off with them to see the great falls of Ni-a-a-gara."

"And by old St. Nicholas," said the brave soldier of the cross and of the State, "I will meet the red sinner half-way, that he may see how the Lord will deliver me out of the mouth of the bear, and out of the paw of the lion. Go on, Teunie, and let us hear the rest of that fine tale. Here, Tom, you blaspheming rascal, that mocked me behind my back, bring me the tobacco pouch and pipes for us all."

In a short time every mouth was puffing out smoke till the whole room was so thick with vapor that "a piece of it," Clarence afterward wrote, "could have been cut out and sent as a specimen of a Dutchman's breath."

The sum of Teunis's story was, that he was sent with a message from the captives to the Consistory, desiring assistance; showing how it was not only possible, but highly probable, for a few men to surprise the Indians and the Tories on the next day, as it was their intention to divide off into companies, so that the whole woods and caves round the region might be scoured for some

prisoners that had escaped. In the course of the narrative which Teunis gave, it leaked out that Elsie Schuyler was one of these fugitives, and along with her was a young lady who had been taken to the mountains, no one could tell where. It would, nevertheless, be a great act of heroism to save two such young and beautiful girls from such a spoiling set of murderers as these I were.

"Oh! yaw, yaw! Teunis, you have got a great deal to say for every piece of humanity, and for every woman kind in general; but for Elsie in a particular degree. Well, no harm in that; I could tell myself, if the 'Yfrow' were here. Let her pass, and tell us something more about that young girl; I see a pair of eyes in that corner looking at you as if they would draw you out of them. Here, Mr. Clarence, or whatever name they call you, here is some corroborative of your unlikely tale. What say you, neighbor, to a young man going off to the mountains to save his sister?" and the Dominie laughed at the thought, now, and all joined Tom with the rest, till the court-room into a house of mirth.

In the meantime, Clarence had taken out a book by himself, making all the inquiries which his patriotic earnestness could suggest. For he was persuaded that it could be none other than Margaret. The answers he received all to confirm him in the suspicion he had from the moment that Teunis had said there were two young women, and one of them a stranger. It was something to know she was out of the hands of the destroyer, but the dangers which still surrounded her made him all the more eager to get her off; which he and Teunis were determined to do, whatever might be the conclusion of the deliberations of the reverend conclave.

The discussions now were informal, and turned upon the best way of accomplishing the object. As in all bodies of men, there was a division of opinion. The Dominie headed one side and old Mat Van Deusen the other; the latter had objections to everything, and no plan. He appeared to have no heart in the matter. Clarence made up his mind that he was one of those secret friends of the king, and he warmly wished Brandt to get off with his company. Could the young Englishman only have been near of the Dutchman a few minutes, he thinks an argument might be produced, that would

and efficient. As things appeared, nothing likely to be done by such slow men, and counsel.

prevailed, and even darkness brooded all day; scarcely a face could be distinctly seen in the smoke that rose from every mouth. He took the cue from the chief man, and he was in his own thoughts; and might be fol- lowed by some knotty text, or deep doctrine, but the counsellors were quite as silent, and their utterances more meaningless. But at this time the door was flung wide open with haste, and he stepped Grant, the Scotchman, out of the room. His first words were:

"After, you and your session there sit in your ease, when the work of treason is being done around you."

"Now, Hugh Grant," said the Dominie, "take the long pipe from his mouth, holding it in his hand, and blow the blast. "We have seen you on fire and with that he continued on with his

"weel," said Grant, "maybe you'll lock the door when the steed is stown; but I'll shake the door of the sin at any rate. I'm tauld that these offishers o' the king are awa' on a he tap o' Ben—I mean Roun' Tap, and the wild Tory Sergeant McDonald has gane on; taken a young lad dressed in the blue coat above the knee; and it is thocht by the folks to be nae one else than her that was the lady here before you this morning. She is carrying dispatches to the south by the river, since the road by the river is closed."

Grant was through, not a pipe but was seen the finger and the thumb of its work. The president had removed his, and was holding the tobacco bag with care, evidently holding himself up into a state of excitement, and would venture to express his determination. The old Mat Van Deusen looked mad at the things were taking, and was the first to say, "It is time for us to act." The decision was coming every moment more forcible, though nothing was spoken, or a movement from where they sat. Clarence, all excited, was afraid lest something might come out of his knowledge of the real state of affairs, and was planning within himself how he might avoid incurring the suspicion of those who probably knew more than was expressed.

#### CHAPTER XXIX. THE MARSHALING AND MARCHING OF THE MIGHTY TO THE MOUNTAINS.

DOMINIE SCHUNEMAN had a favorite maxim, which he put into practice most faithfully, as Cecil said to Queen Elizabeth, "Let us take time, that we may make the better haste." He made all sit down or stand quiet in their places, and knowing him well, they obeyed instinctively. He gave the cast to his face which it always took just before he spoke. They listened to what they knew was coming.

"Providence points us to duty. As Vader Abraham was sent to the slaughter of the kings, who came upon the plain, he brought back all the goods, and also again his brother Lot, and his goods, and the women also, and much people. 'Tom, bring me the big Bible, till I read how David, that good soldier and saint did, when they came and told him that the Amalekites had invaded the south, and smitten Ziglag, and burned it with fire.' You will find it in the twenty-ninth chapter of the first book of Samuel." And he read it through with the coolest deliberation, greatly to the annoyance of the two impatient young men, who had no resource but to wait patiently.

But after reading this long text, he commenced his exhortation. "Brethren, can we sit still, and our friends all in the wolf's den? Good hunters all of you, fathers and sons. Were a painter to come out, or a whole army of wildcats to run down these hills, would not the whole congregation—men, women and kinderen—go off, even on a Sunday afternoon, to kill them; and there now is that wolf Kiskataam, and his cuts, fixing their teeth on the cheek of Elsie Schuyler—she that every young man in the parish would run off his legs to get for a wife; and there you are letting her fecht it out herself. I say the youth that relieves her out of bondage shall have her."

This was met by a cheer that made the stone house ring.

"Who will go up with me to Rammothgilead to battle?"

"We will all go," was the answer; "only lead us out, and we will follow the one that bears the ark."

"Oh, yes," said old Mat Van Deusen, slyly, "put the Dominie in the front. He is a good mark. They will be sure to hit him."

"Shame upon you, Mat," said the Dominie,

shaking at the deacon his big fist; "you have no more courage than your black dog Morgan. You, a Christian soldier that I have been exercising so long in the canons of the church! Ha! ha! deacon, there is for you," and he shook Mat by the shoulder till he made his teeth chatter, when he declared that it was through perfect fear.

"Now who is ready? Let us all to work," said the pastor, rising himself.

"I am ready," said Tom, lifting up the clasped Bible, when his master's back was turned, as if it were a stone to fling at the head of an enemy, when the Dominie suddenly wheeled to see the fun, which he perceived must be going on behind him; the comical fellow jumped to the door at three steps, saying to those near him, "Oh, lor'! forty stripes for supper and one spoonful less."

"Mr. Clarence, this matter concerns you as much as any of us; but I do not see how you can fight against the king's servants conscientiously." This was said in a whisper.

"Oh," said Clarence, "I will serve humanity and affection first, and the king will receive his share afterward."

"Alas! alas! sir, these sentiments are sadly forgotten in these days of blood and rapine. Human nature is a miserable piece of inconsistency. It turns out the widow and the orphan into the wilderness, to die of nakedness and hunger, or worse; and one of Eve's other daughters is reft away in no worse manner, and we will fly through fire and water to deliver that single one."

Clarence was left to muse over these true sayings, while the Dominie called out after those around the house, who seemed to wait upon his orders.

"Lieutenant Grant and Captain Salisbury, drum up your volunteers, and meet, all well armed, an hour hence, in the church, with provisions in your knapsacks for three days at least; and see that your men be like Gideon's choice troops, not greedy of drink."

A general dispersion of all here took place preparatory to a march to the mountains that night. No one was more active than old Mat Van Deusen, who gave his horse to a young stripling at the gate, telling him to "ride along the whole road to Coxsackie, and be back in time, after warning every man, though old Bet should fall in the ditch at the close of the race, and you beside her." In this way the different roads were re-

sounding with horses' hoofs; and there was that day a heavy-buttoned Dutchman along Kaatskill Flats. Once under way, they swept air like a well-ballasted sloop, in a fair wind through the water.

Teunis and Clarence took to each other through common troubles, so that before an hour had passed, they were sworn friends, and bound to their utmost for the deliverance of those who were dearer to them than life. Their fears were, that the little army now mustering would be too late, and every moment's delay rendered them more impatient to be off and up the mountain's side.

In a shorter time than Clarence could have thought it possible for any but regular troops to have assembled, he saw that the yard and around the church were crowded with men and horses, when out from the midst of them came the Dominie's man, bowing and sniggering, as he said, "Massa Domilie 'sire de compaly of de gentlemen in de C'nistry room."

Having gone through with his message, and walking back, he sidled up to Teunis, saying:

"Massa Teunie hab on de Ingin cloude; come frob Brandt's fireplace, eh?"

"I have been up there," was the dry reply of Teunis, "and I am going back again. Has the nigger any message to Cuff?" This was intended to sound the fellow, whom he suspected and intended to circumvent.

"Tom vud like good deal to see Cuffee, goot frien'; de great African king in his own land. He now walk beside de great Ingin Mohawk kin and no more 'fraid ob ole' Beal and tick v. Ha! ha! Cuffee dat licked de ole boy in de dark."

"Now Tom, what would your master say if he heard that you wanted to see Cuff? He would suspect that you wanted to do the same thing to him; cudgel him and then sell him to the Indians."

Tom looked from under his cap to see if the land was all clear, and thinking that he spoke only to the real kingsman, he said under his breath:

"O lor'l vont he roar ven de Mohawk skins him."

Tom walked off, leaving the two young men remarking to each other, "Slavery, whatever may be said of it, has two sides. There are very few of these men in black skins, who would rejoice at the captivity of their masters, but there are some

uld deliver them up. The Cuff he speaks  
st betrayed one of the best of men."

entered among the secret friends, who  
ting in council. The Dominie, as usual,  
the speech and addressed them, saying:  
ave sent for you both, that we may have  
efit of your information and of your ex-  
Teunis, we shall hear you on the first;  
sir, Clarence, on the second; and as you  
interested in this matter personally, we  
ledge that you will be sincere."

Young colonist told them all he knew of  
bers, the intentions and the plans of the  
ove; how many real Indians there were,  
v many disguised Tories. "So far as I  
s, they have private instructions to remain  
lat rock, till they do all that can be done  
e one prisoner of great importance, a  
dy of high note, who has made her escape  
idden away in the clefts of the rocks. An  
f the British army is there, and exercises a  
fluence over the Mohawk; so that he seems  
ist as he directs. How long this may  
no one can conjecture; but to-morrow is  
e great and general hunt; what is called  
Indian a ring. One is to start from the  
ow fixed, and spread three miles wide,  
n to be within hearing of two; one before  
ther behind; then turning till all meet  
auterskill Falls. If unsuccessful they are  
gain as wide, coming round to the *dog-*  
en rest for the day, and perhaps give up  
e. That is all I know. My advice is to  
eir circle and deliver their prisoners,  
the alarm so effectually, that they will  
uddenly, and they will leave all they have  
nd."

ice, when asked, declined to answer,  
delicacy, but really through inexperience  
modes of warfare. But he stated his  
ess sincerely to follow any leader who  
appointed in an expedition that would  
hose two prisoners out of the hands of  
el foes.

tain Van Vechen, we will hear your  
concerning the best way of delivering the  
of the snare of the fowler." The president  
dressed a stout, slow-looking man, who  
said a word that any one heard that day.  
ed his eyes like some one that is just  
out of a slumber; and instead of speak-

ing he rolled out his tongue in something of the  
same way that a turtle puts out its head when  
boys place a hot coal upon its back, moving its  
point from side to side. All knew his weakness,  
or perhaps his strength; for though he was slow  
he was sure to act, and sure to speak to the point.

"We are going to the mountains you say, to  
fight the Indians. Let one-half of our men be  
dressed in the disguise that Teunis wears, so that  
our party will mix with Brandt's in the circle,  
and let the other half be a reserve to attack their  
main camp, when we will find no difficulty in  
carrying off the booty. That is all."

"Now, Grant, let us hear you," was the chief's  
word to that curious worthy; "see if you can  
keep that Scotch blood of yours cool. I declare  
I have more trouble with these hasty Highlanders,  
than with all the rest of my parish."

This was said in a jocular vein, but the real  
intention leaked through, and Grant understood  
these hints sufficiently well to bridle his tongue in  
part.

"'Deed, minister, I own that I am a wee  
thought hasty, when troubled wi' such a hot spur as  
Sandy McLead, or Billy Salisbury here; but mind  
you, that it's no the rattlin' filly that gangs o'er  
the brae first, and that smooth water runs deep,  
and the deil at the bottom o't sometimes. But  
minister though you be, I'll tell you this at ance,  
that neither I, nor any one of my company will  
ever put on false faces, like a set of silly hug-ma-na  
guissards; Jesuits, naething else; wha would pre-  
tend to be friends in the morning, then turn round  
before night and stick a gully-knife in a man's  
wame. I'm for being up and at it at ance, having  
a fair fecht and din we't. A true Indian is a real  
gentleman, we' a brown face o' his ain; but a  
man putting a feather in his cap, and marking his  
cheeks wi' a bit o' burnt cork, and calling him-  
self a Mohawk chief, I despise him with a perfect  
scunner."

"What say ye, Willy Salisbury, man?"

The person addressed had a mischievous pleasure  
of tormenting the Scotchman, and though they  
were great friends, and on all important occasions  
usually agreed, could not resist the temptation of  
saying in reply:

"Grant has a great distaste to the Indian dress,  
but the Highlanders are only of the same breed  
of the wild men. Burgoyne called the black  
watch, the English savages."

"Haud your tongue," said Grant, in his good-natured fury, "you Sassenach, if you do not want me to put this whittle up to the hest in your buttock. The kilt, let me tell you, as the minister said to me, is the garb of old Gaul, and that was the pride of old Rome. When your forefathers came doon to Scotland trying to enslave us, as they are trying to put the collar on the neck o' this kintry, they had just to look at the kilt, and aff they skilped as if a dirk was in their doup."

"Oh, yes!" said the tormentor, "that was at the race of Colloden; my father was there, and he declared that it was the finest thing he ever saw."

"Except," said Grant, in something of hearty bitterness, "the race o' Prestonpans, where the English horsemen were the first to bring the news to Embro that they were beaten by these kilted men, armed wi' hooks an' scythes."

"I think you are even now," said the Dominie, who knew Grant too well not to see that his blood was rising. "We must come to business. Let Captain Van Vechten have the charge of his plan, as every one can carry out their own schemes best. Captain Salisbury, you will take charge of the main body, and let Grant have the reserve. We will start all together an hour after sundown; going by the north side of Round Top; and be sure that not a whisper of this be dropped outside, for that wily snake has got his ears laid low to the ground already, and might take us in a lone place before we knew what was the matter. Let our Indian captain send his single scouts in all directions, to prevent surprises. Our rendezvous at an hour before sunrise, a mile above Hermit's Hollow, on the side of the North Mountain."

"Losh keep us," said Grant, "he is nae doubt going doon to see that Warlock body in the glen. He is a fearless creature that Dominie minister of ours. That's the way o' the ministers in the highlans; they are acquaint with a' the witches in the kintra side."

By this time the volunteers were all come in, mostly very young men, and those past middle life, as the able bodied of the population were away in the army. A large draught had been made but recently for the army of the north, to follow up the victory of Saratoga, now crowned with complete success in the subjugation of Bur-

goyne. Had it been a hunting excursion, they on the ground that day could not have entered into the frolic with more zest and spirit. All present had been out night after night many times before this, chasing the bear and the panther. Scarcely a youth present but had killed some of the kinds common in the region, and was familiar with danger. Even the blacks, who are a stout, athletic race, many of them the genuine "Guinea nigger," and all of them but one or two removed from the original African, were eager for the frolic; and some of them, for secret reasons, were jumping with joy.

"Boys," the Dominie cried, at the full pitch of his voice, "before we march let us seek the counsel of the Lord." To this no objection was expressed, either in word or by look. The good man's heart was brimful of devotion, so that he poured out his soul with all the fervency of a saint—now in English and then in Dutch, and sometimes mixing the two languages in the same sentence: all hearts were melted into one stream. He alluded to the cloud that hung over the tabernacle in the wilderness, and to the safe guidance which the army of Israel had when the ark was in the van. "And now be not angry with us, O Lord, while we venture up into the mount. Let it not prove to us as the mountain of Gilboa did to Saul and Jonathan; for if thou goest not with us we cannot go up in peace." Breaking out into a transport, he forgot his English, or perhaps, he meant to rouse up the hearts of his sluggish people through the tongue they loved best to hear; he prayed, "De lieflykheit des Heeren onzes Godt zy, ons en bevestigt gy het weak onzen handen over ons; ja het werk onzer handen bevestigt dat," Amen.

"Translate that last sentence to me," said Clarence, who was entranced by the earnestness of the petitioner; "it must be good, it was uttered with such spirit, and the effect of it is seen all around. I am not without some of the influence myself, though I am almost ignorant of the meaning."

"It is good," said Teunis; "but the Dominie has a handsome way of saying things, which adds to their effect. The words at the close were, 'Let the beauty of the Lord our God be upon us, and establish thou the work of our hands upon us. yea, the work of our hands establish thou it.'"

"There comes the 'Yfrow! there comes the

"now!" was sounded all through the company. "I will hear something now."

"You seem to be in a hurry," was the salutation of Van Deusen to the lady of the parsonage. "It put me in mind of the big East Indian man my father says he saw, heavy loaded coming to the Scheldt, on her outward bound voyage." "Hurry, indeed, as you say, Mat Van Deusen, a woman's life is to be left exposed to the winds, and worse men. Dominie Schuneman, where are you going?" said the jolly 'Yfvrow, putting me here in charge of a whole parish, white and black, and"—

"These young darlings at your heels," was filling up which the husband gave to the dance begun by the careful wife. He knew she would oppose his going, and had hidden from her to the last moment; and now that he was ready he had no objections to her bidding good-by, while all the family followed for some purpose.

"Where are you going, Dominie?" she repeated her question, with a softer look. Her face glowed like a morning sun, and her tall, heavy form, in the excitement of the moment, had life throughout the whole, which was its elasticity and motion, quick and graceful. Dominie stood entranced, but not in the least alarmed, as she said energetically, "You will have your neck broken on some of these night riders; you will not escape the lead always of the wicked man has run for you. Can you leave such work to them that should do it, and let the business that properly belongs to you?" "Yfvrow, Yfvrow! my work is to do good for my land to my country, as did the high priest of old, who buckled the sword of Goliath on the heroic David, and blessed him, sending him to battle."

"Yaw, yaw! but he did not go himself, but stayed at home, attending upon his work in the sanctuary."

"You have forgotten, 'Yfvrow, that he went on, carrying the ark in the sight of the people." "Dominie Schuneman," said the softened but stern wife, "we have not all been at Leyden, so I cannot argue with you in that style; but affection pleads in me more powerfully than learning." The tear glistened in the eye of the wife and mother, and there was not a man there who would have ventured to call the Dominie a coward. He remained at home—but the man of God

was made of sterner stuff than to yield up at such a juncture—he said:

"All that you say is true, Maria; but there are other parents in the world besides us. There is Martinus and Anshela Schuyler crying after their daughter Elsie, the niece of our good friend and the general; and she is away into captivity somewhere in the mountains: and what would we say if our little dawty there was in the same place, and no one willing to risk a gun-shot for her life?"

The good 'Yfvrow smiled, and looking through her tears, asked if he intended "to let all these men go off hungry to the hills?"

In a few minutes all the servants of the house were seen out on the road, loaded with all sorts of eatables and drinkables. These were spread out on the horse-blocks, on the pews inside the church, and even on the flat gravestones outside. The parting meal was made up of ham and eggs, sausages and rolitches. Breads of all kinds of flour, and cakes without number; ole cake, Johnny cake, crawley cake, fritter cake, and buckwheat cake; with more of Dutch names than would be safe for any man to speak of. Grant said "these Dutch words always stretched his jaw so that he would as soon read the tenth chapter of Nehemiah, when he was hungry, as try to learn to speak them; unless," he added, "this wife o' the minister should be my schule master; for verily she is a perfect Abigail, wi' her loaves and her wine, and her hundred kinds o' cakes; but there is a kind she has na got yet, and that was ait cake; and as for the Dominie himself, he aye believed that there must be some Scotch bluid in his veins, he was sic a sensible body."

The good dame having got over her fears, went from place to place, urging upon them all to eat; flinging down at the same time a slice of rye bread on this place, and a piece of pork on that; and not passing one by, unless she showed her kindness practically. A good word she had for all. When she came to Teunis, she urged him to eat, and be sure and tell Elsie that she would expect her to come down and spend a week with her at the parsonage, till the Hoogenhuisen was built again. Turning to Clarence, she put on the dignity of a duchess, hoping he would soon find his sister; and as this was an easy route to return by, it would be good to spend a night by the way after her fright. At the time she was saying this to him, she was pouring out a glass of her best Hollands for his particular use.

"You will find us, sir," she said, "plain, true-hearted folk, who know both how to treat a friend and a foe."

Clarence drank her health standing, with his hat in hand, wishing that "never worse than the present might be seen by him or his friends on any side of the sea."

All were now ready to march agreeably to the order laid down. The Dominie and about ten of the ancients of the town were in the saddle. Tom, that slippery dog, had charge of what might be called a sumpter horse, since on its back was a large bag of all kinds of necessities; and his master's cloak, which the careful 'Yvfrów had ordered to be strapped behind, so that he might have it ready for immediate use. Coming up close to his stirrup-iron, she said:

"Now, Dominie, see that you take good care of yourself, and tie this around your mouth to keep out the night air and the cauld dews; and mind me and the kinderen;" as she looked up in

his face more softly than she would have an hour before.

"Get away with you, now, Maria," as down his head to her cheek; "you know I am never cold; my feet are always out of the night. My head, you tell me, often is too hot, but you know, Maria dearest, my heart is cold; and for you and the kinderen it is glowing warm."

Here the equally warm-hearted wife lifted her head a little nearer to the saddle-girths, and the good man said, in his usual half-jesting way, "he wished to be familiar and fond:

"Indeed, wife, I think were I laid in the grave there, my heart would throb back to you, and you to put your hand on the turf."

A tear sparkled in the 'Yvfrów's eye; but when the men had moved off a little way, she embraced her lord most heartily, as he rode away from her sight, saying, with great solemnity, "the Lord be with thee."

## WOODED AND MARRIED.

By ROSA NOUCHETTE CAREY,

*Author of "Nellie's Memories," "Wee Wife," "Barbara Heathcote's Trial," and "Robert Ord's Atone-ment."*

### CHAPTER XXIX. "SOME DAYS MUST BE DARK AND DREARY."

AND so the weeks go on.

Dym sickens and gets well, and broods silently over her sorrow, and spends long hours sitting in Will's chair with the little worn Bible in her lap, fingering the pages, but never reading, and looking with heavy lustreless eyes at the blazing streets outside. How long has she sat there?

It is June sunshine now, they tell her; the flower-girls hold up bunches of roses and carnations as they pass. Will's plants droop their heads thirstily as Dick waters them; the linnets flutter and chirp in the hot area below; Kiddle-a-wink basks on a bit of sunny pavement, and the splash of water from Susan's washing-tub seems to drip endlessly on the flags outside; but nothing rouses Dym from her listlessness, or from that dreary fingering.

Friends came about her in her trouble. Anna von Freiligrath sits in the little parlor for hours, turning the heel of a huge gray stocking, and

chattering kind little commonplaces; Anna holds her in her sturdy arms, and positively weeps for her, when Dym came in her black dress, and her passive white face. "*Ach Himmel!*" her heart changed, *mein Liebling!*" she bursts out a little effusion of grief and sympathy; but she can make nothing of her, neither can Mrs. Tressilian when she drives up in her fine carriage, and tries to take Dym away with her. Dym tells them all, they are very good to her, but she rather stay where she is; she is not lonely, she tells them; she has Susan, and little Dick Kiddle-a-wink; there is nothing she wants;—and here she breaks off and covers her face with her hand, and the tears splash down on her dress—she only wants to be alone with him, she sobs out, only alone with him.

"But you will make yourself ill, my dear," says Mrs. Tressilian, with motherly tones; "you are quite moved from her usual apathy." "Mrs. Tressilian, my good creature, she will make herself ill again if she stops in this close room. What

my sister say, and all of them? And I have promised to look after her!"

"Oh, no, no! leave me with Susan; Susan will take care of me," returned the girl, wrapping the homely arms around her. When Mrs. Tressilian had driven away, she put up her hand and stroked Susan's face.

"You will take me to see it to-day, dear, won't you? I am sure I am strong enough now." And Susan, who has not the heart to refuse her anything, consents after a little demur.

Dym ties on her bonnet wearily, and they go out into the sunshine, and Dick goes with them—Dick, whose little face grows every day paler and more shrunken, but who never complains that his crutches are too heavy for him, or that he coughs and catches his breath oddly at night. The people look after the girl as she passes along the streets with her homely companions. Something in the stricken white face, in the soft dark eyes, in the air of refinement that pervades her, seems to attract them. Dick shoulders his crutch and puts back his cap in quite a manful manner, as he hobbles along by Dym's side.

"You will be sure to like it, it is so pretty; full of green trees and white crosses, and with little flower-beds where the children are; he used to like it too; he told me so." And Dick hunched his shoulders and winked away a tear or two.

Yes, Dym liked it; once she and Will had walked there, and he had pointed out a little corner which he said was his favorite corner. There was a little clump of trees, and a seat, and a tiny lawn with a sweetbrier hedge; one or two children's graves were near it. They had laid him not far from this place. The wind had strewn some rose-leaves over the grass mound; a garland hung half withered on the slim cross. Anna Froelgrath and Edith had put it there; there was a little basket of roses and fresh moss lying on the turf. How quiet and sweet it was! Roses were blooming, green trees waved, a gleam of white crosses shone in the sunshine; overhead was a tender blue sky, birds were singing, more garlands waving. Some children came up with a pot of arum lilies, and looked pitifully at the girl sitting in the grass with the crippled boy beside her.

"I am glad we came here, very glad," she said, when the sun had set, and Susan had spoken some word as to the lateness of the hour. She would have sat on there till nightfall, with her

cheek resting against the soft turf; but at Susan's gentle hint she arose at once.

"Good-by, dear. I shall come again; it has done me good," Dick heard her whisper. She looked back once as the great gates swung on them; there lay the still garden, God's acre, as it is fitly called; through the trees shone a radiance and golden glory of clouds; the sun was sinking behind the little chapel; a pale crescent moon arose in the evening blue; a rose-laden wind blew across the dewy lawns; the paths had a white glitter of their own; a stone angel drooped its wings under an acacia-tree—some one had laid a great white lily at its feet. The gate clanged after them; before them was a dusty interminable road, people coming and going, whips cracking, jaded horses coming up the hill, a great red sun dazzling in the west.

"I am glad I came," says Dym, looking out before her with grave unseeing eyes; "it has taken a little of the pain away to see it so quiet and restful. Do you know the words that kept recurring to my mind all the time? 'Let us go, that we may die with him.' Oh, Susan, I did so long to lie down and have done with it all!"

"You mustn't feel that, dearie."

"See how far that mile-stone is from us; we seem scarcely to move, and yet I suppose we shall reach it some time. How long is it since—since I came to you that Saturday?"

"A month to-day. Richard was only saying so this morning."

"A month—only four slow weeks? Oh, Susan, to think I am not twenty yet, and that I am longing to have done with it all!"

"There is the mile-stone," breaks in Dick, with a child's literal interpretation of facts.

"But it is not my mile-stone, Dick," replies Dym, with a curious sad smile. How will she ever make them understand the sick loathing that has come upon her? Is she a "shadow in a world of shadows?" Are those really living people, with flesh and blood, with pains and aches and smiling faces, coming towards them out of the sunshine? Have any of them left a brother lying out on the hill yonder? When she is old and withered, will her heart wither too—will she cease to suffer? How long will she have to go on like this, with only Susan and little Dick for her companions—a month only? Have they forgotten her at Mentone? Mrs. Chichester has only

written once—a hurried shocked letter, brimming over with sympathy, and begging Dym to put herself under Mrs. Tressilian's care. Dym had read it languidly, but it never came into her mind to answer it. "These are sad days with us all, and I have nothing comforting to say about my son; only the poor baby thrives"—that was all Mrs. Chichester wrote. He was too ill to send her a message, then; probably they had not yet told him he had lost his friend. There was no mention of Humphrey at all. That letter, loving as it was, added a still keener pang to the girl's pain as she read it. No, she could not write—not yet, at least. Presently, when she was stronger, and could bear to speak of her troubles.

But Dym was thinking of them all as she walked along, with one hand holding up her black dress and the other grasping the withered garland.

Dick was dragging himself wearily along on his crutches; Dym's gown dropped by-and-by, and trailed in the gray dust. A clock struck; a church-bell sounded in the distance; the streets were full of children, as usual—of shrill young voices, of dissonant tones; the women sat working on their doorsteps; the monastery chimes rang out from the brown straggling building in Maitland Park. Are these monks real monks, with sandaled feet and shorn heads, Dym wonders? A little thin Sister of Mercy, with fluttering veil and dusty cloak, comes around the corner; a pair of smiling eyes look at her out of a wrinkled pale face; the bell ceases, and the little Sister goes on quicker, with hurried toddling steps. Dym thinks she would like to be a Sister; a sudden memory comes across her of a convent-garden she has once seen.

The bell is ringing out for vespers. There is a straight long lawn and tall lilies; the nuns come down a lime-walk; there is a sudden shadowy gleam of black and white; the sun is setting behind a low gray building, with a passion-flower climbing around a porch; up stairs there are more lilies; a shining altar; low chanting; down the whitewashed passages come more black and white figures, and pass into the fragrant chapel. Well, there are places here, scores of them, for empty lives and open yearning hands. Dym thinks, with a sudden heartache, that she is not good enough, as she goes slowly up the steps.

Susan says her dear young lady is very tired and must lie down a little, but Dym shakes her

head. There is not a speck of color in her face. As she enters the shadowy little parlor, somewhat standing with his back to the light, starts forward with an exclamation as the dusty little figure comes wearily in:

"Miss Elliott! Oh, my poor child!"

Dym gives a great sob when she sees Humphrey's honest face. They have not forgotten her, then. The little room seems brighter somehow as those kindly eyes greet her in twilight, as the rugged brown hand stretches it out. Dym holds it for a moment between her fingers.

"Oh, Humphrey, dear good Humphrey, have come to me!"

"They sent me; I wanted to come. I am glad, if you think I shall be of any use to you."

Humphrey can hardly frame his clumsy sentences as those little hands clutch hold of his sleeve. He can scarcely bear to look at the small white face and troubled eyes brimming over with tears.

"I do not know whether you can be of any use to me, but I am glad you have come."

Dym's gladness threatened to become hysterical; she almost clung to the kind friend who had come all these miles to find her in her trouble.

"Oh, Humphrey, it is such terrible loneliness but I know you will be good to me," she said, looking at him in a pitiful childish way.

Humphrey had need of all his fortitude before he could apply himself to soothe her.

"I will do my best for you; you know that, Dym," he said, looking at her with mournful eyes.

Humphrey seemed older than ever in his blue clothes. His forehead was deeply lined, and his hard-featured face had a sallow tint on it. He wondered, after what he had gone through, that Humphrey looked almost ill. The faithful creature had travelled night and day ever since they had given him leave to seek her.

"I don't know whether she will be glad to see me, but I feel I ought to go," he had said to Mrs. Chichester; "she may be ill, or wanting something."

"Perhaps she may have gone to Celia's. Do you think Guy can spare you?" answered the poor mother, doubtfully.

But her words, low as they were, reached Dym's ears.

"Let him go, mother; he ought to go. There is nothing that he or any one else can do for me; it is different with her."

And Guy Chichester walked up and down the long room with fierce impatient strides, as he had walked night and day, his mother thought, as she listened to those never-ending footsteps.

So Humphrey had gone without sleep, taking it by snatches, and had travelled back through the weary miles, hardly daring to expect a welcome. But he never forgot to his dying day the quiver of flight that came over the weary face as Dym ran up to him with outstretched hands, and called him "her dear good Humphrey."

She laid aside her bonnet now, with its dusty crape trimmings. Humphrey watched her hurriedly smoothing her soft hair with her hands and straightening the little frill around her neck.

"See who has come to me, Susan," she said, turning around with a sad smile as Mrs. Maynard came in. "They have not forgotten me; they have sent him."

And the girl laid her head on Susan's shoulder and cried a little, out of sheer oppression of thankfulness. Will would be glad Humphrey had come to her, she thought. Humphrey's eyes had a dumb hungry look in them as the tears streamed over the sweet face. Susan might pet and comfort her, but he could only stand aloof and make useless offers of help. Humphrey was growing sad again, when Dym suddenly held out her hand to him, as though to entreat his forgiveness.

"I cannot help it, Humphrey, it has been such pain; and now I don't feel quite so terribly lonely. You will tell me all about them presently, will you not?" And then she brushed her tears away, and busied herself in helping Susan to prepare the meal for the tired traveller.

Humphrey protested that he did not need either meat or drink; but Dym would not believe him. When Susan lighted the lamp, she drew the easy-chair to the table, and pressed the viands on him with trembling eagerness. Humphrey wanted to wait on her instead.

"Do let me. If you know what it is to have some one of whom to take care again—I have missed that more than all. I—he——"

Humphrey nearly choked over his first morsel, as Dym buried her head on her hands and sobbed.

She hurried away after that, and had it out by herself. These sick longings would come upon

her suddenly. "O, Will, I shall never take care of you again. You don't want me now," she would say at such times.

She came back with the same worn gentle look, and sat down by Humphrey. "Now you will tell me," she said, in a low voice. "I want to hear everything—everything."

"There is not much to tell," Humphrey says.

He goes over the sad story as gently as he dare, and yet he feels an odd relief in telling it.

Dym did not interrupt, except by a question or two. She sat leaning forward, with her cheek on her hand, and her eyes fixed on Humphrey's face. Sometimes a tear rolled down, and she forgot to wipe it away. That fixed sad gaze made it difficult to Humphrey to go on; now and then he faltered and almost broke down.

"How did it happen?" Dym asked; "at the baptism?"

"Yes, she took cold then," Humphrey answered, "some one had left a door or window open—the nurse, he believed. She was sitting up and over-excited or fatigued. Guy noticed her shiver when he came in and put the baby in her arms; but she said it was nothing, and he forgot it afterwards. The clergyman and his wife came in and talked to her, and after a time she had seemed very tired. Guy lifted her back to bed again; but she did not feel inclined to sleep. When the doctor came in he found her still talking, with two spots of color in her cheeks, and her eyes shining like gray stars, and had scolded them both. Honor had pleaded that the baby might be left with her; but he had sternly ordered it away. 'We must have no more excitement; you must go to sleep,' he said, quite angrily; and then he muttered something about the want of common sense in people.

"Honor gave a quaint little smile when she was left alone.

"'I did want baby so,' Guy heard her say. The gray eyes would not close; they were smiling wide open at Guy as he leaned over her some time afterwards, and then again he noticed the shiver.

"But still he was not alarmed," Humphrey said, "and retired to bed as happy as usual; but towards morning they had called him. The doctor must be sent for, they told him in frightened voices; she was very uneasy and in great pain, but had begged them not to wake him before.

"Guy rushed into his wife's room. She was evidently in great suffering. There was a troubled

almost scared—look in her eyes; but they grew dim when she saw him.

"Come here, Guy; nurse says I have taken cold. Can it be that that is the matter with me? I feel so strange."

"Guy strove to hide the anguish that assailed him; he took her in his arms and soothed and comforted her. They say the dear beautiful smile came to her lips every time she looked at him," added Humphrey, in a choked voice.

"But, alas, sharp inflammation had set in, and for a short hour she knew no one. 'Where is our little child? Where is our baby, Guy?' she kept asking; and then she went murmuring on in disconnected sentences about broken crystals, and white robes, and cleansing waters. 'They have washed my baby quite clean,' she kept saying. 'The cross was all bubbles and brightness; I saw it sparkle. Don't let any one kiss the water away—my little Florence—my own baby.'

"She seemed sinking into a lethargy at last, and some one said she was going. The words seemed to rouse her, for she opened her eyes full on her husband's heart-broken face.

"Oh, Guy, is it that?' they heard her whisper; 'not that, husband?'

"My darling, I fear so."

"Must I leave you and baby?' and as, unable to speak, he supported her on his breast, she made a sign that he should kiss her.

"Oh, it has been so beautiful!" Those were the last words that those standing around her could catch; but Guy, bending his ear to her lip, heard a faint sigh, 'Not my will;' and then somebody came behind him and laid her down."

Dym's face was hidden now, and there was a long silence.

"How did he bear it?" she asked at last, almost in a whisper.

Humphrey shook his head sorrowfully.

"He has not borne it; he has fought against it so, that for the first three weeks we almost thought he would lose his reason. He says such things that his mother goes out of the room shuddering; but he is quieter now."

"Has he been ill?"

"Mentally ill, of course; he sleeps badly, and wakes in a strong fever. He is beginning to look haggard and gray; no one can do anything with him—his mother least of all."

"Poor Mrs. Chichester!"

"Madam does her best, to give her husband. She bears his fierce humors as an angel; but her tears anger him. Once or twice brought the baby to him—poor lady, she knew better; but he just flung away, and shut himself up for nearly twenty-four hours at a stretch."

"O, Humphrey, is it possible that he dares not care for his child?"

"It is too early days to talk of that now. The little lamb; she will grow into his heart by and by. They say she has Honor's eyes. Yet he has got it into his head that the babe has ruined her life; he has never taken her into his arms since."

"I can understand just how he feels."

"But he looks at her sometimes when he is alone, no one sees him. I saw him once standing by the cot, with his arms folded over his chest. 'My little child,' I heard him mutter—'yes, all that—will she grow up an angel too? O, I think I should kill myself—I should, I might get rid of all this misery—it is not my fault, I fear I should not see her again;' and then his head fell forward on his arms with such a sigh, and he let me lead him away. I stopped him all night. Somehow I did not dare to leave him alone."

"O, Humphrey, you ought not to have left him now."

"How could I help it?" stammered Humphrey. "He sent me. I have promised to go back if Madam wants me. She won't leave me yet; but I can't help thinking he will be gone from us altogether soon. He gave Madam a look when she ventured to suggest his going back to Ingleside."

Dym gave a heavy sigh. He would have been glad to get away from them all. "He will come back," I know him so well; these noble souls would not wander away in outer darkness. I could almost hear Will say these words often in the months, nay, years that he recalled them with a strange feeling through what dreary experiences were passing, while the mother prayed through her tears—the mother on her knees, wife in paradise weaving the two worlds was to bring him home again!

Humphrey went away as soon as the story was finished. Dym made no more of it, and came again early the next day;

her to St. Luke's, she thought. When the morning came she sat in her old place beside him, with her heavy crape veil falling over her face; the bright sunshine was flooding the chancel again; outside the poplars waved. A stranger knelt in Will's place.

"Are you sure this has been good for you?" asked Humphrey, somewhat conscience-stricken, as the girl put back her veil and looked at him.

Dym had dark circles around her eyes; but a gentle light shone from under the reddened eyelids.

"I could hear his voice all through; we had his favorite Psalms to-day. You were very good to take me, Humphrey," pressing his arm softly.

Dym made him take her somewhere else, too. Her tongue loosened as she sat on the grass beside Will's grave, fingering the daisies lovingly; she poured out the whole history of her trouble into Humphrey's ears as he stood beside her.

"Ay, ay, poor child, poor child!"

Humphrey did not say much more, though his honest heart was overflowing with sympathy. Yet Dym thought his kindness was perfect.

Humphrey had yielded himself quite submissively to the girl's will throughout the day; but on the following morning things were otherwise.

"I ought to have given you this before," he said, somewhat abruptly, producing a letter from his pocket. Dym was dusting and straightening Will's books, and a volume of Hooker dropped from her fingers as she caught sight of Mrs. Chichester's handwriting.

"Madam wrote it in a hurry," continued Humphrey, thrusting his hands into his shooting-coat, and assuming an indifference he did not feel; "she hopes you will decide on remaining at her sister's till her return, as it will be so lonely for you at Ingleside."

"She has given me my choice," returned Dym, disconsolately. "Oh, why, why will they not leave me alone? Write to her, Humphrey; tell her I am happier here."

"Nay, nay, you must not ask me to do that," returned Humphrey, puckering up his brow with the air of a man who has a tough job before him; "you'll only fret out your heart stopping on here and turning over his things all day long, as Mrs. Maynard says you have been doing. Come," he added, coaxingly, "you will be a good child and go to Mrs. Tressilian's."

"I cannot," replied Dym, bursting into tears. "Why is every one so cruel? Mrs. Chichester does not want me—nobody wants me!" with a little outburst of impatience, and despair that goes to Humphrey's heart; but he steels his tenderness and answers her very gravely.

"You ought not to have said that to me; but you did not know what you were saying, did you, my dear? You are so young that you cannot judge for yourself in this; you must let me decide for you, as though I were your—your brother," stammered out poor Humphrey, not thinking how bitterly the word would sound to the bereaved girl.

"No, you can never be that. I have no brother but Will—no one but Will. Oh, my darling, to think you will never help me to be good again!"

Humphrey had to wait till the girl's grief had spent itself a little, and then he returned to the subject very gently but firmly.

"I wish you had some one better to advise you," he said, very sadly; "but I will not go away and leave you like this. Madam is right—you are not fit to take care of yourself."

"Susan will take care of me. Oh, Humphrey, why will you be so hard on me? I would be so good if you will only let me stop here."

But Humphrey shook his head.

"It cannot be done. I have passed my word to put you under Mrs. Tressilian's protection, or to see you safe at Ingleside."

Humphrey's manner has a trifle of austerity in it, all the more that he feels his resolution melting.

"I will go to Ingleside, then," returned Dym, in a low voice.

She was a little scared at Humphrey's peremptoriness; she turned paler, and her head drooped on her breast as Humphrey quietly told her that she must prepare to go back with him on the morrow.

"I have my work to see after; everything is at a stand-still; the home farm is without a bailiff," finished Humphrey, apologetically.

But Dym turned away from him. He had been hard to her; he would not write and ask permission for her to stay; every one treated her like a child, Humphrey worst of all, though he loved her. Dym went away in a little fury of despair, leaving poor Humphrey crestfallen over his victory.

It was a miserable day for every one. Humphrey wandered about the streets, and came back

again to find Dym quietly crying over her work, with Susan helping her; through the half-opened door he could see the little black figure kneeling before a pile of clothes and books; Dick was standing by; Susan seemed to be expostulating.

"I wouldn't do it, dearie; leave them for Richard and me to manage; it doesn't seem right; it is morbid-like, and unchristian."

"These are the shirts I made for him, Susan; and look at that poor old coat with the rent under the arm. I usen't to like to see him in it, but he never would part with it—never. Fold it up carefully, Susan, with the others. I tell you I must take them."

Susan sighed and shook her head. In another moment there was a heavy stride in the next room and the folding-door was pushed open.

"Give that to me, please, Mrs. Maynard; that and the others. I will not have it done." Humphrey spoke quite sternly, and there was a frown on his face. "You ought not to allow Miss Elliott to do things that are bad for her—you, who are her friend, should know better than that."

"She won't mind us, sir; one can't be hard on the poor lamb," said Susan, in a disturbed voice.

"Humphrey, go away; you have no right to interfere with me!" exclaimed the poor child, putting out a feverish hand to stop him; but Humphrey took hold of it, and suddenly lifted her up.

"I will not have it done," he repeated, firmly. "You are wearing yourself out, and you have no one to take care of you. You must not move till I give you leave." And to Dym's infinite amazement she found herself placed on the couch and covered with Humphrey's rug.

"Susan and I will pack the books," was all he said as he went out of the room. Dym lay looking after him in a curious sort of way. He had taken the things from her hand, and had thrown them aside; he had put her out of the way, as though she had been a mere infant; and yet she was not angry; she had never liked him better than when he had stood by her with a frown on his face and then had tenderly stooped and lifted her in his strong arms. There was something healing in the rough tenderness that had interposed between her and that weary labor.

I think, if Humphrey Nethcote had been another sort of man, he might almost have won Dym at this time. The girl was so lonely and

unhappy that she would have clung to an arm that had offered itself for her support. The months that followed she felt for his tenderness, which might have ripened if he had only been less humble with her. She had shown her the more dominant side of his character. Dym could not love where she did not love strongly. Humphrey was good, kind, and gentle, as she assured herself over and over again; but there was something wanting. His gentleness made him timid and self-deprecating.

Once, many months afterwards, when a dry fever of hopelessness came over her, when there seemed nothing left to live, when only the dull level of existence lay before her, a sudden impulse came into her mind that she would make this man happy who had loved and served her so faithfully.

It was one of those perilous thoughts that sometimes come into a girl's mind, and which worked her mighty woe in the years that followed. If Humphrey's generosity had not saved her, it would have ruined both.

She had said some word that the man had hardly mistake, and Humphrey had looked incredulously for a moment, and then a tinge of red had come into his sallow face.

"Do you mean this, my dear?"

"Yes, I think so," Dym replied, looking at her strong homely features, working with emotion, but her voice had a fixed weary tone. "Everything is very miserable, but I shall try to make you happy, Humphrey."

"God bless you!" was all he said for a moment. But as he took her in his arms a shiver ran over her, for she thought he had taken her word; but she need not have feared him.

"I will try to be good to you," she whispered, but there was a chill sick feeling at her heart that ought to have warned her.

"You are always good to me; don't let me forget. I shall never forget this—never; but you must come to me; you do not love me, my dear."

"Not much—not in that way," she said, her face crimsoning under that honest gaze; "but I think it would be nice to make you happy."

"You would not make me happy, dear; I understand, we should both be miserable if you cared for me."

"I shall love you all the more dearly for that," as Dym shrank away from him almost

"but no man ought to marry a woman who does not love him."

Humphrey was quite hot and dusty when he came up to Dym's couch in the late afternoon.

"We have finished; Maynard is cording the boxes. You must not be angry with me, Miss Elliott, because I have taken this into my own hands."

"I am not angry," said Dym, slipping her hand into his with a sweet smile. "Why do you call me Miss Elliott? I am very much obliged to you, Humphrey; it is I who have been wrong. I ought not to have given you so much trouble."

Humphrey was quite taken aback by the girl's humility and gentleness.

Humphrey had no more trouble with her after that; next morning she took leave of her humble friends, and was very quiet and dry-eyed when he put her into the carriage. Little Dick climbed up for a last embrace, and Susan had her apron up to her eyes.

"Good-by; you have all been so good to me," faltered Dym.

The sun streamed down on the dusty pavement, the women came to their doors and looked after the retreating carriage. Dym, leaning back and closing her eyes, saw a quiet face with an ineffable smile stamped upon it, and knew that, wherever she went, one day she should see it again, "smiling at her like one of God's dear angels."

Dym was too weary to say much to Humphrey when he parted from her at the door of Ingleside. The servants went down stairs and spoke pityingly of the young creature who looked so changed and pale in her deep mourning; even Mrs. Fortescue melted at the sight of the sad young face, and kissed her quite affectionately. Dym, who was yearning for love and sympathy, never forgot that kiss.

Dym would have been puzzled if any one had asked her how she spent her days. Humphrey came often, but he did not stay long; and by-and-by he went back to Mentone. Mr. Chichester had been seized with a low fever, which prolonged their stay; but as soon as he was able to bear the fatigue, Humphrey went to remove them to a cooler place; and by slow stages and frequent pauses he hoped to bring them safely to England by the middle of August.

Dym wrote long letters to Mrs. Chichester, and took endless walks with Kiddle-a-wink, and grew

more miserable every day; she was longing for her friends—pining for them; and the delay grew more sickening each hour.

"We are coming home," wrote Humphrey at last to her, and Dym's heart gave a sudden bound; but as she read the next few words it sank lower and lower; "if all be well we shall be with you in another forty-eight hours—that is, Madam and the nurse and baby; but the squire has suddenly made up his mind to take a sea voyage; he talks of going out by one of the Peninsular and Oriental steamers to Calcutta.

"He has shaken off the effects of his illness, but looks languid still. I think, for Madam's sake, it is a pity that the doctors have put this notion of a sea voyage into his head, for if he once get away from us one can never know when he will come back again. I think it is better to face trouble than to run away from it, as he has done all his life," finished Humphrey, in his blunt way.

As Dym opened this letter, a note dropped out and fell to the ground. Dym's hand fairly shook as she picked it up, and the color rushed to her face, for she recognized Mr. Chichester's handwriting:

"MY DEAR MISS ELLIOTT:—Perhaps you have thought that I might have written before; but what is there that we can find to say to each other? There is only one person to whom, in all these four months, I could have borne to have spoken of my trouble, and that is your brother, and he is dead. Had he lived, I might have spent a lifetime at St. Luke's, trying to work out some of my misery, instead of vainly endeavoring to crush it out in miles of ocean. So you have lost him! I am grieved still more in my grief to know it; but be comforted; you are too young to break your heart, and life has something in reserve for you. I am sending my mother and child home to Ingleside. I know you will love and take care of them. Be my faithful little friend still, and help my mother to forget some of her cares.

God bless you! When you have a prayer to spare, you may waste it on one who is ever your true friend,  
GUY LATIMER CHICHESTER."

It was that letter, so curt, so tender, yet so bitter in its sorrow, that first aroused Dym from the apathy of her own grief.

The harvest fields were being reaped around

Birstwith when Mrs. Chichester bade farewell to her son and came back to her solitary home, escorted by the faithful Humphrey.

Dym ran out on the sunny terrace to receive them, and just in time to see Humphrey assisting the foreign-looking nurse to descend from the carriage.

Dym stretched out her arms when she caught sight of the fluttering white cloak and dimpled hands. "Oh, give me the baby!" she cried; and as she stooped over it the child opened a pair of solemn gray eyes and smiled at her.

"Little Florence, little Florence, how I shall love you!" whispered Dym; and, for the first time since Will's death, something like returning happiness stole into her face.

CHAPTER XXX. "ALL IN THE WILD MARCH MORNING."

THREE years and a half have passed away since the events recorded in the last chapter—more than three whole years since Guy Chichester took his passage in the "Montezuma" *en route* for Calcutta; and still Ingleside is without its master.

It is more than eighteen months now since they have heard from him.

And some who loved him well say that the brief unhappy life is finished, and that Guy Chichester will never come back to his own again.

Mr. Fortescue says so, and Cousin Katherine; and Humphrey even shakes his honest head more sadly every day when the squire's name is mentioned; and Beatrix Delaire puts on mourning, and cries her beautiful eyes quite dim for the cousin she has lost; but still the mother hopes and prays, and stretches out her arms to Dym when she comes in to wish her a grave good-night.

"What was it he said? tell me again, my dear." And Dym whispers the words, which have become a part of her creed: "He will come back, my girl; I know him so well: these noble souls are not left to wander away in outer darkness." And as Mrs. Chichester kisses her, and calls her her comforter, Dym's lip trembles, and her eyes fill with tears, for she knows that, whether he is dead or alive, the mother will never look upon her son's face again.

Mrs. Chichester has wept herself blind again.

"God bless dear papa, and bring him home to Flossie and gran'ma," lisps little Florence, night

after night, at Dym's knee; and in the morning, when the solemn gray eyes open, she wakes Dym to ask, "Has papa come back yet?"

Florence knows her father's face by heart; she kisses it every night when she says her prayer. "Papa isn't pretty, like mamma or auntie," thinks Flossie; she likes mamma's face best. A tender image of that sweet mother is already enshrined in the child's mind, a faint glory of shining raiment and white wings and smiling eyes, like the angel she sees at church. On Sunday evenings Dym takes her on her lap and tells her about that loving guardianship; she talks about her father on other evenings; but on these quiet Sabbath hours she speaks of Honor to Honor's child.

She and Florence exchanged confidences. Dym has quaint sweet theories of her own: it is to her an article of faith that Honor is watching over her little daughter. Florence is not quite sure about the wings—does auntie know? A grand beautiful lady, all in white, kissed her last night; Florence could see the stars shining around her head.

"Perhaps papa will come to-night," finishes Florence, sleepily; "but I like mamma's kisses best, only I think she was crying, for my face was quite wet in the morning." Dym holds her peace; she would not have told Florence for worlds that it was only a dream—that it was her kisses and tears that the child felt, when Dym was saying her prayers beside her in the moonlight.

Dym thinks of little Florence when she reads Nathan's story of the ewe lamb; for three years ever since her foster-mother left the ten-month-old babe, Honor's child has slept in her bosom and grown into her heart of hearts.

Dym does not know what she would have done all these years without the child! ever since that long illness through which she nursed her, at which threatened to extinguish the precious little life, Florence had seemed to belong to her more than to any one else. "They tell me her own mother could not have done more for her," wrote Guy Chichester, in one of those rare letters of his. "Heaven reward you for all your goodness to me and mine!"

Dym carried that letter about with her wherever she went. It was more than eighteen months since she received it: he was coming home then. He was sick and weary of wandering, so he was and was longing, with a feverish longing that surprised himself, to see the child that death had

nearly snatched away from him. "I think it is a punishment on my own hard-heartedness," he wrote; "I ought not to have stayed away so long from Honor's child."

What had he been doing with himself those two years? His letters made the two women giddy to read them; now he was tiger hunting in the Indian jungles, now studying Hindostanee and teaching young natives in a missionary settlement; then he had made his way to Australia; when he last wrote, he had already taken his passage home in a vessel leaving Melbourne. It was the fate of that vessel, the "Rose and Crown," that made Beatrix Delaire put on mourning for her cousin, and that dimmed the mother's eyes with anguish; for, hundreds of leagues from land, right out on the blue Pacific, the noble ship had caught fire, and nearly every soul on board had perished miserably. One boat's crew had indeed escaped, and two of the survivors, who had contrived after innumerable hardships to reach one of the coral-reef islands, had within the last few months been interrogated by Humphrey at Liverpool, and, according to their account, Guy Chichester had been left in the burning vessel. One man there was, indeed, who had manned the boat with his fierce energy, and without whom not one of all that boatful would have survived to tell the tale; but even he had succumbed to the exhaustion of thirst and fever. "We dropped him down as decently as we could, and one of us said a bit of a prayer over him; but we had hardly strength to pitch the others overboard. Dawson here says his name was Leicester or Latimer." And Humphrey, wringing the poor fellow's hand, turned away without a word, for he thought, and others thought too, that that dominant spirit among the boat-crew of despairing men was Guy Latimer Chichester. And Humphrey went up to Ingleside and told Dym—every one came to Dym now in their troubles; she was so gentle and helpful, she looked at them with such wistful kind eyes.

Dym was "Miss Elliott" still in the household, but Florence called her "Auntie." Uncle Humphrey had taught her to say it long ago, and Mrs. Chichester loved the name, for Dym was almost like her own daughter to the poor lady.

Dym shielded her face as she listened to Humphrey's story. Humphrey saw her shudder once, as though the strange coincidence of the name struck her; but when he had finished she

uncovered her eyes and looked at him, and the lines of the mouth unbent slightly in their sweet gravity?"

"Do you believe this was he, Humphrey?"

"Ay, surely; there can be no room for doubt, I fear."

"And you think he is lying miles below the Pacific; that he will never come home, never see his child again? We don't believe that, do we, Kelpie?" stooping to caress the faithful creature that seemed to have transferred his affection to her. "You and I and Will know better than that."

"Why do you hope against hope?" persisted Humphrey, sadly. "I think you are wrong, Dym; I do indeed. It is false and cruel kindness to tell that poor woman her son is alive."

Humphrey spoke with unusual sternness, but his heart was very sore.

"If you withdraw that hope, she will die," returned Dym, gently but firmly. "Promise me you will not tell her this, Humphrey—what the sailor said, I mean: you have no idea how weak she is; it would kill her."

"I won't go against you," returned Humphrey, looking at her wistfully from under his bent brows. "Where do you get your faith, Dym?"

Dym gave him a little smile in answer.

"You and I and Will know better than that," she repeated, kneeling on the rug and putting her arms around the dog's neck when Humphrey had gone; and the faithful collie licked her hand as though he understood her question.

Sad news had lately come to them from Lansdowne House. Colonel Delaire had met with an accident in the hunting-field, and Anna von Freiligrath wrote that serious consequences were apprehended. The doctors feared there was some internal mischief, and the invalid seemed to think so too, for he was calmly putting his affairs in order.

The news came to them at Christmas, and cast an additional gloom over the little party. Mrs. Chichester had been ailing for some time; lately the indisposition had increased, and the inclement season kept her a prisoner in her own room.

It was there that Dym read Fräulein von Freiligrath's sad letter.

Afterwards they watched for every post anxiously; but it was the middle of February before their worst fears were verified.

Colonel Delaire had borne his protracted suffering heroically. A little before his death he had sent for his wife.

No one had thought the end was so near; and she came to his bedside dressed for an assembly, with diamonds shining on her white neck and arms. Some of her friends had persuaded her that her presence was indispensable at some gay gathering for an hour or two; and Beatrix, who found her husband's sick-room somewhat irksome, had yielded to their solicitations.

"You sent for me, Frank; do you feel worse?" she asked, a little anxiously. Perhaps she felt conscience-stricken.

"I think I do, my dear. I wanted to speak to you—that is, if you can spare me a few minutes," he added, with a shade of bitterness in his voice that stung through all her worldliness and selfishness. There was unconscious irony in his words, but he had not meant to be hard on this woman, who had disappointed and blighted his life; he would die in peace with her and with all the world, he thought. He strove to forget that but for her he would have lived long happy years of usefulness: this marriage had broken his career and ruined his happiness; domestic misery had made him more reckless of life than other men had been; he knew as they carried him home upon the stretcher that he had dared a useless leap to rouse himself from the sadness that preyed so continually upon him.

And yet how he had loved her!—how her beauty had dazzled his dying hours now; for the sake of that glorious face and form he had bartered the peace of his life; her beauty had been ashes and bitterness to him, and yet he loved her still.

No, he would not be hard on her; but one word he did say of sorrow and regret.

"It is all over with me, Beatrix. You might have been a little more patient, dear. I should not have troubled you long"—looking at her dress meaningly; it was his only reproach.

"I think we may as well say good-by to each other," he went on. "We have not been happy together: it was more my fault than yours; I ought not to have made you marry me; you never loved me, Trichy; but it is too late to speak of that now."

"Yes, it was too late," thought Beatrix, as she stood beside him dry-eyed and speechless. She felt conscience-stricken and abashed before this

simple kindly gentleman; she could not lie to him, she dared not affirm she had ever loved him.

"Yes, it is too late to talk of that, Frank," she said, dragging the diamond bracelet on her arm, and not venturing to look at him.

Some hours later she stood there still, shivering in her gay ball-dress. Some one noticed her shudder, and threw a cloak over her, but she shook her head and put it away with feverish fingers—she was not cold.

Guy Chichester thought he had tasted the bitterest dregs that pain could offer when Honor's arms dropped heavily about his neck; but even his misery was less intense than Beatrix's as she stood with hot dry eyes beside her husband's death-bed.

She did not venture to approach him; others, mere hirelings, pressed round him, and rendered him the necessary offices. Was it for her to touch him, who had never loved him? who had neglected his sick-bed? whose forgiveness she had never asked or sought?

"Now, my men, for a last charge!" were his final words; and so the gallant soul stormed the heights of death.

Dym generously forgot her old repugnance, and wrote to Beatrix in her trouble. There was at an unspoken antagonism between these two; Beatrix was older now, a woman of the world, and she no longer showed her dislike openly to her aunt's companion; perhaps it was no longer so to do so, for Dym's position at Ingleside was wholly unassailable. Even at Lansdowne House and in her daughter's presence, Mrs. Tressilian petted and made much of her, and Beatrix had ceased to rebuke.

"You will all repent it one day," was the only speech she made to her mother. To Miss Elton she was perfectly civil; once or twice she had made some slight advance, but Dym had never cordially responded—to the end of her life she mistrusted Mrs. Delaire.

Dym's aptitude for nursing was greatly needed this winter. Mrs. Chichester did not rally to her indisposition; on the contrary, she grew weaker and weaker. Dr. Grey shook his head when he came out of the sick-room; there was a disease of which to speak, but a lamentable want of power, surprising in a woman of her constitution.

"There is no real wish to rally; this is part

inanition and a depressed state of the nerves," he said once quite impatiently to Dym, who had followed him down stairs. Humphrey, who was waiting in the hall to hear his report, joined them in the porch.

"That is what Miss Elliott says," he interrupted. "We cannot get Madam to take interest in anything; it is 'Do as you like, I am too tired to think,' from one week's end to the other."

"It must be checked," returned Dr. Grey, decidedly. "There is no knowing what mischief may result when the patient is once allowed to sink into this state. She must be roused, interested in spite of herself, or there will be total collapse. The worst is, there is no remedy for the cause of all this; the only question is, whether any certainty would not be better than this state of hopeless suspense."

"That is what I say," put in Humphrey, with a glance at Dym, who was standing by the fire, smoothing her little silk apron thoughtfully.

Dym looked up quickly.

"No, no, Dr. Grey; don't let him say that, he is always telling me so. It would kill her; I am sure it would," speaking with her old energy.

"The question is whether she has really any hope remaining," returned Dr. Grey; "whether this indifference to everything does not mean that she has secretly relinquished it. Tell us, Miss Elliott—you are more with her than any one—do you think she believes her son is alive?"

"I don't know; she has not spoken of him lately," answered Dym, in a low voice. "She has got all his things about her; her bed was quite strewn yesterday with broken toys and books and even baby-clothes. Florence was telling her what everything was when I came in. I wanted to put them away, but she would not let me."

"She thinks that they are relics," returned Dr. Grey, quickly. "I was right, you see; she never expects to have him back again."

"Oh, Dr. Grey, I never thought of that," answered Dym, and the tears sprang to her eyes;

"But indeed, indeed, you are mistaken. I remember now Florence was saying her prayers to her, and she made her say that part over twice about her father coming back."

Dr. Grey shook his head; he was quite of another opinion.

"If you take my advice, you will try to find out exactly what she thinks. I believe with Mr.

Nethecote that she knows already, and that she will be able to bear any certainty."

Dym was still standing by the fire when Humphrey came back from accompanying the doctor to the door. She turned to him with one of her worried looks.

"Humphrey, I can't bear this much longer—you all thinking me wrong, I mean; but some one else must tell her."

"Nay, surely no one understands her so well as you do, Dym."

"I cannot help that," with a touch of her old irritability; "if you and Dr. Grey persist in thinking it right, one of you must do it. It will not be a lie on your lips."

"Ay, whatever do you mean, Dym?"

"If I said he was dead, I should tell a lie; he is not dead—I feel it—I know it. What is the day of the month, Humphrey? I am beginning to forget everything." And she put her hand to her head in a confused tired way.

"It is the twenty-first of March," returned Humphrey, looking at her in surprise; "Madam's been ailing over three months now. Let me see, Flo will be four years old on the twentieth of next month."

"Yes, yes, I know. I was not thinking of that. It is just three years and seven months, then, since he went away; a year and seven months since we last heard. It is a long time, a very long time, Humphrey; no wonder you all lose hope."

"The only marvel is you haven't lost it too," replied Humphrey, in his gruffest tone; it made his heart ache to see how the girl clung to her belief; "but it is not any use; you will be obliged to let it go."

"Never! what are you talking about? I could not, I could not." Her eyes quite shone with excitement; her voice trembled and grew eager. "You may take away the last hope from that poor woman; I cannot prevent you—I dare not, if you think it right; but no one shall make me believe that he will not come back to his child one day."

Humphrey did not answer. Her earnestness staggered him in spite of himself. The squire alive still: a year and seven months, and yet he had not reached them? The idea was too improbable, it was contrary to all reason. He would have liked to argue the girl out of her obstinate belief; but he feared angering her. Dym's fire

was only a sudden blaze, and it died out as soon as Humphrey left her.

"They will reason me even out of this, if I listen to them. Why will they not leave me alone to believe what I like?" she said to herself, with a sudden spasm of doubt and misery. "Oh, Kelpie, do you really think your master is dead—really, really dead!" But, though the sagacious animal licked her hand in the same reassuring manner as before, she was not comforted.

Dym suddenly felt with a great terror that her hope was slipping from her. She had spoken bravely, but why did her heart all at once fail her? Was it that the suspense was becoming unbearable even to her? She had told Humphrey she would never believe he was dead; that it would be a lie on her lips if she said it to his mother. Why did her conscience accuse her of falseness? Had she meant what she said? Had she been utterly true? Had not her wish blinded her when she had so spoken?

Dym felt as though she were collapsing too; a sudden paralysis of fear was on her; her faith had received a shock in reality; the poor thing was weary and spent with nursing; fatigue and depression were wearing out her hopefulness. The body is often to blame for these moods. When Dym sat down with a little shiver and asked herself if she believed this thing or the other, she wanted to sleep away her fears.

It would have been a wonder if she had not been tired; she was too young and weak for such a responsibility; the strain of it was almost wearing her out.

Mrs. Chichester could hardly bear her to be out of the room. Dym schooled herself into brightness whenever she came near her friend. The poor invalid, in her blindness and helplessness, grew more dependent on her young companion every day. Dym's sweet voice never sounded tired in the sick-room; her light step—how it flagged when it crossed the threshold!—was like music to the ears that had grown to listen for it night and day; the soft touches that had once proved so soothing to Guy Chichester were never weary of manipulating the hot brow. Dym kept untiring vigils in the sick-room; she denied herself needful rest, trying to beguile the tedium of those long nights. Mrs. Chichester never slept till dawn; for some hours she was always wakeful and restless. Dym had grown into the habit of taking

the earliest part of the night watch; Dorot and dozed quite placidly all the rest of the day. Mrs. Chichester would be waiting for her when she thought, with a touch of compunction, of her idleness. Stewart came in to close the shutters as she rose wearily from her chair. "It is to be a wild night, miss," he said, as Dym stood for a moment looking out at the black rain-clouds that were scudding across the sky. The wind was driving along the terrace and whistling fitfully among the gable-ends; the elms were creaking and straining their mighty limbs like angry giants. In the kitchen garden there was a flapping of leaves and boughs; that night the Nid was swollen and lashed its banks with white froth. Later on the flood-gates of heaven seemed open, and a deluge of rain and mist filled the valley; a hollow murmur reverberated among the hills and echoed fitfully through the dim woods. Dym shivered as she passed the conservatory door, for it reminded her of that evening, more than three years ago, when Humphrey, with pale face and dripping clothes, stood in that very place and told her that Honor was dead. Dym found Florence curled up among her grandmother's pillows when she came to the sick-room; the little maid had stolen away from the corridor with her little white night-gown, and now sat open-eyed and so pale, looking like a bright-eyed fairy perched at the foot of Chichester's ear.

"Oh, Flossie, how naughty!"

Florence shook back the fair hair from her eyes and argued the matter.

"Flo is not naughty; Flo's good."

"I am afraid not, my darling," and Dym finished her rebuke with a shower of tears. "There, say good-night to grannie."

"Florence has been saying such dreadful things," said Mrs. Chichester, gathering her up fondly in her weak arms; "she has been making poor grandmamma so unhappy. She tells me she won't love papa any longer."

"Oh, Flo, for shame!"

"I think he is a naughty papa to stop away from home this time," affirmed Flo, confidently. "I think he is good, like grannie and mamma and auntie. I like auntie best," she whispered to Dym as she carried her away. Dym, gravely kissing the little face before she left it, felt to-night as though the child's words had stricken her to the heart. Even Flossie was tired of waiting.

"I think I feel more restless than ever, to-night," sighed Mrs. Chichester, as Dym sat down beside her. "Oh, that wind!"

"It is a rough lullaby, certainly," returned Dym, cheerfully, as she drew the heavy curtains closer, and looked to the fastening of the shutters, and then broke a blazing log into splinters. The white china tiles reflected the pleasant glow; the lamp burned brightly. Dym, as she read, stole a glance now and then at the white face lying on the pillow with blank open eyes, and thin hands fluttering aimlessly over the coverlet, and thought that, worn and faded as it had grown, it was beautiful still.

In spite of her efforts, Dym's voice would take tired tones now and then; her nerves were in a state of tension to-night; her reading was purely mechanical. Through it all she seemed to hear the dripping of the rain on the terrace as the wind lulled. Long before the usual hour Mrs. Chichester sent her away, pretending she could sleep; and Dym, with some reluctance, gave up her post to Dorothy.

It was her ordinary custom to go down and pat Kelpie and bid him good-night before she went to her room, and, however tired she was, she never omitted the custom; but to-night Kelpie was not stretched as usual on the black bear-skin in the library; he was whining restlessly at the foot of the stairs, as though he were weary of waiting for his young mistress.

Dym stooped down and caressed him; but, though he licked her hand gratefully, he continued visibly uneasy, and trembled in every limb.

"Why, Kelpie, old fellow, what ails you? I suppose the wind is making you nervous too. One o'clock, and the storm shows no sign of lulling," as the glass in the conservatory rattled and shook in its frame, and the hail beat fiercely on the terrace outside. "What an awful night!" she thought, glancing round the dimly-lighted hall rather fearfully.

"Lie down, good dog," she said, soothingly. But Kelpie resisted every effort to coax him to his bear-skin; on the contrary, his restlessness increased; he whined, looked up in Dym's face, ran towards the door, and commenced sniffing under it, and then threw back his head with a low prolonged howl.

The dog's behavior did not tend to reassure Dym; she knew the collie's sagacity was rarely at fault. For some reason or other he wanted her to open the door; perhaps some one was outside, most likely a tramp. Dym's imagination did not stretch to the idea of house-breakers; she had been too long an inhabitant of the happy valley for such a notion to enter her head; but still she was all alone. There might be two tramps, perhaps, or even gypsies; she did not feel in the least disposed to open the door.

Again she attempted to coax Kelpie away; she even took hold of his collar and tried to drag him with her two hands, but it was no use; the dog only growled at her reproachfully, and broke into a dismal howl. In another moment he would arouse the house.

"There can be no harm if I slip the chain and let him run through," she thought; "it is silly of me to be so frightened; perhaps, after all, it is only Sukey, or one of her pups strayed up from the keeper's lodge." But for all that she was nervous, and bungled sadly over the bolts. She had miscalculated the distance, however; the dog, with all his efforts, could not squeeze himself through the aperture, and his bark of disappointment drove Dym's fears to the wind in the terror lest Mrs. Chichester should be alarmed. "Oh, hush, hush!" she cried, dropping the chain in desperation; she thought she could close the door quickly after him, but she had forgotten the wind. Kelpie had scarcely vanished into the darkness before a wild gust blew the door out of her hand, and drove her backward, pelting her face and dress with hailstones, and nearly lifting her off her feet.

All her strength could not have availed to close the heavy oak door; the servants slept far away, no one could hear her if she called; the lights were flaring, her hair and dress blew about wildly. All at once a low uncontrollable cry broke from her lips, and her knees trembled under her.

And why?

Because a warm human hand, groping in the darkness, suddenly touched hers; and a voice close by, speaking out of the storm and wind, said, "Don't be afraid. Kelpie knows me. I am Guy Chichester!"

## "I SEE THE POINT."

By J. P. McCORD.

Two worthy farmers once fell out,  
I never knew just what about;  
Although in every neighbor's view,  
The cause was small for such ado.  
One's sheep, perhaps, had passed their bounds,  
And pastured on the other's grounds;  
Or one had seen the other's colt  
Across his patch of melons bolt;  
Or one of eggs had spoiled a nest,  
Because he deemed his right the best,  
While yet the other's right seemed clear,  
Because his hens had cackled near.  
Or may be, in some breach of laws  
The quarrel had a graver cause.  
One may have failed, on some pretence,  
To build his share of border fence;  
Or one, with sly and stealthy hand,  
Had turned a brooklet on his land,  
Which else to nature's course had kept,  
And through his neighbor's meadow crept,  
Marked where it had been wont to pass,  
By tortuous streaks of greener grass.

Whatever had begun their feud,  
A word might soon have changed their mood;  
But either would have judged it weak  
That kind and generous word to speak.  
Their hatred therefore gathered strength  
With every day; until, at length,  
Their wisest friends would try no more  
Their old relations to restore.  
Then each the other blamed aloud,  
And told his faults in every crowd;  
Then each to slander turned his tongue,  
And anger's vulgar missiles flung;  
As if the cleaner one appears,  
The more his neighbor he besmears.

When now, from passion's burning height,  
Jones thought he saw just what was right—  
Although he would have found, when cooled,  
That he had been deceived, befooled—  
Old Quibble's office straight he sought,  
And all his wrongs before him brought,  
And vowed if justice could be won  
On earth, it should be surely done.  
"Your cause is good," the lawyer cried,  
"I dare for you at once decide."  
The winds with speed dispersed the news;

Nor could John Wiggins well refuse  
To stand defence. He thought, besides,  
Since law for just awards provides,  
That when the facts were known and bared  
For him must judgment be declared;  
While Jones should find, that in her school  
Dame Justice scourges every fool,  
With hopes like these, he spread his case  
Before a lawyer's gracious face.

"It grieves me, sir," the man replied,  
"That I must take the other side;  
Had Jones not been before you here,  
I would of course for you appear.  
Yet let me say, I have a friend  
Whom I am free to recommend;  
In practice skilled, in law profound  
As any man that walks the ground.  
A note from me will guide you right,  
And place this chance in proper light."  
As Wiggins rose and left the place,  
His thanks were radiant in his face.  
When from the office well away,  
He wondered what the note might say.  
And chose to know; for Quibble's haste  
The paper in his hand had placed  
Without a seal. Perhaps he thought  
One who at school was never taught  
Could read no written lines at all,  
Or such at least as lawyers scrawl.

"I seize my chance," the farmer said,  
And, as he spoke, he stood and read;  
"These geese are fat and heavy, brother;  
If you pick one I will the other."  
"I see the point," the man exclaimed,  
With waving fist and face inflamed;  
"The gain, it seems, in this affair,  
Will be to those who make us bare.  
*Pat geese*, forsooth! In vain the net  
In sight of even geese is set.  
Since Quibble and his learned friend  
Would each his side with warmth defend,  
With less regard to right and law  
Than to the fees they hope to draw,  
Their sordid wishes I will foil,  
And with my neighbor end the broil."  
If men heed not the lesson taught,  
Their wisdom may be dearly bought.

## "MUSINGS."

By THOMAS GEORGE LA MOILLE.

SOME mighty ones, with fate's sharp pen,  
Make out a name:  
If deeds of love, they brighten up  
The scroll of fame;  
If acts of hate, they darker grow  
In clouds of shame.  
As sure as night succeeds the day,  
'Tis just as sure  
Time's tireless energies proclaim,  
Naught shall endure.  
And Nature's forces victims all  
For death procure,  
Wherever our dead dust be laid  
It matters not,  
Who'd like to change the verdict just,

Gone and forgot?  
Be it king's tomb, or soon or late,  
Men plow the spot.  
'Mid ocean's restless billows 'neath  
The cruel foam,  
On mountain steep, in prairie wide,  
With kindred loam,  
What reck's it unto us when fled  
To our long home?  
'Twould seem to sweeten welcome sleep  
If when we die,  
To have the wild rose and the violet  
Mark where we lie,  
In peaceful waiting the loud tramp  
Till earth's last sky.

## NOTES AND QUERIES.

med correspondent furnishes us with a number of interesting items, gathered from "The Book of Oddities," which was published in the last century; some of them are both quaint and curious:

**Odd Family.**—In the reign of King William the first, who lived at Ipswich, in Suffolk, a family, which was famous for the number of peculiarities belonging to it, was distinguished by the name of the Odd Family. Every event, good or bad, happened to this family in an odd number of days of the month, and every one of them was odd in his or her person, manner and behavior. The letters of their Christian names always happened to be an odd number. The husband's name was Peter, his wife's Rahab; they had seven children, all boys, named, in order, Roger, James, Matthew, Jonas, David, Ezekiel, and the husband had but one leg, and his wife one arm. The husband was born blind of his left eye, and Roger lost his eye by accident; James had his left ear pulled off by a quarrel, and Matthew was born with only three fingers on his right hand. Jonas had a stump foot, and was humpbacked; all these, except David, were reprobates, and Ezekiel was six feet two inches high at the age of nineteen. The stump-foot Jonas and the humpbacked got wives of fortune, but no girl would listen to either of the rest. The husband's hair was as black as the wife's as remarkably white, yet every one of them had red hair. The husband had the peculiar habit of falling into a deep saw-pit, where he was killed, in the year 1691, and the wife, refusing all assistance, died in five days after him. In the year 1701 he enlisted as a grenadier, and although he was wounded in twenty-three places, he recovered. His sons, Matthew, Jonas and David died at different times, on the same day, in the year 1713, and Solomon and Peter were drowned together in crossing the Thames

**Sovereignities becoming mere Corporations.**—An interesting letter from Philadelphia, to parties in Boston, dated in February, 1791:

The Supreme Court of the United States opened here to-day. The Judges did not all attend. The only action brought by a Foreigner, against the State of Maryland, was decided. The writ was served upon the GOVERNOR, the Executive of the State, and upon the Attorney General. Two months are given for the State to plead. The action is maintained, one great national question is settled—that is, that the several States have relinquished their SOVEREIGNTIES, and have become mere corporations, upon the establishment of the General Government. A Sovereign State can never be coerced by the laws of another government. Should this point be decided in favor of this cause against Maryland, each State in the Union may be sued by the possessor of their

public securities, and by all their creditors. As the execution will be against them as *mere corporations*, they will be issued against all the inhabitants generally; the Governor and all other citizens will be alike liable. Such offices will not be coveted; even the Constitutional privileges in the several States, against arresting *Senators and Representatives*, while the Courts are sitting, will be done away."

**The Continental Congress of 1784 Searching for a Place to Assemble.**—The question having come up, in 1784, where Congress should reassemble when it adjourned, the delegates from Rhode Island informed Congress that the Legislature of that State, at the February session, passed the following resolutions:

"*Resolved*, That the delegates of this State be, and they are hereby instructed to use their influence to obtain a recess of Congress as soon as the national business will possibly admit.

"It is further voted that the delegates of this State request that honorable body to adjourn to convene at Rhode Island in the course of next year, or as soon as may be convenient; that Congress be informed, that if the aforesaid request shall be acceded to, this State will prepare suitable buildings for their accommodation. And therefore moved,

"That on the 26th day of May next, the President adjourn this Congress until the 26th day of October next, then to meet at Newport, in the State of Rhode Island and Providence Plantations, and if a sufficient number of members to form a house should not then meet, that all the business before this Congress unfinished at the time of said adjournment, be referred to the United States in Congress, who shall be assembled at said Newport, on the first Monday in November next."

A motion was made and seconded, to strike out the words "then to meet at Newport, in the State of Rhode Island and Providence Plantations," and afterwards, "at said Newport;" and on the question, shall those words stand? it passed in the negative, and the words were struck out.

A motion was then made and seconded, in lieu of the words struck out, to insert, "to meet at Philadelphia;" and on the question being put, it was decided in the negative.

MARYLAND AND VIRGINIA ASKED TO MAKE ADVANCES TOWARDS ERECTING BUILDINGS FOR THE RECEPTION OF CONGRESS.—A motion was then made and seconded, to postpone the further consideration of the motion under debate, in order to take up the following: "That the States of Maryland and Virginia be informed, that provided they will advance the United States — pounds, for erecting the necessary buildings for the reception of Congress at or near Georgetown at the falls of Powtomack, it shall be allowed by them in the requisitions made on them for the year — by the United States in Congress assembled," which motion was also decided in the negative.

A motion was then made and seconded, in lieu of the words struck out, to insert "Alexandria," with no better

success; when, finally, a motion to insert, in lieu of the words struck out, "to meet at Trenton, in the State of New Jersey, agreeable to their act of the 21st of October last," which was adopted.

**Pictures of Washington.**—In a letter, under date of July 31, 1779, from Hon. William Vernon to his son, William H. Vernon, then in France, I find the following:

"You will find a letter enclosed from Samuel King, who sends you ten miniature pictures of his Excellency General Washington, which he desires you will dispose of at three guineas apiece. I can't think they will sell for that price. He desires I would inform you to sell them for what they will fetch, and send him the proceeds in shirting linen, from one and eightpence to two and fourpence per English yard. You will employ some broker to sell them, as I don't suppose you will hawk about pictures. They are a good likeness, and not badly painted."

The writer of the above letter, William Vernon, was one of the most active supporters of the Government at the time that it was organized, and he was untiring in his efforts to found a Navy. April 19, 1777, he was selected, in connection with James Warren and John Deshon, to form a Board of Assistants to the Marine Committee, and under instructions sent to them under the signature of John Hancock, they at once organized the Eastern Department of the Naval Board, and chose Mr. Vernon as their head. They were to establish themselves at or near to Boston, and it is well known how efficient they proved, and what good service they rendered the country.

Vernon, the son, on leaving college went to Europe under the patronage of John Adams, to make himself familiar with certain articles of manufacture and trade, preparatory to settling down in business in his own country. While absent (the year prior to the date of the above letter), his father sent him a copy of Peale's Washington, made by the above-named Samuel King, which he was at liberty to present to the King or to any one on whom he saw fit to bestow it. This picture was entrusted to the care of Lafayette, and went out in the same frigate with him; the distinguished Frenchman having expressed to Mr. Vernon a desire to be bearer of a letter to his son.

Young Vernon, during his absence, made a collection of pictures, which he brought to this country, and after his death they were scattered. An account of them has already been published. The miniatures sent to him by King were probably reduced copies of the copy of Peale's Washington, and it would be interesting to know what became of them.

Samuel King was a painter of very ordinary ability; but he had the faculty of catching a likeness, and as this with many compensated for the want of other qualities, he was frequently called upon to paint the portraits of those who could afford to indulge their taste in this way. But the calls were by no means so pressing as to absorb his whole time, and as he was skilled in the manufacture of mathematical instruments, he combined the two callings, carrying them on together in a small shop on the principal street in Newport. It was while he was thus engaged that application was made to him to take two pupils, art students, who desired to learn at his hand the rudiments of drawing and painting. These two

pupils were Edward G. Malbone of Newport and Washington Allston of South Carolina. Malbone was then but sixteen, and his fellow-student was still younger; and it is interesting to know that with such slight promptings as they could have had at the hand of their early teacher, they both rose to the highest position in the profession. Malbone's miniatures have never been excelled, if they have been equaled; and we all know in what high estimation the works of Allston are held. Allston lived to a ripe old age, gaining renown through all those years; but Malbone was cut off in early manhood. He was born in 1777, and died in 1807. His finest work, "The Hours," is now owned by the Providence Athenæum, and all who see it admit that it is as lovely in conception as it is beautiful in execution.

GEORGE C. NASON.

**How to Make a Model Newspaper.**—The literary and mechanical ingenuity displayed in the efforts to make a model newspaper are forcibly exemplified in the following from a correspondent, who says: "The enclosed enumerates stanzas describe, perhaps, an Utopian gazette. The attempt is made to exhaust what the writer believes should be necessary features of a good newspaper. Great pains have been taken to make the piece *absolutely rhymical*, and way of uniqueness, to compel its conforming, *without shadow of an error*, to the other ornamental requirements (twelve in all) of the prefatory note; at the same time, the intended sense or meaning remains intact. It is convenient for the writer to send the stanzas in print, but it would of course be their first publication. If they be accepted, the Editor is requested to *nowhere after* the language as almost every word is inserted under one or other of (twelve) working rules—not one of which rules should be broken on any account."

#### DESCRIPTION OF A MODEL NEWSPAPER.

DAILY, SEMI-WEEKLY, AND WEEKLY:

*Which paper should be owned and conducted by godly men and sold at the lowest paying rate.*

[As will be seen, this piece of metrical prose is in 8 anapaests. The lines, however, contain several peculiarities, all but the first of which need to be pointed out. (1) Each stanza is without rhyme, and (2) no rhyme is found in two contiguous stanzas taken as one. (3) In every stanza the vowel or diphthongal sound in the last accented syllable of each line, and that in the final (unaccented) syllable of each of the first and third lines, are all different; (4) each of the two final syllables of the first line of any stanza contains the same vowel or diphthongal sound as that in the terminal syllable of the last line of the preceding stanza; (5) the same vowel or diphthongal sound does not occur in the last syllable of any two contiguous stanzas, nor (6) in the last syllable of the second line of any two such stanzas, (7), as already half stated (in 3), in the last syllable of the second line of any two contiguous pairs of lines, or final stanzas. Moreover, no emphatic monosyllable is admitted where incompatible with the rhythm; no unemphatic monosyllable is employed in an accented place; no second or fourth line—all of which of course end on the accented syllable—terminates on a secondary emphatic syllable of a word; nor

and beginning with a vowel-sound comes immediately after a word ending in a vowel-sound; no word beginning with a consonant-sound comes immediately after one ending in the same consonant-sound; and, excepting nineteen necessary simple monosyllables and one echoed trisyllable, no word in the piece is used more than once.

The rigorous application of rules so minute and complex is sometimes, obviously, necessitate a recourse to forms of expression such as would scarcely be *chosen* in writing *freely*—a consideration to be kept in mind in reading these verses.]

## I.—NEGATIVE.

It rejecteth contributions<sup>1</sup>  
Fav'ring wrong, untruth, or guile,  
Or that countenance or wink at  
Routs, the stage, or harmful sports.  
It from things announced to happen  
Weedeth such as fail of worth;  
And from gleanings past, historic,  
Purgeth matters, lines, unsafe.  
It admitteth nothing vulgar;  
Doth not jest at sacred thoughts;  
And ignoreth outrage, swearing,  
Hazards, drink, nicotian leaf.  
It inserteth not nor hints of  
Spiteful or injurious words;  
But, when glaring vice it noteth,  
Claims for guilty pains condign.  
And it barreth fiction vapid,  
Frivolous, corrupt, or low;  
Shutting out the same as hurtful  
Both to wise and saintly walk.

## II.—POSITIVE.

'Tis a sheet octavoed,—handy;  
Fit in paper; impress clear;  
And, regarding type-arrangement,  
Excellent, attractive, spruce.  
'Tis a journal prudent, sober,  
Courtly, sensible, concise;  
With, anon, a buoyant outbreak,  
Hum'rous turn, or spice of wit.  
'Tis a guest esteemed by fathers,  
Matrons, children, misses, youth;  
Pensive in gainful reading,  
Fireside problems, wholesome tales.  
'Tis a record prized of ranchmen,  
Shepherds, tillers of the soil;  
And, amongst the social topics,  
Giveth all the farm-hints new.  
'Tis a bulletin for merchants,  
Proxies,<sup>2</sup> holders bond or share;  
Trusty, full, on stocks and money,  
Commerce, trade, exchange, and gold.  
'Tis a chronicle for workers,  
Whether using head or hands,—  
For collegians philosophic,  
As for navvies on the rail.  
'Tis a news-collector, valued  
For its manifold accounts;  
Gath'ring in, from thousand sources,  
Numberless occurrences, deeds.

<sup>1</sup>Emendations emphatically included.

<sup>2</sup>Here used for brokers, agents, &c.

'Tis a chart of useful knowledge,  
And of sound affairs of taste;  
With alacrity producing  
All essential fancy, fact.

'Tis a leader ardent, stalworth,  
In the total abst'nence league,—  
Abstinence for self-secureness,  
And for sake of friend or foe.

'Tis, concerning views of statecraft,  
Independent, dauntless, firm;  
First, though, weighing ev'ry question  
In the scales of Truth and Right.

'Tis at feud with error, falsehood,  
Fraud, injustice, aught unclean;  
For the common weal contending,  
Void of all intent unfair.

'Tis a guardian constant, helpful,  
Of the lower creatures, dumb;  
Judging that Immanuel's dictate<sup>3</sup>  
Loud condemneth ill to these.

'Tis a Mentor to the Christian,—  
Middle-aged or young or old;  
Urgent for unceasing progress,  
And a faith which acts by love.

And, in chief, it has the sinner's  
Highest welfare deep at heart;  
Making known, as fleet his life-days,  
What should bring eternal good.

WILLIAM BOYD.

**Curiosities of the Olden Time.**—It is fortunate for the sake of history, that there are men and women in the world who devote a large portion of their lives in searching after relics, landmarks, and the few remaining fragments belonging to the past. To them are we indebted for much that we know about those who preceded us. The character of the people, their forms and modes of worship, their civil and political life, have all been made indisputable history by joining together the various links picked up here and there, or taken from some out-of-the-way hiding-place, or remote corner of the world.

We extract the following from an entertaining and instructive article in the *Ledger*:

Our local archaeologists and historians, throughout the country, are making a commendable effort to gather relics of ancient or lost tribes, and facts connected with the early history of the country; and we are glad to learn that a number of persons in our own State are giving these subjects some attention. A few weeks ago we recorded the fact that Prof. S. S. Haldeman made a very valuable discovery in a cave near his house, of several hundred pieces of pottery, arrow heads, stone hatchets, etc., which he is now engaged in arranging and classifying, and of which some interesting details were furnished our readers in Prof. Rathvon's "Winter Excursion," printed recently. Several days ago two or three articles were found in Salisbury Township of some interest; and now Samuel Evans, Esq., of Columbia, informs us that he has some very valuable Indian relics which he procured a few days ago from Mr. Jacob Staman, of Washington Borough, all of which were found in a single grave a few yards in the rear of his dwelling. They were dug up in the fall of 1873, and consist of an iron helmet, a skull, the principal bones of the legs and arms, a large iron axe, iron hoe, an iron instrument

<sup>3</sup> The Golden Rule.

which might have been used for a sword, and a large clay pot, broken into a number of pieces.

This is an interesting discovery and has some historical value. It is known that a powerful warlike tribe of Indians, called the Susquehannocks, had a settlement for several hundred years upon the banks of our principal river, two days' journey above the first falls in that river, and that their town was fortified by stockades to protect it from sudden attacks of the Iroquois or Five Nation Indians of New York. Captain John Smith, who ascended to the head of Chesapeake Bay in August, 1608, met a number of these Indians, of whom he gives a graphic description. He says they could turn out six hundred warriors. He locates their town on his map where Washington Borough now stands.

Evans, in his *Analysis* (2d ed., A.D. 1755), says that Bell, in the service of Maryland, at the fort (remains of which were standing in 1755), on the east side of the Susquehanna, about three miles below Wright's Ferry, "by the defeat of many hundreds, gave them a blow that they (the Five Nations) never recovered from."

The Susquehannocks, before the appearance of Captain Smith at the mouth of the river, traded with the French, and had fire-arms. A man named Claibourne established a trading-post at the mouth of the Susquehanna as early as 1631, and furnished the tribe with many articles of European manufacture. Being the most powerful tribe southeast of the Blue Ridge, their trade was very valuable, and it is presumed that Lord Baltimore sent some armed soldiers, under the command of Bell, to help the Susquehannocks to repel the Iroquois, who made frequent raids upon the weaker tribes.

Miss Barber, late of Columbia, in her valuable journal, speaks of this battle, in which Bell participated, but locates it at "Patton's Hill," just below the dam at Columbia. As to that point she is probably mistaken. The Indian town was no doubt located on Mr. Staman's farm, upon a knoll, around the base of which winds a stream of never-failing water. Upon the top of this knoll large quantities of muscle shells have been plowed up, and upon the north front great numbers of stone and iron hatchets have also been unearthed. The relics above mentioned evidently belonged to an Indian warrior who was probably killed in this battle. In the bed of the run at the east base there is a flat stone about three feet in diameter, with deep, smooth grooves, like the letters *IIV*. The single grooves are two feet long, the others about one foot.

This may have been a sign to designate the western boundary which divided the hunting-grounds between the Susquehannocks and a tribe located at Paxton Creek. The figure *V* may represent Chickies Creek, east and west branch, and the grooves to the left of it, Conoy and Conewaga Creeks, or the one at Shock's mill and Conoy.

Mr. Bender, who left Mount Joy in 1839 and took up his residence in Wisconsin, writes that when at the head of Rock River an old Indian prophet hearing that he was from the land of Penn sent for him. He styled himself the XVth Prophet in succession. He said his ancestors and predecessors in office lived upon the Susquehanna River at the mouth of Arraukas, which according to his map is Swatara Creek. From that point one day's journey down the river in a canoe was another tribe. From his chart he described the principal creeks flowing into the Susquehanna River from the East. Chickies Creek he described accurately and stated that a battle had been fought in the angle of the east and north forks of that stream, in which seven hundred warriors were engaged. The conflict was brought on by a dispute between two tribes as to which of those branches constituted the line which separated their hunting-grounds.

As the Susquehannocks were the most powerful it is presumed that they were the conquerors, and in consequence extended their western boundary to the second principal stream west of that. It is supposed that the grooves in the

rock referred to merely designated the lines of conquests and the western boundary of their hunting-grounds.

A few years before the arrival of William Penn in America the Iroquois made a sudden attack upon the Susquehannocks and defeated them. They dispersed the nation and distributed its members among other nations and placed chiefs of other nations to rule over them. A number of Ganawese Indians occupied the Susquehannock town for a number of years. They were visited by William Penn in 1701, and Governor Evans in 1707. Iron bullets about an inch or an inch and a half in diameter have been found upon this bloody ground. Miss Barber says the Mary brought cannons with them and threw them into the river after the battle.

Mr. Thomas Masterson has a very valuable collection of stone hatchets, darts, hominy pounders, and a great variety of beads found at Washington and Conoy Creek, where Captain Smith also locates a tribe on his map in 1608, who remained until 1741.

From an esteemed correspondent we have received criticisms on the article in a late number of the *Month* under the caption of "An Expressive Epitaph," which are pleased to make room for; also an interesting and curious epitaph written by Miss Gould herself:

In the March number of your magazine, I noticed reference to Miss Hannah F. Gould's epitaphs written by the character of people then living. I am fortunate to have in my possession a copy of these epitaphs, written about the very time they were made, by Mr. Cushing for my aunt, Miss T., of Salem, now deceased, whose youth was a frequent visitor to Newburyport, and was acquainted with many of the gentlemen whose peculiarities of character were taken off by Miss Gould. It is noted that the epitaph upon Miss Gould, as ascribed by your correspondent to Mr. Cushing, is in this collection of which is in Mr. Cushing's own handwriting, ascribed to Ebenezer Bailey. As there are some slight verbal differences I venture to transcribe my copy, thus:

"Here lies one whose wit  
Without wounding could hit,  
And green grow the grave that's above her;  
She has sent every beau  
To the regions below,  
And now she's gone there for a lover."

So, too, the epitaph upon Mr. Cushing is, as written in your collection, somewhat better than your correspondent's:

"Lie aside, all ye dead,  
For in the next bed  
Reposes the ashes of Cushing;  
He has crowded his way  
Through the world, as they say,  
And perhaps even here he'll be pushing."

You may be interested enough in the subject to publish the epitaph on Miss Gould written by herself. It is as follows:

"Now Hannah has done  
With her rhyming and fun;  
When her course from the world she was shaping  
The bells would not toll  
For so little a soul,  
From so mighty a body escaping."

In this collection of mine I find thirty-one epitaphs, including the two on Miss Gould.

HENRY T. WATSON

## CURRENT MEMORANDA.

**The Outlook.**—In public and private circles the leader in a conversation bears directly upon the "outlook." "How is business?" "What are the prospects?" "How do you account for such general depression?" are questions of our everyday life, and questions too that concern us all. The responses which they evoke are in the main very unsatisfactory, not because they always give us the truth, but chiefly for the reason that they are hedged in and protected with so many contingencies, ifs or ands, that we gather but little light from them. In the main, however, they compel us to see that a cloud still hovers near most all forms of business industry, and that, like Micawber, most everybody is daily expecting "something to turn up." Some few are endeavoring to turn up something for themselves, and though they find it as going against the grain, they have the satisfaction of some reward, if it be not up to their expectations. These few are worthy of imitating, if not in kind, at least in spirit. It is only by a general striking out with capital, talent and labor that we can hasten a revival of business. There are too many weak-kneed and vacillating in the market to ever turn the tide to a rising one. And various causes are assigned for such timidity and lack of nerve, and these causes are widely at variance with each other. While we concede that different agencies effect, in a measure, diametrically opposite branches of business, the great underlying cause of the stagnation of trade is mainly traceable to the general shrinkage of that well-known factor, Faith. The reduction of this element contracts human ambition, curtails the energy and thrift of any nation or people. To lessen the faith, either in the individual or collective body, is to extract the very sap from the tree of life. The great achievements in the world's history, on land or sea, in times of peace or those of war, never would have been wrought were it not for the factor of faith. It is this that opens the purse of the capitalist and sets labor at work, the mill-wheels in motion, the ships of commerce afloat, and the engines of human thought, ingenuity, industry and enterprise revolving. There are many, however, who regard our present business status as an inevitable result growing out of the late war, and that the inflated condition of everything our intense struggle produced. From this basis, it is argued that better times will not appear until the great incubus, the public debt, is removed, or at least reduced to a minimum figure. On the same line it is held that no marked improvement will take place until we resume specie payments.

At a first glance there seems considerable logic in these views, especially in that which charges the war with the responsibility. If we will bring to mind the fact, so potent to all posted on current events, that the spirit of recklessness, wild speculation, scheming and dishonesty made more rapid strides during the war, and subsequent to it, than it ever had made since we have been a nation, we are forced to conclude that in proportion as the war gave room and opportunity for the growth of dishonesty, in just that ratio has faith among the people shrunk, and business, one of its legitimate offsprings, been crippled.

The public debt certainly has but little to do with the subject. Indeed, it has been considered by some political economist that "a public debt is a national blessing," on the ground that for every dollar of stock held by the individual citizen, just so far he is financially interested in the promotion of the government's welfare and its perpetuity.

Resumption of specie payments will most certainly not bring relief. Gold has been way down to about 1.04½, the lowest since the war, and yet the tide of business did not set in. The approximation towards a gold basis gives no signs that resumption will cure the disease so widespread. The mercantile, manufacturing, shipping and general business interests appear to be afflicted with a sort of hypo or hypochondria, business men not exactly knowing what is the matter. To them we say, "be of good cheer," the day is breaking. There are evidences of brighter skies and a purer atmosphere. The crop of dead-sea apples which turn to ashes, is about exhausted, and a higher tone of morality and stricter probity gradually are coming to the front. With the increase of personal integrity in business and social affairs, there must come a restoration of faith and better times.

In harmony with our views are the following taken from Leslie's Weekly:

"As the curtain now lifts, and we look about us to see how we stand, the prospect is most encouraging. We are already close upon the great desideratum of commerce—the actual resumption of specie payments. Gold has reached a lower point than at any time since our fractional paper currency was first put on the market. Silver has quietly taken its place as the medium for small change, without any disturbance to existing values. Our Government securities command high premiums and low rates of interest, and at the same time stand firm at home and abroad. Even the counting-in of a Republican Presidential candidate has caused no disturbance to stocks, and there has not been the slightest symptom of anything like a financial panic. It is evident that the misgivings of business men have been set at rest. In the belief that the policy of the new Administration will be conservative, that no step backward will be taken in the matter of resuming specie payments, that the business affairs of the country will not be retarded by political complications, our bankers, merchants, manufacturers and capitalists are practically unanimous in looking for a general revival of trade. To have reached this declaration of opinion is a great point gained. The hard times superinduced by the panic of 1873 have been prolonged by a general want of faith in the country's powers of recuperation. Men have talked so gloomily to one another, that even the boldest of operators have not had heart to embark in any new enterprises. It has needed but the good strong words of encouragement that men are now speaking to one another in order to change the dull outlook and set the wheels of activity again in motion.

Looking now at the present condition of business affairs in detail, we find that the balance of trade is heavily in our favor. Our exports to foreign countries are large and steadily increasing. Not only are we now sending provisions abroad, but considerable quantities of our manufactures, thus competing successfully with the labor market of Europe. While such staples as grain, cotton and tobacco continue to be called for in large quantities, shippers of such articles as

cheese and butter are amazed at the demand from foreign ports. Meanwhile the volume of imports is decreasing. Our people are discovering that American cloths, prints, carpets, silks, and other articles of domestic make, are quite as elegant and durable as any that Europe can furnish. Previous to the panic our manufacturing centres had been multiplying production without regard to demand, and had accumulated an immense surplus stock of goods. This had greatly diminished during the past three years, many factories and mills having been closed for long intervals. People, meanwhile, have economized at home. Now the demand is again growing, and the faces of manufacturers are brightening at the prospect. Already, at the first signs of a restoration of commercial confidence, furnaces, foundries and mills announce that they are reopening, or preparing to run on full time, and the consumption of goods of every description will be perceptibly increased. This will bring capital to the front, looking for investment. There has been no dearth of money recently, but it has been extremely cautious. Men have preferred to let their thousands lie idle rather than invest them where they might readily be jeopardized. Now they will seek to multiply their means by its judicious employment in the support of new industries, in the erection of new buildings, in pushing new railway extensions, and in other enterprises necessitating the use of large bodies of laborers. By this means the retailer will be made to feel the benefit of an increased and widespread circulation of money, and the country will realize how much of its prosperity consists in having everybody at work, and in the rapid passage of small sums of money from hand to hand—for the wealth of a nation does not consist in the accumulations of capital, but in the active employment of the means its trade can command."

**Civil Law to Govern the Nation.**—As predicted, the President is moving in the straight line of duty and patriotism—seeing only the *whole* country—knowing no one State or section more than another. Parties should cease with an Executive when the oath of office is taken, for then fidelity to the highest and best interest of the entire nation ought to stand paramount to all other considerations. What measure will secure the best result, not in a partisan sense, but in the broadest sense, to the whole people in all their varied relations? What act will produce the greatest concord and peace between all the States? What men will best represent the will of the majority? What principles are most in consonance with law and equity? What policy will give the greatest impetus to the wheels of industry? In a word, what will best give health to the great national body and mind, restore confidence, put capital now idle, labor now waiting, in wholesome circulation throughout the entire Union? These are the questions for the chief Executive to weigh, decide and act upon.

As the representative of the intelligence and wisdom of the whole people, his views and measures should be liberal and comprehensive. We recognize clearly these elements in the adjustment of the difficulties of both South Carolina and Louisiana. If the war be over, military rule should take the *hard-ground* for its dominion. Civil law is entitled by the Constitution to the right of *front* in time of peace. These two facts the President plainly sees in both the spirit and letter of the great Charter of our liberties; and acting upon this knowledge, how easy to solve the problems connected with the two States referred to.

The citizens of South Carolina not only, but a large

majority of the whole voting population, ratify the Hampton position as Governor of that State; believe that he will best subserve the interest of white and black races, sustained as he is by the firm moral support of both.

Home rule in Louisiana is also to be reestablished; military rule retire to quiet quarters. The following communications explain themselves, while they at the same time mark the dawn of a brighter era for the large:

#### EXECUTIVE MANSION, WASHINGTON, A.

SIR:—Prior to my entering upon the duties of the Presidency there had been stationed, by order of my predecessor, in the immediate vicinity of the building used as a House in New Orleans, Louisiana, and known as the M. Institute, a detachment of United States infantry. I have thought proper to delay the removal of them in that place, until I could determine the propriety of the question of their removal until I could determine whether the condition of affairs is now such as to require or justify continued military intervention on the part of the national government in the affairs of the State. In my opinion there does not now exist in Louisiana such a condition of violence as is contemplated by the Constitution as the ground upon which the military power of the national government may be invoked for the defence of the State. The claims which exist as to the right of certain claimants to the executive office of that State are to be settled determined, not by the Executive of the United States, but by such orderly and peaceable methods as may be prescribed by the Constitution and the laws of the State. My assurance that no resort to violence is contemplated, that, on the contrary, the disputes in question are to be settled by peaceful method under and in accordance with the law, I deem it proper to take action in accordance with the principles announced when I entered upon the duties of the Presidency. You are therefore directed to see that proper orders are issued for the removal of said troops at an early date from their present position to such regular place in the vicinity as may be selected for their occupation.

R. B. I.

To Hon. George W. McCrary, Secretary of War.

The Secretary of War, after the adjournment of the Cabinet, addressed the following letter to General Sherman.

WAR DEPARTMENT, WASHINGTON CITY, A.

Gen. Wm. T. Sherman, Commanding United States.

GENERAL:—I have the honor to enclose herewith a communication from the President of the United States in which he directs that the detachment of United States troops now stationed in the vicinity of the M. Institute, in the city of New Orleans, Louisiana, be drawn to such convenient barracks as may be selected for their occupation. You are hereby charged with the execution of this order, and will cause the withdrawal of the troops to such place on Tuesday next, the 24th of April, at 12 o'clock meridian. Very respectfully, your obedient servant.

GEORGE W. McCRARY, Secretary of War.

As was clearly indicated in a former number of the MONTHLY, on the promulgation of the above order, the consequent support of the military ceasing, the position of Packard became demoralized, and Nichols's force correspondingly strengthened and encouraged. Let it be remembered that we have heard the last of such contentions, from now onward, it will be the aim of all, irrespective of party, to cultivate a better fraternal feeling among the different States and races, to the end that happiness and prosperity be vouchsafed to us and our Southern brethren, once and for all, but now in peace with us!

**War in Europe.**—At this writing all the signs point to war at an early day in Europe. Russia has at last put her views in decided language, and if needs be invokes the onset of battle, declaring that she designs to take possession of and hold Roumania as a material guarantee for the required reforms; and she will ask other European Powers to unite in the occupation of Bulgaria. Prince Charles of Roumania has received a copy of a Russian manifesto, which embodies the following declaration:

"Whereas every endeavor by the Emperor of Russia to preserve peace has failed, owing to the stubbornness of the Porte, while the condition of the Christians in the East is unimproved, their lives and property being menaced; therefore his Majesty, in the name of humanity and in the full consciousness of his sovereign duties as the natural protector of the Slavonian nations in the East, has been compelled to resolve on obtaining by force of arms such guarantees for his distressed fellow believers on Turkish soil as appear absolutely necessary for securing their future welfare."

From all information gathered it is not among the improbabilities that ere this meets the eye of the reader, the actual march of hostile forces will have already begun. It is reported from Constantinople that "Turkey is dismayed at the prospects of imminent war, and would gladly listen to proposals for a pacific arrangement, if it were not too late."

Owing to the complicated interests which a war between Russia and Turkey would imperil, it is not easy to see how England, Austria, Spain, Hungary and Italy, and indeed all the representative powers of Europe, can abstain from taking a hand in the struggle without yielding either some rights or lowering their dignity. The commercial and financial inter-larings between these powers would be seriously disturbed regarded from any point of view. Let us hope, therefore, that such concessions will be made by both powers at issue as shall avert the terrible carnage which would follow such a gigantic clash of arms. War only consumes the wealth and best blood of any people; it never enriches except by invasion and conquest of other territory, and even then it rarely leaves any nation as well off at the end as at the commencement of the encounter. The terrible train of calamities which follow in its wake—widows, orphans, poverty and desolation—calls for the prayers of all Christian people to soothe the red hand of war, and grant in its stead the spirit of brotherhood, peace and tranquility.

If war, however, cannot be averted by concessions or compromises, we can only wish the God of battles to speed the right. In a commercial sense, such a war would certainly benefit the United States. We should have a great demand for not only grain and flour, but would be called on to supply many other necessities of life in an increased ratio. Not only these, but other varied articles of barter and exchange which would set the wheels of industry to revolving, give life to the now silent mills and factories, and a general hum to business on this side of the Atlantic. As the misfortune of one individual or more goes usually to benefit some one else, so war while it destroys on the one hand, builds up and gives renewed activities to those not within its circles. While the iron hoof is almost heard across the waters, we are rejoiced to record a peaceful and prosperous outlook in all the States of the Union.
